Washington, the City Beautiful

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1940

ARTICLE BY PAUL SCHARRENBERG

Mr. GEARHART. Mr. Speaker, there appeared in the February issue of the American Federationist an article which will be, I am sure, of unusual interest not only to the residents of Washington but to the people of the Nation as well. The conditions which are described, as well as the facts and figures which are cited in the article, an article which the writer has entitled, "Washington, the City Beautiful," are well worthy of the consideration of the Members of this legislative body.

Because the article comes from the pen of one in position of high responsibility, the sordid story of squalid conditions in the Nation's Capital City cannot be lightly regarded. In the light of the importance of the subject which is discussed, I was constrained to ask the unanimous consent of the membership of this legislative body that this illuminating article be reprinted in the RECORD of this day's proceedings.

The author of the article, Mr. Paul Scharrenberg, was for many years secretary-treasurer of the California State Federation of Labor. At the present time he is a legislative representative of the American Federation of Labor, resident in Washington, D. C. His background, coupled with lifelong experience in dealing with social problems, entitle him to be heard in respect to the subject concerning which he writes.

That he is an outstanding expert in respect to the social aspects of our economic system will not be questioned. His contribution to the public welfare includes 9 years' service as a member of the California State Commission of Immigration and Housing, as well as 5 years as a member of the city planning commission of the city and county of San Francisco.

Mr. Scharrenberg's article follows:

[From the American Federationist for February 1940]

WASHINGTON—THE CITY BEAUTIFUL

(By Paul Scharrenberg)

Professional promoters and casual visitors have designated Washington as "The City Beautiful." Beauty is a relative term and no one can deny that Washington has beautiful residential areas, magnificent Government buildings, marble palaces and memorials, and public parks surpassed by few American cities. What is not seen by the casual visitor and what is scarcely known by most residents of Washington is the existence of several extensive slum areas where frightfully overcrowded and unsanitary housing conditions prevail and where ugly poverty stalks stark naked and unashamed.

Washington's poverty is, in the main, confined to the colored population which according to the 1930 census was 132,068, or 27 percent of the population. Because Washington's poor cannot possibly pay the prevailing rent for semisanitary quarters, a large percentage of the submerged is concentrated in alleys and alley life is not easily described. It must be seen to be appreciated. According to the research department of the District of Columbia council of social agencies there are 15,000 so-called dwellings in the Nation's Capital without inside toilet or bath. One of Washington's worst slum sections virtually adjoins the Capitol and the office buildings in which our statesmen discuss bills to promote the general welfare. In that particular section more than a fifth of the "homes" do not have any running water.

The desperate poverty which compels thousands of families to live in overcrowded and insanitary houses also prevents normal life in other respects. A minimum diet is out of the question. Washington's torrid summer heat bears heaviest on the slum dwellers and during the winter months the ever-present family problem is to make a choice between food and fuel, to starve or to freeze. Life under such conditions has its inevitable consequences and a glimpse at recent statistical compilations, plain and unvarnished, gives us the awful truth.

In 1937 Washington's death rate from tuberculosis was 75 percent greater than the average for the United States. The Washington rate for 100,000 persons was 83.8. For the United States it was 53.6 per 100,000 persons. However, this is only half the awful truth. In Washington's poverty-stricken sections the death rate from tuberculosis runs as high as 401 per 100,000 population. This is more than seven times the national average.

The Washington death rate from pneumonia is 42 percent higher than the national average. In the slums deaths from pneumonia have been more than three times the national rate.

In 1937 St. Elizabeths, Washington's big hospital for mental disease, admitted 607 Washingtonians. During the same year the District's rate for population in mental hospitals was higher than in any of the 48 States. In 1938 it cost the District of Columbia $2,440,780 to take care of the indigent insane.

The record of infant mortality tells another sordid tale. In 1937, 747 babies under 1 year of age died in Washington. Although the colored population is less than a third, 407 of these dead in-

fants were Negroes and only 340 were whites. The Negro babies were born in the slums and in many instances the primary cause of untimely death was that mother and babies could not get enough to eat.

Very much more could be said about the manifestations of poverty in the Nation's Capital. The published hearings on the District of Columbia appropriation bill for 1940 contain especially illuminating data. For instance, it was revealed that $65,000 worth of food was purchased for school lunches furnished to needy children only, during approximately 245 school days, from July 5, 1938, to June 30, 1939. Disbursements for labor, transportation, fuel, equipment, and other items incident to the preparation of school lunches are in addition to the $65,000.

Statistics on illegitimate births add a dark column to the unpublished chapter in The City Beautiful volume. In the country as a whole, there were 74,983 illegitimate births in 1937. This is at the rate of 4.02 per hundred total births. In Washington the rate was 8.3, based on a total of 841 such births. The higher rate for Washington is made up wholly by the colored slum residents since the babies born of unmarried white mothers were only 1.4 per hundred, which is considerably below the average national rate.

Child delinquency in Washington also points an accusing finger at poverty and slums. The environment of Washington's submerged affects young as well as old. In 1937 the cases of 840 children were acted upon by the juvenile court. Of these 630 were colored and 210 were whites. Almost half of the total came from the slum sections, although only one-fourth of Washington's children lived there.

Washington's prison population furnishes another interesting commentary on white versus colored offenders. There are slightly in excess of 1,600 persons in Lorton, the District penitentiary. According to Hugh F. Rivers, executive secretary of the parole board, 65 percent of Lorton's inmates are colored and only 35 percent white.

In Washington's city jail the daily average population, by race and sex for the fiscal year 1938 was: White males, 199; colored males, 341; white females, 26; and colored females, 80; the total being 646.

Senator ELLENDER, of Louisiana, has presented some startling comparative figures on this subject. Addressing the Senate on January 14, 1938, he pointed to the respective Negro and white population of these two cities as revealed by the 1930 census:

	Total population	Negro	Percentage, Negro
Washington [1]	486,869	132,068	27
New Orleans	458,762	129,632	28

[1] The current estimate of Washington's population is 627,000 with an increased Negro population in excess of 50,000 over the census figures of 1930.

Then he submitted statistical facts obtained from the superintendents of police in Washington and New Orleans:

"In 1935 New Orleans recorded 22 arrests for murders committed by whites and 26 by colored people; 27 whites and 10 Negroes were arrested for manslaughter; for rape, 7 whites and 11 colored; robbery, 52 whites and 29 colored; aggravated assault, 107 whites and 111 Negroes; burglary, 119 whites, 131 Negroes; larceny, 427 whites, 399 colored; auto thefts, 31 whites, 18 colored. So in the city of New Orleans with a 28 percent Negro population, there were 1,527 arrests—792 whites and 735 Negroes."

Senator ELLENDER made his deadly comparison by citing similar figures for the same year in Washington with a Negro population only 1 percent less than that of New Orleans:

"Murder, 19 whites, 53 colored; manslaughter, 20 whites, 15 colored; rape, 9 whites, 13 colored; robbery, 163 whites, 359 Negroes; assault, 105 whites, 313 Negroes; housebreaking (burglary), 301 whites, 916 Negroes; larceny, 209 whites, 330 Negroes; auto theft, 146 whites and 5 Negroes. This makes the grand total of Washington arrests 2,985. Of this number the Negroes, with only 27 percent of the population, furnished 2,004 cases as against 981 whites."

No one acquainted with Senator ELLENDER would accuse him of deliberately suppressing a part of the awful truth with respect to Washington's crime record. It is quite possible, however, that he did so innocently. The Senator's quoted comparative figures are based upon arrests actually made. But in Washington, during the first half of 1939, arrests were made in only 41 percent of the cases of which the police have records. So we are told in the current report of Dr. James A. Nolan, director of Washington's Criminal Justice Association.

Under the circumstances it is not surprising that even such a violent champion of the District of Columbia as the Washington Post should confess in its editorial columns, September 5, 1939, that "Washington has an unenviable crime record of long standing." Another unenviable record which may be mentioned is the death rate from alcoholism. The Census Bureau is authority for the assertion that, next to Nevada, Washington has the highest alcohol death rate in the United States.

Why do such conditions exist in the Nation's Capital? Why does The City Beautiful, year after year, maintain such awful records in sickness, mortality, and crime?

The District of Columbia has a higher per capita income than any State in the Union. The average per capita income for the entire United States is $432 per annum. Mississippi has the lowest per capita income of any State; i. e., $170. New York State with a per capita income of $700 leads all States. But the District of Columbia leads all States with a per capita income of $966.

This higher per capita income for Washington is based largely upon Government pay rolls. In April 1939 there were 121,993 employees in the executive branch of the Federal Government in the District of Columbia. The total pay roll for these employees for April was $21,458,816, representing an average for the month of $176 per employee. The District of Columbia municipal government has another 14,663 persons on the pay rolls at an estimated total for 1940 of $26,153,000 with an average monthly salary of $148.66.

The Bureau of Research and Statistics (U. S. Division of Public Assistance Research) reports that during April 1939 no less than 23,892 residents of the District of Columbia were employed under various Federal work programs.

Thus, in a total District population of approximately half a million, 160,548 were either on the Federal pay roll, on the pay roll of the municipal government, or on a Federal work pay roll. In other words, the predominating industry of Washington is the Government itself.

Washington manufacturers, according to the 1937 census, employed only 8,714 workers who drew annual wages amounting to $12,848,273. This leaves only the building trades and the various groups which may be roughly classified as service trades employed in hotels and restaurants, places of amusement, retail stores, and finally in communication and transportation. There are no reliable figures as to number or the earnings of those last named, but it is known that many of Washington's lowest paid workers are to be found in hotels and restaurants. For instance, when the minimum wage was fixed for waitresses, several Washington hotels began to substitute Negro waiters for the white girls previously employed. It took weeks of active boycotting, which had general public support, before the white girls were reinstated in their jobs at the established minimum wage of $13.25 for a 6-day week, exclusive of meals. Colored housemen employed by Washington hotels are paid as little as $40 per month. For this wage they are required to work 9 hours every day of the year and supply their board and lodging.

As already stated, Washington has a higher per capita income than any State in the Union. It is reasonably certain also that no other American city of comparable size has so large a percentage of per population on a steady pay roll. And finally, what other city in per population class can boast of a single employer with a guaranteed pay roll of 136,656 employees? Washington alone has such a benefactor. His name is Uncle Sam.

Why, then, is Washington cursed with an undue share of slums, poverty, and crime?

The answer is that the residents of Washington do not have a sense of personal responsibility for civic imperfections. Civic pride, such as exists more or less in every other American city, has never got a foothold among Washingtonians.

Before placing any blame for this deplorable and anomalous condition upon the residents, sometimes mistakenly named citizens of Washington, it is necessary to remove the wholly erroneous assumption that Washington is just another American city. As a matter of fact, the District of Columbia—i. e., the so-called city of Washington—is more akin to an old-time southern plantation, or a medieval feudal estate, where no one had any authority or responsibility except the owner or the feudal lord and such of his servants as may have been delegated with temporary power to carry out his wishes.

Washington is governed by Congress through administrative officials appointed by the President for certain terms. Both House and Senate have a District of Columbia Committee. These committees, among other things, recommend each year the amount the United States will contribute toward the District of Columbia municipal government. Aside from the Capitol and the White House, with their spacious grounds, the United States owns an ever-increasing number of buildings to house the staff necessary for New Deal enterprises. From this fact it would seem that the United States' contribution should have been reasonably increased from year to year. The record shows, however, that the United States' percentage of contribution has steadily decreased from 38.21 percent in 1922 to 15.70 percent in 1939.

The residents of Washington have a fondness for banding themselves together in citizens' associations. But deep down in their hearts they know that a citizen without the franchise is like a fish without water. They can appear before congressional committees to complain and voice grievances, they can bellow and holler before the appointed officials of the District of Columbia government but if snubbed or slighted there is absolutely nothing they can do about it. They have the dubious right "to petition" but that is all. They do not have the glorious privilege of electing anyone and cannot "turn the rascals out" no matter what provocation the appointed rascals may offer.

Take, for example, the manner in which the police take it out of the hide of the voteless "citizens." During 1938 the police made 160,888 arrests for all offenses. Ninety-seven thousand nine hun-

dred and forty-five of these arrests were for traffic violations and $360,481.67 was collected in fines and forfeitures by the traffic courts. Washingtonians know that the police spent a large part of their time decorating autos with police tags. They know that burglars and hold-up men carry on their nefarious work with comparative impunity while the guardians of the peace are having their eyes and ears cocked for the "citizens" who commit minor traffic violations. But all the indignant "citizen" can do is to grin and bear and pay!

It should not be inferred from this recital of wrongs that Washington has no public-spirited citizens and outstanding public servants. There are such, and it was the tireless energy of such men that finally gave to the Nation's Capital its Alley Dwelling Authority and its Small Claims Court.

The point is that sincere and earnest reformers in Washington are laboring under a terrific handicap. When Washington's alleys were laid out, long before the Civil War, it was on the reasonable supposition that the slaves should be housed near the masters' abode. Alley life was intended for slaves and all too many Washingtonians of this day and generation still consider this an ideal arrangement.

In other American cities the reformer can appeal for support to the electorate. If not successful the first time he can and usually does try again and again. But Washington has no electorate. Washington's fate as a municipality is in the hands of a Congress chosen by the entire American electorate. It is paradoxical, but true, that Members of Congress who deliver frequent and lengthy orations extolling the virtues of democracy are not willing to grant the citizen's franchise to residents of Washington. And, believe it or not, the principal point made against enfranchisement is fear that the alley dwellers, the Negroes, will wield the balance of power in municipal elections.

National Transportation Policy

EXTENSION OF REMARKS

OF

HON. U. S. GUYER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

RESOLUTION BY THE KANSAS STATE GRANGE

Mr. GUYER of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution passed by the Kansas State Grange at its sixty-eighth annual session, December 12–14, 1939:

Be it resolved, That we recommend to Congress the adoption of a national transportation policy that will—

1. Provide for continued private ownership and operation of railroads.

2. The preservation of the inherent advantages and essential public service of each form of transportation by fair and impartial regulation.

3. Cooperation between the State and Federal Governments to secure safe, economical, efficient, and adequate service for commerce, mail, and national defense.

4. Encouraging sound financial conditions and fair wages and working conditions in all agencies.

5. Making possible and encouraging the coordination of facilities and services.

We recommend that all forms of transportation assisting the farmer in the marketing of his produce be developed and encouraged to preserve the inherent benefits of each, and we are opposed to any legislation attempting to eliminate competition by discriminating against any one form of transportation to the advantage of another.

Each House of Congress has passed a transportation bill, both of which are now pending before a conference committee of the two Houses. Because of the widespread interest of citizens in this legislation and its Nation-wide effects, we urge that a reasonable time be permitted the interested public to study the bill when reported by the conference committee before its final consideration and enactment by Congress.

We further recommend that transportation legislation, if and when adopted, specifically provide for the movement of agricultural commodities for domestic consumption and for export at rates comparable to those for industrial products for domestic consumption and for export.

We especially urge that no provision of law or regulation permitted thereunder restrict any natural or inherent advantages of any type of transportation where such advantages in rates and services are reflected to the shipping public.

Government Services to Business

EXTENSION OF REMARKS

OF

HON. BUTLER B. HARE

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

Mr. HARE. Mr. Speaker, for a number of years I have felt that the future economic life of the South is contingent upon enlarged industrial activities and increased markets for their finished products, both at home and abroad. Heretofore we have been largely agricultural, and agriculture will continue to play a most important part in our social and economic life, but with increased population and the use of improved farm machinery, production, years ago, outgrew the capacity for local consumption. Markets for raw material did not increase in proportion to production, and the growing increase of competent labor, coupled with excellent climate, the South furnished a most attractive field for industry. For two generations plants for the manufacture of cotton have been erected just as fast as economic conditions warranted, and we sometimes wonder if the number of plants has not increased just a little faster in proportion than facilities for disposing of their products were provided; consequently production of manufactured products has been at times greater than the capacity for consumption. Naturally, there have been frequent and numerous periods of depression, resulting in starvation wages or absolute unemployment. The problem, therefore, of greater industrial stability is one which has commanded and must continue to command the interest and consideration of all who may be interested in our public welfare. It has been my personal conviction for a number of years that there could be no hope for continued or permanent increased capacity for consumption without enlarged market opportunities and increased industrial activities, because the capacity for consumption, in the last analysis, is dependent upon opportunity for work and regular income. Markets are indispensable. Without them the future will be no different from the unsatisfactory past; without them there will be an accumulation of surplus both on the farm and in the factory, followed by idle hands, idle spindles, and unemployed labor.

Of course, the future industrial activities of the South cannot be confined to the cotton-mill business alone, although it will continue to be our leading and outstanding industry for many years to come. Our investors cannot afford to put all their eggs in one basket. Other industries are increasing and will continue to increase very much in proportion as we are able to increase our foreign and domestic trade, particularly in South American and oriental countries. Unfortunately, the export of cotton fabrics has not increased as much in recent years as the products of other leading industries. For example, the export of manufactured leather goods from the United States increased 177 percent from 1932 to 1938, manufactured woolen goods increased 129 percent in the same period, silk manufactures increased 33 percent, rayon 391 percent, rubber goods 66 percent, glass and glass products 107 percent, steel-mill products 255 percent, household electric refrigerators 224 percent, musical instruments 115 percent, and cotton manufactures 25 percent, which leads us to inquire whether our textile business has been as alert in using governmental agencies to promote trade in foreign markets as other manufacturing enterprises, or whether we have been content to rely upon domestic markets for support, or whether our Government has been partial in its efforts to promote trade for other industries in foreign countries.

It is one of the functions of government to establish and maintain a relationship with other countries that will command the best feeling and trade relations possible, keeping

in mind the preservation of our own markets just as much as good business will permit. In other words, I have felt that if we can arrange to find adequate markets for our manufactured products we can always expect regular work, fair returns, and reasonable prosperity in every activity.

With this idea in mind, I made an effort last fall to find out, if possible, whether our Government is really doing anything within the scope of its authority to promote the business or industrial life of the Nation. I knew Congress had created and was maintaining with adequate appropriations an office in Washington known as the Bureau of Foreign and Domestic Commerce, established primarily for the purpose of promoting our foreign and domestic trade.

I had two or three conferences with representatives of this Bureau and found it was doing rather efficient work in behalf of some business activities but was forced to the conclusion that the possibility for service to our textile manufacturers was much greater than is being utilized. I found further that the Bureau could be of increased service if manufacturers knew and would avail themselves of this service. Therefore, I suggested to the Director of the Bureau to furnish me a statement showing the extent to which this Bureau and other agencies of the Government may assist businessmen and manufacturers in promoting trade in foreign as well as domestic markets.

Mr. Speaker, I shall not attempt to comment upon the report but shall ask unanimous consent to extend my remarks in the RECORD by including therein the reply to this, my request, hoping that business and industry may see an increased opportunity to utilize various governmental agencies for increasing and stabilizing our industrial activities. The report follows:

DEPARTMENT OF COMMERCE,
BUREAU OF FOREIGN AND DOMESTIC COMMERCE,
Washington, December 18, 1939.

Hon. BUTLER B. HARE,
House Office Building, Washington, D. C.

MY DEAR CONGRESSMAN: In accordance with our very pleasant conversation the other day, I am enclosing basic material covering services rendered to business by Government. As you doubtless know, a majority of the voluntary or nonregulatory services are rendered by the Bureau of Foreign and Domestic Commerce. I sincerely hope that this material will fulfill your needs and trust that you will not hesitate to call on me if at some later date you wish to expand this information more fully.

Incidentally, I hope that the information which Mr. Pickard, Chief of the Textile Division of the Bureau, is sending you will fully answer your requirements regarding the import of bleached cotton goods from Japan and the comparison of imports in previous years.

As we discussed the other day, the dislocations of trade channels abroad and the disruptions of commerce at home necessitate increasing services to American businessmen. There is a vast quantity of material which the Government as a whole, and this Bureau in particular, has available which businessmen could use to advantage. During the past 16 years as directing head of a manufacturing and merchandising organization I myself found it to be a great assistant. However, I believe that you will agree that it is necessary to be able to inform businessmen that this information is available and that this can only be accomplished through personal contact of commercial agents competent to explain the uses of the material and through appropriate published material.

Deeply appreciating the opportunity of a visit with you and your sympathetic interest in the needs of foreign and domestic business, I am

Sincerely yours,

BRUCE BERCKMANS,
Adviser to the Director.

DEPARTMENT OF COMMERCE,
BUREAU OF FOREIGN AND DOMESTIC COMMERCE,
Washington, December 18, 1939.

To: Hon. BUTLER B. HARE.
From: Bruce Berckmans.
Subject: Government services to business.

THE BUSINESSMAN AND HIS GOVERNMENT

When a businessman thinks of government, he immediately thinks of taxes. He thinks that there are too many of them. He invariably thinks his tax bill is too high.

There are other bills that are higher than the tax bill, but he doesn't mind paying them so much. They are itemized. He can see what he is getting. For example, it is easier for a textile manufacturer to pay a bill for $40,000 when it is for 100 looms, than it is for him to pay a bill of $4,000 when that bill merely says "taxes due."

That tax bill needs itemizing. What is the textile maker paying $4,000 for? What is the Government doing with the money to help him in his business that he couldn't do better himself?

First off, the Government is providing for its own existence, and that is absolutely essential to the textile manufacturer's existence. It is so important that he probably never stops to think about it. Because the existence of a continuing Government—of whatever political party—means that commitments may be made and contracts carried out under a single continuing system of law and order.

The textile maker's $4,000 goes to provide security from foreign aggression. It helps build an Army and a Navy protected by which Americans can build and buy and sell in peace.

The Government provides protection for persons and property within the country. It provides for the apprehension of criminals.

"But," our taxpayer might object, "every citizen gets these things from government. Is there nothing the Government does for me particularly? After all, I pay an unusually large tax. I pay wages and purchase raw materials. I am an integral part of the whole economic machine. My well-being and my industry's well-being is essential to the welfare of everybody. Doesn't the Government do anything for me as a textile manufacturer that it doesn't do for me as a citizen?" Yes; it does. Most important of all, it maintains an agency in Washington and offices throughout the country, the principal job of which is to promote this manufacturer's business, to improve his sales, and thereby to help him make larger profits. This is the Bureau of Foreign and Domestic Commerce in the Department of Commerce.

BASIC PROBLEMS SERVICE

There are three principal types of service rendered by this Bureau. They are studies in the basic problems of all business; specific advice on problems of selling goods abroad, international service; and highly specialized aid in specific industry problems, the industries service. Basic problems are simply those problems which are common to all business.

National income: This service includes the compilation of the official Government estimates on national income. National income is the amount of money paid out to individuals each month in each State of the Nation, classified by type of payment, either wages, dividends, or rents and royalties. It is the businessman's best measure of purchasing power.

The studies of this National Income Division show, for instance, that income payments in the whole Nation fell in 1937 to 88 percent of what they were in 1929. In some States the drop was even greater. Massachusetts, for example, had income payments in 1937 which was but 84 percent of the 1929 figures. Income payments for the same year in South Carolina, on the other hand, were 108 percent of their 1929 figure.

This simply means that the people of South Carolina had more money to buy things with in 1937 than in 1929, and that is important not only to the small retailer but also to the manufacturer who wants to locate his plant near lucrative markets.

Marketing research: The Basic Problems Service of the Bureau of Foreign and Domestic Commerce also includes a division devoted to aiding businessmen with their problems of distribution and sales. A cardboard box manufacturer wants to reallocate his sales effort. He writes the Bureau, asks where his type of cardboard box can be expected to sell best. When a large demand for a certain type of marketing information exists this Marketing Research Division goes out and gets that information and publishes the results in pamphlet form. A large number of retailers wanted current information on retail-credit practices and conditions, so an annual survey was undertaken to provide up-to-date data on this important subject.

Foreign-trade statistics: It is important to business also to know the amounts of exports of goods from this country and the amount of imports into this country. Only by knowing the imports of his particular product from abroad can a manufacturer know the extent of his foreign competition. The Government also needed this knowledge to determine tariff policy. So, 205 separate statements are compiled monthly by the Bureau of Foreign and Domestic Commerce, covering all the principal commodities in our export and import trade—from Southern Pine box shooks to bleached cheesecloth.

Business review: Still another Basic Problems Service of this Bureau is the analysis of current business conditions. "How is business?" The answer to this question is of vital concern to men who decide policy in business and government. It is the job of the Bureau's Division of Business Review to supply it. This Division collects, analyzes, and publishes all the available data on construction contracts, steel and automobile production, stock and commodity prices, and similar indicators of business activity.

There is one short coming in this information. No data is available of inventories throughout industry. After all, figures on sales and on production do not mean a great deal if nothing is known about the state of inventories and unfilled orders. It is impossible to figure out how far a locomotive can go—even if its speed and its rate of coal consumption is known—if you don't know how much coal is in the tender.

I see, however, that an attempt is now being made to fill this gap. The Bureau is requesting a large sample of representative firms to report this information periodically. This individual

company data will be pooled to arrive at a measure of inventories for the whole of industry.

With such information, the Bureau can tell businessmen with much greater certainty what the prospects of business are—whether it will improve or fall off—and in what industries this improvement or falling off will take place.

INTERNATIONAL SERVICE

Besides the basic-problems service already outlined, this Bureau maintains an international service. An important part of this country's production is sold in export trade. To aid American manufacturers in entering the export market, the Bureau of Foreign and Domestic Commerce provides experts on the tariffs, financial conditions, laws, and economic conditions of all the countries in the world. If a manufacturer wants to sell shoes in Paraguay, the Bureau can tell him what the duty on shoes entering the Paraguayan market is and what the chances of getting his money out of the country are. It can tell him what the legal and economic situation is as it might affect his shoe sales. And, finally, it can locate a reputable shoe distributor to handle the business for him.

This information is obtained by cooperating closely with the Foreign Service of the State Department. To facilitate this interworking, the Bureau maintains a liaison officer. Through this office go all business' requests for information from embassies, consulates, and commercial attachés in foreign countries. And back through this office come the answers. These are then relayed to business through the Bureau's industrial divisions.

INDUSTRIES SERVICE

The Bureau maintains these divisions to serve the specialized needs of the various kinds of business. There is a foodstuffs division, a textile division, a tobacco division, and others representing all the country's principal industries, each one devoted to the problems of its own industry.

They make it their business to aid both the individual businessmen in their industry and that industry's trade associations. They send out all the information they can obtain of interest to their industry, especially that which comes into the Bureau from the Foreign Service of the State Department. The emphasis is on foreign information because that is virtually a Government monopoly. The data is not available in many cases from any other source. The domestic field, on the contrary, is covered by each industry's trade journals.

A large part of the industry division work is answering inquiries from companies in their industries on matters of interest to these companies. The cotton-goods manufacturer can go to the textile division for any help, advice, or assistance on his own problems. This division will not only mobilize the resources of the Bureau to help him, it will also assist him in his contacts with other Government agencies.

Each industry division is the clearinghouse for that industry's relations with Washington. It is the businessman's first line of contact with his Government.

FIELD SERVICE

Of course most businessmen are in no position to take their problems to Washington, so the Bureau maintains district offices in the principal cities of the country to bring these services to the businessmen. There, in his own city, the individual manufacturer or wholesaler or retailer, large or small, can come and discuss his problems with the Bureau's representatives. Their job is to aid that man in any way possible, because the prosperity of the whole country depends on the well-being of that individual and the millions like him.

This field service is of necessity confined to large cities. There are not enough demands for Bureau services to justify maintaining an office in towns the size of Greenwood, for example. The business of such a community is important, however. The services of government, and of the Bureau of Foreign and Domestic Commerce in particular, should be made available to it. Despite the fact that it represents but a small part of the business of the country, it is nonetheless vital to the economy of its area.

There is but one way that businessmen in towns of this size may be afforded the service available to business in large cities. That is by the Bureau's extending its contact work—getting more funds for its field-service men to travel into small towns and see what the problems of those businessmen are. When such a program is undertaken, government will truly be of service to all business.

OTHER GOVERNMENT AGENCIES SERVING BUSINESS

There are other Government agencies which serve business as a byproduct of their principal function. Most important among these are three other Bureaus of the Department of Commerce—the Census Bureau, the Bureau of Standards, and the Patent Office.

The Census Bureau compiles a census of manufactures every 2 years which gives such vital data as the number of establishments, salaries and wages paid, value of products, and value added by manufacture for all the principal commodities produced in the United States. It is these data which form the basis for much of the market analysis of the Bureau of Foreign and Domestic Commerce. The 1940 census of population and income, the first census to include any income questions, will also aid the businessman through the Bureau of Foreign and Domestic Commerce by giving the national-income section more exact data on purchasing power throughout the Nation.

The Bureau of Standards is tremendously useful to manufacturers in its work of testing products submitted to it for approval. It also collaborates with businesses and with trade associations in establishing standards for various products throughout the industry.

The Patent Office was established specifically to aid business by stimulating invention. Thousands of inventors file applications for patents with this Office every week. The more successful of these new products then go either to promote the business of some established concern or to provide the nucleus for a new business. This inevitably increases employment and generates the flow of income, and from this flow all business benefits.

In the field of labor relations, the Government can also be of extensive service to the businessman. The Conciliation Service of the Department of Labor is charged with the duty of conciliating labor disputes, while the United States Employment Service is equipped to locate for manufacturers workers of any desired background and training. This Employment Service, working in collaboration with the various States, has great and as yet unrealized possibilities of aid to the employer.

In the informational field, the Department of Agriculture is extremely useful to any businessman engaged in the processing of agricultural products. The Bureau of Agricultural Economics in that Department collects and analyzes data on the size and quality of crops from season to season. The Bureau of Mines in the Department of the Interior provides parallel services for the manufacturers of metals and minerals.

Financial services rendered to business by government are increasingly extensive. Most important, of course, is the Treasury Department, which issues currency and cares for the reserves upon which it is based. Business also depends a great deal upon the banking system which was created by the Federal Reserve Act. Also concerned with the health of our banks is the Federal Deposit Insurance Corporation, which was set up after the banking crisis of 1933 to guarantee the deposits in all member banks. These Government contributions to sounder financial institutions cannot be overlooked in any evaluation of government services to business.

At the worst period of the depression, when it appeared that business needed more credit than was available through the usual channels for its continued operation, the Reconstruction Finance Corporation was set up to fill this need. In 1933 it appeared that American export business would need some government subsidy to enable it to enter foreign markets. Congress therefore established the Export-Import Bank to aid in financing and to facilitate exports and imports between the United States and other countries.

Finally, there are other Government agencies which are of great service to business although that service is seldom recognized as such. An outstanding example is the Post Office Department upon which businessmen depend for a large part of their communication with suppliers, customers, and their own organization.

So, if the cotton textile manufacturer's tax bill carried on it all the items of use to him which that tax provides, it would make a long list. The list would be headed by the Bureau of Foreign and Domestic Commerce, the Government's principal agency for promoting business.

This aid to business is a big job, an essential job if business is to function well. And business must run well—it must run better than it ever has before—if the Nation as a whole is to hold onto the better times that now lie within its grasp.

Radicals—Don't Coddle Them—A Spanking

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

ADDRESS BY HON. CHARLES A. PLUMLEY, OF VERMONT

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the League of Republican Women of the District of Columbia, the afternoon of March 4:

Those who under color or cover, or taking advantage of the protective cloak of high official position see fit by their statements and actions to put in jeopardy the rights and liberties of those they are or should be bound to protect and defend, need expect no quarter and to receive no other or different treatment or consideration from me than I would accord any citizen making similar statements.

STARTLING STATEMENTS

The press of date February 22, 1940 (Washington's Birthday), quite generally carried the following startling statement:

"EVERY COLLEGE NEEDS SOME 'REDS'

"SPRINGFIELD, MASS., February 22.—Every college needs a few 'reds,' in the opinion of Dr. Roswell Gray Ham, president of Mount Holyoke College.

" 'The experimental tendency of youth is a characteristic that should not be snuffed out,' he told a joint meeting of Kiwanis and Exchange clubs, 'and it is too soon replaced by conservatism.

" 'I would be fearful of a college that did not have some radicals.'

"Recalling that Calvin Coolidge once asserted that Mount Holyoke was without a single radical, Dr. Ham added: 'The college was worried for some time by that compliment.' "

While I am dictating this speech along comes advice to the effect that none other than the president of the University of Chicago, Robert Maynard Hutchins, took occasion on the 28th day of February to say, as is reported under a big newspaper headline: "The University Needs 'Reds' Not Athletes."

And he goes on to say: "The trouble with American college youths is that they are much too apathetic. They certainly can stand more Communists in their midst."

Now, I recognize he says this for publicity purposes, and in order to attract attention to his subsequent statement with respect to "reds", who, as he says, "mellow as they grow up and turn into substantial conservative oldsters."

ROTTEN APPLES AND ROTTEN AMERICANS

The trouble with that statement is that it is not true, for a mellow apple rots, as everybody knows. It not only rots, but by contact contaminates the other apples in the barrel. The rotten spot in it is a "rotten spot," and it spreads. A rotten apple is a rotten apple, first, last, and all the time. And a rotten American is a rotten American.

What we need is hand-picked American citizens disinfected against rot of fascism, communism, or any other "ism" which is anti-Americanism. It is just a cheap play for publicity for anybody in such a high place to make such an un-American statement.

AMERICA'S ENEMIES

The enemies of organized, representative, democratic government, of American institutions generally speaking need no such aid, comfort, and support and should have none, direct or implied, from persons who like President Ham or President Hutchins occupy positions of responsibility in high places, either in the church, State, or educational field.

A good portion of the trouble found in the world today and for the unsettled condition of affairs in these United States particularly, may be traced to the irresponsible utterances of those who should have known better than to say such things. Their position is not only indefensible, but reprehensible and in some cases despicable.

The preservation of our liberties and the perpetuity of our form of government are the tremendous issues at stake; our national life and its integrity are vitally involved in the proposed steps to change our form of government; the questions before us strike at the root of our American institutions; they are too momentous and too serious to permit the toleration, unchallenged, of such wisecracks by college presidents or anybody else.

Those who indirectly or by implication suggest approval of those who denounce the carefully built guards which have been put about and around our individual rights and liberties, and those who smile at or condone the efforts of those who talk about the fundamental principles on which this Government rests as outworn, outmoded, and antiquated, should be made to know that these are the very things that have saved for them the liberties they now enjoy.

Those who undertake to make light of the situation that confronts us; and who would straddle or evade the issue, are either too ignorant to realize what confronts them or too indifferent to care. Those who breathe treason always do so ignorantly, insidiously, affably, but dangerously, in their approach.

You are either for America and for our form of government 100 percent or you are against it. Every step away from our fundamental principles of government should not be tolerated, accepted, or approved. They need our opposition and should not have our acquiescence or possible approval. There is no middle of the road. Those who encourage radicals, directly or indirectly, are treading on very dangerous ground and should be held strictly accountable by and to the American people.

NO RADICALS NEEDED

We need no radicals. The world needs liberals, not radicals. A true liberal is one who believes in free government, free enterprise, and free men. The outward expression of the liberal ideas of democratic institutions in the field of government, of economic individualism, and cooperative action in economies, and of freedom, humanitarianism and progress in the life of the individual.

Radicals believe in none of the foregoing principles. Radicals exalt the sovereignty of the state, while they deny the sovereignty of the people. They reject the concept of individual liberty. They would subordinate the individual body and soul to a state machine. They would substitute an all-inclusive planning, regimentation, and control by a centralized bureau for free enterprise, individual enterprise, and competition, as found in Mussolini's corporate state, Hitler's dictatorship, and in the communistic empire of Lenin and Stalin.

It may be, but it should not be, difficult to believe, and it is a fact that democracy is on the defensive. Men in high places should defend, not attack the validity of the principle upon which we have built American civilization. It is no time to forget that no price is too high to pay for liberty, and that planned economies and the authoritarian government, the sine qua non of the radical, is fatal alike to liberty and what we know as civilization. Do I need to point to Russia to confirm my statement? We need liberals, not radicals, for the latter have but one end in view and one thought in mind, both of which would result, if accomplished, in the destruction of the liberties—or those that are left—which we now enjoy.

Now let me call your attention to two editorials recently appearing in Vermont newspapers. The first, "Don't Coddle Them," is from the Randolph Herald and News, edited by the Honorable Luther B. Johnson, former official reporter of the Vermont House of Representatives, State senator, long-time chairman of the State board of education, and one who reflects the sentiment of his constituency with increasing accuracy.

The second, "A Spanking," is from the Bennington Banner, edited by the Honorable Frank E. Howe, former representative from Bennington, one-time speaker of the house of representatives, late Lieutenant Governor of the State, and one whose editorial comments and opinions with respect to matters political, as well as others, are symbolic of the majority state of mind of Vermonters generally.

Here is the Herald and News editorial:

"DON'T CODDLE THEM

"President and Mrs. Roosevelt are playing with fire when they personally hobnob with and partially justify the communistic element largely represented, if not dominant, in this Youth Congress.

"The facts are so well known that no excuses or explanations can make them otherwise. Communism and subversive doctrines are endorsed both privately and openly by many of their members and the organization rather subordinates itself to them; at least it does not squarely reject them. The recent Washington congress demonstrated this.

"Mrs. Roosevelt patted them on the back and the President made the congress a special visitation and address in which he cautioned them against subversive attempts to overthrow the Government, but asserted their right to be Communists, to vote that way or do anything short of constitutional infringements. If he thinks he is going to curb them by talk like that he is greatly mistaken. Why, even Fritz Kuhn, indicted bund leader, and Earl Browder, under prison sentence for passport frauds, sing and shout at patriotic rallies, declaring their Americanism—as they interpret it.

"These people do not need encouragement and approval of any sort from officialdom, much less from the President of the United States and the First Lady. The latter held it quite an outrage when the D. A. R. refused to let Marian Anderson sing in their Washington auditorium, yet she caters to an organization bearing an attractive title, but known to be permeated with communism. If we must have persons of that belief, why encourage them in it? Thus inspired, no one can tell how far they will go."

And here is the editorial from the Bennington Banner exclusive of excerpts from the speech of President Roosevelt to the Youth Congress:

"SPANKING

"According to some of the big-city papers, President Roosevelt administered a 'spanking' to the youth-movement convention in Washington Saturday. Looking over the President's speech and other news details of the story, we are inclined to suspect that he was 'spanking' Mrs. Roosevelt rather more than the silly boys who were trying to show off before grown-up folks.

"We have long admired Mrs. Roosevelt for her vigor and enthusiasm which have enabled her to help along so many good causes that we can easily forgive her for occasionally picking up a crooked stick on her journey through the woods.

"This seemingly Communist youth-movement convention is no serious menace to the peace and dignity of the United States. Most of its members will outgrow its silly ideas when they come to years of discretion. Just now they are chiefly addle-pated semi-adolescents showing off how big and bad and dangerous they are. Probably 2 percent of the people of this country are foolish enough and ignorant enough to accept the teachings that have misled these immature young persons, but Mrs. Roosevelt has had experience enough so that she ought not to have been led into an unfortunate seeming endorsement of principles as absurd as the political ideas of the naked savages of New Guinea. She deserved a spanking and the President seems to have been merely taking advantage of an opportunity that presented itself."

There is more to this story than some folks realize.

OTHER COMMENT

My attention has also been called to the fact that Westbrook Pegler, the widely read columnist, in his Fair Enough column in the Washington Post, made some interesting comments anent the meeting of the Youth Congress and the activities of Mrs. Roosevelt in connection therewith. Among other things he said that:

"The fact remains after the shrill clamor of the so-called Youth Congress and the soft shush of dissenters striking the pavement outside that this organization defiantly harbors groups

which are not merely disloyal to the United States but actively loyal to Josef Stalin, whose dictatorship is, in the words of President Roosevelt, 'as absolute as any other dictatorship in the world.' Mr. Roosevelt is not the first to notice this interesting peculiarity of the Moscow Government, but his remark, hurled unexpectedly at the mass of precocious pets of Mrs. R. had the political effect of that lewd note known as the raspberry."

"In almost every other family," he said, "this would have been sure to call for private discussion running far into the night, and the Roosevelts being human, Mr. Big's impolite salute to his lady's friends may have been the subject of a continued discussion in private. If so, the public may yet be permitted to know how the argument came out, for the White House is a regular port of call on the night-club beat nowadays and is rapidly pulling up toward evens with the Stork Club, and Mrs. Roosevelt's own lack of reticence is both charming and famous."

Concerning the attitude and the real low-down on the policies of the Youth Congress he remarked that:

"Thus, plainly, the Communists in the Youth Congress, to say nothing of the fellow travelers who are only pledges, so to speak, with the right to renege, are not mere critics but opponents of the American form of government and prospective enemies of the Nation. Mrs. Roosevelt has been seen feeding sugar to this Trojan steed—which is not a dashing charger, however, but a sway-backed plug. Her error is not as grave as it may seem, for the congress as a whole is not communistic."

And in regard to what Mrs. Roosevelt had to say and to do about the Youth Congress he comments as follows:

"This one clumsy mistake does not entirely revoke Mrs. Roosevelt's reputation as a smart politician operating in the guise of an enthusiastic novice, but if this were parchesi, instead of politics, at least one of her markers would be set back to scratch. She whooped up the congress and had barely eased out the last ham of the Hollywood internationals before the kiddies began to slide down the banisters and write letters home on the White House stationery.

"The congress was her show and she placed herself in the status of chief lobbyist for a $500,000,000 appropriation just in time to hear the President pronounce a hex on lobbyists and funny-money subsidies. The adventure soon got out of hand with pestiferous hundred percenters pressing for adoption of inopportune declarations of American principle for no reason but to embarrass the patroness and with cops diving into the crowd to pluck those muckers out.

"Stubbornness and overconfidence were Mrs. Roosevelt's fault here. She was in wrong from the start, because even the most generous Americanism does not call for Executive hospitality to anti-Americans, even incidentally. No question of tolerance was involved. Mrs. Roosevelt, nevertheless, chose to risk her personal and official prestige, and, for the first time, lost."

The truth is that both editorial writers and columnists the country over criticize Mrs. Roosevelt for using very "bad judgment" in "pampering" the American Youth Congress.

The Diamond Back, a semiweekly student publication, written by representative youths for youths of the University of Maryland, said on February 14:

"The American Youth Congress is unconstructive in its program and renders mere lip service to democracy, the system it claims to support. The whole attitude of the group is one of criticism, a self-assured criticism that is intolerant of opposition or restraint, and suggests no remedial measures. Its ill-informed leaders mask rash judgment and lack of insight behind the so-called impetuousity of youth. There is an old saying, 'If you must use a hammer, build with it.' The American Youth Congress has never realized the truth of this or attempted to give it a try.

"You cannot harness communism and expect it to work for democracy. The first is the avowed enemy of the second, and if the congress thinks it is working with communism, it will soon find it is working for communism."

Ernest Lindley, on the same day, remarked in his column of the Washington Post that: "The American Youth Congress has washed itself up as an effective political force. After its performance in Washington this week it will be listened to just about as seriously as Earl Browder."

Just what the plain people of the country think about it is pretty comprehensively stated in the foregoing excerpts and in the editorial from the Los Angeles Times, of date February 11:

"President Roosevelt's rebuke to the communistic tendencies of the American Youth Congress in his address to that organization yesterday was the more pointed in that Mrs. Roosevelt was standing at his elbow as he spoke. The First Lady, who has publicly defended her right to entertain radicals at tea at the White House has been an outstanding friend and champion of the congress, even after—or perhaps especially after—Dies committee witnesses testified that the organization is saturated with communism.

"* * * The Youth Congress heard from the President a few plain truths of the kind its members need to hear. Their scattered boos, however, indicated that, so long as they have one stanch friend in the White House, they will pay no attention to rebukes from that source."

And in the editorial from the New York World-Telegram of date the 16th of February:

"The country has place and need for a youth movement—never more so than at the present time.

"But it has no place for a movement that uses pretended interest in American youth and American civil rights as a cover for making traitors among that youth and for aiming eventually to destroy those rights.

"Despite her doubtless good intentions in sponsoring the American Youth Congress and despite her impulsive defense of certain sinister policies of its leaders, Mrs. Franklin D. Roosevelt has not, in our view, succeeded in giving it a clean bill of health.

"Neither do we think Mrs. Roosevelt has been wise in laying herself open to the charge of inviting Communists and their fellow travelers to the White House, which most Americans rightly regard as distinctly different from a purely private dwelling.

"The American Youth Congress needs an unemotional investigation and a thorough housecleaning. The sooner the better."

INDIVIDUAL LIBERTY AND ECONOMIC FREEDOM

This brings me to the consideration of a matter concerning which I am going to talk to you this afternoon for a few minutes about a subject as old as the hills 'round about Jerusalem. I have talked to you about it before, but never was it a more important subject than today and now.

The question which confronts you and me and all of us is whether or not the concept of individual liberty and economic freedom shall live or perish from the earth. If that be a platitude let the New Deal make the most of it.

I am no alarmist and I know that if the American people can be aroused to a realizing sense of where they stand there is no prospect of a black-out of freedom in America. There is, however, a danger of a fade-out, as a result of those policies and pressures which threaten individualism and free enterprise here and everywhere. You will recall that people in other countries have gained civil and religious liberty only after they have fought for and won the right to conduct free business enterprise and to assert their individuality.

Here in the United States today we must for ourselves either maintain free enterprise or accept the alternative and by so doing contribute to the complete break-down and destruction of the democratic ideal and concept of government.

It is axiomatic to suggest that the government of a nation is only the reflex of the individuals who compose it. The nation is the aggregate of individual conditions. Civilization itself is the condition of the men, women, and children of whom society is composed.

The progress of a nation is measured in the sum of individual idleness, selfishness, and vice.

The solid foundations of liberty rest upon the individual, upon him who is the only sure guaranty for social security and national progress. John Stuart Mill once truly observed that "Whatever crushes individuality is despotism, by whatever name it may be called."

We are apt to forget the patient and persevering laborers in all ranks and positions of life; culturers of the soil, explorers of the mind, inventors and discoverers, manufacturers, mechanics and artisans, poets, philosophers, and politicians; all these have contributed toward making nations what they are. One generation building upon another's labors and carrying them forward to still higher stages.

TODAY'S DANGER—PATERNALISM

The danger of today, as has been so well said, is not the loss of liberty by use of force. It lies, rather in the supine surrender of the rights of free men to a seductive, subversive program of paternalism which is gradually changing the form of our Government from a representative democracy to a bureaucratic state, mildly despotic in action, dangerously experimental in conception; a program in which human rights and property rights cease to rest on the firm foundation of established law, and come to depend upon the whims of a temporary majority.

No free government can remain virile if it ignores or attempts to forget the traditions of its history. It is not ignorance to heed the lessons history is ever willing to teach us, but it is just that to ignore them. As Woodrow Wilson so well said, "Every nation must constantly keep in touch with its past; it cannot run toward its ends around sharp corners."

Moreover, to those who hurl the words "reactionary" and "obstructionist" as an epithet, I say to you that no student who makes even a cursory study of history can wisely censure those who protest against state paternalism. The present administration attempts both to ignore the traditions of our Government's history, and to become essentially paternalistic.

The Nation which the Civil War was fought to preserve will have ceased to be when the legislative powers are surrendered to Executives who are but too willing to accept them; when the judiciary strives to find reasons for upholding laws enacted at the behest of noisy minorities; when the plain language of Federal and State Constitutions is given new and strange meanings in order to meet assumed emergencies; when debasement of the currency is adopted as a "sound" financial policy; when the sovereignty of the individual States is disregarded and local self-government becomes an obsolete phrase; when individual initiative is discouraged, the lessons of experience cast aside, and personal liberty, in great measure, becomes a thing of the past; when men are denied to buy and sell the products of their labor in the open market place; to fix the price of goods in which they deal by bargain with their fellows; when the farmer is forbidden to sow and reap, on the land he owns, according to his own best judgment; when every detail of business life of the citizen is ordered by officials not of his own

choosing; when written agreements and contracts cease to have a binding force even upon Government itself. All these things are involved in, will be the ultimate end and result of, and are a part of, the policy and program which the New Deal endorse, and pledge themselves 100 percent blindly to support, like automatons or robots. They cannot successfully deny or defend their position by any means other than by pointing to a program of excessive expenditure of your money and mine.

The framers of our Government knew all about regimentation, planned economy, colonizations, and other features and government schemes, and the futility and folly and failure of them as repeatedly demonstrated in the days that have gone. They knew the story of kings and despots and tyrants, and bureaucracy—the beginning and endings thereof, and they definitely and positively would have none of them. It is only by the subversion and the ignoring of the limitations which these men prescribed in the Constitution which they made, and the assumption and usurpation of unwarranted power and authority that it has been possible for the administration autocratically to tell the wage earner what he may earn, how long he may work; the farmer what and how much he may produce on his own farm; the merchant at what price he may sell his goods; the manufacturer what addition he may make to his plant, how much he may produce; to control the flow of capital and savings; to enter into business in competition with private citizens. They have obliterated State lines. The prerogatives of Congress, in whom is vested the sole power to impose taxes and regulate the value of money, have been usurped. Do you realize that the right to impose taxes, in his discretion, has been granted the Secretary of Agriculture, and the authority to fix the value of money has been transferred to the President, a power so great over the lives of men it has never been enjoyed, save by complete despots. And this is America! It is time to wake up. "The liberty of a people," said Edmund Burke, "has many times been lost in a night." He who loses it, loses all. Human rights and property rights are inseparable.

THE NEW DELIRIUM

The Republican Party is the party of opposition to the crazy theories of the New Delirium, and this program that has been forced upon us. Let me tell those who resent constructive criticism of their plans and policies that whatever in this country is too delicate to discuss or to criticize is too dangerous to be tolerated. Any system, any policy, any institution which may not be debated will overthrow us if we do not overthrow it.

There are none of us that do not favor and approve some of the measures constituting a part of the so-called New Deal: Proper control of market speculation, the regulation and limitation of private profits in the manufacture of munitions or in the preparation for war; the elimination of child labor and sweatshops, some rational plan for unemployment insurance and relief for debt-harassed home and farm owners. But measures looking toward satisfactory solution of the problems just enumerated were under consideration long before the days of the "brain trust" or the New Deal. These propositions are not the ones that give us pause. It is the proposition to socialize the States and for national regimentation that shocks us, and to which we are opposed. Regimentation is anathema to free, independent, home-loving Vermonters. National regimentation violates practical economies and essential liberty if America is to remain America. National price fixing never worked whenever or wherever it has been tried, and it never will.

The suspension of the antitrust laws and the establishment of codes has had and can have but one result, the encouragement of monopoly. The Government should get out of business and the dangerously growing bureaucracy should be stopped. Republicans, as I have said, are opposed to the New Deal plan of delegating nondelegable powers to the President respecting money, tariffs, expenditures, and other factors which create the deadly uncertainties now defeating the very recovery they are assumed to be attempting to accomplish. I am too much a Vermonter to consent to the usurpation of these legislative and judicial powers and prerogatives by the Executive, and the taking over of the rights of the States by the Federal Government without a protest.

Thrift, industry, economy are no longer regarded as essential to the well-being of our people. Millions—yes, billions of dollars—representing wealth dug from the earth and wrested from the sea, brought to public treasuries by the tax gatherers are being wasted in unprofitable expenditure, in an attempt to create a prosperity as unreal and unsubstantial as the dreams of an opium eater.

RESURRECT THE AMERICAN WAY

It goes without saying, therefore, that we must change the administration in order to speed up our domestic economy, to the end that we may look forward to a satisfactory and mounting level of national income; a curtailing of wasteful, wanton spending of the taxpayers' money, and the amendment and repeal of the devastating tax laws now on the books.

We should not be misled or misinformed, nor should we be lulled into any false sense of security by the ephemeral war prosperity, if any, we are now experiencing. Nor should we continue to trade our liberty and freedom of action for special privilege or fixed security, for if we do, free competitive enterprise may not long survive, even if our peace continues. Our goal, that of each and every individual, and particularly that of the Republican Party, is the preservation of the American way of life, of civil and religious liberty, and of economic freedom, than which nothing could be more worth while.

Thomas Alva Edison

EXTENSION OF REMARKS

OF

HON. ALBERT L. VREELAND

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

ADDRESSES BY HON. FIORELLO H. LaGUARDIA, DR. JOHN H. FINLEY, AND J. V. B. DUER

Mr. VREELAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following addresses by the Honorable F. H. LaGuardia, mayor of the city of New York, and Dr. John H. Finley, editor emeritus of the New York Times, before the Kiwanis Club on February 7, 1940.

There is also included an address by Mr. J. V. B. Duer, chief electrical engineer, Pennsylvania Railroad, at the luncheon of the Edison Pioneers, February 10, 1940.

The addresses are as follows:

ADDRESS BY HON. FIORELLO H. LA GUARDIA

Thank you, Mr. President, thank you, gentlemen, Kiwanis today, in honoring one of America's greatest contributions to civilization, Thomas Alva Edison, is doing honor to itself. This continent, set aside by Divine Providence for thousands of years, and kept from the world, surely has a distinct destiny and was so kept aside, it would seem, so that when it was given to the world, it could start on the road of that destiny and make its contribution to civilization.

Our first contribution was a new concept of government. It became contagious in Europe and, since that time, many governments have been established, molded on our pattern. True, there has been a set-back, but that is only temporary, and among the many, many contributions which our country made, outstanding and in a class by himself, is Thomas A. Edison. Unique, in many respects, because he seemed to have developed knowledge of science and a genius without the usual customary background. No one in history has contributed such a long list of useful inventions, and no one's invention confronts man as much every day as the invention of Thomas Edison.

Children born today take the telephone as a matter of course; yet, the transmitter is a direct line from one of Edison's inventions. Now, to turn on the light is just a matter of course; and yet it is one of the most revolutionary inventions in the entire world. All of his inventions were useful, practical, and all did so much to make life better, and people happier.

This great genius was constantly at work and provided or obtained an average of one patent every 2 weeks for 40 years, starting with 1868, and totaling 1,150. Modest, unassuming, thorough, hard-working, industrious, absolutely sure of himself. The name of Thomas Edison will be remembered as long as men live.

Now, in keeping with the perfection of Kiwanis, and your president was very careful to explain it to me, he said, "Of course, Mr. Mayor, in order to pay a proper tribute to Mr. Edison, we had to select a gentleman of culture and refinement"—and my real assignment is to present this gentleman to you, and in keeping with that perfection of Kiwanis, the greatest genius of America, tribute will be paid to him by one of the greatest scholars of America. Your speaker of today stands out without a peer for his culture and his scholarly attainments.

And now, ladies and gentlemen, you will have the pleasure of hearing the scholarly Dr. John H. Finley.

ADDRESS BY DR. JOHN H. FINLEY

Mr. Mayor, gentlemen of the Kiwanis Club, and Mr. Chairman, this is the third time that I have had the honor to address this body, but it is entirely forgotten by your chairman. He doesn't remember that I've ever been here. I thought it was one of the greatest honors that I had ever received. I've seldom been asked to speak a second time where I've spoken once, but I appreciate the honor.

I find, however, that the honor has not come to me from the Kiwanis Club. It's come by way of His Honor the Mayor.

We may say of you, Mr. Mayor, without fulsomeness, what James Russell Lowell said of Dante, that the secret of his power is not far to see. Whoever can express himself with the full force of unconscious sincerity will be found to have uttered something ideal and universal.

Now, I have time to speak about Mr. Edison, with whom I had that one delightful association, but it was only one of many. The next day, he came down here for your great celebration, the thirtieth anniversary of the invention of the incandescent lamp, I believe it was, and I brought his hood down to put upon his shoulders. Mrs. August Belmont assisted me and he took it rather bashfully and then said, "Well, you'll be sending this, too, some

day—the day when even color is transmitted by telephone or otherwise."

I have imagined the Ancient of Days as offering to mortals the supreme distinction of having days in the calendars of time allotted to those whose birth has meant the most to mankind. Looking through my calendar of anniversaries and holidays, I find nearby days assigned to Alexander Hamilton, Benjamin Franklin, Robert E. Lee, Stonewall Jackson, the Rebirth of St. Paul, Martin Luther, as well as saints and Presidents of the United States.

So far, the 11th of February belongs exclusively to Thomas A. Edison. Had he been born on the 10th or the 12th, he would have had to share his day with Charles Lamb on the one side or with Abraham Lincoln, Kosciusko, Peter Cooper, Charles Darwin, the geologist Dana, and George Meredith. As it is, the 11th of February is solely his day among the statesmen, saints, soldiers, immortal men of letters, and scientists in our calendars, for no one in our generation has, by his contribution to the general welfare, established a greater claim to it. I say "our generation," for I have a son who was born on the 11th of February and he may, some day, claim a share of the fame.

But Edison's birthday will be observed by many of those who knew him, but the world may well take thought how it may keep him in its permanent calendar, in lasting, vibrant memory, and thank him for all that he evoked by the magic of his incessant, industrious inquiry from nature, and made it illumine the way of mankind in the dark, lessening and lightening the load of labor and bringing all the peoples of the earth within hearing of one another and so, gradually, healing the hurt of Babel. When he made his entry into his eightieth year on February 11, 1926, I sent him something that I had written about him and I repeated in part at least, as he enters his ninety-fourth. For he sent me the most appreciative word in response. Mrs. Edison (so he told me) said that he had a swelled head for a little time after that, but he was a most modest man.

No living man, perhaps (to no living man), was labor less irksome. His days were long in hours but so filled with inquisitive and creative activity that his labor was all leisure as his leisure was all labor. Time galloped with him. He spent far less of it in sleep than the average who (it is estimated at any rate) sleeps 23 solid years of his 70, if he lives as long.

Edison spent far less time, too, in eating—3 solid years for the average man—but he had a great deal of that left for himself. He ate so little or spent so little time, at any rate. And, by reason of an infirmity in hearing, he spent much less time in listening to the talk of lesser men. His 18-hour day was continuous adventure among the atoms and elements and the moving forces of the universe, not as a scientist but as an experimenter. His wizardry was that of an inquiring mind, asking questions always and applying the answer, as you said, sir, to human uses.

An old professor in Princeton used to—it is said, at any rate—used to take off his hat when he performed an experiment, saying that he was about to ask God a question. God must have been kept busy when Mr. Edison was alive. He asked so many questions, and perhaps he's continuing to ask them beyond that. Perhaps he'll find out a great many things that he didn't find out here before he left.

He lived long enough, however, to hear one of the highest authorities in his own field, and I wish he might have heard the mayor's tribute today, say this: "I think that we may soberly and justly claim that the telegraph, telephone, phonograph, moving picture, and electric light and power—six of the most vital and indispensable agencies of our modern life—owe their existence to Edison's creative genius or have been most profoundly influenced by his work and practical wisdom. He did so much to devise and improve means of human communication and life enrichment that he might, at any rate, have allowed himself a little vacation in order that mankind might catch up with what he had invented. He held that increased leisure, coming as a consequence of increased production, would mean more consuming time; that is, more consumption. One effect of machinery would be, contrary to the general view would be—according to his notions, at any rate—a higher intelligence and another, the release of old men and married women—women with husbands and children—who should not work unless they wanted to, but he didn't suggest that the Government should take care of them. He expected their families to make provision for them. He, himself, did not intend to quit work until the day before his funeral. With his extraordinary vision into the known, he could yet say that he didn't know a millionth of 1 percent about anything. This admission puts him side by side with Socrates, who argued himself the wisest of men, because he knew that he knew nothing; but Mr. Edison's advice would be to millions who now have new leisure to go on seeking to know till the day before the funeral.

As I later wrote to him on the day of his going away from this earth, the whole living world was thinking of him who brought the new lamp to mankind as Prometheus, who carried, you remember—most of you, at any rate—the fire itself to mortals, filching it from the gods in a hollow tube. It burned on hearths and altars, in forges, in torches, in lamps with wicks, till this modern Prometheus caught the new fire into the glowing filament. In countless millions of lamps it lights the night of men, illumines dark corners of the day. As he made his way down the valley of the shadow, these lamps were all alight around the world, giving to him a shining path through the darkness to his apotheosis in the perpetual light of immortality. Not only the towers and temples and mansions of men faced him in bright farewell but the lights in the windows of tenements and cottages as well, and especially the wards of the sick and those who were out upon the seas. His has been a work Promethean, but a Prometheus unbound, who has filled with speared fires and interlumined air that hung over the sea and land as the fleece of fire. I am trying to quote Sheeley here. I wish that he were alive to put Edison immortally beside his unbound Prometheus, who tamed fire, which, like some beast of prey, most terrible but lovely, played beneath the frown of man.

One of my associates said at his going what any man in the world would have been proud to say and what he would have been proud to hear—"Every incandescent light is his remembrance, sir; every powerhouse is his monument; wherever there is a phonograph or radio, wherever there is a moving picture, mute or speaking, Edison lives." If in the body Edison is to vanish from us permanently, he survives in the subtle and mysterious power he made his servants. He is ever living in electricity, sound, light. But we have found that, while he belongs to the whole earth, he belongs especially to America—to the land that gave him his birthplace, his freedom, his opportunity.

Long life to Thomas A. Edison—an American boy who became a world light bringer, and who will be remembered as long as man's voice is heard in this earth, wherein each earth-encircling day shall be a pentecost of speech and men shall hear each in his dearest tongue his neighbor's voice though separated by half the globe.

ADDRESS BY J. V. B. DUER, CHIEF ELECTRICAL ENGINEER, PENNSYLVANIA RAILROAD

Always a great admirer of Mr. Edison, I never had the good fortune to meet him, as doubtless many of you have done, and perhaps have worked with him at one time or another. It was not until after his death that I visited Menlo Park, saw his sealed desk in his laboratory office, the recess where he slept briefly on a cot during the long periods of his investigations, and his working coat hanging beside his desk in the chemical laboratory where he had done a great deal of his work, and through these personal belongings came in touch with his great personality.

It was, therefore, both a privilege and a pleasure to be asked by your association to talk at this luncheon on the development of the electric locomotive from the one built by Mr. Edison in 1880, of which you see the 1882 model on the table, to the modern, high-speed, high-capacity locomotives which we are using on our electrification.

The locomotive which Mr. Edison built was not the first in the country, but it was probably the first to use electric current from an outside generating source, and was therefore the ancestor of most of the electric locomotives operating on the railroads today. It is interesting to note from contemporary accounts that comparatively few, if any, of the practical engineers or railroad men of that day saw the possibilities of this machine and the principles of railroading which it represented. It was not until nearly 13 years later that practical application of this principle came into use on some of the railroads of the country.

Among the first of these railroads was the Pennsylvania, and it is of the development of the electrification of the eastern portion of this railroad that I wish to speak to you briefly.

Electrification work on the Pennsylvania started in 1895 with the electrification of a branch line in New Jersey from Mount Holly to Burlington. It was continued in 1905 with the suburban electrification of the Long Island Railroad, which was followed 5 years later by the completion and opening, under electric operation, of the railroad's new tunnel and terminal system in New York City. Next came the electrification of the suburban service around Philadelphia. Then by successive steps the work was progressed until it now represents probably the largest railroad electrification in the world. It is difficult to realize the progress that has taken place in the comparatively short space of time from the experimental railroad on Mr. Edison's track at the Menlo Park laboratory to the modern, high-speed electrification which exists today between New York, Washington, and Harrisburg on the Pennsylvania Railroad.

Without attempting to go into all the details of the development which has taken place since this work was first started in 1895, I would like to sketch briefly the development of the electric locomotive—a story fascinating in itself.

When the initial step of the electrification of the Long Island suburban service was completed, design work was started on a high-speed, high-capacity electric locomotive for handling the Pennsylvania Railroad's through passenger trains between Manhattan Transfer, just east of Newark, and Sunnyside yard, Long Island, through the North and East River tunnels, which were shortly to be opened. It had been determined to make the change from steam to electric power at Manhattan Transfer for the movement into Pennsylvania Station, New York, and electricity was, of course, to be the motive power through the tunnels to Sunnyside yard, designed to be the service and storage facility for all passenger-train equipment using Pennsylvania Station.

The design of this locomotive followed closely that of the American-type steam locomotive, with a single motor replacing the boiler on top of the frames and operating the wheels through side rods and jack shafts. Two of these American-type locomotives were coupled back to back to form a single unit, as those who developed the design thought that a locomotive approaching in general characteristics the standard steam locomotives of the day would be more satisfactory as a transportation unit than those following more

closely the conventional trolley-car type of design with the motors mounted on the trucks and geared to the axles.

These locomotives, known as the DD1 class, operated for many years between Manhattan Transfer and Sunnyside yard, and are still giving a satisfactory account of themselves in the direct-current territory of the Long Island Railroad both in freight and passenger service.

Our railroad adopted the single-phase system in 1914 to secure the benefits of its high-voltage, high-capacity characteristics for possible use in future through electrification of its lines, and a re-study of the electric-locomotive question was made, and several experimental designs built and tested. Finally, in 1929, 2 locomotives of the 4–6–4 wheel arrangement, known in the railroad classification as P5, were built and tested in the electrified territory, covering approximately 50,000 miles each during the period of the test. As a result 62 additional locomotives of this type were built and placed in service when the New York-Philadelphia electrified service was opened in 1933. Each locomotive was of 3,750 continuous horsepower and was geared to a maximum speed of 90 miles per hour.

During 1933, before the roadway and substation structures for the rest of the electrification between New York and Washington were ready for operation, the operation of these 64 locomotives was closely watched, and during this time four and one-half million locomotive-miles were rolled up in the New York-Philadelphia service. While the performance was in general satisfactory, it was found that certain characteristics of the locomotives, such as their relatively high wheel loads and rigid wheel base, militated somewhat against operation at speeds of over 90 miles per hour, and it was also found that their capacity of 3,750 horsepower, although higher than the capacity of steam locomotives formerly used in this service, was not sufficient to permit securing the full benefits of electrification.

For these reasons, 2 more experimental locomotives were built in 1934, one of the same general characteristics as the P5, with lighter wheel loads, known as the R1 and of 5,000 horsepower, and one of the articulated type known as the GG1, and similar to the locomotives then in service on the New Haven Railroad.

One of the P5 locomotives was selected from regular service and all three locomotives were tested over a test track at high speed, with electrical indicating devices on the journal boxes of the locomotives and other recording devices in the cab of each locomotive as well as on the track, all to determine the riding qualities of each machine and its effect on the track.

These tests showed that the GG1 locomotive was superior to the other two, both in its effect on the track and its riding qualities as a vehicle, and this design was accordingly selected for the additional electric locomotives for the Washington extension of the electrification. During the course of the tests detailed changes in design were made in the P5 engine under test which materially improved its riding qualities and these changes were then incorporated in the other engines of this type.

The service of the first 58 GG1 locomotives proved to be so satisfactory that this design was adopted as standard for additional locomotives purchased from time to time as the necessity for increased units developed. It may interest you to have a brief description of their characteristics:

With a nominal capacity of 4,620 continuous horsepower and geared to a maximum speed of 100 miles per hour, they are capable of handling a 1,200-ton passenger train, or 14 standard-weight Pullman cars, at this speed continuously on level, tangent tracks. Actually they are operated to maximum speeds of 80 miles per hour in our regular passenger service and with much heavier trains.

While the continuous rating of these engines is 4,620, they can exert for short periods of time 8,500 horsepower, giving them excellent accelerating characteristics and enabling them to handle heavy passenger trains over rolling grades, such as exist in our electrified territory, with high average speed and relatively low maximum speed.

Weighing 477,000 pounds, the individual driving-axle load is comparatively light, being 50,500 pounds, and the riding characteristics of the locomotive at all speeds are excellent. A cab is mounted on two trucks, each truck having three pairs of drivers, and a guiding truck. The articulated trucks are fitted with restraining devices between the trucks and the cab and the guiding trucks with similar restraining devices between them and the main trucks. Our tests indicate that this arrangement gives the locomotive the stability of a long, rigid wheel base, while at the same time retaining the operating flexibility of a short wheel base.

Results of operation in passenger service have been so excellent that we are now extending the use of these locomotives to freight service, where on level tangent track they can handle a train of seventy-five 40-ton cars at 50 miles per hour. Owing to the rolling profile over which these locomotives operate in freight service, however, they are actually handling trains of eighty to one hundred 40-ton cars through our electrified territory at speeds ranging up to a maximum of 50 miles per hour.

To those who have not traveled over this electrification or watched it during its growth, it is difficult to give an idea of its magnitude, handling daily, as it does, 100 heavy freight trains, 224 heavy passenger trains, 378 multiple-unit trains, and using 2,500,000 to 3,000,000 kilowatt-hours daily for this service. It presents a picture of uniform high speed, highly reliable railroad operation that it must indeed have been difficult for the railroad men whom Mr. Edison consulted to picture in the light of the railroad operating conditions of that day and age.

While we regard the GG1 locomotive as a very satisfactory and up-to-date transportation unit, progress does not stop, and it may well be that the electric locomotive of 50 years from now will bear as little resemblance to the GG1 as that locomotive bears to Mr. Edison's original machine of 1882.

You may rest assured, however, that whatever the transportation picture of the future, electrification will do its part as well as, if not better than, it is doing its job on the electrification of our railroad and many other railroads of the United States and Europe today.

Administrative Law

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

ADDRESS BY JOHN FOSTER DULLES

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an address given on January 14, 1939, at Langdell Hall, Cambridge, Mass., under the joint auspices of the Bar Association of the City of Boston and Harvard Law School, by John Foster Dulles, chairman of the committee on administrative law of the Bar Association of the City of New York, as follows:

Mr. Chairman, Dean Landis, and gentlemen of the Boston bar, you are here, I know, not on my account, but on account of the topic. Everywhere among lawyers there is a growing interest in this new thing we call the "administrative process." Of course, it is not really new. That it seems new is due, on the one hand, to forgetfulness and, on the other hand, to new terms and to new impacts. Actually the administrative process is the oldest thing that there is in the way of government. The simplest and most primitive organization of society involved the vesting in a single person or group of the entire authority of government. Through long experience and often much struggle there has emerged in certain areas a division of the authority into parts independent of each other and checking each other. In this way, it was believed, the freedom of the individual could be insured as against the despotic tendencies of government. But the system of checks and balances is what is really new and it has never become deeply rooted except in the Anglo-Saxon countries. In the United States—which came into being as a revolt against tyranny—we find strongly implanted the conception that one body should make the laws, another administer them, while a third possessed the power to interpret them and control their enforcement.

It is manifestly inefficient to put into separate compartments the three principal ways in which authority manifests itself. But it is an inefficiency which we have measurably accepted, because, with an expanding economy and a laissez faire policy, there was no particular need of a government which was highly efficient. We preferred, and felt we could afford, an inefficiency which was protective against possible tyranny.

But during recent years our world has changed. Society has become vastly more complex. It is only experts who can today trace cause into effect. Our economy is no longer an expanding one. Social and economic problems have become acute and press for solution. The duties and responsibilities of government have enormously increased. Under such conditions government naturally strives to become more efficient, and this is expected of it.

One expression of this urge for efficiency is the administrative agency. Thereby certain fields of human activity are turned over to the ministration of commissions endowed with broad authority to legislate, to administer, and to enforce, within their respective fields. In this way, it is felt, there can be attained an efficiency not obtainable under a system of checks and balances.

The creation by our Federal Government of the Interstate Commerce Commission and the Federal Trade Commission was indicative of the modern trend to which I refer. The proposal to create these Commissions aroused much antagonism, although they were not endowed with what today we would consider to be broad powers. We have gradually become accustomed to these particular Commissions and the fears originally entertained have been allayed.

During recent years the Federal Government has adopted, on a wide scale, the administrative process and has greatly developed its technique with reference to the characteristics of administrative commissions. It has been willing to strain to the limit the constitutional provisions with reference to the delegation by the Congress of legislative power. Indeed, in the case of the N. R. A., delegation was pressed beyond the constitutional limit. The result of these efforts has been the establishment of a large number of Federal administrative agencies—over 40 in number—which govern with broad power various sectors of our social life. Many have been set up with a view to achieving promptly certain reforms. In order to give them a mobility which will permit them to attain more surely and more quickly the desired results, these adminis-

trative tribunals have, to a considerable extent, been endowed with all three of the attributes which we have generally felt it wise to separate, namely, legislative, administrative, and judicial powers. The consequence is an instrumentality of an effectiveness hitherto unknown.

Lawyers have heretofore had to deal primarily with the static. Laws have been passed which constituted, for the time being, a complete and final exercise of the legislative power. Such laws constituted obstacles to action in certain particular ways, but they were fixed obstacles. Today we encounter not a mere obstacle but a weapon which is like a flaming sword. It is not static, but is wielded by skilled hands, directed by astute brains. The flexibility and scope is such that avoidance thereof is impossible and adjustment thereto a difficult problem. Vast fields which touch the lives of us all have been turned over to the ministration or policing of such agencies.

It is not my purpose to deal with the distinctive attributes of the different administrative tribunals. Subsequent lecturers will deal with one or another of the more important commissions. I propose to devote myself primarily to considering some of the general aspects of the problems involved, and in the first instance the attitude which the lawyers should adopt if they are to deal effectively with this new species of being which confronts them at every turn and which is bewildering because of its many facets.

It would, I think, be vain to deny that there exists today fundamental antagonism between lawyers as a whole and these new administrative tribunals. Throughout the country, bar associations—national, State, and local—have set up committees to study the problem of administrative tribunals. The underlying reason for this is a widespread feeling that the tribunals are a menace to personal liberty and a step toward despotism, and that they need to be curbed. Various legislative proposals have emanated from bar associations designed to make impotent the administrative process. I am not in sympathy with such proposals, and in the concluding portion of this talk I shall refer to this aspect of the problem. Before that, however, I think it may be useful to consider certain phases of the situation which are of practical moment to a lawyer who, on behalf of a client, has to deal with the actual situation. All of us would agree that, whatever our personal views may be with respect to the merits of combining in one body legislative, administrative, and judicial powers, such views should not be permitted to prejudice the position of a client. It is then the practical approach and conduct on behalf of a client which I would now consider.

No lawyer can effectively represent a client in dealings with an administrative tribunal unless he gets himself into a state of mind which, on the one hand, frees his advice and action from prejudices, and, on the other hand, involves a recognition which, if it cannot be sympathetic should at least be intelligent, of the attitude of commissions toward their task and toward lawyers who appear before them.

I do not include as "prejudice" the honest conviction of many lawyers that the administrative process is potentially subject to grave abuse. But I do feel that there are many other factors which, often unconsciously, influence a lawyer's attitude toward administrative tribunals and which do create prejudices. The lawyer should, with mental honesty, search his mind to find such prejudices and, if he finds them, seek to eradicate them.

Lawyers have to a very considerable extent been spoiled. They have had in which to operate a field set apart by rules of its own and within which a special form of intellectual exercise and enjoyment was obtainable.

To illustrate what I mean, I may refer to the fact that some years ago I spoke to the honor group of one of our leading preparatory schools. I chose as my topic The Futility of Intelligence. This was a considerable shock to the boys who had achieved high scholastic standing, and, I fear, even more of a shock to their masters. What I sought to develop was that there were very few fields in life within which it was possible to obtain results purely by reliance upon the operation of intellectual processes. Human action is predominantly dictated by custom, mass emotion, loves, hates, appetites, prejudices, and other nonrational factors. In most fields of human activity all of these elements must be taken into account, and results cannot be expected merely because logic would seem to demand it. But there are certain carved-out areas within which results are obtained primarily by intellectual processes and where pure reason holds sway. The game of chess is an illustration. It constitutes a special field governed by certain rules which afford scope for the free and undisturbed exercise of intellectual processes.

The law—outside of jury practice—is a somewhat similar field, and one of its great attractions has been that there are certain rules of the game which in their broad outlines have been long established and which permit a species of intellectual enjoyment obtainable in few other walks of life.

Lawyers, quite naturally, have always sought to maintain their special preserve, and so far as possible to keep the rules unchanged. They have justified themselves by extolling "certainty." It is more important, they say, that law shall be definitely ascertainable than that it do precise justice and equity in each case. Lawyers have ascribed the term "bad law" to those deviations from precedent which result from "hard cases." There is much merit in the doctrine of "certainty." Without reasonable certainty business, for example, is paralyzed. But "certainty" has also, for the lawyer, been a self-serving doctrine and consequently exaggerated.

The bar historically has been conservative, standing against changes which materially modified the rules within which they worked. From time to time important changes have occurred. But they have usually occurred due to pressure from without rather than to reform from within. The introduction of "equity" came when common law had become so rigid that legal technique was almost an end in itself, largely unrelated to justice. Simplification of pleadings, liberalization of rules of evidence have come primarily from pressure from the outside public which, in the face of recurrent failures of justice, demanded less technical procedures.

Administrative bodies represent the most recent and most flagrant intrusion into the lawyers' preserve. Thereby there has occurred an extraordinary change in the rules of the game. The classic separation of legislative, executive, and judicial functions has been cast aside. The law has, in effect, become mobile rather than static. Uncertainty replaces certainty, and much that has been learned over the years has become obsolete. No longer is it possible for a lawyer to sit at his desk and by making logical deductions from past decisions advise his client with confidence as to his rights. All of this is naturally disturbing and upsetting to lawyers and tends to create in them a sullen resentfulness which, unless overcome, will largely disqualify them from effectively representing their clients.

I recall in this connection that some years ago I took bridge lessons from Mr. Milton Work, who was then the leading authority on the game. This was the period of auction bridge and contract bridge was just being introduced as an innovation. Mr. Work felt that auction bridge was already complicated and difficult to master, that he had become a master, and that he would ignore the intrusion of the contract principle. Unhappily for Mr. Work, contract bridge came quickly to replace auction bridge, new authorities appeared upon the scene, and Mr. Work's clientele disappeared. Mr. Work, as I recall, was a lawyer. His attitude was, I fear, typical of our profession. Many lawyers today will similarly lose their clientele if, resentful of the intrusion of innovation, they close their minds to the actual changes which are going on about them and which, for better or worse, must, for the time being, be accepted and understood if the interests of their clients are to be preserved.

It is not only necessary for lawyers to eliminate their own prejudices, but they should also seek to appreciate the point of view of those who man the administrative bodies with which they have to deal. It is always wise to seek to know what the person with whom you have to deal is thinking of you. And we must recognize that if there is prejudice on the part of the bar against administrative tribunals, there is equally prejudice on the part of the administrative tribunals against the lawyers. Prejudice in any quarter is bad. But where prejudice is coupled with power it must be recognized and taken into account as one of the significant elements of the situation.

It comes as somewhat of a shock to a lawyer to learn that many administrative bodies prefer to deal directly with the client and encourage the client to dispense with the interposition of a lawyer. This is a reversal of the usual situation. Normally results can best be achieved and differences can more readily be reconciled if there exists an intermediary skilled in settling differences and able to approach the problem with a detachment which is seldom felt by the person who is himself directly concerned.

The desire to deal directly with the client is not typical of the older administrative bodies. The difference is, however, not wholly explicable by the relative immaturity of recently created commissions. It results from the fact, to which I have already alluded, that such commissions often feel that they have a mission, not to deal judicially with individual cases through the meticulous application thereto of fixed rules, but rather to achieve promptly some broad social reform. The individual case assumes little importance of itself and is to be dealt with primarily from the standpoint of its bearing upon the whole.

Such an approach is alien to the historical approach of the lawyer. He thinks in terms of his particular case and is accustomed to tribunals which adopt a like attitude, disclaiming responsibility for policy. The lawyer is often relatively ignorant of the field as a whole and has no adequate facilities for learning it and appraising the evils sought to be eradicated. Therefore, when the commission meets a lawyer, there is apt to be no constructive joinder of issues. The lawyer is argumentative about facts which to the commission seem unimportant details. The commission knows, or thinks it knows, what is required in the interest of the situation as a whole, and it feels that the lawyer is ignorant of this or, if not ignorant, cannot allow it to sway his professional presentation. The commission feels that the lawyer is adept at concealing that which may seem prejudicial. It is eager to get quickly at the facts in its own way. It is thus not surprising that commissions of certain types are apt to feel that the interposition of the lawyer involves a mere waste of time and that progress can best be achieved by dealing directly with the party in interest.

To revert again to my illustration of a chess game, it is as though the commission felt under mandate to capture the black king. The direct and simple way is, by a snatch of the hand, to take the black king. The lawyer, on the other hand, would make the commission go through the long-drawn-out process of attempting to capture the king by moving subsidiary pieces over a period of hours with the chance that the black king may ultimately escape.

There is also a growing disposition on the part of Government officials to challenge the lawyer's traditional viewpoint that anyone, even though guilty in appearance, is entitled to be represented by competent and reputable counsel. Those who serve the Government generally become identified in spirit with its presumed goals. They loyally and often in the spirit of crusaders seek to advance its ends. Their own mood of self-identification with their own client makes it difficult for them to recall that lawyers can represent their clients dispassionately and without identification with their clients' objectives. They feel that lawyers, through lack of principle or through venality, sell their souls and become an inferior order of being.

In saying what I have said regarding the mental attitude of certain commissions toward lawyers, I am indulging entirely in guesswork. It is not guesswork that commissions which feel that they have a mission to achieve an overdue social objective prefer in many situations to deal directly with the client and to bypass his lawyer. This view has not infrequently been expressed. The reasons for this have never been confided to me, but I have attempted to rationalize them in a way which seems to be natural. I do this not because it is a pleasant topic on which to dwell but because it is important that we should seek to see ourselves as others see us.

From the foregoing I draw certain practical conclusions:

1. The lawyer dealing with a commission should not carry into his work prejudices and resentment which are perhaps natural, but which, in justice to the client, must not be allowed to color the lawyer's judgment and action. He should, for example, be very sure that he does not unwittingly encourage the client to fight a commission, because this will afford the lawyer a chance to vent his general feelings against commissions as such.

2. The lawyer should seek to appreciate the commission's viewpoint and its social objectives. Only thus can he acquire the vision to see what, to the commission, will appear to be the weakness and the strength of his case.

3. The lawyer should not, as a matter of pride, seek always to be the intermediary with the commission. There are times when the client can best deal directly with the commission.

4. The lawyer can perhaps be more discriminating about his clientele. It seems to me that a distinction can be drawn between representing a client in a controversy regarding the past—which has already crystallized—and advising him regarding some projected action. In the first case the lawyer has a duty which cannot be shirked merely because some officials may not like to have their prosecutory task thereby made more difficult. But as regards projected action, the lawyer is under no duty to a prospective client and should weigh the social implications of what he does.

We now pass from the psychological area to more concrete, practical problems. For this purpose we can conveniently classify our problems as between the legislative, administrative, and judicial. The classification is, of course, largely conventional. There is, in fact, no clear dividing line. An order by a commission may readily partake of all three characteristics. Nevertheless, some subdivision is convenient, and that which I have suggested will serve as well as any.

The first task of a lawyer is to know the relevant law. This presents enormous difficulties when the law is made by commissions which enjoy legislative or quasi-legislative powers.

There is, of course, a great difference in the degree of legislative authority accorded to commissions. In the case of the National Recovery Act, the delegation was held to be excessive, and it was largely on this account that the National Recovery Act was held unconstitutional. Despite this decision, by such subsequent acts as the Public Utility Holding Company Act and the Wage-Hour Act, very wide legislative authority was conferred upon the administrative agency. Even where an act does not on its face purport to confer legislative discretion, this often results in fact from the power to interpret and implement. In this respect the administrative agency takes over to a considerable extent what has in the past frequently been referred to as "judicial" legislation. The courts have frequently had to deal with and apply legislation so vague or general in character that interpretation and application inevitably involved a very large amount of judicial discretion. Perhaps the most outstanding illustration was the introduction by the Supreme Court into the Sherman Antitrust Act of the so-called rule of reason. Many other examples could be given wherein the courts, as a matter of judicial interpretation, have applied their conception of the intent of the legislature with reference to particular situations. To a large extent technically equipped administrative bodies have now, with legislative sanction, taken over this task, which formerly, in default of any other agency, devolved upon the courts. Thus, even in the case of a commission to which no legislative discretion has in terms been granted, in fact their interpretative powers may involve a large exercise of quasi-legislative power.

Lawyers have always felt burdened and somewhat aggrieved at the number of court decisions which they have had to consult in order to ascertain the law. They can now read with sympathy and understanding the Second Epistle of Peter, where it is said: "* * * They are again entangled therein and overcome; the latter end is worse with them than the beginning."

Federal decisions for the last 50 years, interpreting such a statute as the Sherman Antitrust Act, are but as a child's primer compared with the opinions, decisions, rules, and regulations of the Securities and Exchange Commission under the acts which it has been administering over the last few years. This Commission has already issued about 6,000 releases. There were 1,649 such releases during the past year, consisting of approximately 25 pages per working day during the year. The Federal Trade Commission, during the past year, issued 1,361 pages of releases. The Federal Power Commission issued, for 1938, 328 releases (445 pages), and the National Labor Relations Board, during the year ended June 30, 1938, issued 766 releases of 1,915 pages. The foregoing statistics apply to only four of the forty-odd Federal administrative agencies.

It is virtually impossible for any single lawyer to keep himself informed as to the state of the law under such acts as the Securities Exchange Act, the Securities Act, Public Utility Holding Company Act, National Labor Relations Act, and Wage-Hour Act. There are, of course, services which supply currently the output of rules, regulations, opinions, and decisions. But even if time can be found to read them, they are often beyond the understanding of one who is without the factual background which points to the substantive purposes which the Commission, by its rulings, sought to achieve. There are a few large law firms with a clientele such as requires and warrants their keeping in more or less constant touch with one or another of the Commissions. Such a firm may be in a position to know with some definitess what the law is with reference to some particular state of facts. But most lawyers and most law firms are not in a position, through their own unaided efforts, to advise with confidence with respect to matters upon which they may be consulted if these matters fall within the jurisdiction of some administrative body.

This is, for a lawyer, a very awkward situation in which to be placed. But it is, I think, safer and sounder for a lawyer to accept the fact of his own ignorance rather than to improvise opinions with a view to bolstering his own self-respect or impressing his client.

Most commissions happily have recognized the difficulty in which lawyers are placed and are prepared to receive and deal courteously with reasonable inquiries.

The Securities and Exchange Commission has from its inception been willing to assist lawyers in elucidating the law and, during the past year, has publicly so announced. For example, by Securities Exchange Act release No. 1861, it said that "persons who have doubt concerning the application of this rule (regarding underwriters) will find the staff of the Commission at all times available for discussions of the scope of the rule and its application to their particular situations." A few days ago, by Utility Holding Company Act release No. 1380, it announced that persons desiring to determine in advance whether a particular transaction fell within the rules, might apply to the Commission for a finding and opinion.

Lawyers who have had occasion to deal frequently with the Securities and Exchange Commission can testify to the unfailing courtesy and patience with which their inquiries have been dealt with. Similarly, the Federal Trade Commission has sought to assist in interpreting the Robinson-Patman Act, which it administers.

A lawyer will not, however, have discharged his duty to his client if he merely informally ascertains and accepts the view of a Commission's staff as to the law. Such inquiry may be a useful preliminary step, or it may be a useful check on the lawyer's own conclusions. But unless the lawyer, at some stage, thoroughly and independently investigates the facts and the law and the rules applicable thereto, and forms his own opinion, he will be advising the client on the basis of legal advice rendered by those who owe no duty to the client. Particularly is it doubtful if lawyers should advise a client to proceed affirmatively on the basis of administrative advice unless such advice agrees with their own judgment.

There is another type of risk in the procedure of getting advance advice as to the law applicable to a given situation. There is the danger that, in truth or in appearance, all relevant facts may not have been disclosed. When this occurs, there may subsequently arise charges of bad faith on one side or the other.

Lawyers should feel under a duty, when they seek the advice of a commission as to the law, to refrain most scrupulously from seeking to gain a favorable opinion on the basis of factual premises which are distorted or partial in material respects. Any other attitude would inevitably lead to a curtailment of that indispensable advice which is now freely given.

If the law, after it has been ascertained, seems to permit of a client doing what he wishes—or more usually some acceptable approximation thereto—the next step is apt to be compliance with certain administrative procedure. If, for instance, securities are to be sold, there must be filed a registration statement, deficiency letters must be met and amendments satisfactory in form to the Commission prepared and filed so that the requisite order of acceleration may be issued. Without this order the administrative process could not keep pace with changes in market conditions. If proxies are sought in the case of a company whose securities are listed, it is necessary to comply with the proxy rules and to file a proxy statement with the Securities and Exchange Commission. Almost all important corporate acts of a public-utility holding company must be submitted to and approved by the Commission. Operating companies may also have to obtain the approval of the Federal Power Commission. Such administrative practice requires not merely an antecedent acquaintance with the law, of which we have spoken, but also a knowledge of the practical work-

ing habits of the Commission. Commissions, as well as lawyers, have their problems. The fields which they are required to cover have enormous scope and there are created for the Commissions administrative problems of a major order. There is, indeed, the risk that in the search for perfection there will be lost, in bureaucracy, the vaunted "efficiency" of the administrative process. The lawyer must, however, help to avoid this, by conforming to orderly procedures. The lawyer should be familiar with and considerate of the practical methods of each commission whose administrative functions he calls into play. The time element is here a most important factor. The lawyer cannot expect to devote weeks to the preparation of voluminous and complicated papers and then expect that the staff of the commission can drop its other business and deal with his particular problem overnight. It is inevitable that there be within every commission a hierarchy. Papers filed must, in the first instance, be examined by subordinates who will sort out the important from the unimportant, consult their next superior on the important, who in turn may have to consult one of the commissioners or the commission itself with respect to very important matters of policy which are involved. All of this takes time and a lawyer practicing before a commission should not ignore this fact. It is a splendid testimonial to the good will and desire to be of service of most commissions that the commissioners and their staffs are, in the main, willing to sacrifice their personal convenience and leisure to working day and night, disregardful of the policy of the Wage and Hour Act, to assist lawyers in meeting a time schedule.

Sometimes, however, lawyers place themselves and their clients in an embarrassing position by prematurely filing with the commission papers which become a public record with consequent public disclosure of the client's intentions. It is often embarrassing to a client to disclose intentions which cannot be carried through because of getting bogged down in administrative difficulties. To illustrate, let us suppose a registered utility holding company desires to refund its 6-percent bonds by selling new 4-percent bonds. It has ascertained that the bankers will underwrite the new bonds (which must be authorized by the stockholders) and the old bonds can be called on the next interest date, say 60 days hence. Thereupon, after study of the proxy rules under the Securities Exchange Act; of the registration rules under the Securities Act; of the rules under the Holding Company Act, there are prepared and filed the necessary papers. Immediately upon filing, the program is announced in the press. The old 6-percent bonds move in the market, up or down, to their call price, and the common stock moves to reflect the anticipated interest saving. But, unhappily, it develops that the "proxy statement" is deemed by the Commission to be inadequate. The registration statement does not "value" capital assets in the way the Commission desires and revaluation will require several months' work by auditors and engineers. The new bonds do not have indenture protection of the kind which the Commission wishes. Obviously, there can be no further thought of calling the old bonds in 60 days and no banker's commitment can be obtained good for several months hence. The whole program must be abandoned, at least for the time being. The market price of the old bonds and stock must again be readjusted, with loss to some holders. There is harmful suspicion that the transaction failed because of the financial weakness of the company or because some "skeleton" has been uncovered. Gossip is rife and seriously harmful. Security holders are critical.

There is no way absolutely to insure against such an outcome. But a considerable measure of insurance is obtainable if, before any papers are filed, they are informally discussed with the Commission. The Securities and Exchange Commission is quite willing to extend this service and to make its contribution toward avoiding a public fiasco. In April 1938 the Commission established a unit in the Registration Division to aid prospective registrants. In August 1938, when proxy rules were promulgated, it announced (Securities Exchange Act, release No. 1823) that it had "adopted the policy of consultation and assistance for the benefit of persons who desire to prepare the material which must be filed under the new regulation." Although I am not aware of any formal announcement on the subject, I do know that they are equally prepared to discuss, in advance, their policy under the Public Utility Holding Company Act. The establishment by the Commission of regional offices is of great help to the lawyer seeking guidance on administrative matters.

Of course, the Commission staff will not do a lawyer's work for him. They will not prepare registration statements or proxy declarations or applications under the Holding Company Act. But they will discuss, in advance, the aspects of a situation which may be troublesome and assist the lawyer to avoid, for his client, public embarrassment.

In addition to their legislative and administrative functions, many commissions also exercise judicial or quasi-judicial functions. Their decisions in these respects may also be subject to review by the courts. I will first speak briefly of judicial and quasi-judicial proceedings before the commissions themselves and subsequently of the possibilities of judicial review.

Judicial or quasi-judicial proceedings before commissions can, for convenience, be divided into two categories: those which are initiated by the commission itself in the exercise of its prosecuting functions, and those which are initiated from without the commission to obtain action by the commission. In cases of the former category, i. e., prosecutions by the commission, the lawyer functions in ways with which he is familiar. He may feel, and usually does feel, aggrieved if the commission is at the same time the prosecutor and judge of his case. There may be features which seem to him unfair, as e. g., that he can secure a subpena only on application to the commission thereby apprising the adverse party in advance of the witnesses he proposes to call, whereas he has no corresponding knowledge. But insofar as the actual practice procedure is concerned, it is usually not dissimilar from that to which he is accustomed in the courts. Witnesses are called, sworn, examined, and cross-examined; objections are made to the admissibility of proffered testimony and it is admitted or excluded, with exceptions noted. No special experience or technique, apart from that of the courtroom, is, as a rule, required.

In the case, however, of proceedings brought to secure affirmative action by a commission, a different atmosphere prevails. Often the Commission is empowered to deny the action requested if in its opinion some broad consideration, for example, "the public interest" or "the interest of investors" will not, in its opinion, thereby be served. The lawyer generally does not know, and in the nature of things cannot know, the entire background of thought which is in the mind of the Commission. He is vaguely aware that considerations drawn from an entirely alien state of facts, which he cannot combat, may be determinative of the result. Typical in this respect were proceedings brought before the Securities and Exchange Commission by corporations seeking confidential treatment of certain information required to be filed with the Commission under the Securities Exchange Act of 1934. Many such proceedings were brought by managements which genuinely and honestly felt that, on the particular facts of their case, disclosure would not serve any public interest and would actually hurt the stockholders through giving information to competitors. It quickly became apparent, however, that the Commission had basic views on such matters, drawn from its general knowledge of the security and corporate field and perhaps based upon a belief that if all made public disclosure the aggregate of such disclosures might be in the public interest, and that from the competitive standpoint the advantages of learning about competitors might cancel out the disadvantages of giving information to competitors. In the face of such an approach, it became virtually impracticable for any one company in any single case to try out the broad question of public interest. This was a task beyond the powers of any individual litigant. Consequently, there gradually came about a general acquiescence, oftentimes grudging, of the Commission's policy. In very few of such cases was the issue fought to a final adjudication.

The Federal Power Commission, to use another example, may permit interlocking directorships "upon due showing * * * that neither public nor private interests will be adversely affected thereby." To prove such a negative is a virtually impossible task.

In such cases the lawyer finds lacking the elements of judicial procedure to which he is accustomed and can only appeal to the discretion of the commission on the basis of such a showing as time and cost will reasonably permit.

The strength of a commission's position as judge and the weakness of the position of a lawyer become apparent if we turn to the field of judicial review. Here again we encounter the distinction we have made between proceedings to secure affirmative action by a commission and prosecutory proceedings by a commission to suspend some privilege or impose some penalty.

Where affirmative relief is sought and denied, such denial is a "negative" order and, according to the present weight of judicial decision, is not, as such, subject to judicial review. See, for example, the decision of the United States Supreme Court in the case of *Federal Power Commission* v. *Metropolitan Edison Co.*, 304 U. S. 375 (1938), where it is said: "Negative orders of the Commission are not reviewable." Lawyers may, with reason, quarrel with the distinction between so-called negative orders and positive orders. They may seek to draw distinctions in particular cases or to secure a reversal by the courts of their past decisions. There are indeed decisions in different circuits which appear to be in disharmony and this week the Supreme Court granted a writ of certiorari in *Pacific Light & Light Co.* v. *Federal Power Commission*, 98 Fed. (2d) 835, which may presage a review of this whole matter. There are also, in certain cases, indirect ways whereby a client, by placing himself in jeopardy or by seeking an injunction, may find a way of getting his case before the courts. But the practical situation at the moment is that, in a case brought to secure affirmative action by a commission and which case is disposed of by a negative order of the commission, there can be no assurance of any right of review on the merits. We have the anomalous situation that only if you win your case before the commission do you have any right of appeal.

This is a practical situation which cannot but influence the nature of a lawyer's advice to his clients. It has a distinct bearing on the expense to which a client is warranted in going to prepare a record in favor of a result which may be denied by a "negative" order.

In the case of final decisions by commissions, which are affirmative, in contradistinction to those which we have termed "negative," there exists the right of review by the court. But as to this the lawyer should not be under great illusions. As a practical matter, it is only in rare cases that court review serves any substantial

purpose. The potentiality of such review is, of course, enormously valuable as tending to lead commissions to comply, at least in form and generally in substance, with those basic procedural requirements of "fair play" which the Supreme Court has several times annunciated, notably in the Morgan case (304 U. S. 1 (1938)), which arose under the Packers and Stockyard Act. Aside, however, from the fact that the possibility of court review thus serves as a salutary influence on commission procedure, review will seldom serve to protect a client against irreparable damage through the prosecuting activity of a commission. The very fact that a commission initiates punitive action is itself of serious consequence to the average client. Such proceedings are usually attended with wide publicity. The goodwill of the client is seriously injured and full advantage of the situation is taken by business competitors and rivals. The proceedings, once instituted, are apt to be very prolonged due to the inexperience and zeal of prosecuting officials and of the examiner and due to their disposition to get into the record evidence of almost anything, however unrelated to the original charge, that counsel for the commission feels may prejudice the client in the eyes of the commission. The cost of the proceedings is apt to be enormous and as part of the cost must be taken into account the distraction from duty of important officials over an extended period of time. The record is made so voluminous that it is almost impossible to expect the Commission itself or any reviewing court to examine it fully, and if much of the testimony admitted is obviously irrelevant, the Commission can protect itself as against appeal to the courts, by the self-serving statement that it has reached its decision without being influenced by any of the immaterial and prejudicial evidence which has been put on record over objection. There is, furthermore, in most cases a presumption in favor of the Commission and some evidence can usually be adduced which, when segregated and marshaled in the Commission's brief, appears, superficially at least, to warrant the result. If the record is so dubious that, as the hearing of the appeal is approached, the Commission begins to feel concern as to the outcome, the Commission can, as permitted the Labor Board by the Supreme Court in the recent Ford case (*Ford Motor Co.* v. *National Labor Relations Board,* 83 L. Ed. 229, decided Jan. 3, 1939), withdraw the record from the appellate court and begin proceedings anew, thereby prolonging the anxiety, expense, and loss of the litigant while the record is patched up.

In an address made last December 30, Mr. Chester T. Lane, general counsel to the Securities and Exchange Commission, in discussing the care which should be exercised by commissions before instituting prosecutory proceedings, had this to say:

"* * * Candor compels me to admit, however, that the remedy of judicial review, in most cases, has no practical content. Business transactions cannot wait upon the exigencies of appeal. The overwhelming mass of administrative determinations are never reviewed by the courts. Time is of the essence. Even appellate procedure within the administrative by no means insures that the unfortunate results of action unwise or arbitrary will be cured. The remedy of appeal is not adequate."

It is important that the lawyer should be well aware from start to finish, and particularly at the start, that "the remedy of appeal is not adequate." Otherwise he may lead his client into a course of action which, in retrospect, will be regretted.

On this note—a rather sad note from the lawyer's standpoint—I conclude my effort to point out certain broad practical considerations to which the lawyer must accommodate himself if he is to handle, to best advantage, the problem of his clients and give them sound advice.

I should like, however, in the time that remains, to consider the attitude toward administrative commissions of lawyers in their own right, as citizens, and not in a representative or fiduciary capacity.

Lawyers, at least to the extent that they are vocal, seem preponderately to be antagonistic to administrative commissions, at least those of the flexible type. What I have already said shows how natural it is that this should be so. I would, however, agree with this viewpoint only to the extent of recognizing that such commissions contain potentialities of evil and regretting that conditions from time to time develop which seems to call for commissions of this type. Generally, they are consequent upon the occurrence, within some area, of deep-seated abuses which are not, and perhaps cannot be, eradicated by self-discipline or ordinary prohibitive legislation. There is nothing unnatural in government attempting to deal with such situations by setting up a mobile, flexible agency, endowed with such broad powers that it is, to a large degree, self-sufficient—without dependence upon cooperation from any outside agency like the courts. This is the procedure which industries have themselves adopted under like conditions. When the baseball industry was threatened by revelation that world-series games were "thrown" by players bribed by professional gamblers, a "czar" was appointed, with broad, arbitrary powers, to be used to restore the confidence of the public in the integrity of the game. When personal scandals, involving the private lives of movie stars, became so shocking that the public was repelled, a "czar" was appointed to rule that industry to the end that public support might be regained.

The New York Stock Exchange possessed powers of the most arbitrary nature. Its disciplinary proceedings were decisive, not subject to court review. Unhappily, these powers were not used to prevent that loss of public confidence, which led to the vesting in the Securities and Exchange Commission of control over trading on public exchanges.

Other abuses had developed in other quarters. The public issuance of securities often occurred under conditions which involved a lack of adequate sense of responsibility on the part of the issuing bankers. This the investment bankers had failed—or been unable—to correct. Conceded and flagrant abuses were characteristic of the management of certain public utility holding companies. In the labor field, the powerful opposition of management to organized labor made inevitable some remedial legislation.

Under existing economic conditions we cannot expect government, where abuses exist and persist, to refrain from seeking effective measures to correct them, and such measures may require—as private industry has by example demonstrated—a large measure of power and a consequent ability to be arbitrary.

If, therefore, the bar would avoid administrative tribunals endowed with large legislative, administrative, and judicial powers it must primarily seek to do so by using its influence to prevent the growth of abuses which call such instrumentalities into being. Individuals may feel impotent and are doubtless usually inadequate to effect reform. But more could have been done than has been done to bring about general realization of the fact that unless abuses are eradicated from within there is bound to be control from without.

If and as administrative tribunals with great power come into being, the bar still has a duty to perform. It is a duty, on the one hand, to seek to make the functioning of such bodies consistent with democracy and the preservation of the basic rights of the individual and, on the other hand, to be vigilant to detect and denounce any violation of such rights.

No one can deny that administrative power, such as is indicated, constitutes a potential threat to democratic institutions. The techniques are precisely those which have been effectively utilized in countries like Germany and Russia, to center all power in government and to deprive the individual of independence. They may readily convert our Government from one of laws to one of men. What I have already said sufficiently illustrates this. There is danger when the mass of rules, regulations, and decrees is such that it is practically impossible for a citizen independently to determine his rights. We approach a government of men, when a citizen must go to some public official and ask what the law is and when, in most cases, he has no practical alternative but to accept the version which is given him. There is danger when there is no safeguard, such as grand-jury action, against the institution of proceedings of so great injury that the mere threat thereof is coercive. There is danger when the prosecutor is himself the grand jury, judge, and petit jury, without effective right of review by any independent, judicial agency.

But because such dangers are inherent in administrative tribunals, we need not assume that they will be realized. Nor do we need to seek to hamstring such tribunals by subordinating their action in all respects to court review on the law and the facts. This is the lawyer's pet formula for rendering impotent administrative tribunals. It is, in my opinion, a device which is impracticable and which, if it proved practical, would involve consequences far worse than those we would avoid.

I believe this device to be impracticable, because I feel the courts will refuse to accept the burden which would thus be sought to be thrown upon them. The courts have already become wary of overruling, or reviewing, administrative decisions. Take, for illustration, the doctrine they have evolved of the nonreviewabilty of so-called negative orders. The distinction between negative and positive orders is often without present substance. A so-called negative order may in many cases work major substantive damage. Yet the courts still persist in invoking this rule—and recently again did so in the case of *Houston Natural Gas Corporation* v. *Securities and Exchange Commission* (100 Fed. (2d) 5), even in the face of a request by one of the commissioners that the distinction be disregarded and review granted.

It seems to me obvious that the courts are invoking a distinction, originally meritorious but now purely technical, in order to avoid a multiplicity of reviews. I doubt whether even mandatory legislation would serve to induce the courts really to review—on the law and the facts—all decisions of administrative bodies. Yet this was in substance sought by a constitutional amendment submitted last fall to the voters of New York with the sponsorship of the New York State Bar Association—though not of the New York City Bar Association. The amendment was defeated by the electorate.

If the courts were to assume the role of reviewing—on the law and the facts—all decisions of administrative tribunals, the consequences would, in my opinion, be most serious. The courts would have been used to nullify agencies which emerge, and reasonably emerge, out of the democratic process. If the courts are so used, it spells the end of an independent judiciary. We are, after all, a democratic country. The will of the people will, broadly speaking, prevail. The courts can prevent occasional aberrations and excesses which infringe and place in jeopardy the fundamental personal and property rights of the individual. We need the courts for this purpose—we may need them desperately. But we will not have courts of a character to serve us in this emergency if, whenever agencies are created which are novel and effective and, because effective, susceptible of abuse, we throw upon the courts the task of nullifying them. An inevitable consequence would be a limitation of the powers of the courts, or the naming of judges subservient to the will of the Executive.

We must use the court sparingly, and only in clearly justifiable cases, to nullify results sought by the legislative and executive branches of government, in pursuance of the popular will. Otherwise we will lose our courts.

I came to see what I now consider to be the "light" on this subject during the course of the legal fight being conducted by utility holding companies against the constitutionality of the Public Utility Holding Company Act. It was largely for the foregoing reasons that I came to the conclusion that a client, which was a leader in the legal fight, should drop its suit and register. I frankly became fearful of the consequences of possible victory. That my fears were not groundless was dramatically evidenced by the fact that on the very day when the company's president and I were in Washington to tell Chairman Landis of our decision, the President announced his plan for enlarging the Supreme Court.

There are some matters which we must fight out in our popular assemblies and, if we are there beaten, we cannot expect the courts to reverse the verdict. If this had been realized sooner, and by more people, I doubt that the Supreme Court would ever have been endangered.

I would deeply deplore it if those who champion an independent judiciary should jeopardize this by seeking to utilize the courts as the instruments whereby, in advance of any proved necessity, they would render nugatory those administrative agencies which society is seeking to evolve as an answer to the many complicated problems facing us today.

There seems to me little present occasion to assume that because administrative agencies have powers which they may abuse, such agencies should in effect be nullified. Before we adopt such a program we should carefully appraise the self-restraint already evidenced by most administrative tribunals and their evident desire to protect the citizen against abuse through the mistaken zeal of any of their staff.

The Securities and Exchange Commission accepts soberly its responsibility as both prosecutor and judge. Obviously this is not a power which it welcomes as licensing abuse. It would undoubtedly accept as applicable to itself the remarks of Gerard C. Henderson in his book on the Federal Trade Commission (p. 83):

"Clearly from the point of view of organization, the Commission's most important and most difficult task is that of maintaining a distinct separation between its prosecuting capacity and its judicial capacity. This is essential if its decisions are to be fair and just * * *."

In his recent Cleveland address, to which I have already referred, Mr. Chester Lane, the General Counsel to the Securities and Exchange Commission, tells at length of the steps now being taken by the Commission to develop an "opinion section" which, having no contact with the prosecuting attorneys or trial examiners, gives each case independent judicial examination before a decision is rendered. It will, of course, be difficult to create any mere section of the Commission which will not have a certain bias, based on loyalty, in favor of the Commission. It will be unfortunate if those who decide in the first instance cannot weigh the testimony with the advantage of having personally observed the demeanor of the witnesses. It will be difficult for the Commission to sit in judgment on its own action in doing irreparable damage by the perhaps unwarranted institution of a prosecutory proceeding. Perhaps something more drastic than an opinion section may prove indispensable. But it cannot now be said that the desired result is impossible of attainment. Certainly it is being seriously and intelligently sought.

Chairman Douglas recognizes, as did Chairman Landis before him, the inadequacies of the trial examiner system and improvement in this respect is being sought.

I referred previously to a memorandum of one of the Commissioners on the subject of court review. It is by Commissioner Healy and it has received, I think, less attention than it has deserved. In urging upon the court that it review a final negative order of the Commission, he said, among other things:

"* * * such a power of final decision as will result if jurisdiction is refused in this case will in the long run come to be regarded as unfair and will work against the future advancement and retention of the administrative process generally, which to endure should be fitted into our system of supremacy of law. * * * My interest in this matter transcends the instant case and exists largely because I number myself among the sincere proponents and defenders of the administrative process."

It seems to me that lawyers do not need to despair of our Government and to oppose blindly the administrative process, so long as commissioners are imbued with such a spirit as I have described. For in every age and in every country it is the spirit of the people rather than the legal form in which its institutions are cast which essentially determines whether or not freedom will prevail. There are countries to the south of us which have constitutions every phrase of which exudes professions of democracy and freedom. Yet under such constitutions there have flourished the most arbitrary dictatorships. Conversely, we can have true democracy without of necessity being bound to some particular formula for balancing and checking the powers of government. It is interesting to recall that the adoption of our Constitution was vigorously opposed on the ground that it did not adequately separate the legislative, executive, or judiciary departments (Federalist Nos. 47, 48).

I have illustrated my viewpoint primarily by references to the Securities and Exchange Commission. It possesses to the greatest degree a combination of legislative, executive, and judicial powers. But I am confident that the spirit which there prevails is consonant with that of most other commissions and that the leadership which it is displaying in organizing, within itself, curbs on possible abuse, is one that will be gladly followed, in due course, by other commissions.

I know that, in its tasks of internal organization, the Securities and Exchange Commission welcomes the cooperation of lawyers who, while sympathetic with the aims and purposes of the Commission and with the administrative process, can bring to bear viewpoints which the Commission cannot otherwise readily secure. I believe that other commissions are similarly disposed. Here, surely, is an opportunity for the bar to help the administrative bodies to evolve in ways which will free us of most of the perils which our imagination tends to conjure up. While this opportunity remains open, bar associations might suspend efforts, by indirection, to shackle and nullify the administrative process.

It is to the credit of the bar if it is vigilant to defend the rights of the individual and to conserve a freedom from governmental oppression which has been hardly won, and the preservation of which must be our constant concern. As world events so dramatically bring home, there is a constant struggle between efficiency, on the one hand, and, on the other hand, individual freedom and liberty. As there develop economic and political pressures, governments tend to seek more efficient processes. These are often at the expense of some curtailment of individual freedom which, it is contended, involves an inefficiency which we can no longer afford. It is the task of the democracies to find ways of increasing their efficiency without involving any sacrifice of the fundamental rights of the individual. It may be that, if bureaucracy does not stifle efficiency, administrative agencies constitute one of the ways of solving our problem. Certainly the complexities of modern society require that certain fields be dealt with by experts. Certainly these complexities make it impracticable for the Congress to pass legislation which covers all details. To avoid rigidities which might be seriously disrupting, there should be some discretion in the working out of detailed rules. Furthermore, there would seem to be little serious objection to administrative tribunals, within their respective fields, exercising the prerogative of "judicial legislation" which has heretofore been exercised primarily by the courts. The intimate and specialized knowledge possessed by administrative tribunals seems peculiarly to fit them to play this role. It may also be that certain judicial or quasi-judicial matters should, in the first instance, be decided by the administrative tribunal, particularly if the applicable principle of solution must be drawn from a knowledge of the field as a whole. On the other hand, there are certain types of prosecutory proceedings where guilt or innocence depends upon the omission or commission of certain acts and the absence or presence of certain intents, where there would seem to be little reason for the commission acting as both the prosecutor and judge. Such cases, however, represent but a small fraction of the activities of administrative bodies, and certainly they are not in themselves sufficient reasons for opposing generally the administrative process.

An evolutionary remolding of certain administrative procedures is certainly desirable. To an extent this can be accomplished by internal changes, such as we have referred to, possible within the scope of existing statutes. To some extent statutory amendments may be required. If so, these matters can be frankly discussed first, with the commission in question, then with the Congress. Wherever it is felt that excessive and unnecessary power has been conferred, the Congress can be asked frankly to curtail that power Such procedure is certainly more worthy and more apt to be effective than blanket efforts, by measures of indirection, to cripple the entire administrative process.

Wheeler-Lea Transportation Bill

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

RESOLUTION BY UNITED STATES LIVESTOCK ASSOCIATION

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD the following resolution adopted by the United States Livestock Association at the seventh annual meeting February 24, 1940, Abraham Lincoln Hotel, Springfield, Ill.:

9. We oppose any part of the Wheeler-Lea transportation bill S. 2009, which would extend the rate-making powers of the Interstate Commerce Commission to motortrucks and to coastal

and inland waterways carriers; and we urge that action upon any conference committee report be delayed for a period of at least 30 days in order that producers, shippers, and Members of Congress may have full opportunity to study the far-reaching effects of this proposed measure.

Government, the Predatory Partner of Industry

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

EDITORIAL FROM THE NEW YORK JOURNAL

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which was published recently in the New York Journal:

[From the New York Journal]

GOVERNMENT—THE PREDATORY PARTNER OF INDUSTRY

The startling full-page article Ruin in Taxes Bared: Wisconsin's Industries Crippled, by Merryle Stanley Rukeyser, which appeared recently in the Sunday Hearst papers, is the most damning indictment in stark figures of New Deal confiscatory taxation that has yet appeared.

Taxes on legitimate business, it is plainly evident from this article, are not only breaking the back of all private business in the country, but they are actually pulling the States down to bankruptcy—for the less the income of the taxpayers the less the States will ultimately get in taxes.

That means universal bankruptcy if these tax burdens are not lifted.

Here are the cold facts in the matter of Wisconsin: Of 6,845 corporations that operate within the State, taxes taken by Federal, State, and local agencies absorbed all residue from operations and ran the corporations into an operating loss.

In the case of 961 corporations that do business both within and without the State, these companies retained a net gain of only 1.1 percent of their assets.

What incentive have these corporations for continuing business? None!

And here is the incredible fact concerning the combined corporations doing business both inside and outside of the State of Wisconsin, as reported by the income-tax division of the Wisconsin Tax Commission (1938):

These corporations, after meeting all expenses before taxes, paid out in taxes to various units of Government, $112,158,743, which was $20,606,913 more than they earned on operations. There was, therefore, an operating loss, after taxes, of $20,606,913.

This is doing business solely for the tax gatherers.

It is keeping the doors of business open for New Deal tax experiments and those myriad job holders who live on corporate losses.

Further—and worse yet—

These corporations paid out, in 1938, $426,181,666 in wages to 355,440 employees, supporting 930,000 persons.

Of necessity, such blasting taxation tends not only to drive down the wages of those employed in these industries, but undermines their working morale because they do not know when their employers will be compelled to close up shop for good—all due to taxes.

This confiscatory taxation is slowly socializing all our industries.

Former Undersecretary of the Treasury Hanes said the other day that the Government is already 20 percent partner in all business in this country.

It is a partner that produces nothing, that contributes nothing, but that takes all.

The debacle of industry in Indiana, New Hampshire, and Wisconsin and the flight of industries out of New York City and State reveal one formidable fact.

The tax policy of this administration has apparently been aimed deliberately at the erection of a system of European state socialism on the ruins of American industry, done to death not by mobs, strikes, rebellions, fire, or flood, but by the more certain and "legal" bludgeon of taxation that eats up net sales, profits, wages, and jobs.

This suicidal policy must be halted if we are to retain our free system of enterprise.

That is the one and only issue that should concern Americans at the polls next fall.

Wheeler-Lea Transportation Bill

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 5, 1940

RESOLUTION BY THE BOSTON MARINE SOCIETY

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD the following resolution by the Boston Marine Society on the Wheeler-Lea transportation bill:

Resolved, That the Boston Marine Society considers that it would be highly detrimental to the interests of the public to enact legislation by Congress which would place private and contract carriers of bulk cargoes under the supervision of the Interstate Commerce Commission, and that therefore this society earnestly requests that any action on any conference report which may be submitted by the joint Senate and House conference committee on the Wheeler-Lea transportation bill (S. 2009) or any substitute thereof be delayed for a period of at least 30 days after the submission of such report, in order that the public and all persons interested in, or might be affected by the proposed legislation, may have an opportunity to examine the report and express their views thereon.

Stamp Plan As Aid To Use of Eggs

EXTENSION OF REMARKS

OF

HON. JAMES M. SLATTERY

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Wednesday, March 6 (legislative day of Monday, March 4), 1940

ARTICLE FROM THE POULTRY TRIBUNE, MOUNT MORRIS, ILL.

Mr. SLATTERY. Mr. President, I ask for unanimous consent to have printed in the Appendix of the RECORD an article entitled "Stamp Plan Boosts Egg Use," from the March number of the Poultry Tribune of Mount Morris, Ill.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From March number Poultry Tribune, Mt. Morris, Ill.]

STAMP PLAN BOOSTS EGG USE—FIFTY LOW-INCOME FAMILIES ASKED ABOUT EGG BUYING

(By J. H. Florea, Associate Editor)

Surveys by Government workers and others have indicated that income and the quantity of eggs used are closely related. But would low-income families use more eggs, if, in a changing economic world, they suddenly should be placed in a higher income level?

It seemed that the best place to find an answer to that question was among the families using the Federal food-stamp plan now in operation in several cities. So Poultry Tribune interviewers undertook a special survey in Springfield, Ill., where the stamp plan was put into use October 19, 1939.

The answer of the 50 families interviewed was an overwhelming "Yes!" They said they used an average of 1.1 eggs per person each week or 57 eggs per year before stamps were made available, but now use an average of 6.2 eggs per person or approximately 323 per person annually. This is an increase of 560 percent! Surely, poultry raisers should be interested in any plan which can increase egg use like that, and, at the same time, provide a more adequate diet to low-income families.

STAMP PLAN EXPLAINED

For those who are not familiar with the operation of the stamp plan, it briefly is this: People working on W. P. A. projects, and all persons receiving or certified for any form of public aid in the designated area, may buy orange-colored stamps good for the purchase of any foods usually sold in a grocery store. When they buy

orange stamps at the rate of approximately $1 a week per person in the family, they are eligible to receive free, blue surplus-food stamps which can be used only for the purchase of certain foods which have been designated as surplus by the Secretary of Agriculture.

People who do not receive cash relief, but receive food orders instead, are given blue stamps at the rate of 50 cents per week for each member of the eligible family.

The food-stamp plan was first established last spring in Rochester, N. Y., and has since been adopted in several additional cities, with the probability that it will be in use in approximately 150 cities by early summer. The purpose of the plan is to encourage wider consumption of surplus food products by increasing the purchasing power of low-income families. It makes use of the normal distributive channels, and anyone, whether on relief or not, can purchase the surplus products at the same price as can the people who receive blue stamps.

Eggs have been on the list of surplus foods since the plan was first established.

The way egg consumption increased as the income per person increased, even among these low-income families, was striking. This is shown in the following table:

Annual income per person	Average income per person in group	Average number of eggs used per person weekly
$1 to $50	$40.14	4.56
$51 to $100	78.34	5.29
$101 to $150	123.06	6.26
$151 to $200	160.15	8.40
$200 or more	278.22	11.11

Since the average family income among these 50 families was only $550 per year, it might be thought that none of these families still would have as many eggs as they wanted, so we asked specifically, "Would you use more eggs if you had more money? Or do the blue stamps enable you to get all of the eggs you want?" Surprisingly, 8 of the 50 families reported they were getting all of the eggs they wanted, and would not buy more even with higher income. We found that these people who had sufficient eggs were using about 7½ eggs per person per week, or more than an egg a day. We found, too, that 6 of the 8 families had high income in relation to the group as a whole.

All 50 families surveyed in Springfield use blue stamps to buy some eggs, ranging from a low of 10 percent of the stamps up to one family which reported they use "nearly all" of their blue stamps to buy eggs. The average proportion of the blue stamps used for eggs was 28.4 percent, which checks rather closely with surveys in other cities, although it was higher than the city-wide average reported by Springfield officials.

HALF USED NO EGGS BEFORE STAMPS

Even though these families presumably were receiving relief in the form of W. P. A. work or in other forms before the stamp plan was inaugurated, 25 of the families said they were not using any eggs before the blue stamps were made available.

It is questionable, of course, as to whether these families would buy as many eggs if they were spending money earned in industry and which could be spent as they chose. It must be remembered that there were only about 17 food items which could be bought with the blue stamps. If the value of the stamps had been in cash which could be spent for anything, it is doubtful if eggs would have fared so well. This is indicated in studies and reports of the National Resources Committee of the United States Department of Labor, and the Bureau of Home Economics of the United States Department of Agriculture. Speaking before the 1939 meeting of the American Farm Bureau Federation, W. D. Termohlen, chief, poultry section, Agricultural Adjustment Administration, summarized this information in the following table:

Family income affects egg consumption

Annual family income	Weekly per person food expenditure	Annual average egg consumption	Percent of population
$750	$1.67	132	31.64
$750 to $1,250	$1.95 to $2.20	180	27.55
$1,250 to $1,750	$2.54 to $2.83	252	16.81
$1,750 to $2,500	$2.98 to $3.66	324	13.32
$2,500 to $3,500	$3.78 to $4.15	360	5.90
$3,500 up	$4.54 up	456	4.78

Note that the low-income families in this study did not use nearly as many eggs as do the food-stamp users in Springfield.

Termohlen also comments: "It is to be noted that nearly 60 percent of our population falls in the group with a family income of less than $1,250 a year and averages under 15 dozen eggs per capita per year.

THIRTY PERCENT USED IN COMBINATION

When it came to methods of using the eggs, 69.8 percent of the eggs were cooked alone, as in frying, scrambling, boiling, poaching, etc. Incidentally, scrambling seems to be the favorite method of cooking them alone.

Of the 50 families, 20 reported that they used all of their eggs in this manner, and did not use any in combination with other foods. On the other hand, 30 families used a portion of their eggs in combination. The favorite use was in puddings, with baking a close second. Use in salads came third, and milk drinks fourth. Sandwiches, waffles, French toast, pancakes, custards, and other uses also were mentioned.

In this regard it may or may not be significant that the families with the very lowest incomes used a considerably higher proportion of their eggs in combination dishes than did those with larger incomes. Those with annual incomes of $100 or less per person used 37 percent of their eggs in combination dishes, while those with higher incomes used only 15.8 percent of their eggs in combination cookery.

Without similar surveys on egg use by the general population, there is no way of knowing how well these figures may indicate use by other groups. If they should be applicable to other groups, however, it appears there is a considerable opportunity to educate people on the use of more eggs in cookery. When, out of 50 families who apparently need to make their food expenditures go as far as possible, 20 make no attempt to use eggs other than straight, there certainly would seem to be room for some educational work.

POINTS TO WORK TO BE DONE

This survey, in conjunction with many similar studies, leads to at least a few definite conclusions:

1. As the Federal stamp plan is expanded, it may prove to be to the poultry industry one of the greatest boons of any Government measure yet adopted. But to receive that benefit, eggs must be left on the list of surplus commodities which can be purchased with blue stamps.

2. More of the poultry industry's educational effort must be directed at the low-income groups, both because they now use fewer eggs, and also, as Termohlen points out, they form the great bulk of the population. Admittedly, they are harder to reach through the usual channels of advertising and publicity. If, as poultry raisers believe, however, the industry has a product which can be used economically by these low-income families to provide a better diet, that fact needs to be stressed to them, and they need to be shown economical and nutritious ways of using eggs. Most of our efforts in the past have been directed at higher income groups because they are easier to reach, but a large percentage of those higher income families already have reached the practical limit of egg use. About all that can be accomplished there is to prevent them from being lured from the use of eggs to the use of competing foods.

3. It is obvious, of course, that the ultimate solution lies in raising the incomes of these low income families on a sound and permanent basis. Of necessity, progress in that direction is slow, but as income levels do rise, poultry and egg producers stand to benefit.

Foreign Policies and the 1940 Election

EXTENSION OF REMARKS

OF

HON. CHAN GURNEY

OF SOUTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 6 (legislative day of Monday, March 4), 1940

ADDRESS BY HON. ROBERT A. TAFT

Mr. GURNEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the junior Senator from Ohio [Mr. TAFT] before the Saturday Discussions Committee of the National Republican Club, New York, N. Y., on March 2, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Friends of the National Republican Club and of the radio audience:

I hope to discuss today the extent to which foreign policy is likely to enter into the elections of 1940 and how far it is an issue today. I do not think that the details of foreign policy should enter into political campaigns or political debate. Foreign policy in the first instance is the function of the Executive. Although the express powers given by the Constitution of the United States to the President in respect to foreign relations are quite limited, from the beginning of the Government, because of the nature of such

relations, the courts have held that the President's power is predominant in that field. The Nation cannot speak with a multitude of voices. The Supreme Court has said: "In this vast external realm, with its important, complicated, delicate, and manifold problems, the President alone has the power to speak or listen as a representative of the Nation. He makes treaties with the advice and consent of the Senate; but he alone negotiates. Into the field of negotiation the Senate cannot intrude; and Congress itself is powerless to invade it."

Unless some great principle is involved, therefore, I have never felt disposed to criticize the President on incidental matters, such, for instance, as withdrawing an Ambassador from Germany, not withdrawing an Ambassador from Russia, or sending Mr. Welles to sound out the foreign nations on the subject of peace.

The President has necessarily more knowledge of facts than anyone else can have, and each problem is a practical one, depending largely on the facts of the particular case.

On the other hand, Congress, and particularly the Senate, is given extensive powers and duties with reference to any Government action in the foreign field other than negotiation. Only Congress may regulate commerce with foreign nations. Only Congress may declare war. Only Congress may raise and support armies and provide and maintain a Navy, although the President is Commander in Chief when they are raised or provided. Only Congress has power to act in the field covered by the Neutrality Act involving the embargo of shipments abroad, restraint on American ships, restraint on the loaning of money or credit to foreign nations.

The President is responsible for what this Nation says to foreign nations, but he must be very careful in his statements as to what this Nation will or will not do, because, unlike executives in European countries, he has not the final power to put his foreign policy into effect.

With regard to fundamental questions of foreign policy, I do not at all agree that they should not enter into partisan debate and campaigns. Of course, no man's position should be guided by a selfish partisanship, but then neither should selfish partisanship enter into the discussion of domestic policies. But if the President, for instance, pursues a policy likely to lead us into war, I believe it is the duty of every American who disagrees with that policy to say so frankly and in as loud a voice as possible. No question of foreign or domestic policy concerns the people of this country so much as the possibility of becoming involved in war. The democratic process demands that they have a voice in that policy, but the discussion of foreign policy should certainly take place without rancor or personal recrimination. In that spirit I wish to discuss the position of this country in the world today.

Outside of North and South America today, we see a world at war. Implements of destruction predominate in Europe and in Asia. Cities and helpless civilians are bombed. Ships of belligerents and neutrals alike are sent to the bottom, often without warning, by mines, submarines, and bombs. It is inevitable that our people are intensely interested in these contests, and intensely interested in the question of the extent to which they may affect their daily lives and the future of their children. There is real danger that the entire civilization of Europe, built up through thousands of years, with its historical landmarks and all its tremendous humanitarian accomplishments, may be utterly obliterated.

At the special session of Congress in October, we considered only questions of foreign policy. According to the peculiar rules of the Senate, debate was prolonged for 6 weeks on the amendments to the Neutrality Act, although everything that could be said was probably said in the first 2 weeks. But the delay served one great purpose—it encouraged and developed an intense debate throughout the Nation on the question of American policy abroad. Serious differences of opinion developed as to the proper course which might tend to keep the United States out of the European war. Hardly two Senators took exactly the same viewpoint on all the amendments. But before the session ended, it became apparent that the American people, above everything, were determined to keep out of war and differed only as to the best methods.

There was a serious difference of opinion on the question whether the repeal of the arms embargo would involve us in war. I voted for that repeal and the establishment of the cash-and-carry principle for several reasons. In the first place, I believed that the cash-and-carry principle was more likely to avoid incidents which might lead to a serious dispute between ourselves and one of the belligerents. Unrestricted submarine warfare against American ships and American lives was the cause of our entrance into the World War. I think that reason has justified itself. No American ships have been sunk, and no incidents have arisen likely to lead toward war, whereas practically every other important neutral nation has lost both ships and lives.

I believed that the policy of arms embargo was more likely to promote war than prevent it. As a matter of fact, I proposed the repeal of the arms embargo as long ago as April 25, 1939, before the President recommended it. That policy favors large nations with all the facilities for the manufacture of arms against small nations which do not have those facilities. It favors continental powers with access to resources over the land against sea powers which have always traded with us and relied upon their trade with us. It favors warlike nations which build up their armaments in times of peace against those nations which, hoping for peace and relying on treaties, fail to pour vast sums into armament. In short, it favors the aggressor against the peaceful nation. The attack of Russia on Finland has brought home to the people of this country how much a general policy of arms embargo would assist aggressor nations to wipe out all the smaller neutral nations in the world.

In any event more than 3 months have gone by, and there seems to be no threat today of our becoming involved in the war. Today the President is for peace and keeping out of European affairs. But it is not unfair to point out that public opinion in behalf of peace seems to have changed the President's former attitude toward involvement in Europe. On November 16, 1937, in Chicago, he declared his belief that we should "quarantine" the aggressor nations. In his message to Congress on January 4, 1939, he said: "The defense of religion, of democracy, and of good faith among nations is all the same fight. To save one we must now make up our minds to save all. * * * We have learned that God-fearing democracies of the world which observe the sanctity of treaties and good faith in their dealings with other nations cannot safely be indifferent to international lawlessness anywhere. They cannot forever let pass without effective protest acts of aggression against sister nations. * * * The mere fact we rightly decline to intervene with arms to prevent acts of aggression does not mean that we must act as if there were no aggression at all. * * * There are many methods short of war, but stronger and more effective than mere words of bringing home to aggressor governments the aggregate sentiments of our own people." It is somewhat difficult to see how we can defend religion, democracy, and good faith in other nations by any policy of mere defense of the United States. It is difficult to see how we can protest against international lawlessness effectively by mere defense of the United States. The President can only have intended to propose that this country employ economic sanctions or embargoes against a nation that it does not like while at the same time assisting those that it does like by loans and other material assistance.

The President has done nothing up to this time to return to his earlier policy, but it is somewhat disturbing that in his address to Congress on January 3 of this year he said nothing with regard to maintaining neutrality and emphasized the fact that he was opposed only to becoming involved in military participation in the war. He implies that we still have some duty to interfere abroad when he says: "Of course, the peoples of other nations have the right to choose their own form of government. But we in this Nation still believe that such choice should be predicated on certain freedoms which we think are essential everywhere. We know that we ourselves will never be wholly safe at home unless other governments recognize such freedoms." This language implies a right and duty to interfere in foreign wars because of the character of government adopted by some of the belligerents.

I do not feel, therefore, that the President has wholeheartedly accepted the declared view of the people of this country that we must stay out of war except in defense of our own land. It is right, therefore, to discuss the reasons which lie behind our present determination to stay at peace. I believe those reasons are not based on sentiment or on any ostrich isolationism. They are based on precedent and sound logic.

War is so horrible today that the reasons against it, unless forced by direct national interest, are obvious to all. The glamour and romance of an earlier day, always largely imaginary, have been completely destroyed by the modern methods developed in the World War and since. No man wants to spend months or years himself in the trenches. Every parent dreads the day his or her sons might sail away to war.

But it is said that we cannot stay out, and many people still seem to feel that because we chose to participate in the World War, we must inevitably be drawn into this war. Certainly we can stay out if we are determined and remain determined to do so. We have stayed out of many European wars. If we admit that we cannot stay out, we will be perpetually involved in war, for Europe's quarrels are everlasting. There is a welter of races there so confused that boundaries cannot be drawn without leaving minorities which are a perpetual source of friction. National animosities are traditional and bitter. Only in this country have they been laid aside, and have the different races learned to live together in peace. In George Washington's Farewell Address there is one statement which is as true today as it was then. He said: "Europe has a set of primary interests which to us have none or a very remote relation. Hence she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns."

It is difficult for us to know what is really going on in Europe, or the reasons which underlie the decisions of European governments. I have little sympathy with those who assume to judge all European statesmen, to criticise so-called power politics in Europe, who say in fact, "A plague on both your houses." There is just as much right and wrong in European quarrels as in any other quarrels. When I see the freedom of independent nations like Czechoslovakia, Poland and Finland destroyed, my deepest sympathies are aroused in their behalf. It is contrary to human nature to have no sympathies between contesting European nations. But because we sympathize with one side is no reason why we should run on to the field and try to join in the game.

Of course, we can stay out if we wish to do so. Holland and Switzerland stayed out of the World War, although they were in the very midst of it. We have an isolated position, and it is still isolated in spite of all the improvements on sea and in the air. In fact, developments in this war seem to show that effective aerial attack cannot be made over any considerable distance. I find that

many people who say that we cannot stay out, at the bottom of their hearts, do not wish to stay out. Certainly this argument presents no reason for not trying to stay out.

It has been widely argued that we should enter the war to defend democracies against dictatorships. The President's own expressions even this year have indicated a leaning to this belief. No one can sympathize more than I do with the success of democratic governments against dictatorships. No one desires more strongly than I the end of communism and nazi-ism, but I question whether war is the effective method of destroying them. Our experience in the World War did not indicate that we could interfere in European quarrels and work out any permanent or satisfactory solution. The World War did not save democracy. It resulted in the creation of more dictatorships than the world had seen for many years. Nothing is so destructive of forms of government, particularly forms of democratic government, as war.

Our going to war would be more likely to destroy American democracy than to destroy German dictatorship. There are pending in Congress measures designed to have the Government take over all business and property, fix prices and wages, and regulate every detail of private employment and commercial life. The President already has statutory power to take over the railroads and manufacturing plants in case of war, and the radios and public utilities in case of threatened war. I have little doubt that he would exercise most of these powers. Mr. Edison, the Secretary of the Navy, demands that additional arbitrary powers be granted at once, and we have been warned by Mr. Johnson, the Assistant Secretary of War, that private business would be regulated in every detail by the Government.

In the World War we granted extensive powers, but actually accomplished results largely through cooperation of industry. The so-called mobilization of wealth, however, carried out in a New Deal spirit, might well result in the complete socialization of all property. I doubt whether we would ever see again real operation of private enterprise or real local self-government in the United States. We might retain the forms of democracy, but we would be likely to find ourselves with an absolutely arbitrary government in Washington, and a plebiscite every 4 years to determine who should control it. A government by plebiscite will not long remain a democratic form of government.

I believe we will do the cause of democracy much more good if we maintain our neutrality, and show that a great nation can get through a crisis of this kind without abandoning democratic principles. There is only one way to spread democracy throughout the world—not by the sword but by showing the peoples that under democratic government they are more likely to have peace and happiness than under any other form. Democracy spread through the world in the nineteenth century from our example, and it will do so again.

The third argument that we should enter the war is based on the theory that if France and England are defeated, we will be overwhelmed by Germany and Russia. This view is widely held, and it will be more strongly held if England and France should appear to be losing the war. It seems to me to be an illusion. Hitler is most unlikely to win, whether or not he can be defeated; but under any circumstances he would hardly be free to attack the United States. No dictator has ever dominated Europe for long, and he is inevitably involved in countless difficulties on that continent. France and England won the World War, but Germany has been a thorn in their side for 20 years. The problem of dealing with the other peoples of Europe, even though they are defeated, is one which will absorb the energy of any victor. Furthermore, no one wins a modern war. The victor is only a shade less exhausted than the vanquished. There seems to be no reason why Hitler or any other European dictator should pick a quarrel with the most powerful Nation in the world when he has nothing to gain by such a course.

The best military authorities tell us that we can defend North America and the Caribbean Sea south of us if we maintain an adequate Army and Navy and Air force. The maintenance of a stronger Navy than any navy or combined navies that might attack us is well within our power.

In short, the horrors of a modern war are so great, its futility is so evident, its effect on prosperity and happiness, and democratic government itself, so destructive, that any alternative seems to be preferable except the subjection of this country to physical attack or the loss of its freedom.

The people's determination to stay out of war is so strong that I have little fear of any involvement before the election of 1940, and therefore I hope that there will be no major issue of foreign policy in that election. But if it becomes apparent that the President has reverted to his former views and moves to involve us in the European war, and if the nominee of the Democratic Party sympathizes with that policy, then foreign policy will be the main issue in the 1940 election. I feel confident that the Republican Party will not sympathize with that view and that the nominee of the Republican Party, if elected, will keep us out of war during the next 4 years if it is humanly possible to do so. The Republican Party is a peace party; the Democratic Party may or may not be a peace party.

Congress has before it today two or three other questions of foreign policy. A bill has been prepared authorizing loans to be made to Finland for non-military supplies, so that the Export-Import Bank may loan Finland a total of $30,000,000. In general, I do not approve of giving the Executive power to lend to foreign nations money which our experience shows is unlikely to be repaid. Nor do I favor the idea of loans to countries engaged in actual warfare. But foreign policy is largely a practical question. Every situation is different, and we may even desire to adopt in one part of the world a policy entirely different from that followed in another. Our main guide should be the peace and welfare of the American people.

It seems to me that Finland presents a special case. There is no possible issue involved in the present war except the freedom of a small, independent, and democratic people. With such nations we have always sympathized. We assisted the South American republics struggling for their freedom. We actually went to war because of the oppression of the Cuban people. Certainly we do not wish to be drawn into a war in the Arctic and Baltic Oceans, but such a loan as has been authorized will certainly not involve us in war. The only nation which can object is Russia, and Russia is estopped because it denies that there is a war. I do not even see how a sound objection can be made to the sale of arms to Finland, or the contribution of money for that purpose. Finland alone among the European nations paid its debts to the United States. We have taken more than $5,000,000 of Finnish money, whereas Russia, which should have paid a much larger sum, has completely defaulted. We certainly owe something to the Finnish people.

The far eastern situation presents an even more difficult problem. There is urged on Congress today an embargo on all trade with Japan, with the claim that our trade alone makes possible the continuation of Japan's attack on China.

In the first place, I believe that a change of such importance in normal foreign policy should be initiated by the President and the Secretary of State. Unless with their knowledge of the facts they recommend a policy of embargo against Japan, I certainly do not think that Congress should adopt it. Many considerations are involved, such as the real condition of public opinion in Japan, the possible success of a Japanese attack on the Philippine Islands, the question whether an embargo by the United States would really deprive Japan of any materials which could not be obtained elsewhere. A congressional policy of embargo, without the sympathy of the State Department, would be much more likely to lead to war. I certainly would not be disposed to force any policy of embargo except on the recommendation of the Executive.

While it is not nearly so dangerous a prospect that we may become involved in a war in the Pacific as in the European war, I believe our people desire to avoid any such probability. Frankly, I have not been able to make up my own mind how far the United States can go in assisting China against an unwarranted attack without becoming involved in war itself. A war in the Pacific is even more to be avoided while war exists in Europe, for the two are not likely to remain completely separate and apart. In any event, I feel convinced that the Japanese question should not be an issue in the 1940 election, and I sincerely hope that it will not be.

Another important policy having a bearing on the foreign relations of the United States is that of the reciprocal-trade treaties which are now under consideration in Congress. There is no doubt that these treaties may be made a means of establishing more friendly relations with some foreign nations. On the other hand, as administered, they have at times sacrificed the interests of American producers, farmers, and workingmen. I believe that the old method of making treaties in Congress led to almost prohibitive tariff walls. I believe that Executive tariff making under definite standards is a better method. If tariff making is delegated to the Executive under a proper standard, it is desirable to do it through trade agreements so that we may have some return for concessions that we make.

On the other hand, the present trade agreements have been administered by Secretary Hull, who is a pronounced free-trader, and Congress has imposed no standard to guide his action. Last year I introduced a bill to provide that no treaty should go into effect until it was published and until the Tariff Commission certified that the new rates were not in excess of the difference in cost of production here and abroad. Before such certification, all those concerned should be given a full hearing before the Tariff Commission, which is to make this determination. Some of the violent protests now made may not be justified; others I know are justified. No real opportunity to be heard has been given. In short, I believe in the protective principle, particularly under conditions such as exist in the world today. I see no reason why our farmers, manufacturers, workmen, and minerals should not be protected against depreciated currencies, starvation wages, and foreign subsidy. If there is to be any science regarding the making of tariffs, it must follow a definite standard.

I have tried to outline for you the present situation. I may well emphasize again that each question of foreign policy depends upon the practical conditions which surround it. We may appear to be entirely inconsistent in adopting policies regarding Europe, regarding South America, regarding the Far East; but there is certainly one underlying consistency—that policy is the welfare of America and the American people. Unless our territory is attacked, that happiness is best secured by peace and neutrality. But we all feel some obligation to prevent hardship and suffering throughout the world. We are spending billions to assist Americans in distress. A few millions for relief and foodstuffs for the foreign populations in distress will meet with the approval, I believe, of the American taxpayers, no matter how heavily burdened they may already be.

The Republican Party believes that partisanship should not enter into the discussion of foreign affairs, but it is determined that the policies of the Government shall be guided by the wishes of the people, and not by the doctrinaire theories which have so often dominated the Democratic Party.

The New Deal Record

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1940

RADIO ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks, I ask unanimous consent to extend in the RECORD an address delivered by Senator ROBERT A. TAFT, of Ohio, on the National Radio Forum over the network of the National Broadcasting Co. on March 4, 1940. The address is as follows:

I have read with interest the statements of New Deal leaders as to their accomplishments during the past 7 years. I listened to Senator BARKLEY on the radio last night and in the Senate today, and to Senator SCHWELLENBACH this evening. Their contention seems to be that we are better off as a people than we were in 1933 by reason of New Deal policies. I have no desire to enter into a partisan discussion. I do not question the good faith of the new dealers in the measures which they have taken; nor do I question their immense energy in pushing forward with their experiments. I only ask you who are listening to this discussion to consider the condition of the American people today, and your own individual position in the light of the New Deal claims. Are you any better off than you were 7 or 10 years ago? If you are, can you trace any improvement to the New Deal?

There is plenty of evidence that most people are worse off than they were 10 years ago rather than better off. National income in 1939, that is, the income of all the people put together, was only $68,000,000,000, whereas for 2 or 3 years prior to 1929 it got up to $80,000,000,000. There were 10,000,000 fewer people then, so that the average income per person is 20 percent less today than it was then. That means a much lower standard of living for everybody. With so many more people, we ought to have a national income of $90,000,000,000 instead of $68,000,000,000. If we had, we would employ the 9,000,000 unemployed.

FARM PRICES GENERALLY DECLINE

Farm prices, which make the farmer's income standard, were in general lower in August 1939 than they were in August 1933, after the first boom, and before any of the New Deal farm-control measures began.

At least 9,000,000 people are unemployed. I notice that Senator BARKLEY said something about there being from seven to nine million unemployed, but the American Federation of Labor figures for January show over 10,300,000. Mr. Nathan, of the Department of Commerce, estimated 10,900,000 unemployed in January. The latest figure available from the National Industrial Conference Board, which was for December, indicated over 8,400,000 unemployed, and there has been a big increase since then. Certainly, these unemployed millions are not better off than when they were at work in 1928.

Then there isn't any doubt that the national debt has increased $21,000,000,000 in these 7 years. Twenty-one billion dollars is a lot of money. It means that every one of 30,000,000 families on an average will have to pay interest and principal on a debt of $700 before we get back to the point where the New Deal started.

GOVERNMENT COSTS INCREASE

Furthermore, the New Deal has certainly increased the cost of government, which all the people have to pay out of their earnings. For 7 years before the New Deal, ending in 1932, that cost was $3,944,000,000 a year. For the last 7 years it has averaged $7,570,000,000, and today it is up to $9,500,000,000, or more than twice what it was before. No wonder your taxes are high; no wonder you have to pay more for bread and other food and clothing because of all the taxes that are imposed on these necessities as they come to you from the producer.

President Roosevelt the other day tried to belittle the size of the debt. According to the Associated Press and the New York Times the next morning, he made the statement that the total owed by the Government was no greater than it was in 1932, because local government debt and State debt had gone down the full extent that Federal debt had gone up. Of course, on this question Mr. Roosevelt just made a mistake. Local and State government debt decreased less than $1,000,000,000, and Federal debt has gone up $21,000,000,000, so the net increase in the public debt is at least $20,000,000,000. That was quite a good-sized mistake.

Then the President said that, after all, the increase in Government debt did not make much difference, because private debt had gone down. Of course nobody knows exactly what private debt is because some people count one thing and some people count another. For instance, some people say that all the deposits in the banks are debts owed by the banks, as in legal theory they are. There has been some decrease in private debt, but it is hard to see how we have gained thereby. In fact, we would be better off if the $5,000,000,000 of excess reserves in the banks were loaned out to people to use to put other people to work. The big difference between public debt and private debt is that private business usually can't borrow money unless it can show that it can earn a return on the money borrowed, and in time pay off the debt. That doesn't cost you or me anything, and the only time it becomes dangerous is when the banks and others get reckless and make bad loans.

TAXES RAISE MONEY

But Government debt almost never pays for itself. Almost the only way the Government can pay interest and principal on its debt is to tax all of us to raise the money for that purpose. If Government debt gets too heavy, there is a tremendous pressure for the Government to print more paper money with which to pay its debts. Once that is done, the Nation is on the road to bankruptcy. So it doesn't help the New Deal any to bring in a discussion of private debt. The fact is that we owe $21,000,000,000 more than we owed in 1932, which we and our children and our grandchildren are going to have to pay off, through higher taxes and higher prices, as far as we can see in the future.

Nearly all the New Deal argument regarding an improvement in conditions is based on a comparison between March 4, 1933, and today. Of course, the country is better off than it was on that particular date. That happened to be the very bottom of the economic depression. We have had a good many depressions in this country, and most of them have followed the same course. There is always a steady spiral downward for several years until the bottom is reached, and then the natural economic forces bring a recovery. Heretofore we have always come out of depressions to a higher income and standard of living than we had before, and we have always come back to a point where every man who wanted a job could get a job, without any New Deal or new Government bureaus. If you want to make a comparison you ought to compare 1939 with some year 7 years after a previous depression. For instance, after the depression of 1893, we had reached by 1900 the highest level of prosperity this country had ever seen. In 1928, 7 years after the depression of 1921, every man who wanted to work had that opportunity.

But with all the New Deal panaceas, we proceeded to have a second depression in 1937, long before we had reached our former prosperity, and today we are still far below where we were in 1928. We came out of past depressions at a much faster rate, without any regulatory action by the Government at all. I certainly agree that the New Deal measures, like relief, alleviated the hardships of the depression, more than the Government did in past depressions; but as far as bringing us out of the depression or doing any permanent good is concerned, the evidence is all the other way.

DEPRESSION WORLD WIDE

Furthermore, we must remember that the depression of 1933 was world-wide, so the Republicans could hardly be blamed for it. They had a hard enough time running things in this country without being responsible for Europe and Asia. There is a very interesting table prepared by the statistical division of the League of Nations. In its December 1939 issue it shows the condition of industrial production in 21 nations as compared to 1929, before the depression. Of the 21, 16 are better off some of them as much as 50 or 60 percent better off. England is 16 percent better off, whereas the United States is 28 percent worse and stands twentieth in the list of 21, only Belgium being comparatively lower. This certainly does not speak very well for the policies the New Deal has pursued in the United States. Apparently we would have been better off today if we had helped along natural recovery instead of regulating everything and everybody.

There is another thing about the low point on March 4, 1933. The bottom of the depression was reached in most places in the summer of 1932, and we also started on recovery until the election of November 1932. After that there isn't any doubt, according to present history, that the failure of President-elect Roosevelt and the Democratic Congress to cooperate in any way with President Hoover started us on the downward road again, when all other countries were improving. There is no doubt that the plans to depreciate the dollar shook the confidence of the people in the banks, and precipitated the bank crisis of February. So when the New Dealers use the figures of March 4, 1933, they are looking at a condition which they had a very large share in creating.

The New Deal promised to help the poor man. With 5,000,000 families on relief, it can hardly claim that it has kept that promise. For 7 years before the New Deal, the average annual wages and salaries paid amounted to $46,700,000,000. In 7 years of the New Deal it has averaged $37,300,000,000, 20 percent less, and more people among whom it has to be divided. Relief just gives a man enough to live on, if that much.

OHIO BEGAN SECURITY IN 1931

The New Deal claims credit for social security, but all the old-age pensions paid up to the 1st of January 1940 were paid under State

laws, the State contributing half the money. We passed our State law in Ohio in 1931, before the New Deal began. The elaborate reserve plan of the New Deal has hardly begun to work, but we have been paying $1,500,000,000 a year in pay-roll taxes, which come right out of the average workman, either from his pay envelope or in the increased price of everything he has to buy.

Now we have the S. E. C., one of the boasts of the New Deal. Certainly we ought to prevent fraud in the sale of securities. But our big interest today is to get people to put more money into business, particularly new business, so that we can build up production and make more jobs. The figures show that in the 7 years before the New Deal there were $3,500,000,000 every year saved and put into new capital issues, enough to put 500,000 more men to work every year. In the 7 years of the New Deal the new capital issues have only averaged $629,000,000, hardly enough to make up for the plant and machinery that becomes obsolete. Too much red tape and Government regulation had a lot to do with this condition.

Yes; we have the National Labor Relations Board, supposed to protect the right of collective bargaining. It could have done a great job, but instead of that it stirred up strife, decided cases without fair hearings, and even discriminated between the unions it liked and those it didn't like. The result is that where strikes before the New Deal averaged 800 a year for 7 years, since the New Deal started they have averaged 2,500 a year in the United States, 3 times as many.

Of course, there are a lot of public works, the only permanent benefits this New Deal administration is likely to leave behind. They are useful, if we can afford them; but you have to remember that $22,000,000,000 is a good deal to pay for them. Most of you are going to have a large deduction from your income to help pay the tax, while the benefit you get from the public works is hard to translate into any equal advantage.

TEACHES LEANING ON GOVERNMENT

Above all, the New Deal has taught everybody in the United States how to lean on the Government, and created a condition where a great many have no way to keep from leaning on the Government. At the same time it has so discouraged people from putting time or money into any new business enterprise that we have stopped the whole process by which America has always grown before. No one will take a chance when the Government is going to interfere with every step of the business process, regulating prices and wages and hours and bookkeeping, and every other practice. No one is going to take a risk of losing when he knows that if he happens to make a success the Government will take most of it away in taxes.

In short, 7 years of the New Deal not only leave us a lot worse off than we were before but have created a condition where apparently we can never move forward again unless we go back to business methods, balance the Budget, confine the Government's activity to keeping the channels of trade free and open, and helping men to start new businesses and build up old businesses as it always used to do. That is the only way you can put more men to work and ultimately get rid of the necessity of relief and emergency benefits and guaranties to the farmer.

Acquisition of British West Indies Possession

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 6 (legislative day of Monday, March 4) 1940

ARTICLE BY JAMES G. STAHLMAN

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an article by the pen of Mr. James G. Stahlman, Washington correspondent for the Nashville Banner, published at Nashville, Tenn., daily, entitled "From the Shoulder." The article comments favorably on a joint resolution introduced by Hon. JENNINGS RANDOLPH in the House of Representatives, and a similar measure introduced by me in the Senate last Monday, March 4, which resolution requested the President of the United States to enter into negotiations with Great Britain for her island possessions in the West Indies and British Honduras in Central America, the purchase price agreed upon to be applied to Great Britain's indebtedness to the United States which now exceed in principal and interest more than $5,500,000,000 in rough numbers.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FROM THE SHOULDER

(By James G. Stahlman)

While the President was away on that fishing trip, recommending the strengthening of the Panama Canal, Senator BOB REYNOLDS, of North Carolina, popped a proposal right into the middle of the Senate, that the United States begin negotiation for the immediate purchase of Bermuda.

Bermuda, you know, is owned by England. And England owes us quite a few billion dollars, a hangover from the last great war, popularly known as World War I. So REYNOLDS proposes that we take over Bermuda at so much per acre and let Britain pay for it out of what she owes us for the last war.

Now, that's downright common sense. Some months ago a similar proposal was made in this column, but since the author is best known for his dumbness, the proposal went by the boards. But Senator REYNOLDS is a smart fellow, so the proposal now has some standing in the community and on the floor of the United States Senate. This column proposed that the United States negotiate with England and France for the acquisition of the majority of the possessions of those two countries in the Atlantic, particularly in the West Indies. That's a thoroughly sensible proposal. It ought to be carried out.

Perhaps Senator REYNOLDS' measure is the beginning. At any rate, it opens the question for consideration. The immediate reason for his proposal was Britain's unwarranted seizure and search of United States mails at Bermuda. That course caused Pan American Airways to cancel its regular stop of planes Europe-bound, at Bermuda. Of course, that mail incident is just a minor aggravation. But it has served to bring our attention to the advisability of acquiring Bermuda.

American money is the chief support of Bermuda anyway. It is the Mecca for American tourists. More American dollars than British pour into Bermuda. Except for the Union Jack and the colonial officials, Bermuda is almost an American colony.

The island would serve the United States very well. Aside from being a mid-Atlantic air base for trans-Atlantic mail and passenger planes, it would serve as a strategic point in the Atlantic defenses of the Caribbean and the Panama Canal.

We purchased the Virgin Islands from Denmark for $25,000,000. Bermuda, of course, is worth much more. We could afford to pay much more. We should pay much more. But there is no good reason why we shouldn't acquire Bermuda by outright purchase, and credit Britain with so much on the barrel head on that long-overdue war debt.

Other Members of the Senate are favorable to the Reynolds proposal. The Senator himself predicts the adoption of his resolution. It would authorize the State Department to open negotiations for the Bermuda purchase at once. The resolution ought to pass. The island should be purchased. Britain should not object.

It would be one way of removing part of her war debt. It would also put a lot of Americans in a better frame of mind toward England. That refusal to pay her debts still sticks in American craws. The Bermuda purchase and credit would ease the pain.

Hop to it, Senator REYNOLDS, and more power to you. You're as right as apples.

The 1940 Census

EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, March 6 (legislative day of Monday, March 4), 1940

ARTICLE BY BULKLEY GRIFFIN

Mr. MALONEY. Mr. President, I ask unanimous consent that there may be inserted in the Appendix of the RECORD a very interesting article on the 1940 census written by Bulkley Griffin, and appearing in the Hartford (Conn.) Times, and other New England newspapers.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Hartford (Conn.) Times]

WASHINGTON

(By Bulkley Griffin)

So much has been written and spoken respecting the so-called personal-income questions in the 1940 Federal census questionnaire that it may be worth while to see who approved the questions. Apparently the questions were not clandestinely inserted by some

new dealers here. They were discussed—all the questions on the census schedule—in various conferences which included businessmen, college professors, and other outsiders. Director William Lane Austin, of the Census Bureau, told the Senate Commerce Committee about some of these conferences.

Starting just a year ago a general conference on the 1940 population schedule was held here under the chairmanship of Dr. Louis I. Dublin, of the Metropolitan Life Insurance Co. Among those who attended the conference were President David R. Craig, of the American Retail Federation; Secretary Noel Sargent, of the National Association of Manufacturers; Gen. Robert E. Wood, chairman of Sears, Roebuck & Co.; and representatives of both the A. F. of L. and the C. I. O.

"The conference," said Director Austin, "approved the question on the tentative population schedule, which included the income queries, and expressed particular satisfaction with the question relating to migration, employment, unemployment, and economic status."

Last April a conference was held under the auspices of the National Bureau of Economic Research in New York City, which went on record "as strongly recommending the inclusion of such questions (questions on income) in the census," according to Dr. Austin. The National Bureau of Economic Research includes directors from such groups as the American Engineering Council, the American Publishers Association, and the A. F. of L.

From April to July the technical advisory committee of the division of population of the Census Bureau studied proposed questions and unanimously approved of the income questions now on the schedule. This committee included Secretary Frederick F. Stephens, of the American Statistical Association and editor of the American Statistical Journal; Prof. Frank Lorimer, of American University, secretary of the Population Association of America; and Assistant Director P. K. Whelpton, of the Scripps Foundation for Population Research.

The advisory committee of the Census Bureau approved the income inquiries. This committee includes Dr. Murray R. Benedict, of the University of California; Dr. William F. Ogburn, of the University of Chicago; Dr. J. Frederick Dewhurst, of the Twentieth Century Fund; Dr. Robert E. Chaddock, of Columbia University; Paul F. Cherrington, market analyst; and Dr. Willard I. Thorp, of Dun & Bradstreet, former Amherst College professor and now economic adviser to Secretary of Commerce Hopkins. "This committee," stated Director Austin, "which had occasion to carefully consider the questions on the population schedule over a period of more than a year, also unanimously approved the inclusion of the income questions."

After all this the Census Bureau last August used these questions in its test census of two Indiana counties with a total population of 186,000. The questions went over well. "The number of refusals was negligible and the percentage of cases where the informant was unable to supply the information was very small (2.5 percent of employed wage earners in South Bend City)," which was included in the area.

"Thus," said Director Austin somewhat plaintively, "it was only after careful study had been given to the many requests received for obtaining income statistics, both from private business and from Government sources, supplemented by the almost unanimous advice of a cross section of the American public, and by an actual test of the inquiries in a special census, that the population schedule, including the income questions, was presented to the Secretary of Commerce for approval, which was given November 9, 1939."

Dr. Willard L. Thorp, in his own statement to the committee, noted that the demand for income data came from "such organizations as the American Home Economics Association, the National Industrial Conference Board, the Actuarial Society of America, the Population Association of America, also some ministers and church councils, Y. M. C. A.'s, insurance companies, automobile manufacturers, public utilities, labor unions, advertising agencies and market analysts, publishers of magazines and newspapers, and publishers of farm papers."

Anthony Wayne Memorial

EXTENSION OF REMARKS

OF

HON. GEORGE W. GILLIE

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1940

EDITORIAL FROM THE FORT WAYNE (IND.) NEWS-SENTINEL

Mr. GILLIE. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I wish to include a timely editorial from the Fort Wayne (Ind.) News-Sentinel of March 1, 1940, which I recommend to every Member of Congress. The editorial deals with the proposed construction of a memorial to Gen. "Mad" Anthony Wayne, hero of the frontier days, and points out that it would be fitting and proper to hold dedication ceremonies for such a memorial in conjunction with the celebration of the one hundred and fiftieth anniversary of the founding of Fort Wayne on October 22, 1944.

This newspaper, which has the distinction of being one of the finest published in any city of its size in the United States, has been leading a crusade for a much-needed memorial to General Wayne for several years.

In the beginning there was some disagreement over what form the proposed memorial should take, but sentiment now appears to have crystallized in favor of a memorial of the type provided for in a bill (S. 2441), sponsored by Senator ROBERT A. TAFT, of Ohio, a member of the Federal Anthony Wayne Memorial Commission.

Senator TAFT's bill which, for some reason, appears to be pigeonholed in the Senate, provides for a small initial appropriation with which to conduct a Federal survey of the military route of General Wayne in Indiana and Ohio.

On the basis of this survey, Senator TAFT proposes that a beautiful memorial parkway be constructed along the Wayne route, and that a permanent memorial to General Wayne be erected in the city of Fort Wayne, which was named in his honor.

The bill is a reasonable measure, and I recommend it to the attention of every Member of the House and Senate. Let us take the advice of this editorial. Let us quit stalling and do something to honor the memory of the man who is responsible, more than any other single individual, for the victory over the British and the Indian forces and the preservation of the western country as an important part of the American Republic. Let us enact S. 2441 now.

[From the Fort Wayne (Ind.) News Sentinel of March 1, 1940]

BUT WE CAN'T AFFORD TO STALL

We have said that there's time enough to get an Anthony Wayne memorial under way for dedication ceremonies at Fort Wayne's one hundred and fiftieth birthday, October 22, 1944.

But we have also pointed out some of the apparently inevitable tendency toward delay on the part of Congress and other public agencies, and we have sought thereby to indicate the necessity for concentration of local interest, activity, and enthusiasm upon the business of keeping the project alive in the consciousness of public officials.

As a specific illustration, we cited the instance of the Lincoln Memorial in Washington, D. C., which was not finally dedicated until 1922, or 57 years after the death of the Great Emancipator.

Mention might also be made of the Perry's Victory and International Peace Memorial at Put in Bay, Ohio, commemorating the victory of Commodore Oliver Hazard Perry and his men over the British Fleet in the Battle of Lake Erie, September 10, 1813; also, the northwestern campaign of Gen. William Henry Harrison in the War of 1812; and the more than 100 years of peace that ensued between Great Britain and the United States.

The Doric column of the monument, rising more than 350 feet above the level of Lake Erie, was not completed until June of 1915, or nearly 102 years after Perry's victory, and after several years of preparation, agitation, appropriation, etc.

Even so, the column was only the central part of the whole Perry memorial, which includes adjoining ground, plaques, retaining walls, etc., and final completion of the whole memorial did not come until 1925, after much agitation by both local and national sponsors.

The cost of this entire project totaled approximately $1,000,000, of which the Federal Government contributed $396,164, the remainder being appropriated by the nine States of Ohio, Pennsylvania, Michigan, Illinois, Wisconsin, New York, Rhode Island, Kentucky, and Massachusetts.

Construction of the Perry memorial was under a commission composed of representatives of the Federal Government and all the States which contributed funds, just as the Wayne memorial project is under a commission composed of representatives of the Federal Government and the States of Ohio and Indiana, including Fort Wayne.

These things all take time, and interest, and effort, and cooperation, and vision, and enterprise, and sincerity of patriotic purpose. They don't just happen. So let's get going and keep going, toward the worthy and variously advantageous objective of an Anthony Wayne memorial at the headwaters of the Maumee.

What Perry did on Lake Erie was not really as important as what Wayne did in Ohio and Indiana. But we've got to "sell" that idea to the Federal Government, which includes Representatives from 47 other States. It's a job which will justify no stalling, no avoidable delays, no petty provincialism, no cheap whoopla, no personal or political glory seeking.

If that job is done, and done right, we repeat that its completion is going to repay us handsomely for our time and effort. About 50,000 people visit the Perry Memorial every year. It is a fairly

safe assumption that many times that number would visit a Wayne memorial here—a handsome and well-publicized memorial reached by a broad, well-publicized scenic highway tracing Wayne's military route in Ohio.

If even 100,000 tourists can be brought to Fort Wayne over that route and made to stop and view a Wayne memorial here each year, you can be very certain that at the very least these tourists will spend a hundred thousand dollars here—a hundred thousand dollars that we're not now getting.

And that leaves completely out of the reckoning all the wages involved in the construction project.

Already a commendable beginning has been made here along the lines of registering public opinion with the Congress at Washington.

Comments the Toledo (Ohio) Blade:

"The [Wayne memorial] project * * * is given new impetus by endorsement of the Taft bill by several influential organizations in Fort Wayne. A multiplicity of bills pending in Congress has confused and divided supporters of the general plan and delayed action. * * * The bill introduced by Senator ROBERT A. TAFT, of Ohio, is along broader lines. It provides for a Federal survey of, and preliminary work along, the entire Wayne Trail. An important section of it virtually parallels Federal Highway No. 24, between Toledo and Fort Wayne by way of Defiance, but in its larger aspects this project includes also a memorial structure at Fort Wayne, as well as a parkway, with historic spots well marked, from Cincinnati to Greenville, Fort Wayne, Defiance, Toledo, and Detroit. * * * The ripening of opinion in favor of the Taft bill is exceedingly fortunate. This measure calls for no huge appropriation at the outset, but contemplates a wise and well-rounded development of the project over a period of years, on routes traversed yearly by hundreds of thousands of tourists."

One of the "multiplicity of bills pending in Congress," to which the Toledo paper refers, has been the Jones bill, suddenly passed last week by the House of Representatives.

That bill, like the original Farley bill introduced by Representative GILLIE'S predecessor from the Fourth Indiana District, is objectionable only in that it is strictly local in character. Its provisions for a memorial to the Treaty of Greenville, like the provisions for a Wayne memorial to be located in Fort Wayne, could have been—and still can be—included in the blanket terms of the Taft bill.

Meanwhile, rather than criticize Representative JONES and his constituents for their somewhat provincial attitude, the people of Fort Wayne had better reflect upon the fact that the House almost certainly would not have passed the Jones bill unless there had been, over a considerable period of time, an intensive, sustained, and intelligent expression of public opinion in the Greenville community in behalf of a memorial to the Treaty of Greenville.

And the people of Fort Wayne may be very certain that proper consideration of their rightful claim to a memorial to Anthony Wayne (whose whole objective in negotiating the Treaty of Greenville was to cement control of the headwaters of the Maumee) will not be forthcoming unless they direct to Washington enthusiastic expressions of Fort Wayne's claim, and demands for authorization of the Taft bill's proposed survey and for whatever subsequent legislation may be required to effectuate construction of a Wayne memorial here in time for appropriate sesquicentennial ceremonies on October 22, 1944.

Raymond Clapper Denies Roosevelt is "Cheap Politician"

EXTENSION OF REMARKS

OF

HON. KARL E. MUNDT

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1940

ARTICLE BY RAYMOND CLAPPER

Mr. MUNDT. Mr. Speaker, we have heard much the past few days concerning the existence or nonexistence of President Roosevelt's ambitions to become the Democratic nominee for President so that he can have a fling at trying to flaunt the well-established American two-term Presidential tradition. The President's persistent reluctance to take the country into his confidence in connection with his personal ambitions on this point indicates but does not prove that he wants to run again and is trying to whip his party into a subservient acceptance of his desire. How successful his drive may be time alone can reveal.

AS RAYMOND CLAPPER SEES THE SITUATION

Inasmuch as Raymond Clapper has frequently written as a friendly pundit expressing sympathy and indicating support of the New Deal and has been unduly harsh at times in criticizing the Republican Party, his analysis of the "third-term crises"—latest of an unending chain of Rooseveltian emergencies—should provide something in the nature of an unbiased opinion by an experienced observer. It is interesting to read, therefore, that Mr. Clapper definitely prophesies that President Roosevelt will not run for a third time. It is even more interesting to note that Mr. Clapper based his conclusions on the opinion that "President Roosevelt is not a cheap politician." In so doing, Raymond Clapper gives new strength to the third-term tradition by indicating that it would be "cheap politics" for a President to attempt to use his vast political machine and his powers of patronage and pork purveying to keep himself and his family in power. In my opinion, Mr. Clapper strikes an important note in the following column, clipped from the Washington Daily News:

DID HE MEAN IT?

(By Raymond Clapper)

I turn back the page to the night of March 4, 1937. That was the fourth anniversary of President Roosevelt's first inauguration. On this anniversary Democrats were assembled at the Mayflower for their victory dinner, celebrating the 46-State landslide of 1936.

Addressing his fellow Democrats and the entire country, Mr. Roosevelt related that a few days before a friend, who was identified only as "John," called at the White House. Mr. Roosevelt said he told John that he had a great ambition.

The President quoted himself as follows: "I am by no means satisfied with having twice been elected President of the United States by very large majorities. I have an even greater ambition. (By this time, explained Mr. Roosevelt, John was sitting on the edge of his chair.) John, my ambition relates to January 20, 1941. My great ambition on January 20, 1941, is to turn over this desk and chair in the White House to my successor, whoever he may be, with the assurance that I am at the same time turning over to him as President a nation intact, a nation at peace, a nation prosperous, a nation clear in its knowledge of what powers it has to serve its own citizens, a nation that is in a position to use those powers to the full in order to move forward steadily to meet the modern needs of humanity—a nation which has thus proved that the democratic form and methods of national government can and will succeed."

Then Mr. Roosevelt told his audience: "My friends, that ambition of mine for my successor can well be the serious ambition of every citizen who wants his United States to be handed down intact to his children and grandchildren."

Fine words! Fine words that don't mean a thing unless Mr. Roosevelt was sincere. Fine words that are being ground into cheap baloney by what is now taking place.

On the basis of current political developments practically everyone else in Washington has come to the conclusion that President Roosevelt will run for reelection. I do not share that belief, a small fact which doesn't seem to matter.

The belief that Mr. Roosevelt is a candidate is so strong that only the hardiest souls in the Democratic Party have the nerve to struggle against it. Other politicians, regardless of their personal feelings about the wisdom of breaking the third-term tradition, have their own hides to look out for and they are hustling to climb onto the third-term coattails of Mr. Roosevelt before it is too late. A Democratic politician would be in a sad fix if he were caught off base with Mr. Roosevelt running again. Remember the purge.

Now, what did Mr. Roosevelt mean when he spoke of handing the United States down intact to the next generation?

Does he mean to hand it down intact, except for the tradition that after 8 years in power a President shall step aside?

Does he mean to hand it down intact, except by adding a new custom under which a President, after serving two terms, shall permit and tacitly encourage his party organization to rig the machine so that it will turn up a third nomination?

Does Mr. Roosevelt mean that the United States shall be handed down intact except with a new custom under which any self-respecting successor may take it as a personal affront if his party does not renominate him for a third term, as the Democrats did Mr. Roosevelt? Don't think it won't be a matter of personal vanity with any successor to make as good a showing in this respect as Mr. Roosevelt.

How is Mr. Roosevelt to get this third-term nomination? By the kind of thimblerigging that you see going on in Ohio. It stinks like the job that the Taft machine did on Cousin Theodore in 1912. Is Mr. Roosevelt going to make himself the beneficiary of political machines, concerned about their meal ticket, and then try to pretend that he alone can save the country?

Franklin Roosevelt is a politician, but I don't think he is a cheap one.

If Mr. Clapper's contentions are sound, it is quite possible that President Roosevelt's greatest contribution to American growth and continuing self-government may yet be an emphatic renunciation of charges he is trying to draft himself for a third term. By so doing he could add his weight to that of Washington, Jefferson, Jackson, Coolidge, and many other

great Americans in urging that one-man government and one-family dynasties shall never become the order of the day in self-governing America.

The other day an interesting balance sheet was prepared showing benefits and disadvantages to F. D. R. should he run for a third term. Advantages to the President and his family included continued access to the headlines for F. D. R., his wife, and sons; the totalitarian thrill of distorting this government of free men into a government of family mandates; the credit for permanently destroying the Democratic Party and substituting the New Deal party in its stead, with its European philosophy of centralized control, thus wiping out the last vestiges of States' rights, for which the Democratic Party of the South so valiantly stood in former times. All in all, even should his drive for a third term be successful, the fruits of such victory would go far toward destroying credit which the President might otherwise receive from future historians. His eagerness for personal power and family fame would outweigh his services to fellow citizens.

Under the heading of disadvantages, F. D. R. would find an alarmingly long list of items whether his bid for a third term were successful or unsuccessful. In the first place, his announcement, or continued acceptance by silent acquiescence, for a third term would precipitate one of the bitterest campaigns in American history. Important social and economic issues would be obscured by the all-important political issue of whether America, in a world plagued by one-man rulers, should sacrifice its traditions of self-government and yield to the European influence to go dictator.

Even though victorious, F. D. R. could never heal the resentment of Democrats and Republicans alike who would resent this destruction of the American way. Self-government can be sabotaged and destroyed, but it dies slowly, and free men are slow to forgive the political princes who become their masters. Once the third term is accepted in America, a fourth and a fifth become inevitable. It is a short step from continuous reelections to hereditary rulership; it is as easy to shift the mantle of the gods from father Franklin to son James as it is to break a century and a half tradition against perpetual Presidential powers vested in one man. And a family dynasty can be perpetuated without benefit of free elections—even of the Harry Hopkins "if they vote right, we'll feed 'em" variety. The doubtful honor of frustrating the free decisions of a free people is in itself a serious disadvantage to a man whose permanent worth will be evaluated by historians yet unborn. The indictment of such a victory might well be more serious than the implications of defeat in failing to achieve such success.

While it is patently true that under the spur of the New Deal the Democratic Party of Jefferson and Jackson has become but a pale shadow of its former self, it does not seem likely that it has sunk to such low depths that it cannot find within its ranks anybody except the present incumbent in whom it can repose sufficient confidence to lead its campaign for the Presidency. And if it has so lost its former sinew, surely the New Deal party can find some other standard bearer to present its philosophy without having to resort to an attempt to perpetuate one man in power in order to give articulation to its policies.

Its apparent inability to develop new leadership to support its program is in itself, incidentally, a serious indictment of the New Deal position. In its zeal to concentrate power in one branch of government it has drifted too far to the position where it now must rely upon one man to give it a rallying point.

It was by this same gradual drift from centralized political power to personalized political power that Mussolini, Hitler, and Stalin were gradually transformed from leaders of their party to dictators of their states. To assume responsibility for carrying onward a parallel movement in America is a fearful and an awful task. The disadvantages accruing to the politician who would assume such a task for himself pyramid a hundredfold and greatly outweigh any temporary advantages for self or family. Hence, Raymond Clapper's prophecy that Roosevelt will not run again is probably accurate. For the peaceful, regular, upward trend of American processes men of all parties should hope that it is.

What Finland Has Done About Unemployment

EXTENSION OF REMARKS
OF
HON. JERRY VOORHIS
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, March 5, 1940

LETTER FROM E. R. BOWEN

Mr. VOORHIS of California. Mr. Speaker, the following letter from Mr. Bowen, general secretary of the Cooperative League of America, speaks for itself. It shows that unemployment can be overcome without dictatorship, and that, apparently, the business of getting a higher percentage of the consumer's dollar into the hands of the farmer has a good deal to do with the matter. A careful reading of the following letter will give us all food for thought:

CHICAGO, ILL., *February 27, 1940.*

Congressman JERRY VOORHIS,
Washington, D. C.

DEAR CONGRESSMAN VOORHIS: In accordance with our promise, we are quoting below the item we published in our national magazine, Consumers Cooperation, in December 1939, relative to the elimination of unemployment in Finland. The item reads:

"The bulletin of the Bank of Finland reports that in August 1936 there were 996 unemployed in Finland. The bulletin then says in a footnote, 'Owing to the disappearing unemployment the unemployment boards have discontinued the compilation of statistics.'"

Not only has unemployment been eliminated in Finland, but farm tenancy has largely been eliminated. It once reached 62 percent. It was reduced to 27 percent in 1920, and still further reduced to 11 percent in 1929. The elimination of farm tenancy is unquestionably due to the narrowing of the spread between consumers and producers by marketing, purchasing, and finance cooperatives. On this point, note the comparative spread below:

Spread between consumer and producer (1938)

Product	Finland	United States
	Percent	*Percent*
Milk for consumption	23	
Milk for butter	17	57
Milk for cheese	30	
Eggs	17	41
Potatoes	42	57
Pork	25	38

The Finnish statistical report from which the above figures on Finland were taken gives the reason in these words:

"The cost of processing and distributing of agricultural products is relatively low in Finland, thanks chiefly to the general advance of the cooperative movement."

Yours truly,

COOPERATIVE LEAGUE OF AMERICA,
E. R. BOWEN, *General Secretary.*

An Anniversary

EXTENSION OF REMARKS
OF
HON. L. L. MARSHALL
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1940

EDITORIAL FROM THE OHIO STATE JOURNAL

Mr. MARSHALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial published in the Ohio State Journal under date of March 5, 1940.

[From the Ohio State Journal of March 5, 1940]

AN ANNIVERSARY

This week marks the seventh anniversary of the New Deal. The country is to be regaled with recitals of its accomplishments by ardent proponents, on the one hand, and, on the other, those who oppose it will sum up its failures. Probably both sides will go to

extremes in praising and damning respectively, but from the oratorical flow the country will be able to strike a balanced judgment.

At the outset, it should be noted that what the New Deal has achieved has been at the expense of the country as a whole. Any party choosing to spend the Nation into a staggering debt rather than seek a constructive path to recovery could have done as much. Any individual, with free access to somebody else's huge purse, could buy for himself and those he favored the same results the New Deal has bought for the Nation.

But this is not constructive, and it is not recovery. It has been a palliative which has soothed, perhaps, but has not cured and cannot cure. Mr. Roosevelt took over about a year after the bottom of the depression, which started in late 1929, had been reached and after recovery under normal circumstances had already set in. He took over on pledges of economy that appealed to a vast majority of the people. He promised to curtail Government expenditures, reduce Government bureaus, and to maintain a sound currency at all hazards; he charged the previous administration with having been the most extravagant in our history, and said he would stop the waste. His golden voice assured the people that under him America would head back toward prosperity along paths charted by Jefferson and Jackson.

That was 7 years ago this week. Today every constructive pledge stands repudiated; unemployment is virtually as high as it was on the day Mr. Roosevelt was inaugurated; the public debt has passed the $42,000,000,000 mark, and the end is not in sight. Instead of reducing Government bureaus it created them, until they crowd each other in a confusion of alphabetical designations; promising to curtail wasteful expenditures, the administration has made an all-time record for reckless extravagance based on theories and put through as experiments and against principles of sound economics.

Creating regulatory bureaus and commissions, the New Deal placed hobbles on business that have held it back from any possibility of full recovery. The Securities and Exchange Commission, foisted on the Nation as a protection from questionable financial practices, has all but stopped the flow of venture money into industry, and without such capital, neither business nor industry can progress beyond the static condition in which they have been anchored; the Triple A, flouting the historic fact that all wealth is based on production, has curtailed the output of the soil and plunged the country deeper in debt by taking the wealth we already had and dividing it in order to buy from the farmers the means to enforce its visionary theory of abundance through scarcity. It started to regiment business under N. R. A., but a Supreme Court that had not yet been packed by the President, was wise enough to throw out this communistic act as unconstitutional.

Under 7 years of Rooseveltism there have sprung up in America more leftist organizations than ever existed here in all our previous history. Its own leftist tendencies undoubtedly helped to inspire such pink adolescent groups as the American Youth Congress, which became so radical that the President himself finally had to rebuke it. From top to bottom, this administration has been permeated with this same pink tinge, and often it has crossed the border into actual red.

With 7 years behind it, the New Deal today ranks with the Populist and Greenback parties of the past as colossal flops; the country is no better off than it was in 1933. The delusion that it is, has been created by the expenditure of billions of public money, all of which must be accounted for and all of which is a burden this generation and the next two or three to come, must bear and pay back.

This year the New Deal enters the lists as a party seeking return to power for another 4 years. The people have already begun to express their reactions. The tide definitely is away from continuing this administration and the outlook is that 1940 will either see it unseated or so reduced as to be impotent.

The tide began in 1938 when the off-year elections resulted in notable gains for the Republican Party, both in gubernatorial and congressional seats; the special elections in Ohio a few days ago evidenced that this tide is still flowing. There is real reason for believing that this, the beginning of the eighth year of Mr. Roosevelt and his visionary hybrid party, is also going to see its repudiation by a disillusioned people who no longer are fooled by dreams, theories, and wild experiments.

Printing and Its Contribution to Democracy

EXTENSION OF REMARKS

OF

HON. ROBERT F. JONES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1940

ADDRESS BY HON. ROBERT A. TAFT, OF OHIO

Mr. JONES of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of Senator ROBERT A. TAFT before the Baltimore Association of Commerce and the Graphic Arts Association of Baltimore, at the Emerson Hotel, Baltimore, Md., Tuesday evening, February 27, 1940, commemorating the five hundredth anniversary of the invention of movable type:

Honorable toastmaster and gentlemen:

The legends which become history when the genuine muse fails us declare that this year marks the five hundredth anniversary of the birth of printing—the most exciting achievement in the whole history of invention. Five hundred years ago, in the German city of Mainz, a resourceful craftsman, Johannes Gutenberg, discovered the art of printing from movable, uniform type; a discovery which, more than any other single event, marked the boundary between the night of the Middle Ages and the dawn of the modern world. Gutenberg's invention broke the monopoly which the powerful maintained over knowledge and information, finally making all men equal in their access to news of the world about them. It made books cheap, communicating ideas swiftly to the Western World. Public education, free discussion, scientific inquiry—democracy itself—have flowed from that obscure printing shop in Mainz since the year 1440. It would not be too much to say that the printing press, more than any other factor, has shaped the political and social world in which we live.

Tonight we honor the genius of Gutenberg. We rejoice that a lowly, undiscouraged individual helped powerfully to break the chains of ignorance which weighed the race. But we do more. If we cherish the values which the widespread diffusion of knowledge helped to establish—self-government, freedom of mind and spirit, and objective criticism of all dogma, which characterize our American civilization—then we should turn tonight to a study and appreciation of those values. They need our defense more than at any time since the foundation of our self-governing republic. Reactionary forces are abroad in the world. Grimly fanatical men in Europe, men who rule great and bewildered peoples, hold these values in contempt. Nor do they lack allies in America. It is appropriate that we who esteem these values should gather in the name of Gutenberg to express clearly the reasons for our faith.

I am told that this observance is, or will be, Nation-wide in America. It may well be. No country owes more to the art of printing. In a world beset by war and brutal despotisms that deny the integrity of the individual, we in America stand out peculiarly as the legatees of Gutenberg. And it is doubly appropriate that you of Baltimore should be paying this really magnificient tribute to an event which has influenced your city from its earliest days. In Baltimore the issue of the freedom of the press was fought for and vindicated during the days of our Revolution. Few nowadays are aware even of the name of William Goddard, who founded Baltimore's first newspaper, the Maryland Journal, in 1773. Goddard, a New England Yankee, was likewise a Tory. His royal sentiments angered a majority of the populace, which from time to time handled him roughly. Goddard remained undaunted. Once, when a mob forced him to apologize for publishing Gen. Charles Lee's attack on Washington, he outwitted the patriots by republishing the matter in his next issue. However erroneous and unpopular Goddard's opinions, he was plainly of the stuff of martyrs.

It is fitting also that a city with the literary and scientific traditions of Baltimore should honor this occasion. Baltimore has had a golden age of literature; an age adorned by Edgar Allen Poe; the biographer, Jared Sparks; Edward C. Pinkney; and Samuel Woodward. It has had a golden age of science under the patronage of the Johns Hopkins and other world-famous institutions. It was here, in the Baltimore American, founded in 1799, that the Star-Spangled Banner first was published to the world in 1814. The celebrated Baltimore Sun, which has been devoted to the principles of self-government and the freedom of the individual since its opening issue, came on the Baltimore scene more than a century ago. Moreover, it is Baltimore's distinction that it gave to the world the revolutionary technique of the linotype. That invention, which enormously expanded the facilities of the press, came from the skill of another German, Otto Mergenthaler, who found his New World home in this city.

THE WORLD AS GUTENBERG SAW IT

As heirs of the printing press, it behooves us to pause for a look backward; a glance at the society in which Gutenberg lived, in order that we may understand how far we have advanced since his day.

In 1440 most of Europe was organized politically into a loose confederation of feudal states under the declining Holy Roman Empire. The Archduke of Austria held nominal sovereignty over a host of kings, princes, electors, dukes, counts, and bishops, as well as a few self-reliant free cities. All authority was imposed from above, descending from the emperor through various steps of authority to the subject. The principle of arbitrary control from above flourished everywhere. The material well-being, the religious faith, the life itself of the subject were at the will or whim of his feudal lord. The individual was bound in a chain of loyalties extending from his immediate boss to the imperial throne itself.

The subject's existence was everywhere regimented in detail. From the time he arose in the morning, whether he was a scholar, serf, merchant, or artisan, until he lay down at night, the subject's daily life fitted into a pattern fashioned from above. The cut and color of Gutenberg's clothing, and that of his wife, were fixed by decree. Numerous laws prohibited subjects from dressing "above their station." In the city of Nuremberg the subject was

forbidden to part his hair. In London he could not serve more dishes at a meal than the law allowed. The hours which a subject might spend in a tavern were strictly regulated, as well as the number of drinks he should imbibe. His speech was governed by voluminous laws defining impiety and blasphemy. Regimentation went so far as to specify the thickness of the stick with which a subject might beat his wife.

The condition of commerce was even more depressing. The medieval economy of western Europe was organized into a watertight system known as mercantilism. It was a closed economy. Industrially the guilds controlled production, regulated prices, restricted output, and fixed wages. Production being, in the main, collective, there were few rewards for invention or individual enterprise. Each community sought to be self-contained. The movement of goods and people alike was strictly regulated. Such wealth as existed, which was little, for Europe was poor beyond our imaginings, remained in the hands of a few. If there was little circulation of wealth, there was likewise a minimum circulation of persons from one class to another.

The society in which Gutenberg dwelt was despotic, in part collectivized, and static. It remained so, although decreasingly, for generations. Although by the year 1500 there were a thousand printers scattered through western Europe the effect of their product still was limited by the illiteracy of the masses. Free universal education awaited the establishment of the American state.

But Europe was on the march thereafter toward democracy and abundance. A slow march it was, to be sure. Freedom of industry and commerce only began to supersede ironclad mercantilism in the century after Gutenberg. Gradually individual enterprise replaced the collectivism of the guilds. As mercantilism provided the economic background for feudalism, so business freedom made possible the movement toward political self-government. The new economics vanquished mercantilism. It provided a new dynamics for society. It rewarded the individual, evoked new techniques and improvements in old, cheapened production and distribution, and, above all, provided sufficient aggregations of savings to exploit the resources that the explorers were disclosing in the New World.

The forces set in motion by the easy spread of ideas through the printed page came to a political crisis in the eighteenth century in the great middle-class revolutions of France and the American Colonies. In France the explosive ideas of Voltaire, Rousseau, and Diderot, to name only a few, widely and cheaply circulated, did more to strengthen the people in their assault on the Bourbons than any other single factor. The philosophers undermined the despotic state, giving sound reasons for the transfer of sovereignty from king to people. In these Colonies, the public printers who, from 1765 onward, published the arguments of those Americans resisting George the Third's encroachments, prepared a suitable seedbed of opinion for the decisive act of separation. Benjamin Franklin's sound and resolute views were spread the length of the Colonies by the willing printers. Thomas Paine's one pamphlet *Common Sense*, because of the mechanics of printing, could appear in thousands of counting houses, taverns, and homes within a few weeks. There have been few such effective demonstrations of the power of the printed page to influence public thinking as that pamphlet.

In the troubled period between Yorktown and the inauguration of Washington, the printed word again molded the spirit and the actual form of our new nation. I need only cite the widespread diffusion of the Federalist papers to recall the part played by the printing press in creating our Federal republic and its representative government.

Nor was it an accident that the liberalization of the democratic system in this country and in England followed closely upon the establishment of the cheap daily press about the beginning of the nineteenth century. It was in that press, which rapidly rose to influence, that the agitation went forward in England which culminated in the Reform Acts of the 1830's. The institution of free schools, the enlargement of suffrage, and other measures strengthening the system of self-government in this country followed upon the rise of the daily press early in the last century.

THE FUNCTION OF THE PRESS IN A DEMOCRACY

Throughout the history of our country the press—daily, weekly, and periodical—has fulfilled its dual role, first, providing people with all the information that is available, secondly, serving as a forum for the discussion of issues. We may often criticize the press. It is made up of human beings prone to error like other sinners. The present-day press seems too willing to interest itself and its readers in those issues and those people who put on a show; inclined to follow what is supposed to be reader interest instead of creating reader interest. But the Government, the courts, the universities, the public-school system are likewise run by men and women who admit that they and their institutions are not perfect. Nearly every publication I know expresses its views freely and honestly, without orders from any outsider. I do not at all share the sweeping criticism which has been increasingly heard from those with whom the press happens to disagree. It is a wholesome situation that the detractors of the press are not disbarred by the press from conveying their ideas to the public. The newspapers of America cannot be wholly biased and corrupt when they display the epithets of Mr. Secretary Ickes against themselves on their front pages.

Moreover, I believe that the American press, with all its imputed shortcomings, is the freest and fairest in the world. I can only suggest to the newspaper publishers and editors of this country that they continue as in the past to portray day by day the events and opinions which are of real importance, and publish them without allowing their own views to color the news or the views of the lead writer to color the headlines. The people can make up their own very intelligent mind if all the facts and arguments are before them. This is the great service printing has done to the world and the only way that democracy and self-government have been made possible. A free people must have a free press. The very concept, indeed, of a free, self-governing people is dependent upon the free publication of opinion.

We see in Europe great, intelligent peoples deprived of the opportunity to form a public opinion by the stultification of their press. No matter how enlightened a German may be today, he lacks the raw materials for an opinion on the merits or demerits of his rulers, the justice of this war, or the role of Germany itself in present-day Europe. How can a Russian, regaled with the abusive mendacity of the Kremlin's propaganda mill, be expected to form an opinion on the moral values involved in the invasion of Finland? Even in Great Britain and France as of today, the press is denied the liberty to select its news and views. In the Scandinavian countries, where democracy has flourished with few hindrances, the press increasingly is censored. This condition in Europe gives rise to the circumstance which should be gratifying to every American—that Europeans who wish to obtain an objective picture of events on their continent turn increasingly to the American press and American radio.

THE FORCES OF REACTION AT WORK

As Americans we like to believe that the slow struggle of European civilization upward from the time of Gutenberg reached a political climax in what we call the American system. That system is based on the freedom of the individual citizen. He is not subject to any ruler. He is one of the masters, and the Government officials are his servants. He divides his power among many Federal, State, and local officers, so that no one may acquire arbitrary power over him. He is not even subject in his fundamental privileges to the majority of the people. He has certain inalienable rights.

Under that system, which has afforded the freest possible play to the individual in political life, in business, in the arts, in science, in industry, and agriculture, the United States grew from a small collection of settlements along the Atlantic Seaboard to become the greatest power in the world within a century and a half. That is a truism which cannot be too often stated in times when the American system is vociferously attacked from many quarters.

I have said that forces of reaction threaten the values on which this system rests. Many of the voices raised against it speak in the name of progress and liberalism. No greater misnomers can be imagined. The nineteenth century has been called the liberal century. In that fruitful, expansive span of years, democracy was enlarged, and the physical well-being of the earth's populations enormously improved; great inventions reduced time and space; the free movement of goods and peoples spread civilization everywhere. The impulses of that century were truly liberal, and no one doubts that mankind made greater material advances than in the whole 18 centuries which preceded it in the Christian era. The wealth of the people was multiplied manyfold. Whereas the population of Europe increased only five times between Gutenberg's time and the outbreak of the World War, the wealth of the European people grew one hundred and thirty times.

The nineteenth century rejected the idea of a closed economy. It knew little price fixing, curtailment of production, government fixing of wages. It was not a century of planned economy or political tyranny. The world in general trod that broad highway of progress until the war of 1914. We followed it until the depression of 1929, resulting from that war.

The story of Europe's reversion to the older type of political and economic organization is fresh in your minds. The demoralization brought on by the World War disrupted the weakest countries most. The economy first of Russia, then of Italy, and finally of Germany was ruined. In that order those countries accepted receivership. The modern dictator is in effect a receiver administering a bankrupt and confused state. Great Britain and France, being empires and victorious, required no receivers. The new totalitarian states developed what they call ideologies, or rationalizations, to justify their existence and their behavior. That of Russia was based on Karl Marx; that of Germany on discredited and unscientific theories of race or blood; that of Italy on memories of the early and vigorous Roman Empire.

When the depression of 1929 broke down temporarily the financial foundations on which our economic system was built, a lack of confidence naturally arose in the whole system. New conditions had developed to which the American system of political and economic freedom did not sufficiently adjust itself. Conditions had become more complex, but not, I believe, fundamentally different. It was necessary for the Government to assume more social

obligations. I feel confident that this could have been done, and can be done today, without changing the spirit or the substance of American life.

Because we were slow to act, however, because confidence was at a low ebb, the ideology of the new despotisms of Europe spread to this country and were embraced, consciously or unconsciously, by many people. Some of these rose to influence in the Government. I don't think they fully realized how closely the ideas they promulgated resembled the ideology which characterized society in Gutenberg's time. I do not believe they knew the theory of a planned economy, collective production, restricted output, and price-fixing were instruments which had kept Europe poor until the movement to free the individual politically and economically furnished new energy to Europe. They thought their face was to the future when in fact it was turned back to the Middle Ages.

We abandoned the time-honored methods with which we had emerged from past depressions, and embarked tentatively on the road to a static economy. That road is only, however, I am confident, a detour. When a landslide swept away the section of the main highway, we turned aside for a little way. Being a detour, it has an end. Surely we have the sense to get back on the concrete road beyond the break, and not wander out some wagon-track into the forest.

I have little patience with those who hold that we who maintain our faith in the liberating and expansive nature of our system are advocating reaction and laissez faire. Our faces are set toward the future. It is some of the self-styled liberals of today who face backward toward the guilds and the totalitarian state. We hold that our system still is dynamic. I believe that America still is the land of boundless opportunity. They tell us that we lost our physical frontiers in 1890. Everyone knew that and thought nothing of it until it was erected into a tenet of national defeat within the last few years; but we still have frontiers in America, social and scientific and industrial frontiers. We have new industries, and there are many others, like the airplane industry, ready to go forward if the chains are unbound. The plastics industry throughout the depression has each year multiplied its output, supplying new materials and fabrics for a thousand uses. The South looks forward to the establishment of a paper industry and a starch industry. Strides are being made even in the slow development of housing. The American people are the same people they were, as determined and inventive and enterprising.

THE AMERICAN PEOPLE AND THE DICTATORS

The essential line between Gutenberg's time and the present over wide areas of Europe need only to be stated to be understood. So far as the masses were concerned in the fifteenth century in the feudal subdivisions of the holy Roman Empire, they were serfs of their overlord. So today are they in Germany and Russia. The mercantile economy had no power in the fifteenth century to raise the standards of living of the people; nor has it that power today. Public works and unemployment insurance do not compensate a youth for the lost hope that he may carve out his independent niche in the world.

In the Middle Ages, income and preferment issued from the state. A youth might rise in Gutenberg's time by only one method—gaining the favor of his leader. So it is today in the dictatorships. Some of our young people have been enticed by the apparent efficiency of despotism. They grow impatient of the slow, compromising methods by which progress is made under a democracy. They are more likely than their elders to mistake the temporary for the permanent. They grow impatient with the hard, sustained, self-discipline required if a man is to make his own way. Thoughtful young people who despair of their future may obtain fresh respect for the American system if they study the history of western civilization from Gutenberg's time to the present day.

I have full confidence that the American people are growing less tolerant of foreign ideology and less tolerant of paternalism tinged with pessimism at home. The American distrust of arbitrary and meddling government is deep. In our infancy we fought a long war to vindicate the principle that the state is the servant and not the master of the people. We resisted the arbitrary exercise of power by a foreign monarch. We preferred in 1776, and I am sure we prefer today, that our decisions shall be made in orderly, or even disorderly, fashion by the many, rather than by the ukase of the few.

Fortunately, this country is rich in resources and in political patience. We have always had room for experiment. When those experiments have failed, we have usually abandoned them and resumed the straight road. As conditions have changed, we have adjusted our system to meet the change, without destroying the basic freedom of that system. We have corrected abuses as they developed, whether from the action of greedy individuals, or pressure groups, or the political vagaries of temporary majorities, and we have never gone back. The American temperament prefers advance to retreat.

The place we occupy today would be impossible except for Gutenberg's invention. Printing alone has made it possible for the people to argue and discuss issues. Only through such argument can we attain the truth. We have assumed social obligations to those who cannot attain a decent living under our system as it is. We see today that this can be done without changing our system of free enterprise. It must be done carefully, so that the others who have to bear the burden of this assistance are not weighted down and discouraged. It must be done carefully, because a state which dispenses money to the citizen with one hand always bears a scourging rod in the other.

The pendulum has swung in this country, as in all civilized lands, between the strong, centralized state on the one hand and a minimum of state regulation over the individual on the other. The strength of the individual has depended on education and the freedom of discussion made possible by the art of printing. More and more, except when upset by a great convulsion like the World War, the pendulum has swung each time further away from the concept and practice of the strong state. It is swinging away today in this country, where the press is free. People today are again more inclined to demand that the Government release its controls and abandon its trend toward mercantilism. The time has come again to go forward on the job which has been neglected for some time, the job of building America. Aided by general education, by a free press, our ideal is, and will remain, a free citizen in a state serving his interest.

Wheeler-Lea Bill

EXTENSION OF REMARKS

OF

HON. VINCENT F. HARRINGTON

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1940

LETTER FROM W. C. PATRICK

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD a letter from Mr. W. C. Patrick, of the Association of Retired Railway Employees, on the Wheeler-Lea bill, as follows:

ASSOCIATION OF RETIRED RAILWAY EMPLOYEES,
UNIT NO. 7,
Portland, Oreg., February 28, 1940.

Hon. VINCENT F. HARRINGTON,
Representative from Iowa,
House Office Building, Washington, D. C.

MY DEAR REPRESENTATIVE: May I presume to call your attention to various remarks in the Appendix of various issues of the CONGRESSIONAL RECORD concerning the Wheeler-Lea transportation bill, which, as I take it, was passed at the first session of the Seventy-sixth Congress, last year, but to which you have at this present session presented an amendment to same, which, without it, the said Wheeler-Lea bill would most certainly work a great hardship upon all of us old and retired railway employees.

First, I see in the Appendix of the RECORD, page 800, an article by the Honorable C. ARTHUR ANDERSON, of Missouri, which is most commendable in support of us old fellows.

Then again on page 1713 of the February 20 issue, is another article by the Honorable Mr. ANDERSON, followed by the Honorable Mr. ALEXANDER, of Minnesota, who quotes a letter written by Mr. A. F. Whitney, president of the Brotherhood of Railway Trainmen, which is a most worthy letter.

Then again in the RECORD, under date of February 23, there is a most appreciable letter written by yourself. For the action you have shown these oldsters you are their friend, and in behalf of the members of the above-named association I wish most heartily to extend thanks.

I have been in the railroad retirement game since its inception. Have followed it all the way through, and I can attest to the reliability of all statements. I am myself a retired railway conductor, receiving my pension under the Railroad Retirement Acts of 1935 and 1937. Citing my own personal case, can say that I served several of the carriers for 50 years. Was married in 1892 to my present wife, who is now almost totally blind. I have grown too old to go out and seek employment again, and should such a bill as proposed ever get through, what in the world would become of such as I?

I am aware of the fact that the railroad stock and bond holders insist upon being able to clip their usual daily coupons, and when they don't the first thing they do is to send out the word to cut the pay rolls one way or another.

Again I wish to thank you for your great interest in us, and would appreciate it very much if you could and would send me copies at your earliest convenience of both the Wheeler-Lea bill as well as your amendment to same.

Most sincerely yours,

W. C. PATRICK.

Motion Picture Democratic Committee Statement of Policy

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 4, 1940

STATEMENT ADOPTED BY MEMBERSHIP OF MOTION PICTURE DEMOCRATIC COMMITTEE AT MEETING ON JANUARY 30, 1940, BY UNANIMOUS VOTE

Mr. GEYER of California. Mr. Speaker, as anything that is connected with Hollywood is of great interest to everyone, it occurs to me that a statement of policy of the Democratic Motion Picture Committee of Hollywood might be in order. This organization is composed of members of the movie colony and have been very active politically in past elections. Their statement follows:

While our principles remain those upon which the organization was founded, the Motion Picture Democratic Committee feels that, in view of critical changes taking place in domestic and world affairs, a restatement of its policies and program is essential at this time, January 1940.

We are dedicated to the democratic principle of government by the people, of the people, and for the people. Upon this traditional foundation rests all hope for a society which is free, prosperous, and at peace.

At the present time war rages in the world. Powerful influences are at work in our own country for the involvement of America in the conflict and skillful demagogy is clouding the air to this end.

Yet more than peace—desired by the vast majority of the American people—is at stake. Liberty and economic well-being are likewise in jeopardy. War threatens these precious heritages, too.

So the struggle for an enduring peace becomes at the same time a defense of civil liberties and the right to work.

The Motion Picture Democratic Committee intends, therefore, to labor unceasingly within our Nation toward these objectives:

Keep America out of war.

Retain the Bill of Rights.

Increase economic security.

We wish to make our program explicit in terms of National and State legislation.

In the cause of peace, the Motion Picture Democratic Committee—

1. Supports strict neutrality; opposes the extension of war credits and war materials to belligerents as steps which will lead us into war.

2. Opposes excessive armaments as unnecessary to defense.

3. Opposes diplomatic or congressional action tending to involve the United States on either side of the European war or tending to prolong or enlarge the war.

4. Opposes M-day (the mobilization bill) and all such militaristic plans for civil and labor regimentation.

5. Supports the spirit of the good-neighbor policy toward South America, opposes all governmental trends to exercise control over the economic and internal policies of Central and South American nations.

To maintain the foundation of our liberties, the Bill of Rights, the Motion Picture Democratic Committee—

1. Opposes the attempt to hamper freedom with new alien and sedition laws, once rejected by America, in the form of the anti-alien legislation now flooding both congressional bodies.

2. Supports the Senate committee investigating violations of civil liberties, and legislation protecting the civil rights of labor.

3. Opposes the tactics of the Dies committee, which has misused its assignment to investigate un-American activities.

4. Supports all measures guaranteeing full civil rights and privileges to Negroes, Mexicans, Filipinos, and other minorities (such as antilynching and anti-poll-tax legislation); opposes all attempts to abridge the rights of racial, religious, and political minorities.

To promote economic security and social welfare for the majority, the Motion Picture Democratic Committee—

1. Supports the principles of the Wagner Labor Relations Act, defining the industrial rights of labor; condemns attacks upon the act.

2. Opposes use of the Sherman Antitrust Act as an antilabor weapon and use of the Federal Bureau of Investigation as an instrument of labor intimidation.

3. Supports extension of long-term, low-interest Federal credits and debt moratoria to small farmers, farm tenants, and small-business men.

4. Supports protection of public health, the principle incorporated in the Wagner Health Act.

5. Supports legislation providing for slum clearance and for building expansion in low-cost-housing units.

6. Supports adequate old-age pensions, payable in cash.

7. Supports broadening of the National Youth Administration and Civilian Conservation Corps under civilian control to provide better protection of our unemployed youth.

8. Supports a public-works program to employ the unemployed on projects beneficial to the Nation (including cultural projects) at union wages.

9. Supports adoption of a revised tax program, increasing levies on large incomes, corporation surpluses, and abolishing tax-exempt securities.

10. Supports legislation to conserve natural resources.

The Census Questionnaire

EXTENSION OF REMARKS

OF

HON. D. LANE POWERS

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1940

LETTER FROM MRS. ENOS M. HUTCHINSON

Mr. POWERS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from Mrs. Enos M. Hutchinson, of Hightstown, N. J.:

HIGHTSTOWN, N. J., *February 28, 1940.*

Hon. LANE POWERS,
Washington, D. C.

DEAR CONGRESSMAN: I am very much concerned about the questions which I understand every citizen has to answer, when the census taker calls at their door. I think some of the questions to be asked are really none of the Government's business, and I think it is taking away our liberty as Americans to be made to answer such questions.

I am really worried. I have always worked hard, and paid my just and honest debts, and have attended to my own business, and what I make and what my husband makes, and what we do with our money, and what we have, we think is our own personal business. I am willing to answer some of the questions, which are all right, but when it comes to telling what we both make, what we pay for gas for cooking, what we pay for electric lights, what kind of fuel we use, and how much our home is valued at, and a number of other questions, which are too numerous to mention, I think it is going a little too far.

I have been reading the paper, and see that the Republicans in Washington are doing their best to strike out certain questions, and I think that is splendid, and I do wish they would strike out a lot of the others. I am a Republican and I wish they would get back in office again, good and strong, as I believe the country would prosper, and business would improve greatly, as the people would go back to work, and that is what a great many are hoping for.

I am married and I work in an office as a bookkeeper, and my salary is small, and my husband doesn't have steady work. He is very ambitious and is willing to do anything, and does work very hard when he has it to do.

My father lives with us, and he is nearly blind and hasn't been able to work because of his eyes for the last 4 years and will never be able to work again because of his age. He is 68 years old, and nobody wants you when you are that age these days, and his health is failing, and I am worried about him, and now when we have to answer all of these questions we are afraid what we do make will be taken away from us, and then my heart will be broken, as it is hard enough for us to live now, and we can hardly make expenses, and if they are going to take everything away from us that we do make, I just feel that I can't stand it.

I am appealing to you as our dear friend, and want you to help my husband and I in these trying times and assure us that we won't have to tell our personal business. We are good, true Americans, and love our country, but we want to keep our rights and liberty and do as our Constitution says, to have the right to live and do as we wish.

I would appreciate an early reply from you.

Most sincerely yours,

MRS. ENOS M. HUTCHINSON.

New Hampshire Day at Valley Forge, Pa.

EXTENSION OF REMARKS

OF

HON. CHARLES A. PLUMLEY

OF VERMONT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1940

ADDRESS OF HON. ARTHUR B. JENKS OF NEW HAMPSHIRE

Mr. PLUMLEY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address of my colleague the Honorable ARTHUR B. JENKS, of New Hampshire, on the occasion of the New Hampshire State Sunday, at Valley Forge, Pa.:

In February, 1938, it was my privilege to come to this hallowed spot, sacred to every American, to participate in a New Hampshire Sunday service, similar to that of today, in this memorial chapel which lends such beauty and grace to Valley Forge.

When last I was here, I dwelt on the part that the valiant sons of New Hampshire took in the American Revolution, but today I want to speak briefly on the peace settlement that followed the close of the Revolutionary hostilities.

In leafing through the pages of history of the Revolutionary period and reading the newspapers of today, recording current events—history in the making—one is somewhat appalled over the striking resemblance of the world turmoil of that day with this. Indeed, one can't escape the discouraging reflection—"Has and will it be ever thus?"

The year 1781 found Great Britain at war with a combination of powers that must have appeared to her then as formidable as the aggregation of adversaries with which she is confronted today; France, Spain, Holland, and the American Colonies were actively fighting England on land and sea, while Russia, Denmark, and Sweden were united in an armed neutrality to oppose British absolutism on the seas.

Largely because of the heavy military tide running against her at that time, hope waned in the hearts of the British people that England would ever be able to subdue her rebellious Colonies across the Atlantic; the doom of this hope was forever knelled with the surrender of Cornwallis at Yorktown on October 19, 1781.

Shortly thereafter an American peace commission was appointed, and negotiations were opened at Paris early in 1782, terminating in the signing of a provisional treaty on November 30, 1782.

Article I of that treaty recognized the 13 American States as "free, sovereign, and independent." Article II defined the boundaries of the new Nation. Article III defined certain American fishery rights. Article IV removed all legal impediments to the recovery of debts between American and British citizens. Articles V and VI restricted future confiscation of loyalist estates and directed the Continental Congress to recommend that restitution be made of loyalist estates already confiscated.

News of the provisional treaty reached the Continental Congress on March 12, 1783.

On that same date John Taylor Gilman, New Hampshire's Delegate in the Continental Congress, wrote to Chairman Weare, of the New Hampshire Safety Committee, informing him of the treaty. Gilman declared "The articles respecting the boundaries of the United States and that respecting the right of fishery are ample, and I believe equal to the most sanguine expectations. These two very important articles are highly pleasing, as are most of the others." This letter from Gilman was the first authentic news of the treaty to be received in New Hampshire—an account of it being printed in the New Hampshire Gazette of March 29, 1783.

On April 9 of that same year Sir Guy Carleton proclaimed the cessation of hostilities between England and the American colonies, and 2 days later the Continental Congress did likewise.

Chairman Weare and the Committee of Safety set aside April 28, 1783, as a day of thanksgiving in New Hampshire. In Portsmouth dawn was ushered in by cannon salutes and the ringing of bells; at 10 o'clock a religious service was held in the North Meeting House, and at noon the proclamation was read from the balcony of the old Province House, amidst a joyous demonstration of cheering and heartfelt gratification over the end of the bitter but victorious struggle for independence. A good old New England banquet then took place in the former royal assembly room, and in the evening there was a splendid ball and a display of fireworks.

On June 18, 1783, Portsmouth Harbor was opened to British ships.

In England, however, the terms of the treaty were regarded as too generous to the American Colonies, which protest resulted in the overthrow of the then Prime Minister, Lord Shelburne, who said: "It is indifferent who understands it (the treaty). The deed is done, and a strong foundation laid for eternal amity between England and America." Nevertheless, the terms of the provisional treaty were approved by Shelburne's successors, effective as of September 3, 1783. Final ratification of the same document was made by the Continental Congress on January 14, 1784.

While under the articles of the provisional treaty many knotty problems remained to be solved and disposed of (the last of which, a fishery dispute, was not finally settled until the first administration of President Cleveland), in retrospect this document shines forth as an American diplomatic triumph.

While American liberty and independence were the great and priceless treasure won through the victory attained by the brave and interpid American colonists, certainly not the least of the byproducts of that victory was freedom from participation in the ever-recurring quarrels resulting from the ancient diplomatic intrigues of European power politics, which render lasting peace on that continent still a bedraggled and forlorn hope. Washington wisely counseled:

"Europe has a set of primary interests which to us have none, or very remote, relation. Hence, she must be engaged in frequent controversies, the causes of which are essentially foreign to our concerns. Hence, therefore, it must be unwise in us to implicate ourselves by artificial ties, in the vicissitudes of her politics or the combinations and collisions of her friendships and enmities. Our detached and distant situation invites and enables us to pursue a different course. * * * Why forego the advantages of so peculiar a situation? Why quit our own to stand on foreign ground? Why, by interweaving our destiny with that of any part of Europe, entangle our peace and prosperity in the toils of European ambition, rivalship, interest, humor, or caprice."

In 1914 when war clouds gathered and broke over Europe, many of us recall the restlessness that developed here in America which, by 1917, raged into a fever of war psychosis that caused us to disregard for the first time the advice of Washington to remain aloof and free from European entanglements. Again the thunder of war is heard in Europe, and the time is approaching when once more we shall be confronted with the decision as to whether or not we shall disregard the advice of Washington.

There are those who try to counter the soundness of his advice by the contention that times have changed, that through inventive genius space has been diminished, oceans have shrunk, and tucks have been taken in world maps, but do not let us overlook the fact that at the time Washington sounded his warning against European entanglements there were still territorial sections of this continent that were under the domination and rule of European governments. Despite the more rapid communication and transportation facilities of our day, Europe was then closer to us than now.

Certainly no thinking person would contend that the shock and eruption of war in Europe leaves us immobile, unaffected, or untouched. There is no gainsaying the fact that war in Europe causes us to suffer an emotional and an economic disturbance that cannot be discounted. We feel it on all sides—our emotions rebel against the ruthless military invasion of small and defenseless countries, cruelly trampled down by the iron heel of stronger and more powerful nations. Because of the necessity of the nations with whom our sympathies lie to arm and defend themselves against annihilation, our industrial and agricultural activities are speeded up, even though we know that when a war-torn and war-weary continent ceases hostilities there will follow here an immediate slowing down of the wheels we have accelerated.

While the present European disturbance has been actively under way only since last September—just 6 months—in a recent statement Secretary of State Hull estimated that if the European struggle were to come to a close now approximately 100,000,000 persons would float out on a world-wide wave of idleness—the 25,000,000 men now under arms, plus the 75,000,000 persons engaged in war work of one kind or another. The United States has its percentage in this enormous group that, sooner or later, is doomed to idleness and readjustment. Indeed, war in Europe does affect us—nor is there any way in which we can shield ourselves emotionally and economically from the tragic jar and jolt of war across the Atlantic.

But let us visualize clearly our part in world affairs. Experience is a harsh and unrelenting teacher. The situation in Europe today proves beyond any shadow of doubt that our participation in the last World War contributed little, if anything, toward the solution of the problems of Europe. I believe that despite anything we can do the wrangle over territorial boundary lines and the balance of power in Europe will continue to shift in blood and smoke until Europe itself finds its own way toward amity and peace. I feel convinced that if the United States again disregards the advice of Washington and becomes involved in another foreign conflict that we will have sacrificed and utterly destroyed our real mission in world affairs. I believe that the greatest contribution we as a Nation can make toward world peace and stability is through the preservation of our own democracy, undiluted by the ravages of war, freely and efficiently functioning, holding steadily aloft the lamp of freedom and the light of liberty. Let us here dedicate ourselves to that mission—let our country heed and be guided by the inspired counsel of the Father of his Country.

Armistice Day

EXTENSION OF REMARKS

OF

HON. SAM RAYBURN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1940

ADDRESS BY HON. WILLIAM M. COLMER, OF MISSISSIPPI

Mr. RAYBURN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech delivered at Biloxi, Miss., on last Armistice Day by the gentleman from Mississippi [Mr. COLMER]:

Mr. Commander, comrades, distinguished guests, ladies, and gentlemen, I am duly appreciative of the honor which you have bestowed upon me in inviting me to be present and participate with you today in this your observance of the twenty-first anniversary of the signing of the armistice which brought peace to a war-torn world. Here on this historic site where d'Iberville first blazed the white man's path in a New World, we have gathered to observe the cessation of hostilities in the Old World. And incidentally, Mr. Commander, I desire first of all to felicitate you and your comrades upon the fine veteran spirit which you have builded in this beautiful city. I know of no city which is more conscious of its solemn obligation to the veterans who have defended the country's honor and fireside in times of great national crisis. You should justly feel proud of the splendid accomplishments obtained by and for these, the Nation's heroes.

ARMISTICE A NEW MEANING

Today the observance of the armistice should have and does carry a new significance for Americans everywhere. For the past 20 years the countries of the world engaged in that monumental strife of 20 years ago have throughout the world convened in their civic centers and market places and proclaimed their joy and happiness unbound to a peaceful world. But today how different. The veterans of Germany on the one hand, and England and France on the other hand, no longer gather peacefully upon the scene of their victories and in the shadows of their monuments to observe with hilarity and glee this momentous occasion.

They have again advanced to the front with their fingers upon the throats of the common enemy. They have laid aside the peaceful, happy pursuit of normal existence to again engage in the bloody, un-Christian, and deplorable tragedy of war. The sweet bugle call of peace has given way to the sharper and militant call to arms. While ill-fated Belgium, astute Italy, the peace-loving Netherlands, treacherous Russia, and wary Turkey are all armed to the teeth and alertly on the march, of all the major belligerents who participated in the gory strife from 1914 to 1918, which left in its wake a disturbed economy, unstable governments, and changing international boundaries, America alone stands aloof and apart on this great day in world history, enjoying the normal, peaceful pursuit of life, liberty, and happiness.

AMERICA CELEBRATES

Americans everywhere were grateful to Almighty God as they gathered on yesterday officially around the Tomb of the Unknown Soldier in the national cemetery across the historic Potomac from the Nation's Capital, and in every community, whether it was the smallest hamlet or the greatest metropolitan center, that they could continue to celebrate and observe Armistice Day with joyous tidings and light hearts, even as they have the 20 Armistice Days that have gone before. America is not unmindful of the true, if new, significance of this armistice occasion.

RESOLVE TO REMAIN NEUTRAL

Not only are the American people happy over their present status in the new European developments, not only are Americans pleased to realize that they are neutral in this new game of massed murder, but more significant still, the American people are resolved to remain neutral in this new conflagration which promises to sweep the Old World. The days of 1917–18 when America was sending the pride of her young manhood across 3,000 miles of trackless ocean, infested with deadly submarines, to endure the pangs of hell upon foreign soil, are too fresh in the minds of Americans everywhere for this country to be easily drawn into the vortex of this new and possibly more disastrous war. America is resolved, willfully and solemnly, to stay out provided that it is humanly possible to do so with honor.

NEUTRALITY LEGISLATION

To this end the President of the United States, that great humanitarian and statesman, who presently is at the helm guiding the ship of state, Franklin D. Roosevelt, called the Congress into extraordinary session 6 weeks ago to enact neutrality legislation with teeth in it. The Congress having convened, the President, after many conferences with that outstanding statesman, Secretary of State Cordell Hull, laid before it his proposal for such legislation. It is true that there were 6 weeks of debate upon this proposal, but it is equally true that this state paper was given the most careful scrutiny and lengthy consideration to insure that it would do the job. After wise consideration and due deliberation the Congress passed the legislation. And while I have never been one of those who believed that a great nation's neutrality could be made or kept by legislation, rather believing that neutrality is a state of mind, I am nevertheless happy to say to you in all sincerity and candor that in my opinion the legislation which has just been enacted by your national Congress will prove most conducive toward the desired objective of keeping this country neutral during the present disturbance abroad.

THE THREE ESSENTIALS FOR NEUTRALITY

History teaches us that the wars of the past in which this country has engaged have largely come from three things: First, the financing of belligerents abroad by this country; second, the sinking of American ships; and, third, the murdering of American citizens upon the high seas. The President and the Congress realize the truth of these facts. And the Congress wrote into the neutrality legislation a prohibition against financing belligerent countries abroad. Moreover, it provides that American ships should not, under pain of excessive penalties, enter the harbors of belligerent nations. It further provides that the President, in his discretion, might prevent the sailing of American ships in combat zones. The President has already issued a proclamation to carry out this provision. And, lastly, this law prohibits the traveling of American nationals abroad except in the most urgent circumstances. Of course, the legislation also provides that arms and ammunition may be shipped to any belligerent country, but it positively prohibits these implements of warfare from being shipped in American bottoms. With these safeguards to prevent a recurrence of such incidents which carried us into World War No. 1, there is every reason to believe that this country can and will remain neutral.

SACRIFICE

Our Nation is a powerful one. It has the natural resources, the manpower, and the Navy to back up its assertion that it is not a cowardly nation. Moreover, no country has even produced a finer fighting Army than has America when occasion demanded it. When it comes to a matter of sheer courage and national pride, our heritage is as resplendent in its glory as that of any nation on the face of the earth. America is neither afraid nor too proud to fight. But the people of these United States, where democracy, freedom of speech, and liberty are the watchwords of the most humble citizen, realize the folly of war. We in this country, thank God, do not have to goosestep or otherwise march at the bidding of any dictator. But recognizing the folly of war, the love of freedom, and the right to worship Almighty God, a proud, a strong, and a peace-loving people are willing to make the sacrifice in trade and in commercial advancement in order to remain peaceful and neutral. For every American must realize that the hope of continued neutrality and peace in this land must be paid for in the loss of commercial development, foreign trade, and the injury to our merchant marine. By the enactment of this legislation the Government of the United States is making the most tremendous sacrifice and the most colossal restriction upon American shipping and American commerce in behalf of the preservation of peace that has ever heretofore been made by any great government in the history of the world. Again America has said by such legislation that it would prefer, in its willed determination, to stay out of this war, to suffer in its foreign trade and in the upbuilding of its merchant marine, with the attendant losses to domestic economy, rather than to spill the blood of millions of young Americans in another foreign war.

AMERICA AFTER THE WAR

But, Mr. Commander, not being unmindful of the dangers of prophecy on such a perplexing problem as to what might happen in the future, I am nevertheless constrained to opine that the sacrifices to be made by our people in their determination to remain neutral are unquestionably justified as there is reason to believe that the future may hold a brighter tint to be reflected by the rainbow of peace when it should come. It will be borne in mind that if the steady resolution of this country to remain neutral should prevail there will be benefits to bless us after the war. American ships should have command of the high seas when the merchant marine of the belligerent nations will be largely upon the bottom of the sea. A war-ravished world will need our natural resources in increased volume. Our manpower and our war machinery should be intact. Our industry should then hum. And, more significant still, America would then be the most dominant of all world powers. Then, in such event, and not until then, should America wield its influence for world peace and world democracy. To put it differently, if America has any Utopian visions of making the world safe for democracy, let it exert its efforts to that end after the war, heeding the lessons so dearly learned of attempting such a thing during a war.

CONCLUSION

Mr. Commander, I reiterate that peace and neutrality are obtained through the solemn will and resolution of the American people and not through legislation. The American people want no part of this war. They have rightly said that this is not their war and they will have no part of it. They and they alone can declare war. It is true that the President of the United States can recommend to the Congress of the United States that a resolution of

warfare be passed. But the Congress of the United States is subservient to the will of the American people, and just so long as the American people keep their solemn vow and present willfulness to stay out of this war there will be no declaration of war by the Congress of the United States.

If I might be so bold as to leave a parting admonition to you, my comrades, the American people, and those in high places in the Government of the United States, I would admonish you and them in these times of stress to keep your poise, to be discreet in your speech, and maintain your neutrality in statements as well as in legislation. Too often those in high places, charged with the solemn obligation of directing the affairs of state, are inclined to make extravagant and unneutral statements. Intemperate speech is not conducive to neutrality, and friendship abroad cannot be courted with intermeddling and intemperate statements by high officials of the Government.

As one humble Member of the National Congress, I assure you with all the fervor and sincerity of my being that I should be most reluctant to cast a ballot for a resolution that would hurl this country into another gigantic catastrophe such as we witnessed two decades ago. Of course, I realize that a chain of hypothetical incidents could develop whereby this country for its own self-preservation and the maintenance of its national honor would of necessity have to fight in such a war. But at the present I can foresee no such chain of circumstances which might actually develop to that end. But if the time should come and I were called upon to consider such a solemn declaration, I think I should take a most careful and prayerful inventory of the situation. I believe that I could consider the question in all the severity of its seriousness, aloof and uninfluenced by the howls for war of an aroused populace on the one hand and the intrigues of world statesmanship on the other.

Mr. Commander, there is no question about the determination of the American people today to maintain a strict neutrality in the present world chaos of arms. Let us continue in that laudatory determination and, united as one great and powerful people, continue to pursue the paths of peace with the help of Him who guides the destinies of men—the God of our fathers.

The Michelson Portrait of President Hoover

EXTENSION OF REMARKS
OF
HON. U. S. GUYER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1940

EDITORIAL BY WILLIAM ALLEN WHITE

Mr. GUYER of Kansas. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by William Allen White, published recently in the Emporia Gazette:

[From the Emporia Gazette]

(By William Allen White)

We note by the public press that President Roosevelt is asking Congress to appropriate $2,500 to pay a portrait painter to provide the White House a portrait of former President Hoover. We suggest that in order to be quite consistent, our beloved President should hire for that painting job, when the money has been appropriated, none other than Charles Michelson. Charles Michelson was the professional hired Democratic smearer of President Hoover. For 4 long years Michelson devoted himself to distorting the truth by misinterpreting the facts and inventing fiction which presented President Hoover as a human devil without mercy, kindness, courage, or intelligence in time of stress, when Hoover was doing all that any human could do to relieve the calamitous situation in the world crash.

A more cruel and defenseless act was never perpetrated in American politics. President Roosevelt sits in the White House today somewhat because of that unfair presentation of a brave, honest man, as wise as he could be in his generation. If poetic justice is sought or done, the wicked picture made by the Democratic smearers should stand in the White House that future generations may see what malice and political greed combined can do to paint upon the shallow heart of biased partisanship and a nation shuddering with fear, a devil picture that has no basis in truth and only reflects the passing panic-stricken timidity of man.

The Hoover portrait in the White House should stand as Michelson made it, an example and a warning to the American people, an example of their credulity, a warning against a craven heart in time of trouble.

Former President Hoover need have no fear about the portrait that history will paint, and the White House portrait should stand as Michelson made it.

Association of Minnesota County Commissioners

EXTENSION OF REMARKS
OF
HON. R. T. BUCKLER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 6, 1940

ADDRESS BY HON. HJALMAR PETERSEN

Mr. BUCKLER of Minnesota. Mr. Speaker, I have asked for and received permission to extend my remarks in the CONGRESSIONAL RECORD to insert a speech by a former Minnesota Governor.

The people of Minnesota are always interested in hearing what Hjalmar Petersen, a weekly newspaper publisher in the village of Askov, Minn., has to say on public questions and issues of the day. Mr. Petersen is a former Governor of Minnesota and at present is a member of the Minnesota Railroad and Warehouse Commission.

Because his remarks are of general interest not only to the people of Minnesota but to the people of the Nation as well I have asked for and have been given permission to publish in the CONGRESSIONAL RECORD his talk before the annual convention of the Association of Minnesota County Commissioners at the West Hotel in Minneapolis, Minn., on Thursday, February 8, and over radio station WCCO, of Minneapolis and St. Paul later the same afternoon. Mr. Petersen's talk follows:

Two years ago it was my privilege to address the Minnesota State Association of County Commissioners on the subject of local government.

Today, in the light of events that have transpired in Europe during this 2-year interval, we may well consider ourselves privileged to be able to discuss local government anywhere, before any assemblage. The fact that you are here again is reassuring evidence that we still have it in America. The kind of local government you have been administering in your respective counties is a testimonial to your ability and determination to keep it.

With a sense of thanksgiving for our liberties there comes to us the realization of responsibilities graver than any that you and I have ever faced in any test of public service.

Men and women cannot be expected to remain true to democracy unless democracy, in turn, can meet each day's emergencies.

Proper tax assessments and tax spending in all units of government are essential to democracy.

Looking at the State tax situation, it appears to me that it was an unwise move to lower the gasoline tax in the State of Minnesota from 4 cents per gallon to 3 cents per gallon, which law becomes effective September 1, 1940. I believe you will agree with me in this contention.

Assuming that we need about the same amount of money for construction and maintenance of highways, and the gas-tax collections are cut one-fourth, it stands to reason that the needed money must be derived through other sources. It will be passed on to higher motor-vehicle license fees or general property taxes. Either method would be unwise.

In the States of Florida, Louisiana, and Tennessee the State gas tax is 7 cents per gallon, while in Mississippi, Alabama, Georgia, and North and South Carolina it is 6 cents per gallon. Tourists from the Southern States visiting the North Star State would not travel less in Minnesota if the gasoline tax remained at 4 cents. Tourists will not help to pay motor-vehicle-license fees in Minnesota, nor will they pay any of our general property taxes.

The gasoline tax in neighboring States averages up with the 4 cents now being paid in Minnesota, but when we drop to 3 cents on September 1, we will be below the Northwest average.

Thirty-seven States have a 4-cent tax or higher.

Eleven States and the District of Columbia have a lower tax. The average in the United States is 3.96 cents, or to all practical purposes a 4-cent tax.

For more than a quarter of a century improvements were being made in highway building out over the State through the help of the Dunn 1-mill road tax law. Those were the State-aid roads. But, in recent years, even greater improvements have been made through the system of county-aid roads, the money for which is derived from gas tax.

If the price of gasoline dropped 1 cent per gallon when a cent is taken off the State gas tax, and then remained at that price, it would be a somewhat different matter, but the past does not indicate that the price of gasoline is governed by the tax on that product. Figures over a period of years show that the price of gasoline, regardless of high or low tax, is governed by what the traffic

will bear. Twenty years ago the price of regular gasoline was about 30 cents per gallon, and there was no gas tax at that time. In 1924 the price was 26 cents to 28 cents per gallon with a 2-cent State tax, and no Federal tax. Gasoline prices today vary from 18 cents to 19 cents per gallon, which includes a 4-cent State tax and a 1-cent Federal tax. All of which goes to prove that the price of gasoline, regardless of State and Federal taxes, is what the public will pay.

Assuming we need the 4-cent gas tax, this reduction of 1 cent, amounting to over $5,000,000 annually, must be made up in some other form of taxation or our roads will suffer.

Let us not have legislation that tends toward increase in general property taxes, such as the law that decreased the gas tax from 4 cents to 3 cents.

Our highway system is far from completed, as you county commissioners well know. More construction is needed, and there are improvements to be made, as well as maintenance on the farm-to-market roads—the so-called county-aid roads—which receive one-third of the State gas tax. To neglect our highways is poor economy.

Minnesota's outdoor paradise of woodlands and more than 10,000 lakes is a great attraction to vacation seekers. The tourist trade is now one of the State's foremost sources of income. With well-maintained highways and good publicity, through the medium of a tourist bureau head with ability, experience, and wide acquaintanceship, such as we have in Ed Shave, visitors to Minnesota for rest and vacation will increase and make for added business.

The general welfare of the State is adversely affected by a 1-cent reduction in gas tax, amounting to over $5,000,000. It means less employment on road work, inadequate highway maintenance, and no economy realized.

It was the large oil companies who worked for the gas-tax reduction. Through their lobbyists, they argued that the public would benefit by a lower gas tax. Yes; they will lower the price of gas when the tax reduction takes effect September 1, 1940. But my prediction is that the price reduction will be only temporary, and that the oil companies will be the ultimate beneficiaries. The reduction of 1 cent on the gas tax will, in my opinion, result in a $5,000,000 gift to the oil industry.

The price of gasoline was much higher when there was little or no tax on it, and the price was lowered when the tax was applied. Illogical as it may seem, as the tax went up the price went down. Ask any oil company that has been in business 20 years or more.

There is considerable discussion at present about old-age assistance or pension, and naturally we are interested in how it affects our counties and the State.

The Minnesota homestead lien law actually repeals old-age pension as far as home owners are concerned. It is a bad law, in that it discriminates against such of our citizens as have labored for a lifetime to save and build homes. These home-owning citizens do not any longer receive a monthly pension, but instead are given a monthly small loan, for which they must give the State a lien on their property, to be paid after death, or the property taken over by the State. But the old people who have no home still receive the monthly old-age pension, and neither they nor their children have to make any repayments. The persons who have acquired no property receive a higher pension than those owning their own homes. Thus the homestead lien law is a monthly small-loan law for the home owners, while we continue with a pension act for those who have no property.

This is bad legislation in that it penalizes the thrift and frugality that has been an outstanding trait of our pioneers and builders. The State should never do anything which makes home owning less attractive, nor should it strike hardest at those who are the least able to defend themselves, the aged. It is a ruthless law and decidedly unfair in its application. But this is not the only objection to the law, although it is a major one.

Fourteen States, including Minnesota, have a mandatory lien law today. From moneys collected under the Minnesota Lien Act one-half goes back to the Federal Government, the State gets one-third, and the respective county one-sixth. In other words, the 34 States and the Federal Government, which have no mandatory lien laws, are beneficiaries to the extent of the money turned over to the Federal Government from collections on liens in Minnesota and the other 13 States with a like law.

Is that good business for Minnesota? Is it keeping money here in the State where it belongs? Out of every $100 collected on liens, $50 leaves the State and goes to help pay old-age assistance in the 34 States wise enough to impose no such law.

To illustrate, take our neighbor State of Illinois, one of the 34 States which has no mandatory lien law, 139,000 persons receive old-age assistance, against the 65,000 in Minnesota. Over twice as many. Therefore, Illinois receives more than twice as much money from the Federal Government as does Minnesota, and need not return any of it. If there were a uniform lien law affecting all 48 States, there would be no discrimination so far as States are concerned; however, this is not the case, and the present law is not good business for Minnesota.

Three States—Oregon, Kansas, and Florida—that enacted old-age-assistance lien laws later repealed them.

As for the shirking of responsibility by children toward their parents, I doubt there has been much of that. It is easy to cite an outstanding case of a son earning $5,000 a year, residing in New York, and neglecting his parents in Minnesota. But where there may be one or two such cases of a son or daughter earning $5,000 or more annually, there would be 98 who earn far less and would have difficulty in taking care of more than their immediate family needs. No law should penalize 98 percent of the people because of neglect or disregard by 2 percent.

I am not as young as some State officials, but I do not believe that today's youth is calloused toward old age. There may be the occasional young man or woman in Minnesota who does not help his or her parents, but from my own observation I firmly believe that our Minnesota youth still love and honor their parents and heed the time-honored adage respecting youth's duty toward mother and father.

A modest home that has been owned by a family for maybe 30 to 40 years is valuable so long as it remains a home. It may have been built for $1,000, fifteen hundred, or $2,000, and after many years of use could not be sold for much money if that home came into the hands of the State.

The lien clause on homesteads will make for much legal entanglement. The value of the home in dollars being small, there will not be much left for the State after all legal fees are paid, for certainly the Federal Government will not pay legal fees when it does not require a lien on the property.

The lien clause cannot be justified if old-age assistance or pension is compensation on the basis of need for services rendered to society by our aged people. The lien law is decidedly unsocial.

The State of Minnesota acquired plenty of property and, goodness knows, plenty of liability through the State rural credits. Let us not have another such mess.

With so much unemployment as prevails now, it has been necessary for the various States and the Federal Government to make larger tax collections during the past half dozen years than previously.

The State of Minnesota receives far more tax money from the Federal Government than we pay in Federal taxes. During the past 7 years Minnesota has received from the Federal Government nearly $700,000,000, or an average of $100,000,000 a year. In the fiscal year ending June 30, 1939, Minnesota received over $127,000,000, or twelve and one-half million dollars more than during the fiscal year 1938.

This does not take into account loans made by the Federal Government in Minnesota to the amount of over $20,000,000 during the fiscal year 1938 and over $36,000,000 during the fiscal year 1939.

The facts are that the total Federal loans and grants in Minnesota during the fiscal year 1939 totaled $28,000,000 more than during the fiscal year 1938.

It seems that even our youthful State administration needs and gladly accepts the aid of their elders in the Federal Government.

If the State of Minnesota raises $171,000,000 in taxes and spends $170,000,000, but receives Federal money to the extent of over $127,000,000 during 1 year, we come to a realization of the seriousness of our problem, local, State, and National. In the face of these facts and figures, it hardly behooves anyone to boast of having balanced the State budget.

I have presented these facts that we may give serious thought to our financial situation and our everyday problems. I am firmly convinced that the ultimate solutions of our social and economic problems will come, one by one, by and large, from our rank-and-file citizens, you home folks.

Extension of 3½-Percent Interest Rate on Land Bank Commissioner Loans

EXTENSION OF REMARKS

OF

HON. KARL M. LECOMPTE

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1940

RESOLUTIONS FROM IOWA

Mr. LECOMPTE. Mr. Speaker, under leave to extend my own remarks, I include three resolutions on the subject of permanently extending the 3½-percent interest rate on Land Bank Commissioner loans. The resolutions were received from the South Central National Farm Loan Association, of Chariton, Iowa; the Lucas-Wayne Farm Loan Association of Chariton, Iowa; and the Clio National Farm Loan Association of Clio, Iowa.

Be it resolved, That the South Central National Farm Loan Association, of Chariton, Iowa, request the United States Congress to extend permanently the decreased rate of interest of 3½ percent on all Federal land-bank loans, and that the rate of interest on Land Bank Commissioner loans be permanently fixed at 3½ percent. That such low rates of interest materially assist in the stabilization of agriculture and work to the interests of all the people.

Be it resolved, That the Lucas-Wayne Farm Loan Association, of Chariton, Iowa, request the United States Congress to extend permanently the decreased rate of interest of 3½ percent on all Federal land-bank loans, and that the rate of interest on Land Bank Commissioner loans be permanently fixed at 3½ percent. That such low rates of interest materially assist in the stabilization of agriculture and work to the interests of all the people.

Be it resolved, That the Clio National Farm Loan Association, of Clio, Iowa, request the United States Congress to extend permanently the decreased rate of interest of 3½ percent on all Federal land-bank loans, and that the rate of interest on Land Bank Commissioner loans be permanently fixed at 3½ percent. That such low rates of interest materially assist in the stabilization of agriculture and work to the interests of all the people.

Cities With High Power Rates May As Well Start Moving—Or Get Lower Rates

EXTENSION OF REMARKS

OF

HON. CLYDE T. ELLIS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 6, 1940

ASSOCIATED PRESS ARTICLE FROM ARKANSAS GAZETTE

Mr. ELLIS. Mr. Speaker, for several years I have been interested in the wide variation of power rates in the different parts of this Nation and in the reasons for them. On February 26 there appeared in the Arkansas Gazette an Associated Press article, carrying a Washington date line of February 25, entitled "Public-Owned Utility Rates Among Lowest—Wide Difference In Light Bills," quoting figures released by the Federal Power Commission. It is pointed out, for instance, that the typical residential bill in Little Rock ranges from $1.48 for 25 kilowatt-hours to $8.10 for 250 kilowatt-hours. In Tacoma, Wash., a city about the same size as Little Rock, the price ranges from 95 cents for 25 kilowatt-hours to $3.20 for 250 kilowatt-hours.

Perhaps there is nothing more essential to the modern city of today than electricity at reasonable rates. I have come definitely to the conclusion that cities with high power rates are in the same predicament as a man with acute appendicitis; they must act quickly or suffer the probability of premature death.

Herewith I submit the article which I quote in full:

[From the Arkansas Gazette, Little Rock, Ark., of February 26, 1940]

WASHINGTON, February 25.—The Federal Power Commission published today a survey of electric rates in cities of 50,000 or more population which showed, it said, that publicly owned utilities rendered the lowest bills. The widest differential, 243.5 percent, occurred in the category of typical bills for 100 kilowatt-hours. The municipal plant at Tacoma, Wash., charged $1.70, and the Pennsylvania Edison Co., at Altoona, Pa., charged $5.84.

In the other categories, the Nation's lowest and highest typical bills were: 15 kilowatt hours, Fort Wayne, Ind., 52 cents; Altoona, $1.35; 25 kilowatt-hours, Chattanooga, Knoxville, 75 cents; Altoona, $2.09; 40 kilowatt-hours, Tacoma, $1.10, Tampa, Fla., $2.99; 250 kilowatt-hours, Tacoma, $3.20; Atlantic City, N. J., $9.75; 500 kilowatt-hours, Tacoma, $5.30; part of Boston served by Boston Consolidated Gas Co., $17.10.

In each of these cases the community enjoying the lowest rate was served by a publicly owned utility, while cities with the highest rate were served by private companies. Municipal plants in the three Tennessee cities obtained power from the Tennessee Valley Authority. The rates were those charged January 1, 1940.

The Commission reported that rate reductions in one or more typical bills for residential service were made in 83 cities during 1939 and that no increase in the general level of the bills was found in any of the 191 cities surveyed.

LITTLE ROCK'S TYPICAL BILLS COMPARED

The typical residential electric bill in Little Rock, Ark., ranged from $1.48 for 25 kilowatt-hours to $8.10 for 250 kilowatt-hours, the report showed. This was slightly higher per kilowatt-hour than residential bills in Harrisburg, Pa., which is served by a privately owned company. In Tacoma, Wash., comparable in size to Little Rock, the city-owned utility company charged 95 cents for 25 kilowatt-hours, and $3.20 for 250 kilowatt-hours.

In Austin, Tex., which is supplied by a city-owned utility, the 25 kilowatt-hours bill was $1.50, and the 250-kilowatt-hour charge $6.95. Austin, comparable in size to Little Rock, had lower bills in all categories except 25 kilowatt-hours.

One hundred and twenty-nine cities of more than 50,000 population were furnished residential electric service in quantities of 25 kilowatt-hours cheaper than rates in effect in Little Rock on January 1, 1938, the report showed, and 154 cities had lower rates for 250 kilowatt-hours.

Of the 191 cities, Chattanooga, which is served by a city-owned company buying power from the Tennessee Valley Authority, showed the lowest bill for 25 kilowatt-hours, 75 cents. In this kilowatt category, Altoona, Pa., served by the Pennsylvania Edison Co., had the highest residential bill, $2.09. In all kilowatt-hour categories, bills rendered by a publicly owned utility were the smallest in the Nation.

Memphis, Tenn., whose consumers are supplied by a municipal-owned company, was sixth among the lowest bills for 25 kilowatt-hours, and twenty-third among the lowest for 250 kilowatt-hours.

The report showed similar comparisons for commercial and industrial electric service. Little Rock commercial bills were $9.25 for 150 kilowatt-hours, or $1 higher than in Harrisburg, the report showed. The bill for the same amount of service in Tacoma was $3.75. A similar comparison was evidenced in listings of typical industrial electric bills.

Deportation of Alien Communists

EXTENSION OF REMARKS

OF

HON. LELAND M. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1940

RESOLUTION BY LABOR'S NONPARTISAN LEAGUE OF LOS ANGELES COUNTY, CALIF., AND LETTER BY HON. LELAND M. FORD, OF CALIFORNIA

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution sent to me by Labor's Nonpartisan League of Los Angeles County, and my reply thereto:

Whereas the Department of Labor recently dismissed deportation proceedings against Harry Bridges, west coast C. I. O. director, after Examiner James M. Landis could find no evidence that Bridges was a member of the Communist Party or advocated the overthrow of the Government by force and violence; and

Whereas a bill has been proposed by Representative LELAND FORD requiring the deportation of any alien who sympathizes, associates with, or uses the support of Communists; and

Whereas behind the vague wording of this bill is a thinly disguised attempt to suspend the Bill of Rights in order to secure the deportation of Harry Bridges; and

Whereas the passage of this bill would constitute a menace to the civil liberties now guaranteed by the Constitution to aliens and citizens alike: Therefore be it

Resolved, That we go on record opposing the introduction of this bill as a flagrant and willful attempt to end civil liberties in the United States and deprive the west coast C. I. O. unions of their progressive and militant leader, Harry Bridges; and be it further

Resolved, That copies of this resolution be sent to Leland Ford, House Office Building, Washington, D. C., our Representative in Congress; Senator Sheridan Downey, Senate Office Building, Washington; Senator Hiram Johnson, Senate Office Building, Washington; Raymond J. Kelly, national commander, American Legion, Indianapolis, Ind.; to all affiliated organizations; and the press.

MARCH 4, 1940.

Mr. OLIVER M. HICKEY,

Secretary, Labor's Non-Partisan League, Los Angeles County, Club No. 1, Assembly District 5, Los Angeles, Calif.

MY DEAR MR. HICKEY: This will refer to copy of your resolution sent me, dated February 21, with reference to my bill requiring the deportation of any alien who sympathizes or associates with or uses the support of Communists.

Of course, I could not expect the Labor's Non-Partisan League to agree with any such bill as this on account of their close contact and sympathy for the Communists, to say nothing of the Communist members that may be within the organization, as disclosed by the Dies committee, in which report I believe it was stated that the Labor's Non-Partisan League was simply a front for the Communists.

With reference to the dismissal of the deportation proceedings against Harry Bridges, it may be true that these proceedings were dismissed, but in my opinion, and I believe in the opinion of the public, Mr. Bridges may have been whitewashed but he was never "exonerated."

It seems very singular that Labor's Non-Partisan League, who have such great sympathy for Communists, who in turn preach a doctrine of destruction of the United States, and, of course, with it the Constitution and the Bill of Rights should immediately begin to scream for the help of the Government, the doctrines and the principles of which, in my opinion, they are trying to destroy. How long do you think you or Harry Bridges would last in your beloved Moscow were you to oppose the communistic Government? You know very well that any such opposition to the Moscow Government would bring forth summary execution. The trouble with you people is that you never learned to use your liberty but have abused it.

I feel that I can derive great honor by reason of the quality of my enemies, and I therefore thank God for every damn one of them.

Very truly yours,

L. M. FORD.

Interview With Capt. Alden Howell on His Ninety-ninth Birthday Anniversary

EXTENSION OF REMARKS

OF

HON. WILLIAM H. SMATHERS

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, March 6 (legislative day of Monday, March 4), 1940

ARTICLE FROM THE LOS ANGELES EVENING HERALD AND EXPRESS

Mr. SMATHERS. Mr. President, I ask unanimous consent to have published in the Appendix of the RECORD a newspaper clipping taken from the Los Angeles Evening Herald, relating an interview with my uncle, Capt. Alden Howell, my mother's brother, of Los Angeles, Calif., on the ninety-ninth anniversary of his birth on the subject of how to live to be a hundred.

His statements on the longevity of life will be extremely interesting and useful to the Members of the Senate and the readers of the CONGRESSIONAL RECORD.

There being no objection, the interview was ordered to be printed in the RECORD, as follows:

[From the Los Angeles Evening Herald and Express of February 17, 1940]

GIVES ADVICE FOR LONG LIFE—CAPTAIN HOWELL, FAMED CONFEDERATE OFFICER TO BE 99 TOMORROW

Capt. John Alden Howell, one of the few surviving Confederate officers, and a member of a distinguished pioneer Southland family, tomorrow celebrates his ninety-ninth birthday as a "fighting man who smiles when he strikes a blow and smiles—but not so much—when the other fellow hits him."

"Never get mad; never have the blues; never use cuss words; never complain—then you'll live to a ripe old age, maybe a hundred years old, as I'm going to do," he said, laughing.

Captain Howell, who is descended from John Alden, of early American history romance, is a brother of Robert Howell, pioneer banker, who owned Howell Terrace and the famous Howell home which stood at Seventh and Bixel. He is the uncle of Robert Howell's daughter, Mrs. Mark Lewis reigning belle of early society here and once fiesta queen of the city.

"I'm going to cut the cake. I'm going to sing a song I composed, and I'm going to make a speech, and the guests had better like it," chuckled Captain Howell, who makes his home with his son-in-law and daughter, Mr. and Mrs. J. R. Johnston, of 269 South Van Ness.

Some 50 friends of the captain and his distinguished family will gather at the home between 3 p. m. and 5 p. m. tomorrow.

And one of the most honored guests will be the captain's great grandson, Kenneth Brimmer, 6½-year-old student of Page Military Academy.

"I teach him that to cry is to cry alone and to laugh is to have the world laugh with you," remarked Captain Howell.

As he gleefully prepared for his party tomorrow the captain today went through heaps of congratulations, which included letters from a sister, Mrs. B. F. SMATHERS; her son, Senator WILLIAM SMATHERS, of New Jersey; another of her sons, Judge Frank Smathers, of Miami, Fla., and a card from Josephus Daniels, United States Ambassador to Mexico.

HISTORIC HOME

Captain Howell came to Los Angeles about 15 years ago and was a frequent visitor at the historic Howell home before it burned 2 years ago, and so ended a brilliant chapter in early Southland society.

He was filled today with remembrances of the great days of the South.

"I was a captain under Stonewall Jackson," he said proudly, "and I fought in battles where the bullets fell about me like rain. I once heard that George Washington said bullets sounded like music to him, but I never felt that way.

"Once a whole regiment shot at me in a battle in Virginia—and I played dead until they left.

"Another time when I was with Stonewall Jackson, we met and whipped three northern Yankee armies by engaging them one at a time as they approached.

"I fought at Gettysburg with the dead piled in mounds around me."

He chuckled as he recalled a Confederate story of how President Lincoln was advised not to promote General Grant.

"Why not?" asked Lincoln, according to the story. "He wins battles."

"He's a heavy drinker," said the adviser.

"Then tell me what brand he drinks," Lincoln replied, "so I can get some for my other generals."

After being mustered out of the war, Captain Howell went to Waynesville, N. C. He became a lawyer, once got a $1,000 fee, which was tremendous for those days, and, as he puts it, "I never lost a law case."

Later he organized the first bank in western North Carolina and served as its president for 33 years.

While he pursued his career in the South, his brother, Robert, came here more than a half century ago and became a pioneer banker.

LAVISH GATHERING

Robert Howell's home was the scene of some of the most lavish and distinguished gatherings in early Los Angeles.

And carrying on the colorful history of a noble family, a daughter of Robert, Mrs. Lewis, became a social ruler and was one of the very first fiesta queens.

In concluding the interview, Captain Howell, who is first cousin to the late Clarke Howell, editor of the Atlanta Constitution, said:

"The hardest job in my life is the one I began after the age of 80 years—doing nothing."

And for the first time during the interview the distinguished and venerable man seemed depressed—"Doing nothing; that's the toughest job in the world," he concluded.

Seven Years of Conservation

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Thursday, March 7 (legislative day of Monday, March 4), 1940

NEWS RELEASE FROM THE DIVISION OF INFORMATION, DEPARTMENT OF THE INTERIOR

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD a news release from the Division of Information of the Department of the Interior with regard to the progress made toward the conservation of American natural resources during the 7 years of the Democratic administration.

There being no objection, the matter was ordered to be printed in the RECORD, as follows:

[United States Department of the Interior, Division of Information, March 4, 1940]

The Department of the Interior observed the seventh anniversary of the present administration today by specifying progress made toward realizing America's conservation program.

In 7 years since March 4, 1933, the Congress by legislation, President Roosevelt by Executive action, and the Department of the Interior by deliberate, aggressive administration and policy, have done more to make the Department of the Interior a department of conservation than was accomplished in the prior 91 years of existence, according to Secretary Ickes. He pointed out a sevenfold achievement in progressive conservation in reclamation, grazing, Indian Service, hydroelectric developments in the West, parks, mines, and territorial possessions.

"It is refreshing and encouraging to notice the change of attitude toward national resources that has swept over this country in recent years and now receives the wholehearted support of its citizens," Secretary Ickes said. "As America beholds the rest of the world slaughtering itself as nations fight for resources, and bombs, shells, battleships, battalions, torpedoes, and machine guns speak their national need for oil, lands, minerals, waters, and resources, this country at last realizes its heritage. With out frontiers

gone, this dramatic realization has brought a determination to protect and conserve those resources so that the United States need not do as other nations are doing.

"When the Department of the Interior was established by act of Congress, signed by President James K. Polk in 1849, it was purposely conceived as a department of exploitation. That was considered the need of the country then, as resources appeared endless. But of recent years, by Executive action, legislation, and administration, that policy has been completely reversed and much of the reversal has been accomplished in the past 7 years. Under President Roosevelt, resources have been protected and conserved so that they will last a long while, although our task is not complete as yet. The Federal agencies dealing with such resources as wildlife and waterlife, as well as other resources have been grouped into the Department so that in truth it has become a responsible department of conservation.

"Seven years is but a short time. Yesterday destruction was commonplace. Today, few of us would return to the spoilage that prevailed for so many years. Conservation is here to stay."

Incidentally, in the past 7 years the Department of the Interior has enjoyed a continuing administrative unity of policy and direction for longer than any period heretofore in its history, with one exception. The present head of the Department, in addition to other duties, has served longer as United States Secretary of the Interior than any other individual except Secretary of the Interior Ethan Allen Hitchcock, whose service ended in 1907.

Despite the stupendous preliminary task of gearing machinery to revitalized methods for carrying out the conservation policies of the Nation, seven major points of achievement stand out as figurative candles on Interior's imaginary conservation birthday cake. Swiftly surveyed, these are:

(1) The establishment of prudent grazing practices on 134,000,000 acres of public domain, through the cooperation of the livestock industry of the West.

(2) Increased opportunities for agriculture through irrigation of semiarid lands under the program of the Bureau of Reclamation.

(3) Striking advance in mine safety and development of helium.

(4) A higher degree of self-government and the fostering of native culture for Indians.

(5) Advancement of a broad program for social and economic betterment in the Nation's far-flung Territories.

(6) Greater industrial opportunities in the Pacific Northwest through development of hydroelectric power at the Bonneville and Grand Coulee projects on the Columbia River.

(7) Additional opportunities for public enjoyment in the national-park areas.

Coupled with these beneficial results from the 7 years' activities has been a constant vigilance to prevent encroachment upon the public's right in natural resources on the public domain. An outstanding achievement under this program was the recent victorious outcome of a 5-year battle by the Department of the Interior, involving valuable oil resources in section 36 of the Elk Hills reserve in Kern County, Calif. In this historic contest the public's right was reaffirmed in the ownership of one of the most valuable square miles of land in the world, and reimbursement totaling more than $6,250,000 was ordered paid to the Government by the Standard Oil Co. of California.

Brief review of other accomplishments by the Department of the Interior is afforded by summaries of activities within the various Bureaus since March 4, 1933.

GRAZING SERVICE

One of the newer conservation agencies, established by the Taylor Grazing Act of 1934, this branch of the Department is authorized to protect 142,000,000 acres of public domain against unwise grazing practices. Despite the fact that the first few years following its organization was devoted to preliminary map-making work and a general campaign of education among stockmen of the West, who cooperate in the work through advisory boards of their own selection, already 134,000,000 acres of Federal range are being maintained on sound conservation principles in 52 Federal grazing districts located in 10 States of the West. In addition to activities which involve the issuance of grazing licenses, thereby preventing overgrazing by 11,000,000 head of livestock, the Grazing Service is carrying forward a broad program of range improvements, including construction of stock and truck trails; development of springs, wells, and other watering facilities; rehabilitation and improvement through reseeding of forage crops on the range; and extermination of harmful rodents and poisonous weeds from wide areas of the range land. Adequate provisions for forage and water consumed by wildlife on the public domain also is included in the work of the Service, carried on with the cooperation of more than 90 C. C. C. camps.

BONNEVILLE PROJECT

The Bonneville Power Administration was created by act of Congress on August 29, 1937, for the purpose of building transmission lines and selling power generated by the Bonneville Dam, which at the time was already completed and ready to produce power.

Funds for construction of power lines and substations were not made available until 1 year later, but in the ensuing 16 months power-system construction, which normally would require nearly 2 years, was successfully completed. By January 1940 Bonneville had finished surveys and detailed designs for 640 miles of transmission lines, construction of 2 substations, and construction of 2 complete high-tension power lines, comprising nearly 200 circuit-miles. Preliminary surveys on 200 miles of power line, construction on 3 high-tension lines totaling 335 circuit-miles, and 5 substations were well on the way to completion.

Other outstandings accomplishments during the past 18 months were:

Power contracts were signed for more than 57,000 kilowatts of firm power and additional amounts of surplus energy. Other contracts, bringing the total firm-power commitments to over 100,000 kilowatts, are being actively negotiated. These contracts are expected to yield nearly $1,000,000 in revenue for the fiscal year 1940, and $2,200,000 during the 1941 fiscal period.

By the close of the calendar year 1939 two municipal systems—Cascade Locks and Forest Grove—were being served with Bonneville power. The home, farm, and commercial customers were receiving the benefits of low-cost Columbia River energy in the form of rate reductions ranging as high as 30 to 40 percent.

Bonneville power brought a new industry to the Northwest by the consummation of a contract with the Aluminum Co. of America on December 20, 1939, which guarantees at least $10,000,000 to the Government over its 20-year term. Further evidence that the Government's program of developing hydroelectric resources of the Columbia River would result in industrial expansion in the Pacific Northwest was contained in the signing of a 20-year contract with the Sierra Iron Co., of Nevada, which contemplates the establishment of a plant at Vancouver, Wash., for the manufacture of pig iron.

BUREAU OF RECLAMATION

Completion of Boulder Dam, the highest concrete dam in the world; Bartlett, the highest multiple-arch dam in the world; Parker, the deepest dam in the world; and Imperial Dam, feeding the biggest irrigation canal in the world, are listed among the achievements of this agency of the Department of the Interior during the 7-year period. Altogether, 23 storage dams have been built, creating reservoirs with a capacity of 34,308,494 acre-feet, or 11,000,000,000,000 gallons of water.

Since 1932 the Bureau has completed 3 power plants, with an ultimate capacity of 2,040,000 horsepower, the one at Boulder Dam being the largest operating in the world today.

During the same period 2,293 miles of canals, ditches, and drains have been constructed on irrigation projects which, together with the dam construction, brought about an increase in irrigable acreage from 2,551,479 to 3,782,933. The cumulative value of crops produced on irrigation projects since 1932 has amounted to $658,758,955; in 1933 the crop value was $83,564,446; for 1938 it was $113,463,460.

Reclamation construction since 1932 has raised the number of irrigated farms from 43,377 to 52,552, increased the number of towns and cities on irrigation projects from 227 to 258, and the number of persons living on the farms, or in the towns and cities about them, from 696,440 to 903,897.

During the period from 1933 to 1939 the Bureau started three of its greatest reclamation projects. The Columbia Basin project by irrigating 1,200,000 acres of land will create 30,000 to 35,000 owner-operated farms capable of providing the source of a permanent livelihood to 150,000 persons on the farms and two to three times that number in towns and cities as yet unlocated. The Central Valley project in California will provide needed supplemental water supplies to 2,000,000 acres of rich farming land, 200,000 acres of which is imminently threatened with reversion to desert. The Colorado-Big Thompson project will provide supplemental water supplies to 615,000 acres of land.

NATIONAL PARK SERVICE

A fivefold increase in the number of visitors to national parks, monuments, and allied areas was brought about by activities of the National Park Service during the 7-year period. In 1933 the number of visitors totaled 3,500,000; in 1939 it was approximately 15,000,000 persons. At the beginning of the period there were 117 units included in the National Park System; in 1940 there were 155 units with a combined area of 20,817,228 acres.

Work was inaugurated on three national parkways, a new phase of recreational development, during the last 7 years. These "elongated parks" are the Blue Ridge National Parkway, which, when completed, will connect Shenandoah and Great Smoky Mountains National Parks; the Natchez Trace National Parkway, which will connect Natchez, Miss., and Nashville, Tenn., and the George Washington Memorial National Parkway, which will link together landmarks associated with the life of the first President.

In addition, two memorials to Thomas Jefferson were started, one in St. Louis and the other in Washington, D. C. Acquisition of the historic Chesapeake and Ohio Canal from Georgtown, D. C., to Cumberland, Md., also was included among the accomplishments of the National Park Service.

BUREAU OF MINES

Scientific investigations of outstanding benefit to industry, material reduction in the number of coal-mine explosions, and steady advancement in the training of miners in safety methods constitute the highlights of achievement by the Bureau of Mines during the years following the inauguration of the conservation program on March 4, 1933.

In addition, the investigation of strategic minerals sources, already indicating the existence of three promising new sources of supply of essential minerals, and the design and installation of the only experimental plant in the United States for the continuous hydrogenation of American coals to determine their suitability for obtaining gasolene and oil, were outstanding developments.

The production of more than 38,800,000 cubic feet of helium for use in Army and Navy dirigibles, and its production and sale for medical purposes in the treatment of respiratory diseases, also was brought about during the 7-year period.

OFFICE OF INDIAN AFFAIRS

The 7 years since March 4, 1933, have witnessed a complete reorientation of national policy toward the Indian and of Federal service for the Indian. Through the instrumentality of the Indian Reorganization Act of 1934 the Government has voluntarily divested itself of important arbitrary powers over Indian persons and property and has substituted an increased measure of Indian self-determination. Thus far 192 tribes, with a population of 130,174, have accepted the benefits afforded by that act. Indian tribes or groups numbering 115, with a total population of 115,000, have organized. Many of the groups have received tribal charters of corporation. In addition, more than 40 groups have become eligible for financial assistance through the credit system created by the Reorganization Act.

Not only have the past 7 years seen a halt put to the further loss of Indian lands, but the Indian landed estate has been increased by over 3,000,000 acres, until today it totals 54,839,278 acres.

One of the most dramatic evidences of the progress made in the administration of Indian affairs over the past 7 years is the fact that the Indians, once a dying race apparently destined for oblivion, have today a birth rate estimated to be higher than that of the population at large. Gaining at an indicated annual rate of approximately 1.2 percent on January 1, 1939, the Indian population in continental United States under jurisdiction of the Office of Indian Affairs was recorded as 351,878.

GEOLOGICAL SURVEY

Greatly increased use of aerial photography in the preparation of maps necessary to the national defense form an outstanding feature of the work of this scientific bureau, which pioneered in this branch of topographic work.

The study of the Nation's water resources also constituted an important part of its operations during the past 7 years, together with investigations into the geologic problems surrounding supplies of the metals, minerals, and oils essential to the well-being of every citizen.

Classification of the public lands as to their mineral deposits and their values for water power resulted in reports on approximately 70,000 such cases by the Survey. Through its operations this branch of the Department of the Interior also served to bring about the production, without waste, of oil, gas, coal, potash, and other minerals on the public domain, and supervised the return to the Public Treasury or to the Indians of proper rents and royalties for mineral production amounting to millions of dollars annually.

DIVISION OF TERRITORIES AND ISLAND POSSESSIONS

Five islands in the South Pacific, hitherto unsettled—Canton, Enderbury, Howland, Jarvis, and Baker—have been colonized by the United States as the result of activities under this Division since the inception of the national conservation program in 1933, while an initial step toward possible colonization and development of Alaska was taken in the compilation of a comprehensive report of facts and statistics concerning conditions in the Territory.

A form of democratic government, containing among other progressive features a provision for universal suffrage, was extended to the Virgin Islands. Passed by Congress in 1937, the new organic act contained features of government more liberal than those formerly enjoyed under Danish sovereignty.

PUERTO RICO RECONSTRUCTION ADMINISTRATION

Although in active operation for only 4½ years out of the 7-year period, this agency has carried out a general rehabilitation program in Puerto Rico, where it was estimated that 75 percent of the employable population was without work in 1934. This program, to date, has been responsible for the construction of three low-cost housing developments, providing 849 units (in addition to two developments constructed by the Public Works Administration); development of the rural electrification system; construction of health centers; a soil-conservation program, and resettlement of approximately 10,000 Islanders as small landowners. Two large sugar centrals, vital factors in the Island's economy, now are being operated on a cooperative basis, and 10 new buildings have been constructed for the University of Puerto Rico.

GENERAL LAND OFFICE

Complete reversal of many of its operations, due to the substitution of conservation procedure for earlier land-disposal practices on the public domain, has taken place in the General Land Office since March 4, 1933. Among the activities of this branch of the Department of the Interior has been reorganization of its machinery for better recording, classification, and planning for wise disposition of 750,000,000 acres of the public domain in the United States and Alaska. Protection from overgrazing and other misuse of 50,000,000 acres of public land outside Federal grazing districts has been provided through carefully considered leasing of areas to stockmen, and through extensive land-measurement operations. Institution of a general fire-protection program on public lands in Alaska, suppression of disastrous coal-mine fires in Wyoming, and supervision over timber cutting on 2,500,000 acres of valuable forest lands in tracts of revested Oregon and California railroad grant lands, also form features of this agency's work during the past 7 years.

BITUMINOUS COAL DIVISION

Taking over duties formerly administered by the National Bituminous Coal Commission, this division of the Department of the Interior recently completed the last big hurdle in establishing minimum prices, and this spring will make these prices effective along with marketing regulations for bituminous coal. These are designed to aid the bituminous-coal industry in its effort to stabilize the sale of coal by eliminating ruinous price-cutting and unfair trade practices.

World Affairs

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Thursday, March 7 (legislative day of Monday, March 4), 1940

ARTICLE BY IKE HUGHES

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD a very interesting and forceful article pertaining to world affairs by the pen of Mr. Ike Hughes, of Washington, N. C. This article was published in the Washington (N. C.) Daily News, issue of February 13, 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington (N. C.) Daily News of February 13, 1940]

TO THE EDITOR:

Can you stick your fingers in any part of a fire without getting burned? Would you, with your clothing soaked in gasoline, attempt to pinch out one spot in a raging conflagration?

That is what we would be doing if we attempted to protect Finland from Russia. Finland is a part of Europe and has been a factor in every one of their balance-of-power crises. Finland's relations with Russia have been similar to Ireland's relations with England; for about the same length of time, and with about the same results.

We were persuaded in 1917, largely by what we now know to have been faked propaganda, to take part in a foreign war which was to make the world safe for democracy and end war. Little Belgium was then the gallant nation toward which our sympathies were directed, as they are now drawn to Finland, and both deserve our admiration and sympathy. But both, with Ireland, Poland, Czechoslovakia, and every other part of Europe and the colonies under European control are locked together in a situation which every so often results in a war.

Finland is no happier in her recently gained democracy than Czechoslovakia was; the difference is that Finland has been encouraged to fight while Czechoslovakia was as falsely abandoned by pledged allies as any people ever have been. Those allies were then appeasing Hitler and courting Russia; the very same Russia we have known as a bloody despotism for years but which has only appeared in its true colors to pro-British interests and sympathizers since Stalin joined, or partly joined, hands with Hitler. Proof that the campaign in Finland is as much a part of the general European balance-of-power war as the armies locked along the Maginot line is to be found in the assistance being given Finland by France and England and Italy. Mussolini is certainly no champion of democracy; Mussolini is weakening Russia to protect Italian interests in the Balkans. England and France could, without firing a gun but simply by dragging their guns out of occupied territory, bestow self-rule to millions of subject peoples. They are strengthening a balance-of-power ally which just happens to be a democracy.

If we admit the right of nations to make imperialistic war, and the whole world does admit it, Russia is as much justified in attempting to force Finland to yield strategic positions necessary to her defense as England was in taking Gibraltar from Spain.

That Finland neutral, or friendly to a strong nation at war with Russia and in control of the Baltic, would be a threat to Leningrad is shown by the map. So, no matter what our sympathies may say, we cannot hoot down Russia's claims by simply comparing the size of the two nations. Every nation in Europe is an ally or a potential ally of some other nation. Did England fear that Egypt, Gibraltar, Malta, or South Africa would or could conquer her?

It is not the wrong that Russia does which excites our animosity, it is simply that we don't like Russia now, and we do like Finland. That we are being made the dupes of our liking for Finland and our dislike for communism is as certain as that we were made the dupes of our own emotions in 1917. See the pattern: A war for democracy. That got us the last time and that is what they started with this time. They have flooded the country with Mein Kampf by Hitler and books by gentlemen named Rauschning and Spivak, all

going to prove that there was a German plot to enslave the world. In 1917 there was a book by a German general, Von Bernhardi, predicting exactly the same thing. But what really got us were the faked Belgian atrocity stories. That rage-against-atrocity feeling is exactly the same one that is now being so skillfully aroused against Russia. Atrocity; atrocious conduct; heartless aggression against innocence and beauty; every phrase and thought to which we reacted in 1917 is being used now. And the skids for our entry are being greased with exactly the same soft soap. "Lend them money. We surely can do that much to show our sympathy with the right. How can we do less? They, in a way, are really fighting our battle." It was a lie then, and it is a lie now. They are fighting their own battles, the continuation of a struggle which began more than a thousand years ago and the end of which is not in sight except from a concerted feeling of revulsion among the ordinary, everyday people of Europe. There is not a gun being fired in Europe which is not enlisted on one side or the other of Europe's balance-of-power war. If we send supplies to any European belligerent we are going to end by sending men to support the main alliance. Unless we can realize that what happens in Europe is Europe's sole responsibility we are going to follow the 1917 track of sympathy, supplies, credit, men, death, debt, disgust, and disillusion.

Look at this for a ridiculous picture:

Just a few months ago we trembled before the threat of Germany and Italy. Nothing was too good to say of Russia; Russia was going to block "the world's worst aggressor," Herr Hitler, on that old German road to Baghdad. In the meantime, however, Czechoslovakia had been abandoned, and the "world's worst aggressor" had been tendered an English loan of about $5,000,000,000, just in case. Germany and Italy were totalitarian, and the totalitarian nations were threatening our very life's blood. They were going to mop up the democracies, among whom at the time, strange as it seems, Russia was included as a member in good standing.

Now see:

Mussolini lacks very little of being one of the prime champions of Christian civilization, and Stalin exceeds in black wickedness anything that Hitler every approached.

Why? Because of the shifts of alliances, or apparent or hoped-for alliances, with Great Britain.

We have followed every one of those shifts.

Are we a British colony?

Are we so soundly established and financially comfortable within our own territory that we can afford to lend our strength in foreign wars?

If we hope to pull this country through the present crisis as a democracy, we have got to think about the United States and it alone. We are in no predictable danger of invasion, but we are in imminent danger of dictatorial government. It is as close as a declaration of war.

IKE HUGHES.

Ratification by Senate of Reciprocal-Trade Agreements

EXTENSION OF REMARKS
OF
HON. KEY PITTMAN
OF NEVADA
IN THE SENATE OF THE UNITED STATES
Thursday, March 7 (legislative day of Monday, March 4), 1940

LETTER BY HON. KEY PITTMAN, OF NEVADA

Mr. PITTMAN. Mr. President, I have today offered a proposed amendment to House Joint Resolution 407, a resolution to extend the authority of the President to enter into foreign agreements commonly called reciprocity treaties. This amendment provides that no such foreign agreements hereafter entered into shall become effective until they have been advised and consented to by the United States Senate, two-thirds concurring, as is required in the ratification of all other treaties.

I ask leave to have published as a part of these remarks in the Appendix of the CONGRESSIONAL RECORD a letter that I have this day addressed to the Senator from Colorado [Mr. JOHNSON], a member of the Committee on Finance of the Senate, relative to such amendment.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UNITED STATES SENATE,
Washington, D. C., March 7, 1940.

Hon. EDWIN C. JOHNSON,
United States Senate, Washington, D. C.

MY DEAR SENATOR: I have today introduced in the Senate and had referred to the Finance Committee a proposed amendment to the bill for the extension of the foreign-trade agreements. The amendment is in the form of a new section providing that hereafter no foreign-trade agreement shall become effective until ratified by the United States Senate as all other treaties are ratified.

As you showed interest in this amendment, I have supplied you with a copy of it. I would be pleased, of course, if the committee would consider the amendment before making their report.

May I say that I am not concerned with the character of agreements that have been heretofore made by the President. What I am interested in and what I believe the Senate is interested in is the authority that we have granted the President which we propose to extend. The act undoubtedly authorizes the President to enter into an agreement with a foreign country of a character that would come within the definition of a treaty as anticipated by the Constitution. The President is authorized to enter into an agreement with a foreign country to reduce or increase our tariff revenues. This agreement may be made for a period of 3 years and indefinitely extended thereafter if the President so desires.

The Supreme Court has held that a treaty is a contract between the United States and a foreign government affecting public welfare. In some cases it has held that it is a compact between the United States Government and a foreign government affecting public welfare. The question that submits itself to the Senate is, Does the act authorize the President to enter into such a contract or compact? Undoubtedly any agreement that he enters into with a foreign government affects the public welfare because it affects, first, the revenues that Congress has provided that our Government shall receive; second, it may materially affect the prosperity, if not the existence, of certain industries in the United States.

The act authorizes the President to enter into a contract that is binding upon the Government of the United States for a substantially long period of time. It authorizes the President to enter into an agreement that will modify existing law. Certainly no agreement but a treaty authorized in the Constitution has the status of law that can repeal or modify existing law. It is true that the Supreme Court has held that the President may enter into agreements that have not the force and effect of treaties and therefore do not require ratification, as is required relative to treaties.

I do not take issue with these opinions. It is unnecessary to take issue with these opinions, as the law which we now propose to extend empowers the President to enter into contracts with foreign governments for substantial periods of time affecting our public welfare. The law itself authorizes the making of a treaty that shall have the effect of a law and with the power of that law to repeal or modify former laws enacted by the Congress of the United States. If the Senate finds that the President by the law is authorized to make a treaty as anticipated by the Constitution, then it must follow that it is the duty of the Senate under the Constitution to require a constitutional ratification.

Sincerely yours,

KEY PITTMAN.

Flood Defense

EXTENSION OF REMARKS
OF
HON. CHARLES H. ELSTON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1940

EDITORIAL FROM THE CINCINNATI POST OF MARCH 4, 1940

Mr. ELSTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Cincinnati Post of March 4, 1940:

[From the Cincinnati Post of March 4, 1940]

WE ASK CONGRESS TO HELP US PROTECT OUR HOMES AND OUR FACTORIES FROM ANOTHER FLOOD

To the Senate and the House of Representatives:

On behalf of the people of Cincinnati we address you on the subject of spending.

But, we hasten to assure you, this is not the usual cry of "Roll Out the Pork Barrel."

The people of Cincinnati ask the Government for financial help in protecting a valuable residential and industrial district from a repetition of the disastrous flood of 1937.

The people of Cincinnati are not, however, asking for any 100-percent gift. They have voted to tax themselves $5,000,000 to pay the city's share of flood protection.

The project for which Cincinnati asks your consideration is a barrier dam to protect the Millcreek Valley from the flood waters of the Ohio River.

In this valley live more than 40,000 of the city's 470,000 residents. In this valley are situated factories which represent perhaps 75

percent of this city's capital investment in industry, and which employ 65 percent of its industrial workers. It is truly the city's "meal ticket."

In this valley is a great network of railroads, the key to much of the rail transportation of this part of the Ohio Valley.

In this valley are important machine tool, chemical, and plastics factories whose products would prove invaluable to the Nation in any emergency of war preparation.

The value of all property in this valley is estimated at more than $150,000,000.

The United States War Department engineers have declared that the expenditure of $6,670,000, or an annual cost of $340,000, would return average annual benefits of $1,460,000. Naturally, they pronounce this project "economically justified."

The Ohio River flood of 1937 caused the city of Cincinnati a loss estimated at $65,000,000. The building of the Millcreek barrier dam, together with the measures already taken to protect the city's water and power against flood, will reduce the loss, if the river rises again to the same stage, to a fraction of this sum.

The people of Cincinnati are entirely appreciative of the efforts of Congress to curtail unwarranted spending of Federal funds.

However, we submit that this request of the people of Cincinnati must be regarded as an investment which will pay rich dividends in preventing human tragedy and business paralysis resulting from the recurring floods of the Ohio River.

The city of Cincinnati is willing to dig down in its own pocket to pay its share. The city is unanimous in supporting this project as a worthy one. The city council has paved the way by approving all necessary local legislative measures.

Will you help us protect our people and our industries?

THE CINCINNATI POST,
CARL D. GROAT, *Editor*.

Administration of the Bonneville Power Project

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1940

ADDRESS BY DAN HALLOWELL

Mr. PIERCE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Dan Hallowell, special representative, Bonneville Service Committee, Portland, Oreg., before Oregon League of Democratic Women, February 28, 1940, at Portland, Oreg.:

In the beginning of Bonneville there was the Columbia River—it had been there quite awhile and it didn't belong to the Portland Electric Power Co., or the so-called first families of Portland—surely no person will dispute the self-evident fact that the river is the inherent property of the people who live within its watershed—or that no man or group of men should have an unfair advantage over another in the bringing to himself the good things the river will accomplish for him. We in this generation have a trust or obligation to those who follow after to pass on to them its benefits in such manner that they too may share equally in them. It is a constant, relentless, mighty thing—this river—whose power for good is just coming into the consciousness of man—no longer does it run, as Mr. Joseph used to say, "unbridled to the sea."

Rising in the Rocky Mountains of British Columbia and flowing 460 miles through Canada by the time it reaches Bonneville the river has become the second largest in the United States and America's greatest potential source of power. Engineers estimate 17,600,000 horsepower. Down in California they make much ado about Boulder Dam and the Colorado River and yet the Columbia at Bonneville flows 10 times as much water at low-water time as flows in the Colorado at high-water time. It is only in the last few years that people have begun to realize that water and rivers are man's greatest treasure. Forests may be cut or burned, oil wells may go dry, soils may be depleted, mines may run out, but the power of a mighty river goes on forever.

Today many people among us are working to bring the benefits of Bonneville power to the city of Portland, and at the same time many people are working and much money is being spent to keep them from it. They want Bonneville for the selfish few. Each day more and more people see the vision and the possibilities for which the late George W. Joseph labored. It is true that the forces of greed, monopoly, and special privilege can no more defeat and prevent the ultimate working out of a great and just plan than they can stop the flow of the Columbia River with their bare hands. Largely as a result of the efforts of Mr. Joseph the Army engineers made preliminary surveys and had them on file, apparently waiting the day when an economic condition should bring forth a great national leader, President Roosevelt. President Roosevelt saw the great and real possibilities in the development of the Columbia River. He has said that its power shall be distributed in the widest possible manner to the greatest possible number of people. Certain paid propagandists of the Portland Electric Power Co. have brazenly tried to deceive the people about President Roosevelt's stand on public distribution of power. They have attempted to twist the truth on the assumption that the people of Portland are fools.

Here is what the President said, and I quote:

"Where a community, or a city, or county, or district is not satisfied with the service rendered or the rates charged by a private utility it has the undeniable right as one of the functions of government, one of its functions of home rule, to set up, after a fair referendum has been taken, its own governmentally owned and operated service. That right has been recognized in most of the States of the Union. Its general recognition by every State will hasten the day of better service and lower rates."

Now let's analyze it. Are you satisfied with the little insignificant reduction that two Portland power companies have recently given you? Are you satisfied to trade your birthright so cheaply away? Now to go back to the quotation, which says: "It is one of the functions of government"—the Oregon P. U. D. law has made a referendum possible—this is still a democracy and the will of the people expressed by their ballot is the law of the land. The Oregon P. U. D. law is the tool that can maintain your birthright.

The Bonneville Act specifies that preference in the sale of power shall at all times be given to such nonprofit public agencies as P. U. D.'s. It is the law that publicly owned systems have first choice of power. Portland Electric Power Co. cannot be sure of getting Bonneville power for longer than 5 years. Suppose the surrounding people's utility districts should continue to increase the use of industrial power with their cheap rates. Then there is always the possibility that there would be no power left for Portland. Here is what the law actually says, and I quote:

"*Provided further*, That nothing herein contained shall be construed to limit or impair the preferential and priority rights of such public bodies or cooperatives after January 1, 1941; and in the event that after such date there shall be conflicting or competing applications for an allocation of electric energy between any public body or cooperative on the one hand and a private agency of any character on the other—the application of such public body or cooperative shall be granted * * * in the case of contract with any purchaser engaged in the business of selling electric energy to the general public, the contract shall provide that the Administrator may cancel such contract upon 5 years' notice in writing, if in the judgment of the Administrator any part of the electric energy purchased under such contract is likely to be needed to satisfy the requirements of the said public bodies or cooperatives referred to in this act."

That is the law. So you see there is real danger that the progressive communities of Oregon and Washington would so far advance industrially that they would need the Bonneville power being sold to these private companies, and so demand it. The Administrator at Bonneville would then be required by law to cancel the contract with the private power companies and, of course, the private power companies would then be forced to go back to their old antiquated methods of production, which would immediately throw them into another periodic spasm of bankruptcy. Portland, its people, and its industry would then be out in the cold. Can you visualize any manufacturer who would be so foolish as to come to Portland to invest his money under these circumstances? Do you wonder why the Aluminum Co. of America went to Vancouver? Why did this new iron company go to Vancouver?

The State of Washington has 28 people's utility districts; 4 now in actual operation; more are forming. They have already cut their rates. Their load factor and demand for Bonneville power is even now increasing. Washington people are alive. They want factories and jobs for their people. Should the people of Portland continue to sleep, they shall wake up some day to find their city of roses a suburb of Vancouver, Wash.

Remember this, that the law of the land requires people's utility districts to sell power without profit; there will be no profit in it for any man. Its operation, its finances, will be regulated by State and Federal law, yet its directors will be selected by you, as you select your school directors—nonpartisan, nonpolitical men of proven business ability, whom you know by the record of their success in their own business. Many progressive businessmen of this city are taking an active part in the people's utility district movement. Do the power companies hope to convince you that there are not five honest, substantial businessmen in this city of Portland with brains enough to hire a competent man to manage the distribution of Bonneville power at cost?

Look here; think of this; why are the power companies in business? To make a profit, are they not? And what profits they make. Right now they are selling you 10 cents worth of power for $1.75. Suppose your grocer should buy a box of Hood River apples for $1 and, having delivered them to your door in his truck, should send you a bill on the first of the month for $17.50? What would you say? Do you think that his argument that he was justified in charging $16.50 for delivering the apples would bear any weight with you? Thank God the grocers in this city are not that kind of people. They, too, have their power problems. They pay on a so-called commercial rate; the mountain labored and didn't even produce a mouse for them. They got no cut of any

kind. Some day just before voting day the power boys will reduce the commercial rates in about the same manner as they have reduced the rates for home consumption. Then there will be a new and greater campaign of newspaper advertising and billboards.

Power company propagandists, the leader of whom is Mr. Walter W. R. May, whose salary is $6,600 a year of the people's money, the same man who pretended to work for Portland's good as manager of the Portland Chamber of Commerce has done a lot of loose talking about the Government taking over private business. They should like to scare independent businessmen, but, in truth, there is no comparison between monopolistic power companies and legitimate private business. In the first place, the power business is not private business; it is public business. People know and generally recognize this truth, that whenever any business is by its very nature an economic monopoly and an absolute necessity to the people, then it should belong to the people.

Some say there are two power companies in Portland; but are there? They charge identical rates; they work, hand and glove, together; they lobby and connive together; they contribute equally in what in the past have been very successful efforts to corrupt our public officers and to curb, regiment, and control our civic organizations. Their consuming desire for profits and fat salaries has completely submerged any truly American hope for better things for anyone other than themselves.

As an illustration of how successful they have been, in 1938 Franklin T. Griffith, then president of the Portland General Electric, was selected as Portland's first citizen. Mr. Griffith comes down from the old days when industrial leaders literally carried a whip over the citizenry. He made it pay, too; $19,500 per year it paid him, plus $16,670 as retainer fees to his legal firm of Griffith, Peck & Coke, plus $4,500 from the Portland Traction Co.; a total of $40,670 per year that we know about; and this—mind you, all this—while local investors lost $18,000,000 worth of their life savings, many of whom are today the objects of charity. L. T. Marvin, president of the Northwestern Electric, gets $12,460 per year. Paul B. McKee, president of Portland Gas & Coke Co., is on the pay roll of the Northwestern Electric Co. at $6,000 per year as special adviser. Makes one wonder if there was any conniving with the Portland Gas & Coke Co. so as not to reduce rates too much and bring electric ranges into competition with gas ranges. James E. Polhemus, now president of the Portland General Electric, got $10,000 as vice president. A total of $109,670 in salaries to top-ranking executives.

Dr. Raver, the administrator of Bonneville, gets $10,000 for the whole job. The city of Seattle paid the late J. D. Ross $7,500 per year. Over a period of years he cut the electric rates in half and left the city an electric production and distribution system worth $62,000,000.

Over $100,000 in salaries to high-powered executives. Meanwhile Portland General Electric is in bankruptcy for the second time in 5 years. Meanwhile thousands of private investors have lost their money in worthless stocks. Old employees have been unceremoniously laid off. There is talk of eliminating pensions and group insurance. A very concerted effort is being made to make power-company employees believe that they will lose their jobs when the people take over. Such is not the record of P. U. D.'s. In Washington practically every power-company employee has been retained by the new P. U. D.; in some cases 100 percent. No competent trained electrical worker need fear for his job with the Portland-People's Utility District. The association of P. U. D. directors for Oregon has publicly gone on record endorsing verbatim the labor provisions for which the unions have asked. The labor clauses in the Oregon P. U. D. law were written by the late Ben T. Osborne. In fact, power-company personnel should welcome the coming of a P. U. D. to the city of Portland because we all know that if rates are cut in half, consumption will soon double and there will be more work and more jobs for everyone.

It is true that power-company money is being lavishly wasted in an attempt to corrupt union officials, but the rank and file will not be led astray. How fearful to contemplate the insidious lobby system maintained to corrupt our politics, both city and State, to bore within our unions, to intimidate the workers, to enter slefishly into our civic activities, to curry public favor, and disguise the efforts of a few grasping men who seek to dominate and regiment our city.

The Portland Electric Power Co. has contributed financially to such strike-breaking organizations as the National Industrial Relations Association and the labor hating National Manufacturers Association. Oregon Business and Investors is a nice-sounding name for a power company subsidized agency to fight Peoples' Utility District. They received in cast last year more than $33,000 from power companies. They seek to control the press. Meanwhile many an unsuspecting businessman paid his $1 per year to what he thought was a worthy cause. In 1938 the Portland General Electric paid $3,669 to the Edison Electric Institute, which is dedicated to fighting the public-power program. What an unfair use of the name of Thomas A. Edison, who actually attended the birth of modern electricity for the use and comfort of all mankind.

There is an item in the power company's report to the Public Utility Commissioner for Oregon of $523,000 for trade extension—$523,000 which they collected from the people of Oregon. How do they use it? They are using it against you now. Do Tacoma, Eugene, or Forest Grove, or Canby need to advertise—to lobby and subsidize and supply whisky to members of the legislature? Yet they talk about keeping the power business out of politics. In Portland it has always been in politics. P. U. D. proposes to take it out of politics.

What is the matter with Bull Run water—finest and cheapest in the United States, is it not? The water department employees are civil service. Their job goes on year in and year out, through change of mayor and city council. No Portlander would want to go back to the privately owned water company with its high rates and disease-producing water. In fact, the city of Portland has in truth a peoples' utility district, for water, right now, and it runs so fine and smoothly we scarcely know it is here. Don't some of you remember some of the things that were said by the private-water company at the time you took over the water business? Are they not saying the same things now? Wasn't a big holler made about taxes? Sure there was, but you wouldn't go back.

However, bear in mind this: That the framers of the Oregon P. U. D. law stopped the tax argument before it started because a people's utility district will pay taxes in exactly the same manner and in the same way that the power companies now pay taxes; in fact, P. U. D. will reduce taxes because it will sell its power for street lighting, for public buildings, for schools, and public use to the city for about half the charge now made by Portland Electric Power Co.

The city of Seattle gets approximately 3 times as many street lights for half the money the city of Portland pays to Pepco. In fact all this noise about taxes paid by private power companies means absolutely nothing because they get all the money back for services—and what poor service it is. Every teacher and most mothers know that the Portland public schools are poorly lighted because the cost is so high. Every person who is forced to walk our streets at night knows how poorly they are lighted. I ask you to look at the death rate of pedestrians at night. Why does the city skimp on street lighting?—because of the enormous cost.

The power companies will get every dollar of value they have invested and perhaps a little more, because while it is true that they have very little good will, they did pioneer the business and they had a potential earning power. Investors in power company stocks and bonds have a much better chance to get their money from the people of Portland than they have to get it from the financial gangsters of Wall Street. The Portland P. U. D. directors will employ competent engineers to survey the properties, and after ascertaining their true worth will begin negotiations. Should the power companies take an unreasonable stand there is always the United States district court. In no case and under no circumstances will there be two competing systems in the city—for the will of the people is the law of the land.

Remember this—that People's Utility District will sell power without profit. The private power company must make a profit. They base their rates on the money they owe, plus the legitimate operating cost; plus the high salaries of their executives; plus the taxes that they collect from you; plus the money they spend for political activities; plus a cut for the holding companies which is Wall Street; plus legal fees for periodical bankruptcy; plus contributions to every Tom, Dick, and Harry that might influence a few votes; and then a profit. Is it any wonder that they cannot reduce rates?

People's Utility District has one simple job. Hire a good, capable engineer to direct the present employees, set aside enough to amortize the cost of the property in 30 years, some for extension of lines and improvement, pass the other savings on to the people. Rates cut in half will increase consumption double in a short while. That is the record of public ownership in other places. Look at Knoxville, Tenn.; Forest Grove, Tacoma, Cascade Locks, and Canby.

Portland has a very important decision to make. Her very future is in the hands of the voters. It is your job to cut through the smoke screen of selfish, subsidized propaganda and get the true facts. Your money and your labor has built Bonneville. Are you going to let the power companies steal it? You must pay for it, why not use it?

Great cities in the past have been dependent upon 4 things: (1) Resources; (2) location; (3) transportation; (4) coal. We have the location, the resources, and the transportation. We never had any coal, now we have. White coal. Rushing, inexhaustible, irrestible, never failing, smokeless, clean, and powerful. And it can be carried instantly from Bonneville to Portland—over a railroad of gleaming wire. It is yours. Do you know what it means? The mighty energy of 17,000,000 horses champing the bit of destiny—eager to help you build a great industrial city. Here at the tidewater of the Columbia, at the head of the Willamette Valley, where the Federal Government is spending $62,000,000 to help us make it the finest and most productive valley on the face of the earth.

For almost a hundred years Portland has been the principal city of the backward colonial empire. There are those who would keep it so. They have defeated the will of the city before. Will you let them do it again? There are in Portland, and you all know them, a certain group of landed colonial aristocracy who are content—they hate competition and energy; things are well with them. They don't need factories or office buildings. They don't need jobs. They don't need schools—their children go east to school. They don't need parks and playgrounds—they don't want anything new. They are perfectly satisfied to sit—pretty confident of the future they are; but how about you?

What Oregon and Portland needs is more people—people who can see the wonderful natural advantages of the Pacific Northwest—and they are coming, thousands each month, from the Great Plains States, from the Dust Bowl, and the crowded cities of the East. Oregon looks mighty good to them. It is truly the promised land. Eager and willing to work they are. Bonneville can find them a job—and you?

That great highway to the inland empire—the Columbia River—where traffic has doubled 17 times in the last year, unlocks one of the world's great storehouses, bursting with wheat and cattle and sheep; 1,200,000 new acres, more than the State of Delaware, just coming into irrigation on the completion of Grand Coulee; minerals beyond the dreams of smug complacency; copper and mercury and aluminum, zinc and lead and tungsten, nickel and borax and iron, phosphates and clay and sulfur, potassium and quartz and gold—waiting to be called into the building of the city which shall be Portland.

Do you think they will ever come to Portland when electric power—your power from Bonneville—is sold in Vancouver and other points along the Columbia at $17.50 as against $59 our manufacturers pay Portland Electric Power Co.?

Let's look back in the pages of history. Such things have happened before. Let's decide that it will not happen to Portland as it did to Milwaukie, Oreg. Once they were nearly equal, Milwaukie and Portland—Milwaukie had the edge a little. The farmers from the Willamette and Tualatin Valleys came to Milwaukee to trade. Then some forward-looking people built the Canyon Road. That turned the tide. They came to Portland, Milwaukie didn't die exactly, but Portland had a new inspiration. She went on to greater things and now what is she going to do about this? Will she take what belongs to her? or will she sit here like a wooden Indian?

It isn't necessary to have all these industries actually in Portland but we must have them in this trade area. Cheap power at tidewater is our advantage. We have locks and terminals and airports, schools and homes and playgrounds, churches and parks and hospitals, 100 miles inland, easily defended in time of war; no finer place on the face of the earth for homes.

Less than a million people in Oregon—1,000,000 people—90 percent of whose income, directly or indirectly, comes from timber and farms. In forest products we exceed the national average by 642 percent. The timber is rapidly disappearing and the faster it goes the scarcer the jobs become.

Three-fourths of the things we use come from east of the mountains—clothes and shoes and hats, tools and jigs and dies, iron and copper and steel, rubber and cars and trucks, plows and hoes and rakes, tractors and combines and seeders, dishes and pots and pans—practically everything we need and use, and yet we sit here worried, and fearful, and timid, listening with dread fears to the confusing half truths put out by Portland Electric Power Co. in their attempt to fool us into trading our very destiny for a pitiful little saving of a few cents a month on a light bill.

President Roosevelt saw the vision of the development of the Columbia River—I quote his words—"Water power of incalculable value for cheap manufacturing and economy and comfort on the farm and in the household."

The Government has done its part. From here on it's up to us. We are at the cross roads. We must choose which road to take. One leads down the narrow, private toll road of Portland Electric Power Co., the other leads up—to better things for the common good of all—the broad public highway of the people's utility district.

Trade—Tradition—Termites

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1940

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. STYLES BRIDGES, of New Hampshire, at a Republican rally under the auspices of the Utah Republican State committee, at Ogden, Utah, February 20:

Tonight I should like to speak to you about three "t's," which concern the lives of everyone more than is generally realized—tradition, termites, and trade.

There are three ways of regarding tradition: First, there is the true reactionary, who makes a fetish of tradition, revering it merely because it is tradition. The other extreme is the revolutionary radical, who has no use for the past and would overthrow it for precisely the same reason, merely because it is tradition. In between these two extremes are the vast majority of the American people, who evaluate the past in terms of the present and future. They realize that tradition is of little use unless it will help us in everyday living. But they also know that we have nothing to guide us save past experience. They know that history has taught us certain fundamental truths by which men must live, and certain ideals toward which men must strive if they are to advance. They know that these truths and these ideals will always be distorted either by a selfish few seeking personal gain or by theorists seeking to prove their contentions. In evaluating tradition they seek to separate the true from the false of the past. In their daily lives they seek to preserve these truths from those who would distort them today and to carry forward these ideals.

The American people have an unsurpassed tradition of which they are justly proud. It is a tradition of free men under a free government and a free economy. It has stood the test of time; it has brought the greatest progress the world has ever seen in so short a time, for it is no rigid doctrine that becomes outworn with the years. It is, rather, a spirit, a way of life. It is an ideal that man has set for himself and toward which he must constantly strive if he is to progress. It is the spirit of tolerance and understanding toward one's fellow men, the way of voluntary cooperation with others for the good of all, the ideal of self-restraint, self-development of one's talents and abilities, and of service to one's fellow men. It seeks the encouragement of individual initiative and energy and talent as the way of progress for all. These are the truths; these are the ideals which have been bought with the blood of patriots and martyrs and passed on to each successive generation of Americans as a priceless heritage. These are the truths and the ideals which each successive generation has held in trust and sought to bequeath, untarnished and enriched, to their posterity.

In recent years these principles which have guided the American people in their onward march have been questioned for the first time. Americans have stumbled at times, they have sometimes fallen short of these ideals, but never before have they been ridiculed or discarded as useless, outworn relics of a bygone day. For the first time, termites have sought to undermine the American tradition and way of life. For the first time we have in public office professional reformers, men who delight in experiment for experiment's sake, who relish overthrowing precedent, and who have used their public office as a laboratory in which to perform vivisection upon the American economic system. Many of them are men with "messiah complexes" who "honestly and fervently believe that their mission in life is, at least, to reform the United States regardless of the terms of the statutes, the Constitution, or anything else." These last words are not my own. They are to be found in the report of the House Judiciary Committee last year on the Logan-Walter bill.

These would-be messiahs of the New Deal pay tribute to the Constitution; but to them the Constitution is so elastic as to cover whatever interpretation they decide to give it. Take, for example, the so-called human rights amendment proposed by Thomas R. Amlie when he was a Member of Congress, which provided for the complete socialization of our economy. When Mr. Amlie was questioned by a Senate committee following his nomination to the Interstate Commerce Commission by President Roosevelt, he declared that he thought we had come so far under the New Deal that these same objectives could be achieved without even a constitutional amendment today. Incidentally, when the Senate committee had refused to confirm the appointment of Mr. Amlie, after he had admitted frankly his belief in a collectivist state, he was rewarded by President Roosevelt with an appointment to a soft political job in the Justice Department.

Those would-be messiahs of the New Deal pay lip service to our civil liberties. Yet the newspaper which dares to criticize the administration brings down upon itself a torrent of abuse and vilification. The individual who dares to speak against the New Deal can expect to have a campaign of smearing launched against him, and runs the risk of reprisals. The National Labor Relations Board, from its pinnacle of power, has decreed that freedom of speech is a qualified right, and not to be enjoyed by employers. The right to petition is also denied by the N. L. R. B. The right of appeal is deprived the citizen by this and numerous other New Deal agencies, and by the present Reciprocal Trade Agreements Act.

Most of these professional reformers—amateurs though they may be in the art of government—place capitalism on the list of things they are going to save. And yet their every move is designed to supplant private spending with public spending, private investment with public investment, private employment with public employment, and private control with public control. When New Deal spending first began it was presumably to relieve human distress. Then it was to prime the pump, to stimulate industry until private business could take up the slack. Today there can be no doubt of the fact that public spending is one of the instruments through which new dealers hope to make America over, and that if they are reelected to office this fall—which I do not expect to happen—we would be further than ever from a revival of our system of private economy.

Mr. Roosevelt's recent attempts to justify his spending policies actually reveal the degree of socialization of our economic system since the New Deal took office.

During the years from 1921 to 1930, private debt increased by nearly $48,000,000,000. There is no denying that some of this represented unwise speculation which contributed to the crash of 1929. But by far the greater portion of it represented legitimate investment in productive enterprise. It went into expanding our

economic system and providing employment, thus creating more wealth and a higher standard of living for all. During the same period, the debt of State and local governments increased slightly, while the National Government decreased its indebtedness. Private spending was carrying the load, as it should and must in a private economy.

During the 3 years which followed the crash, from 1929 through 1932, private debt decreased by more than 16½ billion dollars. Private borrowing and spending contracted, and with it private industry. We were in a depression. We needed a revival of new investment in private industry to achieve recovery.

Instead, we have it now from the President himself that since he took office, private borrowing for investment and expansion in business and industry has continued to decrease. The fact private debt has fallen another $17,000,000,000—or more than during the years following the crash from 1929 through 1932—is no credit to the New Deal. Instead, it proves that during the last few years businessmen have lacked the confidence to borrow money to invest in a new venture or in the expansion of a business already established. Instead, it helps to explain the idle cash in the banks and the idle men on relief rolls. Instead, it is evidence that our system of private economy, instead of expanding, has continued to contract ever since the New Deal came into power.

Nor is the fact that the Federal Government and its corporations have increased their debt by over $24,000,000,000, and that the Government has assumed the burden where private industry could not, since Mr. Roosevelt took office, a cause for self-congratulation. Together with the nearly 10,000,000 unemployed, it is rather the greatest proof of New Deal failure to achieve the revival of our private economy. That system is based on private spending, private investment, and private employment. Until we have a revival of these we shall not achieve any true recovery.

What New Deal spending has done is to provide temporary shots in the arm which resulted in temporary spurts, each followed by a recession. After 7 years there can be no possible doubt that such a policy can never bring true recovery. What it has done is to increase the trend toward socialization, to take the Government further and further into the fields of private spending and investment which have always done the job and could do so today if given the chance. As a result, both business and the individual taxpayer are paying the price for public spending that can never bring recovery either of our system of private economy or of prosperity for our people.

This comparison of private and public debt by new dealers—as though it were to their credit—reflects the fact that they cannot or will not see the difference between private debt and public debt, between private investment and public investment, between private spending and public spending. They refuse to recognize that private borrowing generally represents investment in productive enterprise, and thus creates a supply of new wealth in response to the demands of the consuming public. The borrower feels that the chances of success and a fair profit are sufficient to justify his risk in borrowing money he knows that he himself will have to repay.

But Government spending is generally in nonproductive enterprises which add nothing to the wealth of the Nation. Consider the billions we have poured into useless pump-priming projects. They did not result from any demand or potential use for them on the part of the public. Moreover, these spenders of the public's money are not guided by whether or not a venture is likely to prove successful. They are not personally responsible for any losses. These are simply chalked up to present generations in increased taxes and to future generations in burdensome debt.

You can never expect any decrease in spending, debt, or taxation, or any revival of our economic system of private economy from this administration. It is dedicated to the proposition that public spending, investment, and employment must gradually but increasingly replace private endeavor in our economy.

One of the peculiarities of the New Deal mentality is their inability to admit their error, to acknowledge that theories have failed to bring the promised results. In their intolerance of all other views, in their tenacious clinging to their pet theories regardless of human needs, in their refusal to meet conditions squarely, they are as narrow and bigoted as the blackest reactionary that ever lived. If their theories have not succeeded according to their diagrams, it is not the fault of their blueprints, but the fault of the people for not reacting as they had expected. If progress has not followed according to their charts, it is not the blueprint that must be revised to fit human psychology and needs of the people, but the people who must be reformed to meet the specifications of the blueprint. Thus, as private industry failed to revive as new dealers had expected, it was not the fault of their policies. Rather it was the fault of the "selfish few," the "60 families," and of a sit-down strike on the part of capital. On no account could the blame be allowed to rest upon the New Deal. And so we have a dogged persistence in policies that have been proved a failure, and a grim determination to carry them forward at all costs.

It was this determination to brook no resistance that led to the attempted "purge" by which new dealers hoped to assure a "yes man" Congress, just as they had attempted to set up a "yes man" Supreme Court the year before. Today, the "third termites" are busy trying to purge once more. This time it is being done more cautiously and quietly. Tommy the Cork and his friends have learned much from their previous failure. Today the attempt is to purge Jeffersonian Democrats from the delegations to the Democratic National Convention this summer by making sure that only ardent new dealers and advocates of a third term for Mr. Roosevelt are selected as delegates. If Jeffersonian Democrats once again are successful in resisting the purge, the strategy is to make them honorary delegates with no vote, or to invoke a unit rule at the convention by which, if they are in the minority of the State delegation, their vote will be lost.

In one way, the desperate maneuverings of the "third termites" are pathetic. Some are frank in conceding that no other 100-percent new dealer stands much of a chance either of nomination at the convention or of election at the polls. They are clinging desperately to the Roosevelt coattails as their one hope of salvation, for they know that whether the next President is a Republican or a conservative Democrat, their soft jobs and their pet theories will be out the window. You can expect increased propaganda during the coming months that Washington and Jefferson had no objection to a third term and—now that war has broken out in Europe—that Roosevelt is the one man who cannot only save America but work for world peace. Should the President be renominated, new dealers count on his being swept back into office, as he was first elected, on the basis of emergency.

Consistent with the increasingly international outlook of the administration is the reciprocal-trade program, which President Roosevelt championed as never before in his last annual message to Congress. Secretary of State Hull has always been an economic internationalist and has consistently maintained that we must first achieve the economic salvation of the rest of the world before we could be prosperous ourselves. He has crusaded for years for free trade. However, the policy conflicts on all sides with the New Deal program of domestic reform. Indeed, new dealers are divided between those who support the President's political and economic foreign policies and those who want him to concentrate on the task of remaking America.

Today, the Agriculture Department enforces a program of planned scarcity at home by controlling production. The State Department encourages unplanned amounts of imports from abroad.

The Surplus Commodities Corporation spends many millions each year in buying and disposing of surplus food products. The State Department lowers duties on these same products, thus adding to the surplus.

We have promoted this policy of scarcity on the theory that it would raise prices. By this and other artificial methods we have attempted to raise the prices of the farmer—and have failed pathetically. We also passed a Wages and Hours Act to raise the standard of wages. The State Department opens the door to cheap competitive imports from other nations.

Another scheme for raising the general level of all prices was the devaluation of the dollar—another failure. Now the entire philosophy of the reciprocal-trade program is that we cannot expect a healthy foreign trade if we export more than we import, thereby draining the riches of the rest of the world. And yet, by our program of buying gold and silver from all the world, at artificially high prices, far above the world value, we are inviting other nations to part with their silver and gold, thus draining them of these metals and of the wealth Mr. Hull contends with justification that they must have if they are to continue to trade with other nations.

Having increased our gold holdings from approximately $4,000,000,000 to $18,000,000,000 in 6 years, we now have two-thirds of the world's gold. We shall have it all before the forties are over if we continue to buy it at the present rate. And, in the same proportion as we are buying up the world's gold, we are decreasing its true value. The only possible use this hoard can have is if the President decides to use the powers surrendered to him by the Congress to issue money against it, in which every additional ounce of foreign gold will but make the inflation that much more terrible.

It is true that if we stop the purchase of gold suddenly, we shall disrupt the currencies of the world. But it is equally true that if gold and silver are not to become increasingly worthless, if the currencies of the world are to be protected—to say nothing of our own miners and our own currency—this fantastic policy must be gradually curbed.

But to return to the subject of trade. The reciprocal treaties were to be the panacea for the revival of world trade. They were designed particularly to aid the farmer. Not only have they failed of their objectives, but it is becoming increasingly clear that the American farmer—particularly in the West—is the chief victim.

This fact was amply demonstrated by the testimony of Mr. George N. Peek before the Committee on Ways and Means of the House during its hearings on the extension of the Reciprocal Trade Agreements Act. Mr. Peek, the first Administrator of the A. A. A. and an unquestioned authority on agriculture, left the New Deal because of his profound disagreement with its trade policies.

Among other things, he pointed out that competitive agricultural imports increased on an average of more than $43,000,000 a year during the first 5 years of the reciprocal-trade agreements, 1934 through 1938, as compared with the 5 preceding years, 1929 to 1933. At the same time, noncompetitive agricultural imports fell on an average of more than $128,000,000 a year. From 1929 through 1933, the average value of noncompetitive agricultural imports was more than $88,000,000 greater than that of competitive imports. But during the first 5 years of the reciprocal-trade agreements, the value of agricultural imports which competed directly

with the American farmer was more than seventy-two and one-half million dollars greater than the value of those agricultural imports which were not competitive.

From these figures it is apparent that the result of the reciprocal-trade treaties has been to decrease imports which we need and can safely bring into the country without displacing American farms and farmers, and to increase the importation of those products which put American farms and farmers out of work.

On the export side, at the same time that agricultural imports were increasing, agricultural exports declined an average of $251,000,000 a year during the first 5 years of the reciprocal-trade agreements as compared with the years 1929–33, which covered the worst of the world-wide depression.

And still the New Deal goes on subsidizing scarcity, making it impossible for the farmer to recapture the foreign markets that once were his. And, ironically, the farmer himself is paying for these subsidies which are taxed out of business in the increased price that he must pay for industrial goods. Between its domestic agricultural policies and its reciprocal-trade program, the New Deal was going to bring farm prices up to the level of industrial prices. And yet the index of prices received by the farmer has fallen to the lowest since 1934. The ratio of prices he received to the prices he had to pay is also the lowest since the inauguration of the reciprocal-trade program.

An outstanding example of the effect of these treaties, one which directly touches you in Utah, is furnished in the case of wool. Duties both on raw wool and wool manufactures were reduced in the treaty with Great Britain. A detailed comparison of imports for the first 8 months of 1939, compared with the first 8 months of 1938, reveals that various types of wool increased anywhere from 168 percent to over 1,000 percent. The encouragement given by the lowering of the duties is shown by the fact that the total value as expressed in terms of the dollar did not increase nearly so much as the total quantity.

For example, the increase in imported nails was over 2,500,000 pounds, or over 168 percent, but the dollar value increased only 99 percent. The increase in rags was nearly 5,000,000 pounds, or more than 1,009 percent. But the increase in the dollar value was only 767 percent. The increase in manufactured woolen materials was 175 percent. But the dollar value increased only 107 percent. Could anything demonstrate more clearly the danger of opening the doors to cheap competition from abroad?

The yardage of imported woolen goods in 8 months alone was enough to provide two and a half million people with a garment containing 3 yards each. That meant the loss of some $5,000,000 in wages, together with employment for some 5,000 people who might have been employed in its manufacture. Together with the importation of raw wool, it represented some 35,000,000 pounds. Just figure that out in terms of your wool production in Utah.

The American people have achieved a standard of living that is the envy of the world. They have achieved it by the sweat of their brow, by their initiative, and their genius. The poorest in the land are better off than the peons of other nations. But that is not enough. So long as there is mass unemployment, so long as wages and prices are in many instances too low, we can and must achieve far more. But we cannot protect all we have gained thus far; we cannot advance if we permit ourselves to be dragged down to the level of other nations. We cannot afford to sacrifice the American standard of living on the altar of free trade.

We can achieve greater employment and higher prices and wages only if we halt the flow of competitive goods from other nations below the American cost of production. We stand to gain by a reciprocal-trade program only if it is placed on a basis of true reciprocity by which we win a concession for every concession made, instead of gaining from only one nation but giving to all the world. We can increase our export trade only if the reciprocal-trade program is used to bargain the products we have for export for products that we do not produce. We can make concessions to other nations on those things which we do not raise. Since the beginning of the reciprocal-trade treaty, foreign nations have lost an average of more than $128,000,000 a year in exporting to this country noncompetitive agricultural products, products which would not have displaced American labor and American land. This was nearly three times the amount they gained by increasing exports to this country which did displace American labor and American land. In other words, the program as administered has actually benefited neither the American farmer nor the farmers of other nations. On a basis of true reciprocity, it can be made to benefit both.

Upon any party that takes office in 1941 there rests a tremendous responsibility. The next 4 years will not be easy ones. It will take all the strength, all the courage, all the vision at our command to put America back on the road to progress and prosperity. But I believe that the Republican Party will meet that challenge.

First of all is the task of inspiring the traditional American spirit of industry, initiative, and energy for the advancement of all. That spirit has been discouraged, it has been suppressed, it has been thwarted in recent years. But I refuse to believe that it is dead. I do believe that, if released and summoned to the work that lies ahead, the American people will achieve greater conquests and the conquest of greater frontiers and greater human happiness than ever before.

But, if they are to go forward, we must assure them of a constitutional government by law whose purpose is to free them rather than the arbitrary government by officials with the power to tinker with their lives. There will be no doubt in the minds of our people as to the protection of their freedom of speech and press at all times, and of their democratic right to a fair trial, an adequate hearing and appeal at all times. There will be no doubt in their minds as to the protection of the spirit as well as the form of their Constitution and their democratic institutions. There will be no fear that these are being perverted to perpetuate politicians in public office. For the Government of the United States will be returned to the American people. We shall return to them the powers which are theirs under the Constitution to exercise through their chosen representatives, among them the control over their currency and the power to negotiate treaties with other nations.

Under a Republican administration there will be a resurgence of our system of private economy. The savings of our people will not be taxed away and squandered in the name of helping them. Punitive taxation will not prevent the raising of wages and the reemployment of men in an expansion of industry. The citizen will not hesitate to invest his hard-earned savings because of the competition of his Government. He will not be restricted and harassed out of a decent living by Government bureaucrats. Rather he will be confident of government which encourages him to go forward, which stimulates an economy of plenty. Such Government regulation as is necessary will be designed at correcting abuses in our economic system, and not at making it over. Their purpose will be to preserve the freedom and opportunity of the individual to go forward in an economy of plenty, to rise as high as his toil and his talents will permit, and to contribute as much as possible to the wealth and standard of living of others.

Those who hold office will encourage the greatest possible self-government and voluntary cooperation among our people in solving their problems. They will set an example of tolerance and mutual respect. They will conceive of the duty of their office as to serve and not to rule, however benevolently.

Under such a government, I do not doubt that the American people will not only go forward, will not only preserve the precious heritage that is theirs in trust, but will write new chapters to the history of American achievement and add triumphs to an already glorious tradition.

Important Decision Ahead

EXTENSION OF REMARKS

OF

HON. RAYMOND S. SPRINGER

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1940

EDITORIAL FROM RICHMOND (IND.) PALLADIUM-ITEM OF MARCH 4, 1940

Mr. SPRINGER. Mr. Speaker, I ask unanimous consent to extend my own remarks in the Appendix of the RECORD and to include therein a very carefully written editorial which appeared in the Palladium-Item, of Richmond, Ind., on March 4, 1940, on the subject, Important Decision Ahead.

I hope each Member of the House will read this illuminating editorial, as it contains some real food for thought.

The splendid editorial follows:

[From the Richmond (Ind.) Palladium-Item of March 4, 1940]

IMPORTANT DECISION AHEAD

History-making world events should not cause Americans to overlook the grave domestic problems of the United States. The voters of this Nation will make a choice of Government leaders at the polls this year. Opposing parties offer a marked difference in approach to the solution of our difficulties.

The average citizen has become well acquainted with the policies and methods of the New Deal. Eight years of its rule have not brought the correction of fundamental weaknesses.

Widespread unemployment, heavy expenditures for public relief, mounting taxes, and an unbalanced economy remain in the pathway of recovery. Promises of "the abundant life" can no longer be accepted as sufficient.

What is the alternative?

After 2 years of study, the special program committee of the Republican Party, headed by Dr. Glenn Frank, has offered its recommendations. The party will be privileged to incorporate any or all of these recommendations in the national platform this year.

Most important of the statements accompanying this finding is that which declares in favor of an expanded "free enterprise," holding to the view that "our private economy has not come to a dead end."

The New Deal has preached the doctrine of "no new frontiers to conquer," and has sounded a note of fatalism. It has accepted the fact of unemployment and relief, with accompanying heavy expend-

itures, and has attempted to make the people of this country accept the fact as an inevitable condition. Private enterprise and individual initiative have been consigned to the past along with other relics of the "horse and buggy" days.

Frank's committee declared, "The farm program should try to increase interchange of farm and city goods by better correlation of prices." In simple language, that means price levels must match. The farmer must receive pay for his goods on a standard comparable with what he pays for other persons' goods.

"Private enterprise should be encouraged by protective rather than restrictive Government regulation of business," says one of the points, and, "A 20-percent reduction in Federal spending should not be too difficult, and coupled with a higher national income, should bring a balanced Budget in 1942."

These are a few of the essential recommendations offered to correct policies which have kept the farmer's income too low; created a staggering public debt, and allowed unemployment and relief to continue.

Appointments to the Military and Naval Academies

EXTENSION OF REMARKS

OF

HON. WILLIAM J. MILLER

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1940

REPORT ON SELECTION OF APPOINTEES

Mr. MILLER. Mr. Speaker, under permission granted to extend my remarks, I wish to insert the following report on the method used by a committee acting for me in the selection of principals and alternates to the United States Military and Naval Academies. Several Members of the House have indicated a desire to know just how this method of selection worked, and for that reason I am inserting the report just received from this committee. This method of selection was used in my district for the selection of candidates for the first time last fall.

I know every Member of Congress is interested in securing the highest type of candidate for the Military and Naval Academies. I am greatly pleased with the work done by this voluntary committee, and would highly recommend this method of selection to any Member who has a vacancy to fill in these service academies.

REPORT ON THE METHODS OF THE COMMITTEE FOR SELECTION OF PRINCIPALS AND ALTERNATES TO THE UNITED STATES MILITARY AND UNITED STATES NAVAL ACADAMIES FOR 1940, FIRST CONGRESSIONAL DISTRICT OF CONNECTICUT

The principals and alternates recommended by Congressman MILLER for admission to West Point and Annapolis in 1940 were selected by the following committee which had been appointed by him: Paul M. Grover, chairman, United States Naval Academy, 1926; Dr. William B. Smith, University of Pennsylvania, 1922; James V. Walsh, United States Military Academy, 1920.

In making its plans for selection, the committee endeavored to determine in a practical manner, evidence of those capabilities which would be expected to make the candidates attract followers during and after their training as cadets and midshipmen.

As it was felt that acquired knowledge, and the will and ability to acquire further knowledge, were of material importance, the following examinations were given to the 23 candidates who had survived the committee's scrutiny of scholastic records:

1. An intelligence test.
2. Tests of the new short-answer type on (a) Two years of high-school algebra, (b) English usage.

The results, arranged in order of rank, were considered to be a proper indication of the merits of the candidates in aptitude and scholastic achievement.

On the same plane of importance with knowledge, the committee considered the ability of the candidate to associate with other students and to prevail upon them to acquiesce in decisions against which they normally might offer resistance. An attempt was made to develop this information on each candidate by privately questioning each one on his extra-curricular activities, such as his elective offices, his sports, and his activity in debating societies and school papers.

During the same personal interview, questions were framed and asked to bring out evidences of determination, initiative, and resourcefulness. To obtain a comparison of the degree of development of these qualities and of the ability to lead associates, the following method of rating was used: Superior, excellent, good, average, and below average. The average rating was the committee's concept of the degree to which the quality was evident normally in a high-school senior.

The final selection of principals and alternates was predicated upon the resultant relative merits of the candidates in scholastic aptitude and achievement, in their ability to lead associates and in their evidence of determination, initiative, and resourcefulness.

Profiting by experience, the committee recommends the following procedure for selecting the 1941 principals and alternates to the Academies:

1. The committee will include one additional member who is experienced in selecting boys for preparatory school or college.
2. Initially all candidates will be interviewed both privately and in a group, to determine evidences of the ability to lead associates, and evidence of initiative, resourcefulness, and determination. The same method of rating will be used as was used in 1940.
3. The 10 highest candidates for each Academy, rated after the interviews, will be given the same types of intelligence and scholastic aptitude tests as were used in 1940.
4. The principals and alternates will be selected after weighing the relative merits of the candidates as determined by the interviews and examinations. If necessary, in close decisions, it is suggested that additional interviews be held.

The committee is deeply grateful to the headmaster of Kingswood School in West Hartford for the use of the examination room and proctors, and to the proctors for their assistance in marking the examination papers.

Respectfully submitted.

PAUL M. GROVER, *Chairman.*
WILLIAM B. SMITH, M. D.
JAMES V. WALSH.

Lewis Basks in the Sunshine—His Pickets Walk in Snow and Slush—and Honest Workingmen Pay the Shot

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1940

EDITORIAL FROM THE BENTON HARBOR (MICH.) NEWS-PALLADIUM

Mr. HOFFMAN. Mr. Speaker, the activities of John L. Lewis and some of his communistic allies are well understood by at least some city editors. One of the more astute, alert, enterprising, and discerning of these is Stanley Banyon of the News-Palladium, published at Benton Harbor, Mich.

An editorial published on March 4 of this year accurately pictures the plight of men who are picketing a newspaper in Chicago. It also discloses how Mr. Lewis, who has a salary of $25,000 a year and an expense account of $1,000 a month, is enjoying himself in Florida, while his pickets in Chicago trudge in snow, sleet, and slush.

Nor should it be forgotten that Lewis' vacation, his salary, and his expense account, as well as the pay of the pickets for their cheerless, useless work, comes out of the pay envelopes of the men who are working.

Lewis collects literally millions of dollars a year from the pay envelopes of the workers. How long will it be before those who enable him to live in luxury will begin to inquire whether he and his cronies are not receiving an exorbitant proportion of the workers' pay checks?

Lewis and others of like ilk have been loud in their denunciation of the large salaries received by business executives. But they accept with alacrity compensation out of all proportion to that received by those who pay them.

The editorial from the News-Palladium of March 4 is as follows:

[From the Benton Harbor (Mich.) News-Palladium of March 4, 1940]

MR. LEWIS WANTS TO BE ALONE

Here are two interesting pictures:

In Chicago, weary, dull-eyed C. I. O. Newspaper Guild pickets trudge back and forth, day in and day out, in front of a Hearst newspaper office. The collars of their overcoats are turned up against the biting wind that makes stinging eddies of the smoke

and grime of drab West Madison Street. The pickets carry placards announcing that members of the Newspaper Guild are on strike.

This has been going on for months. The pickets appear to have become a permanent part of the West Madison Street panorama. Few passersby even glance at the marchers, and within the building the functions of a metropolitan daily go on as usual.

The guild is an affiliate of John L. Lewis' C. I. O. Mr. Lewis is, if you take his word for it, the champion of American labor.

There is another picture.

The local is swanky Miami, Fla.—the Nautilus Hotel at Miami Beach, to be exact. The Nautilus has style and service excelled by none. It is a gathering place of socialites, moneyed nabobs, and rotogravure queens. Few but the rich can enjoy the Nautilus, although it probably costs nothing to walk into the lobby for a quick look around.

Guess who is a paying guest at the Nautilus? Why, Mr. Lewis, none other than the shining knight of the toilers!

To have the means to stop at the swellest Florida hotels is apparently one of the compensations for being a labor leader.

There's something in the check-off system after all.

It seems that Mr. Lewis, who as president of the C. I. O. goes to bat with much attendant publicity, for the downtrodden, also has an expensive limousine, driven by a uniformed chauffeur who pilots the boss around the ritzy boulevards of Miami Beach.

Mr. Lewis went to Miami Beach for a vacation. He's right down there among the rich people. He relaxes. The pickets shivering in Chicago and elsewhere can't. But you don't get anywhere in this life by just walking around in circles. You have to learn how to relax.

When Mr. Lewis settled down at the Nautilus, the city editors of Miami's newspapers thought he was worth an interview. Ordinarily Mr. Lewis gives interviews at the drop of a hat. But remember, he went to Miami Beach to rest. At any rate, the editors sent a squad of overworked reporters around to interview Mr. Lewis, who, according to the published accounts, was "relaxing magnificently," and breakfasting at 11 a. m. The reporters were a little crestfallen when labor's friend refused to see them and complained to the management that since he was paying $38 a day for the privilege of writing home on Nautilus stationery, he should have privacy. He made quite a scene about the whole thing. The minions of the press were disturbing him. So Mr. Lewis complained to the hotel management. He didn't inquire whether the reporters belonged to the union or not. That's a small matter, anyway, when one wants to be alone for $38 a day.

The management is said to have informed Mr. Lewis that the ladies and gentlemen of the press are free to come and go at the Nautilus as they please, but that guests don't have to see the ink-stained wretches unless they want to.

When brickbats were being thrown and windows smashed during the C. I. O. sit-down strike in Flint a few years ago, Mr. Lewis was not among those present. Neither did he join the sit-downers inside the beleaguered automobile plants and share their discomforts. No, the strikers, jobless and payless, were exhorted from afar.

The C. I. O. has campaigned strenuously for members who pay their monthly dues by having the amount deducted from their pay.

Nobody has yet heard of any of the rank and file being able to relax 'neath the Florida palms, with a towncar and liveried chauffeur at beck and call.

A monkey is being made of somebody, but quite obviously that somebody is not Mr. Lewis.

Modern Government Trends

EXTENSION OF REMARKS

OF

HON. ROBERT F. JONES

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1940

RADIO ADDRESS BY HON. ROBERT F. JONES, OF OHIO

Mr. JONES of Ohio. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered over the radio on March 4:

I appreciate this opportunity to come into your homes tonight to discuss modern government trends. These modern trends deprive the people of their free thought and action. The dictator gains the exclusive power to think and decide everything for them. The masses lose to governments their rights to freedom of worship, of assembly, of speech, and of press. Hunger and poverty of the people have encouraged this trend.

Socrates, one of the world's greatest teachers, did not attempt to teach people what they should think. Rather with skillful questions he made his pupils partners in discovering truths for themselves. Let us then investigate as partners to see if their problems were not the same as our present problems.

After he leaves New York Harbor, until he reaches Manila, the traveler will report that the world is ridden with classes and special privilege groups. H. G. Wells in his most recent book, the New World Order, describes the class struggle in the British Empire. Millions of citizens of India know that they can never rise above the caste into which they are born. The English commoner holds no false hopes that his son will become the King of England. In Russia the proletariat child will never own an acre of ground, a small business, or a little home. The squalor and hunger of his birth will continue through life. Stalin alone has the alternative to raise his station above the proletariat or to grind and crush him with his tyrannical personal power.

A few months ago Fortune magazine grouped persons generally according to the part they played in our Nation's economy, as its managers, its workers, or its victims, the dispossessed. By a vote of 5 to 1 the American people rejected the idea that class proletariat or plutocrats exist here, rather we regard ourselves as middle class.

In sharp contrast to this view, throughout the world the wars of abstractions, envies, fears, and hatreds are constantly being created against one group for the benefit of another group. Class a man in one group and for no other reason he becomes a mortal enemy of, and expects no mercy from, those in another group. There is little hope to escape these hatreds when the nation inspires them.

It has been said, "Men will continue to commit atrocities as long as they continue to believe absurdities." Belief in absurdities in the modern nations of the world probably started October 25, 1917. Future historians may assign the turning point in modern history to this date. With very little bloodshed the czar had surrendered during this summer. Many political parties, with the weakest of these, the Communists, proposed their candidates.

Lenin wrote in 1917 that the Russian people thought his Communists were a little handful of lunatics. The Communists lost the election by a majority of 6 to 1. When they discovered that every one of their delegates had been defeated, Trotsky says the party council decided that there would be no constitutional convention. They stole from the government 30,000 guns and necessary ammunition. They led soldiers to desert from the German battle front. On the eve of the convention, the Red Guards marched through the streets of Moscow. When the shooting was over there could not be found enough constitutional delegates to hold the convention. Ruthless dictatorship of a conspiracy, conceived in the darkness of a warring nation, stabbed to death the representative government of the people of Russia. Stalin exists today by means of midnight revolutionary tribunals, mass murder of entire political parties, and transportation from their homes of great sections of the population.

Women, ill-clad and unshod, work by the side of men in the railroad yards of Moscow. There is no family unit. Their children, as cattle, belong to the Soviet State.

Stalin chooses whether men mine, plow, or fight for his militaristic machine. For 23 years the people of Russia have been on the bread card of their dictator's commissary. Stalin devours the hope of the individual.

Since 1917, in every country where they have had a revolution, the people have cried out, "We are hungry and cold. Our children are starving. What's the use of a political liberty to us? Let's try a dictator."

Stalin, Mussolini, and Hitler are the answers to the cries. They have abolished constitutions, parliaments, bills of rights, and checks upon the power of the people's representatives.

In 1918 we helped to give Germany a representative form of government. The Versailles Treaty bled the new republic white with reparation payments. Heavy government levies upon German business and the German people made the soil fertile for the growth of communism in Germany.

To fight communism, businessmen and thinking people followed the hue and cry of a Nazi Party. Hitler burned liberty at the stake, chained freedom of worship, freedom of speech, and freedom of assembly.

Are the hunger and oppression of the Nazi and the Communist less painful than the deprivation and abuse of the subjects of the Czar and Kaiser?

Bear in mind that these movements have thrived when the European countries I have discussed were either debt burdened or at war. Their people were oppressed by taxation and confused by personal financial difficulties.

The Socialist Party has had a significant place in the revolutions in Italy, Spain, Russia, and Germany, because they created just enough mess for the Fascists, Nazis, and Communists to worm their way into power. The Socialists attempted to ballot their way to high public office, and then modify the constitution and destroy its safeguards to life, liberty, and property. This is the party of Eugene Debs, Norman Thomas, and the late Blum in France.

The Communists attempted to settle the difficulties of Russia and its people by destroying private property. To achieve this they would annihilate constitutions and all laws.

The Communists destroy the state by revolution. After they take the little home they crush the spirit of the owner by a dictatorship. After that they promise that the dictator will surrender his power to all of the people. In 23 years this has not happened in Russia.

The National Socialist Party, known now as the Nazi Party, called together the Aryan against all minority groups within the borders of the nation. Hitler inspired the Aryan with fear and hatred of

the creed and race of every other group. He develops their prejudices and executes his aims through brute force.

In every one of those movements there is no remedy for the persecuted.

Is there any trend in our Government that would mark us as having anything in common with one of these revolutionary philosophies or theories?

Our Federal debt is fast approaching the $45,000,000,000 limit. No one knows how much debt this country will stand before we have financial chaos. Certainly the new dealers know no more than we. If we follow the pattern of countries where communism, nazi-ism, and fascism have come into power, our greatest danger of "isms" in America will come when the people lose confidence completely in the ability of the Government to pay its obligations. Every day that this administration continues deficit spending the closer we approach to the "isms" we detest.

In the next place, all of these philosophies of government imagine that the political party in power, and especially its party head, has all the wisdom to solve all problems once exclusive power over property, rights, and remedies of the people is granted. If Stalin, Hitler, or Mussolini imagine that a situation needs correcting, without discussion, without explanation, they execute their plans immediately—transplant men, expropriate homes. They can herd men into the army. To oppose them or seek redress from their plans means death.

Our Constitution does not presume that one man and his appointees could have all the wisdom of the Nation. When Washington, Madison, and other framers of the Constitution created the legislative branch of the Government, they created opportunities for statesmanship in both Houses of Congress.

Argument and debate of every bill or plan of the Chief Executive, of any Senator, or Congressman was intended by them to be argued and acted upon by statesmen in each House. Our Republic during the last 150 years has developed statesmen in each House whose sound reasoning exposed the fallacy of the programs of the administration in power.

During this administration one of the branches of Government sought to purge from the Senate men who dared to speak their convictions against the New Deal programs.

The New Deal party leaders sought to defeat those Senators. I do not recall that the charge was ever made that error in judgment was the issue, but the charge was made that the Senators had not cooperated with the party.

The totalitarian states' glorification of the party leader is more important than the great good of the nation. Is glorification of the New Deal party leader more important than solving our problems? This is false patriotism.

The framers of our Constitution intended for the Members of the House and Senate to grapple with the greatest problems of the Nation. This administration has offered, and in many instances has stampeded, legislation granting away discretionary powers to its appointees in the several bureaus of government.

The tariff schedules fixed by one of the Government bureaus is fast ruining some major industries in the United States. Heretofore the tariff laws have provided for appeal to the courts. For example, the farmer and the pottery manufacturer cannot compete with the cheap labor of foreign countries. There is no possibility for them to confront the bureaucrat who draws the schedules or tariff rates. Why? Because this man's identity is a secret. After the aggrieved industry has been summarily dismissed they have no redress to the courts because of the reciprocal-trade law did not provide for such appeal. Several boards and commissions appointed by the Chief Executive make rulings every day having a sweeping effect upon the life and death of small and large businesses and there is no chance to appeal to the court.

In several instances where a record is necessary, the boards and bureaus have wide discretion to charge one price to the Government for a record of the proceeding, and charge a prohibitive price to the small business seeking a carbon copy of the same record.

Deny a remedy or raise its cost so high that a man cannot afford it, the result is the same. The remedy is still unavailable.

You may not care because your job, your property, your liberties or your friends are not involved. The New Deal came to power smearing businessmen. That may please you. Have you thought some subversive group might win high public office merely by hating your race, your creed, your color. Do you want their bureaucrats to deny your right to worship God or restrict the liberty of your race? Do you want to be denied a hearing in the Supreme Court?

In America we want every man equal to his neighbor. We want all citizens with equal rights as individuals before the bar of justice. We want every man to have freedom of press, speech, and assembly and the right to worship God as he sees fit.

We do not want to exchange our liberty for relief, or a name on the Government's bread card. We want to own our own home, our own garden, our own little business, and, in exchange for a few dollars of Federal subsidies, we do not want to lose the right to manage our own farms.

The American people do not want to go down the same financial road to dictatorship that Germany and Italy and Russia traveled. We want to put our economic house in order and make the revenue pay all of our Government expenses.

Pending Transportation Legislation

EXTENSION OF REMARKS
OF
HON. VINCENT F. HARRINGTON
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1940

RESOLUTION OF THE LEGISLATIVE COMMITTEE OF THE NEBRASKA STATE FARMERS' UNION

Mr. HARRINGTON. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD the following resolution passed by the legislative committee of the Nebraska State Farmers' Union February 15, 1940:

We are opposed to any legislation, State or National, that would have a tendency to increase transportation costs either directly or indirectly. We believe the best interests of agriculture will be served by a continuation of private ownership and operation of our railroads.

We believe that each form of transportation should stand on its own merit and that the rules, rates, and regulations for the various types of transportation should not be made arbitrarily uniform. The competitive features of the different forms of transportation should be preserved rather than destroyed. Rules and regulations that are not necessary for the safety of the public and the protection of property should be greatly modified or eliminated.

Each House of Congress has passed a transportation bill, both of which are now pending before a conference committee of the two Houses. Because of the widespread interest of citizens in this legislation and its Nation-wide effects, we urge that a period of 30 days or more be permitted for the interested public to study the bill when reported by the conference committee before its final consideration and enactment by Congress.

We are opposed to those provisions of the Wheeler-Lea bills now pending before Congress which place the control of rates on water-borne commerce under the control of a governmental rate regulatory body.

The Furnishing of Refrigerator Cars

EXTENSION OF REMARKS
OF
HON. C. ARTHUR ANDERSON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1940

ARTICLE BY HON. C. ARTHUR ANDERSON, OF MISSOURI

Mr. ANDERSON of Missouri. Mr. Speaker, under leave to extend my remarks in the RECORD I include a study which I have made of the possible effect of H. R. 8242, a bill designed to compel the railroads to accept cars supplied by shippers of certain products.

The matter referred to is as follows:

THE FURNISHING OF REFRIGERATOR CARS

The railroad industry must be, and is, ready to furnish all the refrigerator cars that are needed for the transportation of general perishable traffic.

The industry is prepared to meet its full responsibility in this respect with cars of railroad ownership or control, or with those for which they have contracted with private car lines, a combined total of 141,000 refrigerator cars—a supply ample for all needs, including seasonal and extraordinary demands as well as the needs of regular every-day perishable traffic.

Railroad-owned cars are those owned directly by a particular railroad. Railroad-controlled car lines are those owned jointly by two or more railroads. Railroad contract lines are private car lines with which contractual arrangements have been made to supply all the cars needed to meet the needs of the general perishable traffic on a particular railroad or group of railroads.

There are also a few private refrigerator car lines, owning a total of less than 3,000 cars, which have no contracts with railroads, but which, through various methods of solicitation, are serving, to a relatively small degree, shippers of dairy and packing-house products.

Still another group of cars are those used by the meat-packing industry. These represent a situation entirely different from the cars provided for the general perishable traffic. From the beginning of their operations, the large meat packers have provided their own equipment, of the special type needed for the handling of fresh meats and packing-house products, and sufficient for all their own needs. The railroads, therefore, have not had to invest money in equipment held for their use to take care of occasional or sporadic demands.

In recent years, the railroad owned and controlled and contract refrigerator car lines have provided refrigerator cars of this special type suitable for packer service. These cars are available for lease to packers, and scores of such leases are in effect now.

To a somewhat limited extent private car lines without railroad contracts have also provided cars suitable for packer service. These cars are not essential to meet the needs of the traffic, however, since the supply of cars owned by the railroads or their controlled and contract lines is adequate in number, of modern construction, and equipped with the latest developments in the art of refrigeration.

Prior to January 1, 1936, the use of private refrigerator cars by shippers of perishable products was practically unrestricted. On that date, as a result of the findings of the Interstate Commerce Commission in I. & S. Docket 3887, following an extensive study of the entire subject, there was published what is known as rule 36 of the Perishable Protective Tariff. Prior to the effective date of this tariff the selection and application of refrigerator cars to the general perishable traffic was in a most chaotic condition. Under the practice which had grown up, any shipper could establish a private car line of his own, with the result that there were private refrigerator car lines all over the country. Many of them had relatively few cars, some less than 10. With each one of them the railroads not only had to maintain separate car-accounting arrangements, but also to specially handle and distribute their cars for loading, according to the requirements of the individual. This forced thousands of selected moves, extra switching and terminal operations on to the railroads, all of which was most expensive. With the establishment of the tariff rule referred to, these private lines were eliminated so far as general perishable traffic was concerned. Cars in packer service were not disturbed, as these cars are of a somewhat different type and construction and are not generally furnished by the railroads.

One of the objects, and perhaps the principal one, sought by the private car lines was the revenue to be obtained from the railroads in the payment of mileage on movements, empty and loaded. Mileage payments are generally based on such an amount as will compensate for the cost of ownership covering all cars in service. When, however, a private car line has only that number of cars which can be kept in practically continuous movement at the relatively high speed with which perishable traffic is moved, with no stand-by time, mileage payments for those cars are considerably more than the cost of ownership. Shipper-owners and shipper-lessees who rented cars from the private car lines for less than the mileage paid on their movements by railroads, benefited by these excessive earnings from mileage payments.

In I. & S. Docket 3887, the Commission declared such excess payments to be a form of rebate in that the shipper using the cars was able to reduce his transportation costs through the earnings received from the car in which his products were moved. Since January 1, 1936, there have been no such arrangements or leases of private cars, except to meat packers, as previously explained, these leases being supervised under such safeguards as will protect against the practices which the Commission found objectionable.

Since 1936 some shippers have continued to demand that cars of certain private car lines be assigned to their service. The record is not clear as to why these particular cars are ordered. There is a plentiful supply without them. They are not superior in any way to cars which are owned or controlled by railroads, or those of car lines with which railroads have contracted to provide for their perishable transportation requirements. The railroads have served notice that as of a certain date the assignment of these cars to general perishable traffic will be discontinued. What the railroads seek to avoid, in the interest of operating economy, is the extra expensive services involved in the continued selection and specialization required in the handling of these less than 3,000 unneeded cars. In fairness and equity to the car lines which own this equipment, negotiations are under way to acquire their ownership at a fair price.

Attempts are now being made through legislation in Congress to reverse the decision of the Commission in I. & S. Docket 3887 and to force the railroads to accept refrigerator cars with which shippers may supply themselves or, in other words, to establish private car lines of their own. Such legislation would restore the situation previously referred to, with the possibility of hundreds of private-car lines serving no useful purpose, but resulting in much unnecessary specialization and expense on the part of railroads and the setting up of rebates in the form of excessive mileage earnings, which already has been condemned by the Interstate Commerce Commission.

The passage of such a bill would not relieve railroads from providing adequate transportation in case any shipper owning or operating a line under lease should fail to supply and keep available enough cars to meet his requirements for every day of every month of the year, nor would such a bill relieve the railroads of their liability for any damage to the lading in the cars. The passage of such a bill would not relieve the railroads of their obligation to anticipate the requirements of the perishable industry as a whole, and to regulate car supply in such manner as is necessary to meet all such needs.

Passage of the legislation now proposed in Congress would relieve the railroads of none of their present responsibilities. It would, however, greatly increase the cost of handling the general perishable traffic. It would force the building, at heavy cost, of cars which would be used only for the stand-by service of protecting the fluctuations of the traffic. It would force upon the railroads, by reason of the irregular and uncontrolled assignment and use of a variety of other cars to handle the regular traffic, a great increase in unnecessary empty hauls, unnecessary cross hauls of equipment, unnecessary terminal services, unnecessary special car accounting, unnecessary and uneconomical costs of all sorts.

The general responsibility of the railroads to provide and maintain the cars necessary for the protection of perishable products can be met best and most economically by leaving the matter in the hands of the railroads, subject to the regulation and safeguards of the Interstate Commerce Commission. In this latter connection, copy of letter from Joseph B. Eastman, chairman of the legislative committee of the I. C. C., to the Honorable BURTON K. WHEELER, under date of July 17, 1939, is attached.

INTERSTATE COMMERCE COMMISSION,
Washington, July 17, 1939.

Hon. BURTON K. WHEELER,
Chairman, Committee on Interstate Commerce,
United States Senate.

MY DEAR SENATOR: The Chairman of the Commission has referred to our legislative committee your letter of July 10, 1939, requesting comments on S. 2753, introduced by Senator SHIPSTEAD, "to amend part I of the Interstate Commerce Act, as amended, with respect to the use of refrigerator cars." This bill has had the careful consideration of the legislative committee, and I am authorized to submit the following comments in its behalf.

S. 2753 proposed to amend section 1 (11) of the act by adding a provision giving shippers of fresh meats, packing-house products, and dairy products the right to "supply themselves with such safe and adequate refrigerator cars as they deem efficient and proper for the transportation of such products," making it "unlawful for any common carrier to refuse to accept such cars for transportation in interstate commerce of such fresh meats, packing-house products, or dairy products * * *."

Section 1 (11) of the act, which it is thus proposed to amend, read as follows:

"It shall be *the duty of every carrier* by railroad subject to this part *to furnish* safe and adequate *car service* and to establish, observe, and enforce just and reasonable rules, regulations, and practices with respect to car service; and every unjust and unreasonable rule, regulation, and practice with respect to car service is prohibited and declared to be unlawful."

The term "car service" is defined in section 1 (10) of the act as including—"* * * the *use, control, supply,* movement, *distribution,* exchange, interchange, and return of * * * *cars* * * * used in the transportation of property, *including special types of equipment* * * * *by any carrier* subject to this part."

The words italicized are those particularly pertinent to the present discussion.

The law in regard to this matter was succinctly stated in *Use of Privately Owned Refrigerator Cars* (201 I. C. C. 323, 373–374), as follows:

"It is well-settled law that it is the duty of common carriers by railroad to furnish such cars as may be reasonably necessary for the transportation of all the commodities they hold themselves out to carry. That duty, imposed by statute, necessarily implies that the carriers have the exclusive right to furnish such equipment. It is optional with them whether they exercise that right by furnishing cars owned by them, cars owned by other carriers, or cars leased from independent contractors. Under modern conditions, refrigerator cars have become regular equipment.

"A private-car owner, whether he be a shipper or not, has no right to have his cars used as a vehicle for the transportation of freight over the rails of any carrier without its consent. If the carriers have suitable cars and will furnish them on demand, they may refuse to transport shipments in private cars. They are privileged to do so at any time they have, or will secure and furnish, suitable equipment to carry the commodities they hold themselves out to transport (*Armour & Co.* v. *El Paso & S. W. Co.* (52 I. C. C. 240, 246))."

In *Atchison, T. & S. F. Ry. Co.* v. *United States* (232 U. S. 199, 214, 215), the court said:

"Whatever transportation service or facility the law requires the carrier to supply, they have the right to furnish. They can therefore use their own cars and cannot be compelled to accept those tendered by the shipper on condition that a lower freight rate be charged."

S. 2753 proposes to change the law, as thus stated, by giving the shippers of certain specified commodities only the right to supply themselves with such refrigerator cars as they see fit to select and by making it unlawful for any carrier by railroad to refuse to accept such cars for the transportation of the specified commodities. Your attention is directed incidentally to the fact that the so-called Cummins amendment, now section 20 (11) of the act, amplifies the

ancient common-law liability of the carrier as an insurer of the goods transported. The question, therefore, arises whether if S. 2753 should become law it would not, in fairness, be necessary to limit or qualify this liability of the carrier, if the shipper, instead of the carrier, is to be given the right to determine the safety and adequacy of the car for the transportation of his perishable goods.

In our opinion, however, S. 2753 is from all points of view a move in the wrong direction. When cars owned or rented by shippers are used, compensation for their use must be paid by the railroads, and this opens a door to indirect concessions in transportations charges which increases, as we have found from experience, the difficulties of adequate regulation. The use of such cars also promotes unnecessary empty hauls and terminal service and makes it difficult for the railroads to use economically the cars of similar type which they must continue to provide. The following quotation from the case above cited, at page 328, will make clear the latter point:

"By leasing or renting only enough cars to take care of their assured traffic, leaving the carriers to furnish cars to move the remainder, they (the shippers) are able to keep their cars moving most of the time, and the mileage earnings exceed the compensation paid the car owners by substantial amounts."

At present the railroads are in a position to supply most needs for refrigerator cars. One conspicuous exception exists in the case of the so-called brine-tank cars used and supplied by the packers. It would be far better to prohibit this exception and make it necessary for the railroads to furnish these cars also than to move in the opposite direction, as proposed in S. 2753. The situation with respect to the contracts which the railroads have with car-owning companies for the supply of refrigerator and other special types of cars is not in all respects satisfactory, but these conditions would be remedied by the provisions of section 4 (12) and section 19 (7) of S. 2009 in the form in which it passed the Senate.

It is our opinion that S. 2753 ought not to pass.

Respectfully submitted.

JOSEPH B. EASTMAN,
Chairman, Legislative Committee.

A Federal Problem

EXTENSION OF REMARKS
OF
HON. LELAND M. FORD
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1940

EDITORIAL FROM THE BAKERSFIELD CALIFORNIAN OF FEBRUARY 28, 1940

Mr. LELAND M. FORD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Bakersfield Californian February 28, 1940, which confirms something brought to the attention of the House many times before in respect to the increased number of migrants coming into the State of California:

[From the Bakersfield Californian of February 28, 1940]

A FEDERAL PROBLEM

That the number of automobiles bearing migrants coming into California fell from 57,307 in 1938 to 54,717 in 1939 is in no sense heartening to the people of Kern County and other valley communities. This means 2,500 fewer automobiles, but, nevertheless, the record for the past year shows that 147,000 individuals crossed the border bearing all their household goods in their family cars. This represents a total of 46,182 families while there were 8,535 single men in the trek.

It is idle for State authorities or Federal authorities to discuss the question of housing the flow of migrants into California. That is not the problem involved. If the half-baked plan of building 5,000 new houses under State direction were to be placed in effect, it would mean nothing. The 5,000 would be occupied almost overnight and we should be in exactly the same position as we are today. The proposal to establish these newcomers upon small acreages of land would likewise prove futile. The majority of them, in that case, would still be on relief and would gain residence which would entitle them to the generous California allotment made for the needy.

The migrant problem is one that must be dealt with by the Federal authorities. If there are allotments of land to be made to those who are homeless, such distribution should be in the States in which they live. If there is housing to be provided, it should be constructed in Oklahoma and Arkansas and Texas and other States from which the migrants begin their trek to the West.

It must be obvious to all that the condition which threatens California is a menacing one; it can be ameliorated only by a sane policy which must stem from Washington. The Federal relief granted in Oklahoma and California must be the same; migrant State relief must be measured by the relief in the States which were the former homes of the newcomers. A 3-year limitation will, of course, be helpful but not unless the Federal Government cooperates with the State. If the Farm Security Administration is to continue its policy of placing upon relief all those who cross the borders into California and thus aid them in establishing residence here, it is difficult to see how this State can maintain itself through the years to come.

The fact that 46,000 families came to California in 1939 and must find subsistence in this State, whether there is employment or not, is a menacing problem and if history is repeated in 1940, the government of the counties which attract most of the migrants and the government of the State will be bankrupt. There should be enough influence in California, which makes heavy contribution to the Federal Government in the matter of income and other taxes, to secure action at Washington to bring some relief from the situation which now exists and which threatens the very future life of the State.

Descendants of the American Revolution

EXTENSION OF REMARKS
OF
HON. KENT E. KELLER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1940

ADDRESS BY MAYOR MAURY MAVERICK, OF SAN ANTONIO, TEX., BEFORE THE DESCENDANTS OF THE AMERICAN REVOLUTION

Mr. KELLER. Mr. Speaker, I listened to an address by our former colleague Hon. Maury Maverick, who for 4 years stood on the floor of this House, one of the most aggressive and progressive Members which it has been my pleasure to know or observe. He fought with intense seriousness for everything he believed in. He stuck his neck out and took it on the chin as few men have been compelled to do.

When I listened to the address, which I have just received the privilege of inserting in the RECORD, I could not help but think what a happy growth has taken place in this master of men since he left the floor of this House. His natural sense of humor has developed and blossomed in a way to permit him to say many things which his more serious attitude here as a Member of the House would have been resented by many Members, who would, I am sure, under his happier expression accept and enjoy his sledge-hammer blows at those conditions which he is hammering so powerfully.

That he will return to the United States Congress in due course there can be little doubt. When San Antonio, the then machine-ridden city which constituted the greater proportion of the population of his congressional district, elected him mayor, it was a complete reply to those interests who, through fair means or foul, mostly foul, I am afraid, had prevented his return to the floor here as a Member of this House. Many believe that when the machine kicked him out of Congress it kicked him so high that he will return to the upper House in due course.

He has the great advantage of having a remarkable background of southern ancestry so that his criticisms of present conditions in the South cannot be charged to prejudice or lack of understanding and sympathy of the southern part of our country.

He is probably the most aggressive progressive American politician living today; and, from the commanding position of mayor of one of the well-known southern cities, he is reaching out and stirring public sentiment as almost no other man is doing at the present time.

His ability to give and take in fair fight is one of the great assets of the man who seeks to better conditions. He knows the necessity of pulling down old buildings before building new ones, and he knows how. He knows the necessity of building properly in the place where old buildings stood, and he is a political architect of great vision, foresight, and aspiration. I submit his speech as delivered,

though I am not able to inject into it the peals of laughter which his own cheerful voice and brightly smiling face brought from his audience on this occasion.

The address is as follows:

Ladies, gentlemen, doers of good deeds, sinners, great greatsons of the American Revolution, members of that free pillar of our Republic, the press, my children, my D. A. R. brothers and sisters, I come back to tell thee, to wisen thee up, and deliver thee from intellectual bondage. Once I resided in your fair District; among those who are old and have good memories, there will be some who may remember that I was once a Member of the Congress of the United States. [Laughter.] I have come back to you from the far distant province of Texas from whence come great men; but I come as ye humble messenger, saying unto each and every one of you: Arise! Arise! Thou has naught to lose but thy chains! [Laughter.]

SONS AND DAUGHTERS OF THE AMERICAN REVOLUTION

I realize that in a select gathering of this kind that all cannot really belong to the elect. No doubt a few common people have slipped in. We D. A. R.'s are exclusive—but there are D. A. R.'s and D. A. R.'s. I belong to that select circle which has both sons and daughters, not just daughters. Yes, indeed; otherwise I would not be here.

Now, due to some recent experiences of my own—due to certain happenings in the courthouse—I was asked to talk about poll taxes, but I am not going to talk about the pole cats who tried to smear me. No. Nor will I speak upon another suggested subject—the battle of the C. I. O. and the A. F. of L., of John's sweet disposition, and the mighty intellect of William the Green. Nor shall I discuss the political fortunes of a certain Texas friend of mine—nor the other one either. For, friends, Americans, countrymen, I come to bury no one, for all, all are honorable men. Indeed, the lofty patriotism only possessed by a citizen of that vassal of Wall Street, the great State of Texas, compels me to say that I like not that ribaldry which takes form in vulgar jokes such as—that Johnny is on the spot, and that most everyone hopes that Martin dies.

I am not really here to make a political speech in the sense of praising the Democratic Party for the good reason that I don't know what or where it is; I am not here to tell you that any one political group is better than another. Of course, I still have my ideas, and still love my friends, and dislove my enemies.

No, my friends; I am only a common mayor, from the old Spanish town of San Antonio. No, sir; I am no dignified Congressman who votes appropriations, speaks of mother, home, religion, and free speech, and then votes the Dies committee more money for witch hunts and Fascist and Communist expeditions to put the old Ogpu and the Gestapo to the American people.

POLITICS AND LIBERTY; OUR CORNFIELD ANCESTORS

My subject is about politics and liberty, which is a wide subject, to say the least. My subject might just as well have been, "What the descendants of the soldiers of the American Revolution forgot—or maybe never knew." And so before I treacle over on economics and political science, let me start by talking of ourselves; that is, of the Americans today, who have a heavy load of American ancestors.

Some of us are taking on airs. Our ancestors came from cornfields, forests, rough log cabins. When they died, they were buried in cornfields, and not in fancy mausoleums. Our ancestors wore buckskin, and homespun; not frills and lace. Very few had aristocratic blood. They were common people and knew it, and fought that way.

COATS OF ARMS, NOBLE BLOOD, AND PHONEY ARISTOCRATS

Oh, how some people have changed with the generations. They drag their ancestors out of cornfields and log cabins and put them in mansions and beautiful gardens. That isn't all. They hire genealogists, who find out that the present-day son of the old American stock is, after all, an aristocrat, entitled to one coat of arms for a hundred dollars—and the others at so much per dozen.

Now, how do they get these coats of arms that these phoney aristocrats hang over their false fireplaces, these people whose ancestors had only shooting irons over their fireplaces? They get them by forgetting all realism, by making a little dough, and then getting smug, reactionary, and obnoxiously patriotic.

It happens that I know the economic and military history of several American families. And I am now thinking of one living American, let us say his name is John Smith, who has a trainload of American ancestors. The aforesaid John Smith had about 16 ancestors who fought in the American Revolution—including a general or two, some privates, a captain, and a sea captain. John has found that he has several thousand blood relatives alive today. His research has been extensive and careful.

Now, what I am going to prove is this: That not only well-fed Tories and Bourbons but ordinary people forget all they ought to remember with one good generation of comfort, groceries, and modern plumbing. For this John Smith has visited his hundreds of relatives all over America. Some had their houses dripping with noble blood, which never flowed in Merrie Olde England nor Bonnie La Belle France. And of these people, all are well-heeled economically, or live in hopes of getting well secured one way or the other.

AMERICANS IN FLOPHOUSES, SLUMS, FREIGHT TRAINS

But this same secret investigator of the descendants of the American Revolution finds these same people in sharecroppers' shacks, flophouses, filthy slums, freight trains, migratory camps, farms, everywhere. In fact, there are twenty-odd-million descendants of the American Revolution in every state of life who don't belong to any "swell elegant" organization dedicated to the worship of their revolutionary ancestors.

In the most poverty-stricken areas he has found poor whites who are definitely of old American revolutionary stock—and blood relatives. They are poor, ignorant, and in ill health. They have no coats of arms; but their names are the same as their snooty relatives; and many can tell you the generals, colonels, governors, and members of the United States Supreme Court from whom they are descended.

Well what has happened?

ECONOMIC DEGRADATION, RACE PREJUDICE, THE INDUSTRIAL REVOLUTION

These blue eyes, these Nordic blonds, these cousins of yours and mine, have lost out, and are forgotten in this country today. Strangely enough, many of these hungry people of old American stock—our cousins—have no fight left in them. In the South they have strangled and exploited themselves in their hard and cruel lives by hammering on the Negro; by getting rid of their inhibitions in practicing race superiority, but suffering economic degradation in the process. For their pains, these white cousins of ours get exploited, disfranchised, kicked around, and abused just like the Negro. And in the North they are not much better off. For there, as elsewhere, they have just been run over by the modern machine age.

That's it. That's what has happened.

All of these people have been literally run over by the juggernaut of the industrial revolution. Our early Americans came in a primitive agricultural age. They fought and slashed their way through the forests, built log cabins, schools, and made America great. They owned property, developed individualism, and the Bill of Rights.

But they were men of small property, and their twin ideals were Jeffersonian democracy, or political democracy, and Jacksonian, or economic democracy. And since there was land, every man had a chance to make a living out of this land if he was willing to work.

What has happened in the past 40 or 50 years? While the old American stock stuck to the farm, or drifted to the city, with an agricultural psychology, there came new races upon whom they looked with scorn. These were Italians, Jews, Greeks, Syrians, Poles, Russians, and other strange races. These new races came to the cities. Industry grew. Agriculture declined.

And naturally, since all people grow out of the production of wealth, the old stock withered, and the new came up.

Of the old American stock, an exceedingly tiny minority inherited, or in turn gained, great economic wealth. A number of them also inherited big ideas—the agricultural conception of civilization. This crowd got wilder, more reactionary, more resentful, more bitter, than the fat old lords who sent over the redcoats and the Hessian mercenaries to take shots at our cornfield ancestors. This crowd here in America has finally become so stupid that it is as far away from the present-day American people on the whole as the rich British merchants and nobility of London were during the time of the American Revolution.

PEOPLE FORGET HISTORY

These are the real modern Bourbons, and what they have forgotten, is American history, their own history.

Now, what about the so-called new races? Well, an extremely small portion got extremely rich, and the rest were industrial laborers and joined the C. I. O. or the A. F. of L., or became a part of the great American poor.

The old American minority threw in with the new American minority. Sharing this economic power with them, they allied themselves against the big majority of all the people. They allied themselves against the great mass of farmers and laborers, and it did not make any difference whether they were black or white, Italian or English in background. This minority combine got to the top of the pile, and, by propaganda, soon controlled the American mind.

Oh, how cleverly they took over the free press. The farmer was taught to hate the wicked man of the city, the "red" villain of the C. I. O.—the labor unionist. The city man was taught the farmer is an ignorant, anti-union-labor hater. In the South, as usual, the various big corporations that owned it kept the white people whipped up on the Negro question.

The big corporations hired professors—like sacks of potatoes, as Huey said—and these professors took on Hollywood-Harvard-Cockney accents, and went around the country yammering and clowning before chambers of commerce, ladies' clubs, and schools, getting the citizens' minds off the track.

What is the result?

THERE IS NO MOVEMENT IN AMERICA

It's chaos of mind, race groups, political parties—a national situation wherein there is no worthwhile movement of any kind in America, political or economic.

Propaganda against democracy under the cloak of anticommunism, has worked so well that people are even afraid to say they stand for the Bill of Rights and democracy. The mere defense of freedom of speech has become "communistic." Everybody sees red. To favor the Government giving benefits, as advocated by the father of the Republican Party, Alexander Hamilton, is now dubbed

"communistic." That is, if such benefits are for farmers or laborers; but, of course, the tariff and big loans to banks are excepted and accepted.

THE GREAT FEAR COVERS THE WORLD

Fear politics, fear psychology, are used by the powerful interests—and those who have a little property, or a hope for property, fall for it. Mr. Chamberlain fell for it at Munich; he chose in favor of Mr. Hitler as against Mr. Stalin, and now he has both around the neck of England, France, and the democracies.

Indeed, for 10 years a great fear has come over the people of the world. Since the Russian Revolution—a revolution of which the American people know very little, by the way—anyone expressing anything new has been badgered and persecuted and called a Red Russian Communist. And when Hitler came into power, he engendered more fear—and made the great fear more positive, and more hysterical. Strangely enough, democracies have bowed under the lash and tortuous words of the Fascist press and Fascist dictators. They have cringed as though they were ashamed of democracy!

Rich Frenchmen, Czechoslovaks, Poles, Germans, Englishmen—all fell for it. But because the world has a horror of war, mankind contracted the terrible world disease of the great fear. Hitler taught them all about the "red" menace—and when he got all these chumps of capitalism out of the way he threw in with Stalin. And now the rich as well as the poor face the real menace of combined absolutism and military power.

And we Americans have the same great fear.

What I have said is about psychology, about propaganda, about the recent habit of just throwing away our liberties. In such a case civil liberties didn't seem to mean much, for even if we had them, we would give them away.

What then is the most serious menace today? Isn't it the repugnance, the fear, to think on any idea? You may have the protection of liberties at the point of a machine gun, but liberties will not last long if you have to use dictatorial methods in order to make the people preserve their own Constitution and their own Bill of Rights, instead of using honest, clear thinking.

THE PROGRESS OF LIBERTIES IN THE UNITED STATES

At the same time, I am not saying liberties should be left unprotected. In fact, I am saying that at all cost, even though the people are throwing away their liberties, even though the means of production—and the press—are controlled by the selfish minority, I say our most essential duty is to preserve civil liberties.

Most everybody in this crowd knows the history of our civil liberties. First came the Bill of Rights, protecting against invasion of rights by the Federal Government. But all States were left to disfranchise, abuse, or violate the rights of their own citizens. Then came the fourteenth amendment, saying all men should have due process of law. That was supposed to give liberty to everybody, all over the country; it was supposed to protect your liberties from invasion by any part of the Government, State or Federal, and, I think, from any citizen or group of citizens.

But it was not until the Hague case that liberties were finally fully recognized by the Supreme Court of the United States. The case in effect establishes that the people are entitled to the Bill of Rights, that men and women can assemble, pray, hand out pamphlets, petition the Government, and all that. The Supreme Court thought it out, and thought it out well.

Let's analyze that case.

It rests upon the simple principle that if Mr. Ford, or members of the chamber of commerce, or manufacturer's association can make speeches in a city like Milwaukee, which has a Socialist mayor, then a Mr. Bridges, or Earl Browder, and members of the C. I. O. or the Communist Party can make speeches in Jersey City, dictated over by a boss belonging to the Democratic Party.

All this is reasonable. Let us talk it out—and if we can preserve our liberty of speech long enough, maybe we can keep from killing each other off, and destroying the Nation.

At the same time we must have sense enough to know that in troublesome times—I mean hard times—people fight for their economic rights, whether they are conservatives or radicals, or what not. Even the Dies committee agrees to that.

WHAT IS LIBERTY, AND FOR WHOM?

However, the owner of the means of production, the holder of the economic power, has always had the upper hand, and hence, in plain English, the most liberty. We can all agree, right now, that we are for liberty, and want everybody to have it.

But the question is liberty for whom? Indeed, the slave owners of the South fought for liberty in the Civil War. Who for? For the Negroes, and the seven-eighths of the non-slave-owning white population, known as the poor whites? No! They fought for liberty for themselves, while the poor whites were led to fight against their own liberty, just as the small reactionary minority has many of the common people fighting each other today.

When you talk to a Liberty Leaguer, or some member of a high-sounding organization blatting his ears off about the Constitution, whose liberty is he talking about? Why his own, of course.

And it is here that I hope I make a point. The point is that the conservative ought to be more interested in liberty than anyone else. The minority property interests have always gone too far, have used too much force to protect their ante. They have always tried to keep the status quo by force. And the end has always been that they are deprived of what they have by force.

NO REVOLUTION BUT SOLUTIONS MUST BE MADE

I am not warning of any impending violent revolution. But economic solutions have not been made, and it doesn't look as though they will be. Therefore the conservatives, if history means anything, are the ones that ought to be yelling the loudest for liberty and real democracy. If they don't, violence or dictatorship will surely wipe them out.

And I just brought in the word "democracy."

What is it? Throughout history people have talked about democracy—but they have always meant democracy for a special group, class, or religion. Democracy has been for those that get the benefit—as in Greece, and the South, where the majority of the population were slaves.

But what is true democracy? Well, I'm going to tell you, and I think it is a good definition. Professors may try, but we won't understand. So here is the correct, the maverick, definition:

"Democracy is the right of every man to talk, pray, and think as he pleases, live in peace, and eat regular."

I might say that no such democracy has ever existed, and does not exist now. We have the form of democracy, but as for really having the substance of it, that's something else. But at least we will agree, I hope, that my definition is right.

Everyone can understand the meaning of that definition. It means that a man should have intellectual and spiritual liberty; that his soul should be free; that he should not be killed or have to kill anybody else; and that he should have economic freedom. Economic freedom simply means groceries, and their proper distribution. Economics is whether you eat or not, and that is all. And if you don't eat, you have no liberty.

Now, I promised I wouldn't make a political speech—that is, I wouldn't tell you to vote Democratic or otherwise. And as a new dealer, I admit that too little of a fundamental nature has been accomplished these last few years.

Am I abusing the President? No, indeed, for he has led the American people just as far ahead as they care to go, without any movement, and with very few other leaders who stand out for civil liberties and economic democracy. Don't blame everything on Roosevelt. The misfortune is that America is still in chaos, and there is no sizable group or party that stands for anything at all.

A NATION SHOULD NOT DECIDE AN ISSUE ON ONE PERSONALITY

Into this puzzling situation comes the question of whether or not Mr. Roosevelt will run for a third term. Now, I am for a third term. But I am worried because of lack of a movement and lack of leaders. I think it is a dangerous condition when people are so confused that all they know is that they are for or against a single man.

Before the World War, there was a Socialist movement. There was the Bull Moose Party. But when the war swept over us, not only socialism but all movements were blotted out. To this date no real movement has arisen in America.

In traveling over the country, I find frank and open discussion almost impossible—at least to the extent of anybody really having any toleration, or even listening with mental fairness. It is true you can go to an open forum and talk about public ownership if you want to, but everybody has his mind made up in advance.

But a strange thing to me is that when some government hater wants something done honestly and safely, he sees to it that the Federal Government either owns or controls it. If one of them gets in an airplane—be he Ford or J. P. Morgan or that capiti-capitalist, Wendell Willkie—he wants, first of all, to know whether the plane has been approved by the Federal Government. [Applause.]

THE EXPANDING POWER OF THE FEDERAL GOVERNMENT

In hundreds of our daily contacts, the Government, Federal or otherwise, is doing what you need, and doing what private business cannot do.

Historically, of course, the American was suspicious of government because he was suspicious of the King. Some of our original constitutional debates were funny—some of our forefathers were even opposed to letting the Government operate the Army, Navy, or post office.

Now, I am not going to lead you innocent descendants of the American Revolution astray, nor teach you bad things. I only say that people must begin to study and realize that there is an expanding power of the Federal Government. Take the subject of monopolies: They dominate our life. So our political heroes bombinate about monopolies, and say that monopoly is bad. But why not just say—and let everyone agree on a simple thing—that all monopolies should be owned or controlled by the Government? [Applause.]

To put it in simpler words, that means public ownership of certain industries or their control by the people. But any such simple suggestion that the American people should run their own Government or conserve their own natural resources brings the outraged cry of "communism." And everybody from the elevator boy to big corporation owner begins to tremble with fear.

THE SCANDINAVIAN EXPERIMENT IS SUCCESSFUL

In this situation certainly we Americans ought to try to be as sensible as the Scandinavians. You already know that in Scandinavian countries ownership of a utility might be spread around

in such hands as the King, officially and personally, members of the royal family, cities, towns, and general private ownership. There you have a full combination of royal, official, municipal, and personal ownership; and, moreover, this has proved satisfactory.

Imagine a king being mixed up in a Socialist enterprise. I have often wondered why the chambers of commerce in Scandinavia haven't run their Kings out of the country, or at least have gotten a Dies Committee to smear them and call them red Kings, royal transmission belts, or something like that.

But what do we do? We permit a lot of arrogant, overbearing Federal judges to enjoin us to death. And the National Congress usually lies down and lets them do it. The Government knows, and the people know, and the judges know that T. V. A., for instance, is a legitimate Government agency; and that its functions could not be done except by the Government. Everyone knows T. V. A. was not just building dams, but also provides flood control; besides that, it is a great social program with soil conservation, education, and a myriad of other things. No private corporation on earth could assume these governmental responsibilities; they had to be done by a government and by democratic methods.

But what happened? When T. V. A. began to operate, there was no stopping the big corporations from getting endless injunctions, and it was crippled time after time and year after year.

Here one is likely to ask if I am opposed to the power of the judiciary. No; but the legislature, and not the judiciary, is supposed to run this Government. Moreover, in all such cases in Canada and other democratic nations like our own, the legislatures never permit courts to block the government.

Whether I am in or out of Congress, I still have the right to criticize; and as a private citizen I so criticize Congress. Congress and the legislatures pass their duties on to the courts; and they should take on these duties themselves.

THIS NATION IS AND WILL BE CAPITALISTIC

Now, this is a capitalistic country, and nothing else. At the same time we all admit that there should be a post office, an Army, roads, public transportation in some instances, and a considerable amount of Government assistance in the shape of subsidies for agriculture, shipping, and other lines of business. But any further discussion gets people worried that the "red" revolution is just around the corner.

Let no man worry about capitalism being crushed out in this country. I know that every American is a capitalist. Once I had a colony of some three or four hundred people—it was during Hoover's administration and nobody had any money—and so everybody worked hard and exchanged labor for goods. But the first man who got $5 got drunk, turned capitalist, beat his wife, and began condemning the "reds."

PEOPLE SIMPLY DON'T WANT COMMUNISM

So we might as well admit that America is going to proceed upon capitalistic lines and that there is no danger, if you call it that, and absolutely no possibility of communism in this country, for the simple reason that the people don't want communism.

But here I make a warning to America's "better class." If they don't get "hep" to themselves; if they don't stop their hypocritical yapping about Government interference and Government spending; if they don't see to it that liberty and economic democracy are made possible to the American people, then this country is going on the rocks, just as sure as God made little apples.

Therefore, I say what are we going to do about it? Americans are determined to preserve both capitalism and liberty—but at the same time. Then, if we have any sense, we ought to figure out how to do it before it is too late. Let's do it now, before the time comes when we can do nothing.

All Americans, as far as I know, want what they call democracy; so for the moment let us look at some of the things we need, and some of the things we do don't need, in order to get democracy.

I have already mentioned some of these; but let me set them out. Here they are; let's talk about them and really do something:

I. Civil liberties, MARTIN DIES, and poll taxes. We want the liberties, but not MARTIN and the poll taxes.

II. Economic democracy, or groceries; whatever you call it, we want to eat.

III. Local government—and let's preserve it, but at the same time realize our country is one economic and political unit.

IV. Labor peace, and maybe some leaders ought to be chloroformed, or drowned.

About the first—civil liberties—we have already talked. We know civil liberties are being brutally violated in many places, and always have been, and always will be.

CIVIL LIBERTIES ARE FOR EVERYBODY

All we have to remember is that civil liberties are supposed to be for everybody. We know that since the first World War that people in democracies have been doing more and more to cut their own throats. Now, for example, take the attitude of our American Communists on Finland. Whether these Communists are right or wrong is something else—with the vast overwhelming majority of 90 percent, I am for the Finns. But, nevertheless, I say let the Communists—I mean real ones—blat their ears off, as do Liberty Leaguers or the dodo tories of today.

In the past few years many businessmen have taken the choice of fascism instead of communism, because they thought they had to choose. In Germany the businessman was promptly put in a strait jacket under nazi-ism; as an individual person with liberty, he has ceased to exist.

LET'S FIGHT BOTH FASCISM AND COMMUNISM

So let's not take either fascism or communism. And the boy who had better really watch out is the businessman, for he has the most to lose.

Now, let's talk about MARTIN DIES. What's wrong with his committee? The answer is that its majority action has been cruelly unfair. That's the whole story, and the result of this unfairness is a danger to our constitutional government and the American people.

MARTIN DIES PATRIOTIC AND HONEST BUT DOES NOT GIVE OTHER GOOD AMERICANS EQUAL CREDIT

What about MARTIN DIES personally? I know him; I can give my opinion. In the first place, he is financially honest, and the fact that he may make money on lectures and magazine articles is nothing wrong. I say frankly that were he a soldier in a war I would not be afraid to trust him. I would not suspect his patriotism any more than any German could have suspected the patriotism of Hitler in 1933 in fighting what he thought was a foreign enemy of Germany.

But what I sadly deplore is that MARTIN DIES does not give the same credit to Americans of equal patriotism. He is willing to smear men and women by the thousands, and in a manner strange to American ideals and constitutional practices. He is willing to pin the badge of un-Americanism, by unfair and cruel methods, on anyone else, if this puts him to the top.

THE TORTURE OF THE DIES COMMITTEE

Yes, I know MARTIN DIES. I saw him in 4 years grow from a man who liked to play cruel practical jokes, to become a man who got joy out of practicing plain cruelties on fellow human beings. I doubt if he knew it at first, but he entered the scene when the Americans were bending to the great fear, when reaction was setting in against progress—and he accidentally filled the niche that was waiting for a man of this type.

There is no use in beating around the bush. I know men in high places who are afraid of MARTIN DIES; they live in horror of his unfair torture. I know men who know that MARTIN DIES will not hesitate to blacken their wives' names by calling them Communists simply because these ladies belong to consumer organizations and want to get the American people—and themselves—better products at lower prices.

Mr. DIES knows better, because he is a capable lawyer, of keen intellect. But his love to punish, to hurt, to give pain, to ridicule, to embarrass, make uncomfortable, drives him on in this sadistic course. And if we look at history we find men exactly like him, who have taken advantage of these periods of depression in the human mind, when people have been bewildered and bowed down by sorrow and fear.

I personally know that many of these leading conservative Congressmen are opposed to the methods of the Dies committee, and have said so privately. But they are afraid, so they go along and vote for more appropriations. And I know liberal Congressmen who fear to be called Communists, or fear for their wives or relatives.

There was a time—and this may still be true—when MARTIN DIES was immensely popular with the American people. He gave them the jitters, and whipped them up with the great fear. He was, and is, the symbol and representative of the reactionary forces, a man of great power. But I can report to you that his power is weakening. Men of property know that he has overdone his job, and that such practices will destroy them as well as the democratic power of the people.

I have been told that MARTIN DIES should be ridiculed. But I tell you, he has been taken seriously, very seriously. And it is good to know that three of his democratic colleagues are now bitterly opposed to him, and with fighting spirit.

As a citizen living out in the sticks—I call upon these three men of the Dies committee to keep up the fight. I call upon all men who fear MARTIN DIES to get rid of that fear. For if they continue that terrible fear, America can be destroyed.

We must demand that Congress stop these witch hunts, which are in violation of the decent ideals of democracy, and which have already done so much damage to the free institutions of our country.

The heedless Tories of this country have on the whole accepted Mr. DIES, and have permitted honest liberals and progressives who are patriotic men and women to be smeared and persecuted. Mr. Hearst puts his press at the service of Mr. DIES. Yet the Hearst papers would be the first to be suppressed should the Dies methods be permanently accepted. Indeed, I call upon those heedless, smug people who have whooped up this great example of sadism to turn back the pages of history and take a look. If they do so they will find that people will not endure persecution, humiliation, and the destruction of their liberty and honorable names without returning blow for blow eventually.

To all I say, fight communism—and fascism, too—root out subversive movements; do it with congressional committees if necessary, but let us preserve American methods, constitutional government, and common, ordinary decency and fair play.

POLL TAX DISFRANCHISES WHITE MAN

Now, about the poll tax. Whether or not that is strictly a question of civil liberties I don't know, but I discuss it under that heading. I do so because millions of citizens have been, and are being, deprived of their liberties by the imposition of a poll tax, because poor people haven't got the money to pay.

The original idea of the enactment of the poll tax might have been to exclude the Negro. But today it excludes the white man from the Democratic primaries, and more white men are excluded than there are Negroes in the South. By Supreme Court decision the Negro cannot vote in the white man's primary, where elections are settled. Even omitting the Negro, we still have the disfranchisement of millions of white men.

Why is this? The reason is that those who have economic and financial control of the South do not want democratic suffrage. And why?

Well, because the South is still a colony of Wall Street. The boys in Wall Street have the same high regard for the people of the South as did the lords of trade in London for Americans before the Revolution. They own utilities, banks, mortgage and insurance companies. The South owns about 10 percent of its life insurance, and the North owns 90 percent.

The big boys in the South—the hired hands of the North—come from the land-owning class, or they are the lawyers and representatives of the northern interests. The small number of voters are partially of the same class, the dependents, the employees, hangers-on, and hope-to-be's.

THE POOR WHITES CAN'T PAY, AND DON'T GET POLL TAXES

The so-called menace of the Negro is continually thrust before the poor white. He is assured that all is for white supremacy, and so the disfranchised white either does not get to vote, and if he does, he does so with all the economic prejudices of the people who are exploiting him.

What, then, is the situation? It is that we have a minority of the North, tied in with a smaller minority of the South, controlling all of the South, and disfranchising a vast number of the southern citizens.

The poll tax has always been a source of corruption. By it the political machines stay in power, and by it can persecute anyone who legitimately tries to help voters to qualify.

The poll tax ought to be abolished, and if necessary, by Federal law.

Certainly if the Constitution provides for elections, Congress can make the qualifications. So let us all have as an objective the abolition of the poll tax, and as a means of obtaining both political and economic democracy.

NO LIBERTY IF YOU DON'T EAT

Now, let's get around to discussing economic democracy. We have broken down many economic barriers; political power for the people has increased in the last few years. In spite of witch hunts and persecutions, civil liberties have increased, and particularly under the present Supreme Court. But all of us have come to know that if we haven't got economic liberty, we haven't got any liberties at all. If you haven't got those groceries I have talked about, why, of course, there's no use in living. If you are hungry, underprivileged, with no medical care, and have no decent house to live in and your children can't go to school, then you have no liberty. There is literally no sense in talking about liberty if you can't eat and can't live like a human being.

That, of course, isn't all. If the people of this country are not permitted to eat and have their economic democracy, the country will sooner or later blow up. That is the end of civil liberties entirely, and when it ends, it ends for the middle class, the rich, and the poor alike.

Let no man think otherwise. Remember Thyssen, the German industrialist now exiled, his estates confiscated—worth some three or four hundred million by the way—the very man who financed Hitler. And I mention this so the conservatives, the property owners, can listen. If they want to save their property, their liberty, their stocks and bonds, and their necks, they had better wake up and see that people get jobs and a living.

For the break-down of liberty is the break-down and end of capitalism.

Let those who own, whether big corporations or their lawyers, or the people of property in general, take a look at T. V. A., farm benefits, social security, W. P. A.; yes, especially to W. P. A. Let them think of Scandinavia, and figure that it may be better to try to get along with such democratic decrees than to try to wipe them out. Then possibly we can all be saved.

PRESERVATION OF LOCAL SELF-GOVERNMENT ESSENTIAL

The third thing I mentioned was the preservation of local self-government. To some of our reactionaries this means that our Federal Government shouldn't feed starving people or have any power at all, but leave the people to the mercy of private monopolies and unregulated industrial power. That is certainly not what I mean.

Historically, when we started out two centuries ago we were an aggregation of States, small villages, and agricultural communities. The economic and political interdependence of today was not then a fact.

Each locality did most of its own manufacturing and filled most of its needs.

Today all that is changed and we must recognize the United States and every community in it as one economic unit.

Strangely enough, the economic groups which owe their power wholly to the fact that this country is a single economic unit, want so-called relief, and Federal assistance to people to be abolished—and financial expense, if any, should in some mysterious way be borne by local governments. They keep talking about local self-government. But what they are doing is to destroy self-government.

Let us, therefore, insist that since our country is one economic unit, that it be so governed. In so governing it, we will preserve not only economic democracy for the American people, but local self-government and political liberty as well.

LABOR PICKETING EACH OTHER MONSTROUSLY IDIOTIC

Now we come to the fourth point—a sour and mean one—the matter of labor peace. During my entire term in Congress the C. I. O. and A. F. of L. row went on. It is still going on; it is still a grave nuisance; it is slow-creeping destruction for the American worker and the people.

This is a very difficult question on which to make an unprejudiced, unbiased statement. If you take the side of one or the other, that is, of John Lewis or Bill Green, you make the other one a life enemy, and nothing is accomplished. And I really have no preference in the matter. John Lewis or William Green, as such, mean nothing whatever.

What to do about labor leaders I don't know. Enough has been said about them. The thing that intelligent working people must do is to disregard their leaders whenever they ask them to fight some other labor organization. It is monstrously idiotic to see laboring men picketing each other, and fighting each other.

A few labor leaders chloroformed would help, but that isn't all. The point is, we know nothing of the labor movement. And concerning labor, I think it is not even important to decide whether one is prolabor or antilabor—but that labor unions are here to stay—and must be reckoned with.

IF LABOR UNIONS GO, SO DOES BUSINESS

Labor unions are as much a part of democracy as business itself. There is no point in crying and bellowing about unions. And anyhow, if unions are beaten down or abolished, then the businessman can figure that our system will be such as they have in Germany now.

So, my friends, we who love and understand America, who appreciate the lessons of history, have plenty to do. Not necessarily MARTIN DIES, but his type of psychology has been dominating the spirit of America for some 2 or 3 years. We have buckled and bowed and trembled before the great fear. It is time to throw off that fear, and now I can conscientiously say that I can see some hope for us. Men and women are beginning to stand up and resent this senseless and cruel badgering and persecution of good Americans by smug and ignorant people. And businessmen are beginning to see—at least some of them—that if labor unions go, so do they.

The reactionary forces still hold the upper hand, but many of that group are beginning to find out that democracy cannot be maintained, nor property preserved, by organizations set up by racketeers who piously claim to uphold the Constitution.

WE LOVE THIS EARTH AND WE OWN IT

My friends, I end as I began. Let us remember our ancestors came from cornfields, from the earth, and that the earth belongs to we, the people.

We love this earth, and we own it; we love the Constitution, and we own it; I call upon all men of good will and courage to stand up and fight for what is ours.

If we do, we can preserve this country and be free men and women.

St. Lawrence Seaway

EXTENSION OF REMARKS

OF

HON. CLARENCE E. KILBURN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1940

Mr. KILBURN. Mr. Speaker, opponents of the Great-Lakes-St. Lawrence Basin project, both here in the House of Representatives and elsewhere, have raised the question that the proposed development of this great project would affect the neutrality of the United States in the present conflict.

In order to set at rest any apprehension on the subject, I would like permission to insert in the RECORD a letter which I have received from the Honorable Cordell Hull, Secretary of State:

DEPARTMENT OF STATE,
Washington, March 6, 1940.

The Honorable CLARENCE E. KILBURN,
House of Representatives, Washington, D. C.

MY DEAR MR. KILBURN: I have received your letter of February 28, 1940, requesting an official statement as to whether the proposed development of the Great Lakes-St. Lawrence Basin project would affect the neutrality of the United States in the present conflict.

In reply, I desire to say that those of us in the executive branch of the Government, whose primary duty it is to safeguard the neutrality of the United States, as a matter of course give the most careful consideration to the effect upon the international position of our country before undertaking any definite action in the realm of foreign affairs. The conclusion of a treaty with Canada for the development of the Great Lakes-St. Lawrence Basin project would not affect in any way the complete neutrality of the United States.

Sincerely yours,

CORDELL HULL.

Therefore it can be readily seen that the opponents of the St. Lawrence seaway project are attempting to mislead the public.

Do You Remember Dr. Wirt?

EXTENSION OF REMARKS

OF

HON. NOBLE J. JOHNSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1940

ARTICLE BY GEORGE ROTHWELL BROWN

Mr. JOHNSON of Indiana. Mr. Speaker, under leave to extend my remarks, I wish to include an article by George Rothwell Brown which appeared in the Washington Daily News on March 6, 1940.

[From the Washington Daily News of March 6, 1940]

DO YOU REMEMBER DR. WIRT?—HE WASN'T AS FAR WRONG AS HE SEEMED TO BE

(By George Rothwell Brown)

One memorable anniversary has just passed into history—that of the inauguration of Mr. Roosevelt as President in 1933.

Another anniversary—corollary, one might say, of the first—is at hand.

It was on a March day in 1934 that James Rand read before a House committee a memorandum which had been prepared by Dr. William A. Wirt.

Summoned before a special House committee to tell what he knew of an alleged left-wing plot to "bring on the proposed overthrow of the established American social order," Dr. Wirt touched off the fireworks, and in turn was subjected to such unjust abuse in Congress as has rarely fallen to the lot of an innocent and patriotic American citizen.

Every effort was made by the Democratic majority to break down and discredit Dr. Wirt's disclosure of the intent of the left-wing New Dealers of which he had learned. The Gary (Ind.) school superintendent—since deceased—was all but thrown out of the committee, and for what?

He said he had been told by certain left-wingers that they believed that by thwarting recovery they could prolong the country's destitution until they had demonstrated to the people that the Government must operate industry and commerce.

Well, 6 years have passed, the recovery of the country has been thwarted, and the New Deal has moved a long way toward the operation of industry and commerce. Has this prevention of recovery been the result of ineptitude or design? Which horn of the dilemma does Mr. Roosevelt choose?

Dr. Wirt said he was told that these New Deal reformers would "destroy by propaganda" institutions that had been making capital loans.

"Then they added," he said, "we can push Uncle Sam into the position where he must make these capital loans. And, of course, when Uncle Sam becomes our financier, he must also follow his money with actual control and management."

How nearly has this been brought about in the year 1940?

Dr. Wirt added in his memorandum:

"When I asked why the President would not see through that scheme, they replied: 'We are on the inside. We can control the avenues of influence. We can make the President believe that he is making decisions for himself.'"

"I was frankly told," said Dr. Wirt to the House committee, "that they could make the newspapers and magazines beg for mercy by threatening to take away much of their advertising by measures to compel only the unvarnished truth in advertising. That they could make the financiers be good by showing up at public investigations the crooks in the game, and that the power of public investigation in their own hands alone would make the cold chills run up and down the spines of the other business leaders and politicians."

Said Representative BRUCE BARTON in a speech the other day:

"There are men in the Federal Trade Commission and the Department of Agriculture who hate national advertising. They want to destroy it because national advertising supports the free American press and the free American radio."

Walter E. Botthoff, president of the Standard Rate & Date Service, shortly afterward charged that communism was launching an attack against advertising to destroy America's free press and free speech as a step toward ultimate socialization of the Government.

Bless your hearts, Dr. Wirt told a committee of Congress 6 years ago that he had learned of the existence of precisely that plot. He was denounced and slandered on the floor of the House for patriotically trying to call the attention of Congress to a peril that threatened America's free institutions.

We can now judge Dr. Wirt in the light of what has subsequently transpired. Dr. Wirt said of his informants:

"They were sure that they could depend upon the psychology of empty stomachs, and they would keep them empty."

Has the Roosevelt New Deal kept stomachs empty? It sure has—for 7 long years!

Ask the 10,000,000 unemployed how empty they are.

Does the left wing expect to reelect Mr. Roosevelt by the votes of these empty stomachs?

Yes; that is their hope—their sole hope for a third term. Think it over!

Europe

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1940

ARTICLE FROM THE NEW YORK TIMES OF MARCH 4, 1940

Mr. SHANLEY. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following article from the New York Times of March 4, 1940:

[From the New York Times of March 4, 1940]

EUROPE—WELLES' CHANCE OF HELPING SEEMS SOMEWHAT BRIGHTER

(By Anne O'Hare McCormick)

BERLIN, March 3.—As Under Secretary Welles leaves Berlin tonight on the third lap of his trip the one thing clear is that this tour will begin only when it ends. It is no paradox to say that for all practical purposes his journey to Europe starts when he returns to Washington. As interlocutor for the President his mandate is simply to listen and report. He can make no commitments and draw no conclusions from his findings in any one capital. Not until he is home again can the information he is gathering be compared, correlated, and studied as a basis for possible action. Thus the American journey—if any—commences where Mr. Welles finishes.

Here he has been given quite extraordinary opportunities to examine varied facets of the German ruling mind. Not only was he received with punctilious courtesy and every mark of honor. He was offered unusual facilities to carry out his mission. No door was closed to him. He was enabled to meet everybody who counts in the regime. Besides Chancelor Hitler and Foreign Minister von Ribbentrop, and other official exponents of foreign policy, he talked for hours with Field Marshal Goering as economic dictator and was taken to Nazi headquarters to see Rudolf Hess as executive head of the Nazi party. In addition he was in contact with Hjalmar Schacht, other important personages outside the government, and several foreign diplomats.

In 3 days Mr. Welles saw more key men—therefore, more of "the works"—than were ever seen by Prime Minister Chamberlain, Lord Halifax, Sir John Simon, or Anthony Eden. Perhaps no foreign statesman except Mussolini has been given a more comprehensive glimpse into the human mechanism that makes this grinding wheel go round. Since of no country do detailed reports convey so little a sense of the incredible whole, in 3 crowded days in Berlin he learned more about Germany than he could learn in a year in Washington.

A TRIP WORTH WHILE

This is the real index of the importance the German Government attaches to this visit. It received such scant press notice that there could be no great popular reaction beyond the anxious interest of countless inarticulate Germans looking for a last-minute miracle to stop the war. The official effort to build up a picture of German strength, solidarity, and determination speaks louder than words the ruling group's estimate of the Welles mission.

From the American point of view a close-up is also important. If the trip does not yield more than a truer measure of the German machine and the handful of men who control it, it will not be a failure. It may yield more. Mr. Welles has not broken his official silence by a whisper, but he was not pessimistic in leaving Berlin.

From various small signs it can be deduced that chances that the trip may produce some result appear to be slightly better now than when he landed in Europe.

The grim impression left by the opening conversation with Von Ribbentrop was apparently somewhat modified by discussions with other leaders. The Chancelor himself was in a quiet mood when he received the President's envoy. Despite reports, nothing of the interview has been revealed by either side, but Hitler is understood to have brushed aside details and confined his talk to broad and general claims. He was more concise than usual, and his tone was expository rather than argumentative or impassioned.

FIRST OUTSIDE VOICE

When one speaks of possible consequences of this inquiry there is no question of large or positive results. Undersecretary Welles is not a mediator, negotiator, adviser, or even a commentator, but simply a reporter commissioned to interview four governments to find out if there is any basis for peace before the war is fought to a finish. There is no reason to assume that any such basis was discovered here. On the contrary, within the past week the Reich Government gave southern neighbors assurances which they interpret as a clear indication that the Germans are ready to move in the opposite direction. Italy's action in calling up additional military classes may be a response to this warning.

For the first time since the war, however, an outsider's voice has penetrated to the inner circles of Berlin. This does not mean it will dispel echoes of their own voices to which Nazi leaders have been listening, or that the calm accents of Mr. Welles will affect in the slightest degree the course decided on. Probably the most it can accomplish is to give pause while Hitler and his coterie wait to hear what the French and British say in reply to questions asked here. Even that is something, for more and more it appears the purpose of the Welles journey narrows down to an attempt to gain time to stave off the irrevocable plunge toward unpredictable disaster. As already suggested in this place, the order existing over great areas of Europe is so fragile that a single tear in the tissue-paper surface means something like anarchy and chaos. People are saying that if nothing happens before April 1, the danger will be progressively less thereafter. On such brief respites do Europe's hopes hang nowadays. Thus Welles is watched as a kind of symbolic figure in a race against time and doom.

Col. Michael de Kovats

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1940

ADDRESSES BY WALTER L. MILLIGAN, PH. D., AND DR. TIBOR KEREKES

Mr. SHANLEY. Mr. Speaker, it is with particular pleasure that I insert in the RECORD speeches concerning Col. Michael de Kovats, American Revolutionary hero, published by the Hungarian reference library with the assistance of an advisory council, including Prof. Edwin M. Borchard, of Yale; President Nicholas Murray Butler, of Columbia; and Prof. James T. Shotwell.

ADDRESS BY WALTER L. WILLIGAN, PH. D., PROFESSOR OF AMERICAN HISTORY, ST. JOHN'S UNIVERSITY, BROOKLYN

One of the greatest contributions that the United States has made to world civilization is her virtue of holding on and helping others to hold on to those values in life which make human existence bearable.

Tonight we are gathered to pay tribute to one of that great army of patriots who made possible this great American virtue—who made this United States—the only country where the masses of men can still enjoy life, liberty, and the pursuit of happiness.

In the past history of mankind there have been times when human existence seemed unbearable. Civilization appeared to be on the verge of a complete collapse and men lived more like animals than human beings. The culture and civilization of mankind was saved when God gave Moses the Ten Commandments—a rule to guide human conduct. This rule was successful for many years in guiding human relationships, but once more selfishness and materialism dominated human existence. Christ gave the Sermon on the Mount to save humanity again. He preached the doctrine of the brotherhood of man as the article of faith to which men must adhere if life would be bearable. For many years this doctrine reformed the minds and actions of men, but again society began to crumble due to human weakness. Again divine providence provided men with messages that would arouse their faith and courage, appeal to their minds and hearts, and guide their thoughts and actions. This was the Declaration of Independence, issued in 1776.

It was in the year 1776 that 13 small, insignificant colonies jointly issued a declaration of independence which was destined to rock the entire world to its very foundations. It was these Thirteen Colonies who declared: "We hold these truths to be self-evident, that all men are created equal." Not some men, but all men, are created equal. The Declaration of Independence goes on to say "that they are endowed by their Creator with certain inalienable rights; that among these are life, liberty, and the pursuit of happiness." My friends, men are endowed by their Creator—not a dictator, not a government, but by God. "That to secure these rights governments are instituted among men, deriving their just powers from the consent of the governed." If we live up to the pronouncement of this declaration, we will, in respecting the inalienable rights of our fellow men, follow the Sermon on the Mount and the Ten Commandments.

This message was heard at the far corners of the earth. It even reached the small villages on the far plains of Hungary—the home of the renowned Hussars, the greatest horsemen of all time.

It was in the heart of the Hussar country, in a small village, that Michael de Kovats was born on June 12, 1724. It was in this region that the great cavalrymen of the world were trained. It was here that young Kovats learned to know and appreciate what it means to enjoy life, enjoy liberty, and to enjoy the pursuit of happiness. For him it was to ride horses.

Strange as it may seem in light of recent events, Prussia during the Seven Years' War was the victim of the aggressions of Austria, Russia, France, and Sweden. Prussian liberties were endangered, and it was to Prussia that the young Kovats went to join the cavalry of Frederick the Great. However, as the war began to lag and Frederick the Great used his cavalry to collect taxes, to impress men into the army by force, and to collect hostages, Michael de Kovats revolted. This was a prostitution of a great calling. In 1760 Kovats resigned from the cavalry of Frederick the Great and returned home. My friends, this act alone would place Colonel Kovats above the status of a mere brigand or mercenary. He returned his commission to the Prussians and prepared himself for a more noble cause.

It was in 1776 that the immortal words of our Declaration of Independence were heard. It was in 1776 that Michael de Kovats secured permission from Maria Theresa to leave Buda and come to America. He immediately left for France via Italy, and met Benjamin Franklin and Silas Deane in Paris. To these gentlemen he offered his services to fight for the American cause. In Paris at this time several divisions of cavalry troops were being organized. Kovats rendered great service in organizing his former comrades in arms to join the American Revolution.

On January 9, 1788, Kovats' old friend, Count Casimir Pulaski, recommended that the well-known cavalry officer receive a commission to train the American Cavalry in the Pulaski regiment. We read in a letter which Kovats wrote to George Washington that "If Congress will honor me with the regulation of it (the Cavalry), I shall faithfully execute and glory in the honor of such a command, which will also give me an opportunity to show my attachment and fidelity for this country's cause." His commission was ratified in April 1778, and Kovats immediately appealed in the Maryland Journal and Baltimore Advertiser for recruits.

The methods of fighting in America were different than those used in Europe. George Washington never engaged the British Army in a battle according to European standards of fighting. The American strategy was to brush the British flank here and there, ambush, and execute surprise attack.

It was the cavalry which was used through 1778 and 1779 to protect the American infantry as it retreated from one position to another.

In July 1778 the supreme executive council of Pennsylvania sent Colonel Kovats and Colonel Hartley against the Indians. In the middle of August Kovats was sent back to join Pulaski. In September 1778 Washington ordered Kovats to Princeton, N. J., to protect the American Army against the Indians and the loyalists. In October the British carried a devastating raid against the Pulaski regiment, inflicting severe losses on the Infantry. It was Kovats' Cavalry which, amid the cheers of his men, successfully repelled the English and extracted the Infantry from its untenable position.

All during this campaign Kovats never forgot his religious duties. Early in 1778 a minister of the Protestant church in Bethlehem, Pa., noted that the well-known commander of the Hussars attended services. Again it was noted that on April 16, 1778, Count Pulaski and Colonel Kovats attended Easter services.

The British, failing to cut the American Colonies in two in England, attempted to sever the South from the rest of the Colonies. On February 9, 1779, Colonel Kovats was ordered to South Carolina to relieve the pressure of the English troops on Charleston. His legion arrived on May 17, 1779, and bolstered the garrison of the city. It was here that Colonel Kovats received the highest praise from Brigadier General Skelly of His Majesty's Army for leading the best cavalry that the rebels ever had. It was in this battle that Kovats' cavalry, under the command of their intrepid leader, lifted the siege of Charleston and ultimately saved the South for the American cause. It was here that Kovats received a mortal wound and gave up his life for the cause of American liberty.

We are the living benefactors of Kovats' spirit. We are his spiritual successors. He died for the American Declaration of Independence. He died for a noble cause. He died that America might for all time hold onto and help others to hold onto those

values which make human existence worth while. He is one of Hungary's contributions to the establishment of American democracy.

ADDRESS BY DR. TIBOR KEREKES, OF GEORGETOWN UNIVERSITY, WASHINGTON, D. C.

This is indeed a red-letter day for us American citizens of Hungarian origin. We rejoice at the sight of such a large gathering at this occasion which honors the memory of one of our race. The knowledge that Colonel Commandant Michael de Kovats so nobly helped the cause of American independence, and that by his self-sacrifice the freedom-loving Maygar race had a definite part in the establishment of the United States, fills our hearts with proud satisfaction.

If any nation appreciates freedom and liberty, it is the Hungarian. It was the destiny of the Maygar race to fight for independence from the beginning of its national history to the very present. Ever since our ancestors at the end of the ninth century occupied the uninhabited lands on the slopes of the Carpathians and in the valley of the Danube this fight for independence became the history of the nation.

First against the Germanizing tendencies of the great medieval emperors, which threatened the absorption of a small race, the extinction of its national characteristics, of its language and institutions. The wisdom of the founders of the Hungarian Kingdom is proven by the fact that this small race survived in its very youth the impact of an already mature civilization.

Then, again, in the thirteenth century this love of freedom asserted itself in the fight against the hordes of the Tartars, who were bent upon the conquest of not only Hungary but also of Europe. The cream of the nation perished in this great conflict, but Hungarian independence, and with it western civilization, were saved.

Perhaps the greatest service which Hungary rendered the Christian world was her struggle with the Turks. When in the early sixteenth century, in the period of the general European division and confusion, caused by the great religious upheavals, the Turks decided upon their European conquest, Hungary unhesitatingly threw herself in the path of the mighty Ottoman forces. In this uneven conflict, Hungary was crushed; together with its heroic King, most of the Hungarian manpower was lost on the great plains of Mohacs in 1526, and from Buda, the proud capital of Hungary, the unfurled Turkish banners announced to the world, that the Hungarian National Kingdom, founded in 1002 by our first king St. Stephen, came to a sorrowful end. The foreign occupation lasted for 150 years, but the spirit of freedom never died in the hearts of the Hungarian people. For 150 years did the oppressed Hungarians hope, pray, and toil for freedom, which once more became theirs with the gradual collapse of the Turkish power at the end of the seventeenth century.

But hardly was the much awaited freedom regained, when a new danger threatened its continued enjoyment. Hungary in her struggle against the Turks enlisted the assistance of the neighboring Hapsburg realm, and entered into a personal union with the Austrian Empire. This meant that the Hapsburg emperors of Austria became kings of Hungary. The crown of St. Stephen, that symbol of Hungarian independence, was to be worn by the Hapsburgs, who by their coronation oath were bound to respect and safeguard the national genius of Hungary. But instead of strengthening the Hungarian national spirit after the ending of the Turkish occupation the Hapsburg rulers embarked upon a policy of centralization with the purpose of merging Hungary into their Austrian realm. The history of Hungary from the end of the seventeenth century to 1848 is an endless struggle against this new threat to her freedom. In this tragic struggle her best blood was dissipated, so was her wealth and her cultural energy. And when in 1848, in final despair, the whole nation rose under the leadership of Louis Kossuth against tenacious Hapsburg oppression, only the overwhelming Russian support given the Hapsburgs could break the Hungarian resistance. After the national rising of 1848 was crushed, a twofold task taxed all the political acumen of Hungary; on the one hand to safeguard, as far as possible, the independence of the Hungarian national state, and on the other, to harmonize the Hungarian national interest with the interest of the Hapsburg Empire, whose rulers had to be reaccepted as rulers of Hungary.

The happiest solution of this great task was the compromise of 1867, the work of the Hungarian sage, Francis Deak. By this compromise a dualistic system of government was established guaranteeing political, cultural, and religious freedom to the Kingdom of Hungary under Hapsburg rule. This compromise remained in force until the great collapse of 1918.

Today, surrounded on all sides by expanding and aggressive totalitarian states, Hungary again faces a critical period of her national existence. Will the world recognize her plight? Will the Christian world extend her a helping hand in her hour of need for all the heroic service Hungary rendered in the past? In this period of malicious propaganda, will the Western World understand that the maintenance of a politically and economically independent Hungary is the only guaranty of a better order in the Danubian Valley? Will the world finally realize that all that Hungary demands is the restoration of her national integrity. "Nem, nem, soha!" is not a battle cry, not a chauvinistic slogan, not a provocation hurled at other nations. It is a statement of fact. Just as Hungary repudiated the Germanization tendencies of the medieval German emperors, just as she saved western civilization from the Tartar hordes, just as she upheld the cross against the grasping Hapsburg rule, so does she repudiate the dictate of Trianon and demands the return of her national territory, which belonged to her for a thousand years.

Ladies and gentlemen, I have mentioned only a few incidents of Hungarian national history to show the love of freedom of the Hungarians, and their willing sacrifice to keep this precious possession. I have cited these incidents from our historical past to assure you that this love of freedom is our precious heritage; that this love of freedom was the reason which brought us into the United States; that this love of freedom made us willing citizens of this country, and for the freedom of this country we are willing to follow the example of Col. Michael de Kovats and make the supreme sacrifice.

Water Pollution Control

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1940

Mr. DINGELL. Mr. Speaker, supplementing my remarks regarding water-pollution control as intended by the bill S. 685 which I was privileged to make when discussing the rule yesterday, I want to say that the people of my State feel that the rivers, the lakes, and the streams are a God-given heritage which He in his wisdom intended should be passed on for continuous—in fact, perpetual—enjoyment and unrestricted as to use for all of the people. Industries and municipalities have a right to use the pure water from these natural reservoirs with only such restrictions as might be imposed for the public good and as will guarantee against exhaustion, but they have no right to pollute the wholesomeness of the water by dumping raw sewage and industrial wastes or chemicals, or in any other way to convert our rivers into polluted arteries and our lakes into cesspools.

During the many years of our industrial growth in this country, canneries, packing plants, and tanneries, as well as pulp and paper mills and chemical plants, have been the greatest violators of Nature's beauty and purity. Coal and metal mines have been equally as inconsiderate of the public good and as destructive. Considerable progress has been made because of the militant attitude of civic organizations and particularly because of the aggressive and fighting mood of sportsmen who are interested in game and fishing, and other nature lovers who have forced some degree of respect upon some of these industrial boors.

Many industries have voluntarily corrected their ways and have disposed of their refuse in a more sanitary and harmless way. Many have assumed the attitude, however, that they have the right, without any restriction whatsoever, not only to siphon these waters from the lakes and the streams to their use in manufacturing, but they insist upon the singular and unrestricted right to pollute the stream below their industrial plants. This attitude must be curbed. Cities and towns are not without blame. The shortsightedness on the part of city officials in some instances has helped to destroy the beauty and the healthful wholesomeness of our waters. This shortsighted policy has worked in the same destructive direction as the industries disregard of the problem. Ultimately we arrived at the point where the pleasures of millions of outdoor lovers and the fishing of sportsmen was impaired or completely destroyed and wildlife, including animals, wading and migratory birds, were driven away. I cannot be charged with being altogether narrow or selfish in this instance or alone in my advocacy of a strong and effective measure which will abate the nuisance. Sportsmen and out-of-doors men and nature lovers throughout the length and breadth of the land clamor for a real and substantial law to be placed upon the Federal statute books at the earliest possible date. This bill is not what I would have it. It is only a beginning. I am hopeful that in the very near future we might amend it and put some real teeth into it so that the objective might actually

be realized. This is the long view of the problem, but I think we ought to be able to strengthen this bill by amendment here today, and I certainly shall do everything I can to assist in the reinforcement of the Barkley bill, which is before us.

For many years I have been an active member of various sportsmen's and fishermen's groups. The distinguished Speaker of this House has recognized my interest when he favored me with an appointment as a member of the Special Committee on Conservation of Wildlife Resources, a spot much sought after by Members of this House. I have a real interest in this bill, because it is predicated upon the report which was submitted through the President to the Committee on Rivers and Harbors. That report was born of a long and pleasant conversation which I had with the President of the United States at the White House during the Seventy-fourth Congress. Our discussions were specifically upon the question of pollution and the general impairment of the wholesomeness of our waters. The President agreed to respond to a House resolution and agreed to order a Nation-wide survey through the War Department and the Army Engineers which could be submitted to the proper committee. I carried out my end of the understanding by introducing the resolution, and the House speedily sustained me in this instance, and the President carried out his end of the bargain. We know the danger of pollution, and we know the extent of the pollution and its effect not only upon the game and upon the sportsmen, but we are familiar with the tribute paid in health and human enjoyment because of this sinful nuisance by all of our people. It must be said, in justice to industries, that some progress has been made; liberal and generous industrialists have realized the crime of pollution and have in some instances gone all the way to abate the nuisance. Municipalities have made far more and speedier progress in this direction, particularly by the assistance made possible through the Public Works Administration.

I am very pleased to say that I have taken the lead in obtaining the necessary amount of money for the interceptor sewer at Detroit and the vast sewage-disposal project which will practically assure the wholesomeness of the whole lower Detroit River area and extend over a large part of western Lake Erie. I was instrumental in obtaining additional funds by a direct appeal to the President which made possible the completion of the general plan, which includes cities and towns in the lower Detroit River section.

I am pledged, Mr. Speaker, to do everything within my power to aid in the solution of the problem.

National Labor Relations Act

EXTENSION OF REMARKS
OF
HON. ABE MURDOCK
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1940

STATEMENT BY HON. ARTHUR D. HEALEY, OF MASSACHUSETTS, AND HON. ABE MURDOCK, OF UTAH

Mr. MURDOCK of Utah. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement:

STATEMENT OF REPRESENTATIVES ARTHUR D. HEALEY AND ABE MURDOCK

Believing that the welfare of labor is essential to a sound economy, throughout our service in Congress we have consistently and steadfastly supported labor legislation. We feel that the National Labor Relations Act is the most important of all labor legislation ever enacted by the Congress of the United States. In fact, it is the emancipation of labor and its Magna Carta.

We believe that, while this act may not be perfect, we should be most cautious in adopting any amendments which may have the tendency of impairing the rights guaranteed under this act. We have therefore approached the consideration of amendments firm in the conviction that the right of self-organization and collective bargaining must not be weakened.

Nevertheless, we have striven with open minds and in good conscience to arrive with our colleagues at a sound solution of the complex and difficult problems involved in the administration of this act. We have exerted every effort to agree with the other three members of the committee to whom we accord the same good faith and sincerity of purpose that we claim for ourselves. But we believe that the proposed amendments, agreed upon by the majority of the committee, are in fact emasculatory and threaten the principles, purposes, and objectives of the act.

We call attention to the fact that our disagreement with the majority of the committee resulted from a vote on the question of adoption of the amendments as a whole. We set out the following principal reasons for our disagreement with Chairman HOWARD W. SMITH, of Virginia and the two Republican members of the committee, Hon. HARRY N. ROUTZOHN, of Ohio, and Hon. CHARLES A. HALLECK, of Indiana.

(1) The first amendment deletes the following language in section 1: "the denial by employers of the right of employees to organize and the refusal by employers to accept the procedure of collective bargaining." We could not agree to this amendment because this language has been referred to by the Supreme Court as significant in determining the constitutionality of the act.

(2) The next amendment constitutes a redefining of the term "employee." The particular language that we cannot agree to places the peaceful picket at the mercy of the labor spy, provocateur, and hired thug. Any willful violence, regardless of its pettiness or provocation, would result in a denial of reinstatement to the employee—a sentence to economic death. The only justification for such an unconscionable penalty against the employee would be the imposition of an equal penalty against the employer who is responsible for violence. No such equivalent penalty is contained in the amendment.

(3) The purpose of the next amendment is the separation of quasi-judicial functions from administrative functions. This is attempted to be accomplished by the creation of an Administrator, at a salary of $10,000 a year, empowered to carry out all administrative functions; leaving the Board only judicial functions—or, in other words, setting the Board up as a labor court but denying its orders the fundamental and necessary attributes inherent in court orders; namely, the sanctions necessary to properly effectuate such orders. We direct attention also to the fact that there is absolutely no remedy by appeal, to the Board or otherwise, from an arbitrary or capricious refusal of the Administrator to proceed with a charge made in good faith. The administrative process which has been built up in the United States over a period of 50 years and has functioned efficiently would, in our opinion, be very seriously menaced in a field which immediately and vitally affects the welfare of the great mass of American workers. We were unwilling to take this far-reaching step without necessary safeguards which were not provided in the proposed amendment.

(4) We disagree with a proposed definition of the term "collective bargaining" so drastically restrictive as to undermine the very foundation of the act by specifically excluding most essential elements of genuine and effective collective bargaining such as good faith efforts to compose differences and reach accord. Such a definition would strike at the very heart of the accepted and established meaning of "collective bargaining."

(5) We were unable to agree with the committee on an amendment which may well be styled the "Ripper amendment" and which proposes a drastic reorganization of the Board. We feel that consideration of such an amendment should properly await the conclusion of the investigation. We did, however, in an effort to reach unanimous agreement, propose a five-man board by the addition of two new members. This proposal was rejected.

(6) The thinly disguised purpose of the next amendment, deceptively cloaked as relating to free speech, is obviously to permit the use of the economic weight of the employer to interfere with the free exercise of the right of self-organization. We hold that to attempt legislatively to define free speech in pursuance of ulterior motives is a perversion of the significance of this great constitutional guarantee. Certainly the Supreme Court has historically demonstrated its ability to preserve the amplest exercise of free speech against all legislative or administrative encroachments; and no court has ever held that any infringement of this precious right has yet resulted from this act.

(7) We oppose other amendments proposed which fix the virtually unprecedented limitation of six months for the filing of charges and arbitrarily limit the recovery of back pay to a maximum period of 6 months. We maintain that labor's rights are entitled to equal protection with other property rights and that these drastic limitations on labor's remedies are obviously unfair and discriminatory.

(8) Concerning the amendment which provides that proceedings under the act shall be conducted as far as practicable according to the rules of evidence prevailing in the district courts of the United States, we feel that, in the absence of any showing having been made to the committee of its desirability, we should hesitate to single out this agency, which is set up to safeguard labor's rights, for the imposition of technical rules of evidence. The courts have repeatedly held that administrative decisions must be based upon substantial evidence. We believe, and the courts have held, that this adequately safeguards litigants.

(9) On the question of review of elections and certifications, we believe that the adoption of the Garrison proposal, properly drafted,

would eliminate the desires of litigants to obtain review by the courts of elections and certifications. This solution of the problem we believe to be preferable to throwing open to judicial review all elections and certifications.

(10) We interpose no objection to placing in the statute the provision granting employers the right to petition for elections; provided it is not used as a device to defeat the purposes of the act.

(11) At the present stage of our deliberations, we are inclined to favor the Garrison proposal for amendment to section 9 of the act, under which the Board would be relieved of the duty of determining the appropriate bargaining unit in cases in which two or more bona fide labor organizations are in substantial disagreement or conflict as to the unit. But we seriously doubt that the draft of the majority of the committee accomplishes the purposes of the Garrison proposal.

(12) We believe that the administration of laws by the various administrative agencies would be improved by the creation of an independent body of trial examiners as a career service, as proposed by Dean Garrison.

In conclusion, we wish to state that we cannot acquiesce in amendments which, under the guise of improvement, propose to sacrifice vital rights of labor guaranteed under this act. We will continue to strive to ascertain and recommend genuine improvements in the act or its administration but we cannot approve amendments whose predominant effect would be to eviscerate the act and deprive labor of guarantees which are the fruits of many years of struggle and hardship.

Air Corps Expansion Program

EXTENSION OF REMARKS

OF

HON. EWING THOMASON

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1940

RADIO BROADCAST BY MAJ. GEN. H. H. ARNOLD, CHIEF OF THE AIR CORPS, AND FULTON LEWIS, JR.

Mr. THOMASON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following radio broadcast over WOL, Washington, D. C., March 4, 1940:

PROGRESS OF THE AIR CORPS EXPANSION PROGRAM

FULTON LEWIS. By way of background, you may recall various legislative programs that have been put through Congress in the last few years, for the improvement and the expansion of the air defenses of the United States. There was one particular program of aviation expansion that was put through Congress a year ago, at the request of President Roosevelt, and since that time, the term "Wings Over America" has been changing from a mere expression to a material reality.

Gen. Henry H. Arnold, the Chief of the Army Air Corps, is in charge of this program, and tonight he has consented to make a report of progress, so to speak, to you over this coast-to-coast Mutual network.

General Arnold, what sort of progress are you making in your program of expanding and improving the Army Air Corps?

General ARNOLD. Well, Fulton, first of all don't you think it would be a good idea to give a little background on this Air Corps of ours? Then, after that, I'll try to answer any questions that you may want to ask.

FULTON LEWIS. That's a fine idea, General; go ahead.

General ARNOLD. Although military flying is now approximately 30 years old, its real birth occurred during the period of the World War of 1914–18. It was during this period, that necessity forced the use of the airplane as a weapon. Following the war there was a normal amount of enthusiasm for flying until the year 1927, when, suddenly, the world was startled with the news that a young American, Charles A. Lindbergh, had succeeded in flying, all alone, from New York to Paris. This accomplishment gave a new impetus to flying, and the entire world seemed to become air-minded over night. As a direct result of this attitude on the part of the people, there developed, in a few years, the beginning of our present commercial air lines. The remarkable development of this transportation activity has, in my opinion, contributed greatly to the civilization of the world.

FULTON LEWIS. I don't think there's any question about that, General, but that is commercial aviation. What we want to know is: What has happened to military aviation in the meantime?

General ARNOLD. In the military field we have had our troubles, but slowly and surely there has arisen the realization that the airplane is a most important factor in a nation's defense forces. During the World War the airplane was considered as a supplementary weapon of the ground and sea forces. Since then many changes have occurred. Let me quote you the words of the President, who, last January, in his message to Congress, said: "Military aviation is increasing today at an alarming and unprecedented rate. Increased range, increased speed, increased capacity of airplanes abroad have changed our requirements for defensive aviation." The changes that the President referred to bring out the fact that the military airplane recognizes no barriers of land or sea, and if this new power is unleashed, it can carry a war to those people who, heretofore, have been immune to attack. Because of that, the Congress, in its last session, enacted legislation to improve our aviation defense program. The terms of this legislation provide for an expanded Air Corps of the Army which shall have a strength of approximately 4,600 officers, 45,000 enlisted men, and 5,500 airplanes, all to be in existence by July 1, 1941.

FULTON LEWIS. How will that compare with other nations, General?

General ARNOLD. For many reasons, there can be no direct comparison. However, I might answer your question by saying that this force is considered to be the minimum Army air strength that the United States required for the defense of its frontiers. I would like to emphasize the fact that this organization does not contemplate any expeditionary forces to be used outside of United States territory. It is purely for defense. Such a force is a guarantor of our peace.

FULTON LEWIS. How is the program progressing, General?

General ARNOLD. Very satisfactorily. * * * Your question now brings us back to your first suggestion. As you know, an organization like the Air Corps is a complex and technical structure. To be fully effective it must be balanced in all its parts. For example, airplanes without pilots to fly them are useless; similarly, airplanes with pilots but without mechanics to maintain them are hazardous and also airplanes with sufficient personnel but without bases to operate from are very restricted in their usefulness. So you see, our job in building up the expanded Air Corps has not been simple.

FULTON LEWIS. I can well believe that, General. Would you mind telling us how this balance is being effected?

General ARNOLD. The aircraft industry has responded in splendid fashion, to our demands. Throughout the country production is increasing and I can say that, barring unforeseen eventualities, when July 1, 1941, rolls around, the Air Corps will have its 5,500 new and modern aircraft. New bases are being built. When the program is completed the Army Air Corps will be operating from Alaska, the Philippines, Hawaii, Panama, Puerto Rico, and from numerous stations in the continental limits of the United States. In this connection it is interesting to note that the spread of this air force to such wide areas is indicative of what speed and range mean in the new conception of defense.

FULTON LEWIS. In other words, you are going to be so placed that wherever trouble may arise, you will have defensive forces ready, on the spot.

General ARNOLD. That's exactly right. Modern aircraft are so built, with such speed and range, that it is possible to concentrate the entire force at any place in very short time.

FULTON LEWIS. Now, General, that's all very well, so far as the actual airplanes are concerned, but unless I am very much mistaken, this automatic control of planes hasn't quite reached the point as yet where these planes are going to be able to fly themselves. That brings up the little question of what you are going to do about getting more pilots for the Air Corps.

General ARNOLD. Yes; and that is the interesting part of the job, because it deals with the human element. During the past year we have enlisted in the Air Corps 25,000 additional men who are now learning to be Air Corps mechanics and technicians. To give you some idea of the type of men who have joined the Air Corps, let me remind you of the fact that every one of these lads is young—I believe the average age is 22 years—every one of them has the equivalent of a high-school education, and many of them have attended college. These youngsters have joined the Air Corps not only for patriotic purposes but also because they want to learn something about the aircraft industry, and the Army is the best place to get this education. A great majority of these recruits are now, or will be soon, in schools learning the rudiments of the many trades that the Air Corps practices. To see them is an inspiration, and I am more than happy to report that these men have found an opportunity to learn useful trades, that may be the means of improving their entire careers.

FULTON LEWIS. That sounds like healthy news. Perhaps you have found the answer, in the Air Corps, to the problem which has been bothering so many young men and young women lately—"Where am I going to find useful occupation?"

General ARNOLD. There is no question in my mind on that point. * * * You suggest by your question, the next point in the program that I have in mind—the procurement and training of young men to be officer-pilots of these airplanes. We in the Air Corps can become very enthusiastic on this subject. Let me ask you this question, Suppose some responsible person came to you and said, "* * * I am in a position to offer you a scholarship which is worth $20,000 to do postgraduate work in the newest of sciences—aeronautics. This work involves a period of 9 months of training and then application. During this entire period you will be free of financial worry, as I propose to pay you during your period of training sufficient money to take care of all

of your personal requirements. As soon as you have finished your training period you will be paid a salary which compares very favorably with the salaries of men in similar work."

FULTON LEWIS [with a laugh]. I'm beginning to think I am wasting my time in radio, General. That sounds like the millennium to me.

General ARNOLD. Well, it is not the millennium, but it is a very practical opportunity that's being offered today to young men in this country by the United States Government. Specifically, we obtain our officer pilots for the Air Corps by a system of selection of men between the ages of 20 and 27 who are unmarried and who have finished at least half of the work required to graduate from a recognized college or university. The accepted candidates are sent to the Air Corps training center for 9 months of training as a pilot of military aircraft. As soon as they graduate they are commissioned in the Air Corps Reserve as second lieutenants and then placed on active duty with the combat units of the Regular Army Air Corps, for further training.

FULTON LEWIS. General, you say it takes 9 months to complete their training. How long do they stay on active duty, as officers following graduation?

General ARNOLD. Under the present law a Reserve officer may now remain on extended active duty with the Air Corps for a period of 7 years. However, there are several other points in connection with this plan which I believe are interesting. We have found through many years of contact with the young officers of the Air Corps that they are divided as to their ambitions into two general groups—those who desire to make the Army a lifetime career and those who want to use the Army as a training ground for entry into the great field of commercial aviation.

For the first group, the War Department offers, to a limited number, commissions in the Regular Army Air Corps. Before they can be commissioned in the Air Corps, however, they must be graduates of the Air Corps training center. So you see the college men who start out today as flying cadets are given a chance to compete for a commission in the Regular Army as soon as they are graduated. During the past 3 years more than 600 young Reserve officers have been commissioned in the Regular Army.

FULTON LEWIS. How many will have a chance to become Regular officers in the future?

General ARNOLD. Our present plans provide that approximately 125 vacancies a year, for the next 6 or 7 years, will be open to these boys.

FULTON LEWIS. General, what is the opportunity for those who do not desire to stay in the Regular Army?

General ARNOLD. I can safely say that since the aeronautical industry is one of the fastest growing in the country today the opportunity is almost unlimited. When the Air Reserve officer leaves the Army and returns to civil life he carries with him the stamp of approval of the United States Government. The industry is glad to get men of this caliber. The field is wide, either in the air lines, the airplane and engine manufacturing plants, or the many engineering industries associated with the manufacture of aircraft.

FULTON LEWIS. General, to me personally this is most interesting. I believe the Army Air Corps is offering a career opportunity to young men that exposes a new frontier for youth.

General ARNOLD. One of my officers, in commenting on this very point, said he would rather think of this opportunity as providing a new horizon for youth since the horizon is the farthest thing that an aviator can see.

FULTON LEWIS. Well-turned phrase, General. Let me ask one more question. Many young men listening to this program are naturally going to ask the question, How can I enroll in the Air Corps for flying training?

General ARNOLD. I have tried to make this procedure as simple as possible. At every Air Corps station there is a permanent flying-cadet examining board. In addition, orders require that every corps area have a traveling examining board which tours the area for the purpose of examining applicants. This latter procedure saves the applicant the cost of travel to the permanent board and often is the means of making it possible for some lad to enroll who otherwise would miss out. Any interested young man need only contact one of these boards. Or he may write a letter to the nearest corps area commander or the nearest Air Corps station, or to my office in Washington, and he will be furnished full information.

FULTON LEWIS. General Arnold, you have presented most interesting news, and I am sure that the people of the United States will be glad to received information of this kind from such an authoritative source.

General ARNOLD. Thank you, Fulton. Let me add one thought to what I have said. Normally, the competition for appointment as flying cadets is in great demand and we are forced to apply a priority to the selection of candidates. For the next two classes, entering training in March and May, there remain a few vacancies. Many college graduates are applying for later classes. Men who have recently graduated, and men with less than 4 years of college work, will therefore have their best chance to enroll right now. I would advise these men to lose no time if they have any desire to enter this field. Ten years from now the man who does not fly will be rare indeed. Time flies as well as airplanes.

FULTON LEWIS. Thank you, General Arnold.

Descendants of the American Revolution

EXTENSION OF REMARKS

OF

HON. J. THORKELSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1940

ARTICLE FROM THE BALTIMORE SUN OF MARCH 6, 1940

Mr. THORKELSON. Mr. Speaker, I insert this article in the RECORD so that the Department of Justice, the Federal Bureau of Investigation, and other intelligence services may be informed of the meeting that was held at the National Press Club on March 5.

The group may call itself liberal, but it is too liberal with the Constitution of the United States, and therefore communistic, pure and simple. In order that the intelligence departments will know what the Communist Party stands for, I quote from A. Cloyd Gill—Post-Office Box 29, Grand Central Annex, New York—author of America's Other 60 Families, the Communist Oath:

I pledge upon joining the Young Communist League, to be a loyal fighter for the everyday interests of the working class and the toiling youth. To further do all in my power to learn and become a conscious leader amongst the young workers, wherever I may be, in the struggle against the boss class and for the establishment of a workers' and farmers' government—a Soviet America.

From the same paper:

COMMUNISM'S OBJECTIVES

1. Abolition of orderly government.
2. Abolition of private property.
3. Abolition of inheritance.
4. Abolition of patriotism.
5. Abolition of the family.
6. Abolition of all religion.

YOUNG COMMUNIST LEAGUE

Program: "We favor the nationalization of the munitions industry. We stand for the abolition of the R. O. T. C. We pledge our aid to the annual student peace strike. We recognize the greater hope and vision of tomorrow—a new social order—socialism! This will mean the building of a new America in which the factories, mines, and natural resources will belong to the people. The Young Communist League has always looked upon the American Student Union as a rallying point of all progressive students, no matter what their political beliefs."

Officers of the Young Communist League are: President, Gil Green; vice president, Angelo Herndon; administrative secretary, Henry Winston; executive secretary, Carl Ross; student director, Celeste Strack; educational director, Francis Franklin.

Earl Browder, general secretary of the Communist Party of the United States of America, has this to say of the Young Communist League:

The Young Communist League, with the assistance of the party, has from the beginning played an important part in building the Young Communist movement and formulating its program and activities. Working modestly, loyally, and energetically, the Young Communists have won a myriad of friends and a secure place in the movement. This work can serve as a model for the older generation.

The Department of Justice has spent considerable time protecting the Communist and persecuting patriotic citizens. If the members of these Departments will now get down to business and reverse the procedure, they will in any event honor their oaths of obligation, which is more than any of them have done to date.

Communism is a threat to our Nation, and the Communist can be apprehended under article III, section 3, because the Communist is the enemy of the United States of America.

No one should be deceived about this organization, because it is purely communistic. It serves little purpose to investigate organizations that are trying to cope with communism, for

they are indeed parts of the majority that is realizing the inefficiency in the Government.

I have inserted this in the RECORD in defense of the Dies and the Smith committees, which I now hope will go right down to the root of communism and expose it in the high places.

It is also my desire to call congressional attention to the deplorable lack of loyalty that exists in the Department of Justice; and I think it is high time that Congress should impeach those who are not living up to their oath of obligation to preserve, protect, and defend the Constitution of the United States. The people are entitled to protection, and that is particularly true as to protection against communism, and no department should waste its time investigating patriotic Americans in order to distract and confuse the public. I do not believe the American people can be fooled much longer. The article is as follows:

[From the Baltimore Sun of March 6, 1940]

MAVERICK ATTACKS DIES, CALLING HIM SADISTIC AND CRUEL, IN CAPITAL SPEECH—ADMINISTRATION LEADERS PROMINENT AMONG SPONSORS OF MEETING—FORMER CONGRESSMAN URGES THREE COMMITTEEMEN TO CONTINUE FIGHT

(By C. P. Trussell)

WASHINGTON, March 5.—Maury Maverick, former big shot of the House's liberal bloc, returned tonight to the Washington scene, breathing fire and directing most of it at a fellow Texan, Representative MARTIN DIES, and his Committee on Un-American Activities.

Now mayor of San Antonio, Mr. Maverick came back under heavy official sponsorship for an address entitled "Politics and Liberty" and under auspices of the Washington chapter, Descendants of the American Revolution, of which he is one. He discussed politics abstractly, came out for a third term for President Roosevelt, denounced poll taxes, Tories, modern Bourbons, Communists, Fascists, and especially his former colleague in Congress.

BRIDGES CHEERED

Harry Bridges, west coast C. I. O. maritime leader, who has figured in both the Dies and Smith committee investigations, was in the audience. He was introduced and got a rousing hand.

Maverick's audience, so big that it completely filled the auditorium of the National Press Club, was composed largely of Government employees and was sprinkled with groups previously identified with the Washington chapter of the American League for Peace and Democracy, which has undergone Dies committee investigation.

The Descendants of the American Revolution, however, is not a successor to the now disbanded league, for it was born 2 years ago as what was described tonight as a "left-wing D. A. R.," which disapproves heartily of the Daughters of the American Revolution. As Maverick told his laughing audience tonight, there are D. A. R.'s and D. A. R.'s.

RESPOND TO DIES ATTACK

To join the new D. A. R. one must either be a descendant of a participant of the Revolution or have descended from one who contributed materially to that cause. It is open to both sexes.

The audience responded vociferously to Maverick's attacks upon DIES, which were as personal as they were scathing. Hisses greeted the name of Representative HOWARD W. SMITH, Democrat, Virginia, chairman of the special house committee investigating the N. L. R. B.'s administration of the Wagner Act, when it was mentioned by Kenneth G. Crawford, president of the American Newspaper Guild, who introduced Maverick.

As Maverick spoke, the Dies committee was preparing to resume its investigations into several fields, including consumer groups and allegedly communistically inclined "names" of the Hollywood movie colony. Today it announced the appointment of a new counsel, Robert E. Lynch, a Washington attorney, and public hearings are scheduled to start up again late this month.

DIES OFF TO FLORIDA

While poll taxes, civil liberties in general, and democracy were dealt with profusely, and the warring between the C. I. O. and A. F. of L. was condemned roundly, amid applause, interest and effort were focused squarely upon the Dies committee. Maverick was buttressed by others, currently on Capitol Hill, who denounced the committee and its operations.

And, as DIES, accompanied by a committee investigator, started for Florida the new D. A. R.'s rally carried on full blast under a list of sponsors that included:

Harold L. Ickes, Secretary of the Interior and frequent adverse commentator of the Dies group and its works.

Oscar L. Chapman, Assistant Secretary of the Interior, whom the committee identified with the American League for Peace and Democracy.

Representative ———, of New York, only American Labor party Member of Congress and national head of the International Labor Defense, another organization to undergo Dies committee probe.

Representative ———, Democrat, Michigan, who recently inserted letters, later admitted to be forged by someone else, into the CONGRESSIONAL RECORD, which appeared to link DIES with William Dudley Pelley, chief of the anti-Semitic Silver Shirt Legion.

Gerard D. Reilly, solicitor for the Department of Labor.

Merle D. Vincent, head of the hearings branch of the Labor Department's Wage and Hour Division.

Senator ———, Democrat, Montana, labor-supported Presidential possibility.

Senator ———, Democrat, Florida.

Senator ———, Democrat, Montana.

Representatives ———, Democrat, New York, ———, Democrat, Washington, and ———, Democrat, Illinois, members of the bloc of which the speaker formerly was a leader.

Representative ———, Democrat, Massachusetts, one of three Dies committee members, figured largely in Maverick's speech.

Charles H. Houston, Negro, representing the National Association for the Advancement of Colored People, who spoke.

Senator ——— and Representatives ——— and ——— spoke briefly.

CALLS ACTION CRUEL

Bluntly, Maverick called upon the three dissenters on the Dies committee, ———, ———, Democrat, California, and ———, Democrat, New Mexico, to continue their internal fight against DIES and the majority of four which he controls.

"What's wrong with his committee?" he asked, and answered:

"Its action has been unfairly cruel. That's the whole story. And this unfairness is a danger to our constitutional Government and the American people.

"What about MARTIN DIES personally? I know him. I can give my opinion. In the first place, he is financially honest. The fact that he may make money on lectures and magazine articles is nothing wrong. And I say frankly that were he a soldier in a war, I would not be afraid to trust him. I would not suspect his patriotism, any more than any German could have suspected the patriotism of Hitler in fighting what he thought was a foreign enemy of Germany.

"WILLING TO SMEAR

"But what I sadly deplore is that MARTIN DIES does not give the same credit to Americans of equal patriotism. He is willing to smear men and women by the thousands, and in a manner strange to American ideals and constitutional practices. He is willing to pin the badge of un-Americanism, by unfair and cruel methods, on any one else if this puts him to the top."

This excoriation of DIES had been received up to this point with absolute silence on the part of the audience. Maverick became more personal and continued.

"Yes, I know MARTIN DIES. I saw him in 4 years grow from a man who liked to play cruel practical jokes to become a man who got joy out of practicing plain cruelties on fellow human beings. I doubt if he knew it at first, but he entered the scene when Americans were beginning to bend before the 'great fear,' when reaction was setting in against progress—and he accidentally filled the niche that was waiting for a man of his type.

CALLS DIES SADISTIC

"There is no use beating around the bush. I know men in high places who are afraid of MARTIN DIES; they live in horror of his unfair torture. I know men who know that MARTIN DIES will not hesitate to blacken their wives' name by calling them Communists, simply because these ladies belong to consumer organizations and want to get the American people—and themselves—better products at lower prices."

DIES, Maverick charged, "knew better," because he was "a capable lawyer, of keen intellect."

"But," he shouted, "his love to punish, to hurt, to give pain, to ridicule, to embarrass, and make uncomfortable drives him on in his sadistic course. And if we look at history, we find men exactly like him, who have taken advantage of these periods of depression in the human mind, when people have been bewildered and bowed down with sorrow and fear."

"HAS OVERDONE HIS JOB"

He knew personally of persons, Maverick said, who opposed the methods of the Dies committee but were "afraid," so "they go along and vote for more appropriations" for that body. He also knew, he added, "liberal Congressmen who fear to be called Communists, or who fear for their wives and relatives."

There was a time, Maverick continued, when DIES was "immensely popular" with the American people, that he "was, and is, the symbol and representative of the reactionary forces—a man of great power." But, he said, he could now report that his power was "weakening."

"Men of property," he observed, "are beginning to see that he has overdone his job, and that such practices will destroy them as well as the democratic power of the people."

URGES OPPOSITION

"I have been told, "Maverick continued, "that MARTIN DIES should be ridiculed. But I tell you that he has been taken seriously, very seriously. And it is good to know that every one of his Democratic colleagues is now bitterly opposed to him and that three of his committee oppose the other four—openly, and with fighting spirit.

"As a citizen living in the sticks, I call upon these three men to keep up the fight. And I call upon all men who fear MARTIN DIES to get rid of that fear. For if they continue to have that terrible fear, America can be destroyed.

"We must demand that Congress stop these witch hunts, which are in violation of the decent ideals of democracy, and which have already done so much damage to the free institutions of our country. * * * The heedless Tories have on the whole accepted Mr. DIES and have permitted their fellow ancestors—honest liberals and progressives who are patriotic men and women—to be smeared and persecuted."

Hook, a speaker, detailed circumstances attending the purchase of the forged letters from a former associate of Pelley with money furnished by Gardner Jackson, lobbyist for Labor's Nonpartisan League, political-action arm of the C. I. O.

TO PROBE GROUP

The committee, Mr. DIES said before leaving for Florida tonight, would investigate the American Committee for Protection of Foreign Born, an organization which held somewhat turbulent conferences here over the last week end. Investigators, he said, already were in possession of information which he wanted to present to his colleagues.

When hearings resume, DIES added, the committee would first hear witnesses from the C. I. O.'s United Electrical, Radio, and Machine Workers of America, which was cited in the last committee report to the House along with nine other C. I. O. unions in which, the committee held, Communist leadership was "entrenched." The electrical workers' union protested and asked for a hearing.

CONSUMER ORGANIZATIONS

After this, DIES said, the committee would investigate the Christian Mobilizers, a group of whose members recently were indicted in New York on charges of plotting overthrow of the Government, the Christian Mobilizers and other allegedly fascistic organizations.

Then, DIES predicted, the consumer organizations would undergo protracted probe.

Bourbon County Grandfathers

EXTENSION OF REMARKS

OF

HON. VIRGIL CHAPMAN

OF KENTUCKY

IN THE HOUSE OF REPRESENTATIVES

Friday, March 1, 1940

ADDRESS BY HON. HARRY B. HAWES

Mr. CHAPMAN. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include a very brilliant and scholarly address delivered at Paris, Bourbon County, Ky., on September 4, 1939, by an illustrious native of Kentucky, a distinguished and beloved former Member of this House and of the Senate, the Honorable Harry B. Hawes, of Missouri, who since his voluntary retirement from the Senate has engaged in the practice of law in the city of Washington. The occasion was the celebration of the sesquicentennial anniversary of the founding of the Kentucky Paris, the seat of historic Bourbon County.

His discussion is of great value in a historical way, as it describes the birth of the Kentucky resolutions of 1798 which were submitted to Thomas Jefferson and out of which grew the first Ten Amendments, called our Bill of Rights.

The Bill of Rights and its effect on democracy within recent years has become one of the principal subjects of discussion, and the whole matter having originated in the old "Ashland District" (so-called after the home of Henry Clay in the environs of Lexington), which I have the honor to represent, causes me to believe that anything that appertains to the historical background of these important documents is worthy of the consideration of Members.

The address is as follows:

Mr. Governor, Mr. Mayor, members of the committee, citizens of Bourbon County, Mr. Cassius M. Clay, a son of Bourbon County, requested me, at the direction of your committee, to address you in your very colorful celebration of the one hundred and fiftieth anniversary of the establishment of your Paris.

The request was accompanied by two prohibitions: The first, not to talk politics; the second, not to occupy more than 30 minutes.

To debar a Kentuckian from talking politics is cruel and unusual punishment, and to attempt to discuss affairs of 150 years in 30 minutes is an invasion of freedom of speech guaranteed by your Bill of Rights.

There is little in my life that entitles me to this high honor—a sentimental journey to the home of my ancestors, of orators, critical housewives, to a territory controlled by traditions of statesmen, soldiers, and comity.

Mr. Clay, in a diplomatic way, explained that the request was made for the sole reason that I had exercised very careful and discriminating judgment in the selection of two great-grandfathers from this immediate vicinity. I agreed they were both able men and each had performed his part in creating the fine traditions of old Bourbon County.

One was George Nicholas, the first attorney general of Kentucky, for whom Nicholasville and Nicholas County are named, and the other, Richard Hawes, who represented your district in Congress, fought in the Black Hawk War and was for about 5 minutes Confederate Governor of Kentucky.

If we could look through the eyes of these two grandfathers, we would have a vision of 1776 and the Declaration of Independence; the formation of the Union of States and its written Constitution.

Most important achievement of all, the addition of the first 10 amendments to the Constitution, called our Bill of Rights, which grew out of the Kentucky resolutions.

We should recall the second war with England and the War with Mexico, when the great State of Texas came into the Union, and the Civil War, when brother fought brother and father fought son, in which more men were killed and wounded, considering the number engaged, than in any war in all history.

We might have gone back of this to 1652, shortly after Jamestown, Va., was established, when another grandfather, Robert Carter, received a grant of land from the English King stretching from the coast as far west as His Majesty's possessions extended, and which would have carried it straight through Virginia and Kentucky, for in that day no one knew just where His Majesty's possessions ended.

Then, through the eyes of just one more generation, the Spanish-American War, which finally drove Spain out of the New World and part of the Orient and brought the sons of the North and the South under the American flag.

And later, the miles and miles of long lines of Confederate soldiers from all over the South in their last great encampment at Louisville were led by a former Confederate soldier wearing a blue United States uniform.

Finally, the World War, which brought death to the old sectional feeling of North and South and forgetfulness of the words "Rebel" and "Yankee."

So today, in Bourbon County, Paris, Ky., the vision of selfish statecraft, of war, of division in families has passed, and the motto on the great seal of your State, "United we stand, divided we fall," survives periods of division.

No single county of Kentucky can be jealous of this special celebration of Bourbon, because Bourbon is the grandparent of all other counties, the rest are offsprings.

One hundred and fifty years ago, all the nations of the earth were ruled by kings and what was called the House of Bourbon ruled in France. With thoughts of Lafayette, of French sympathy in our struggle in 1776, with memory of LaSalle, a Frenchman who first explored the Ohio River, and who probably was the first white man to tread the soil of Kentucky, what better name could have been chosen than Bourbon, connoting, as it does, politeness, chivalry, and comity between men?

Throughout America, the Bourbons who were kings are forgotten, but Bourbon County, Ky., is known to all Americans because its sons have made history in all parts of our Nation.

Shortly after your county was created, a grandfather's clock, as we call it today, crossed the mountains in an ox-cart from Virginia and was set up in the little town of Hawesville. It has crossed back again, this time in a motor, and the interesting feature is that it keeps perfect time, strikes the half hours as well as the hours. Its voice rings through the lower halls of my home, proclaiming the time of this century in the tones of 150 years ago. When modern time-pieces and electric clocks are out of order, this old "grandfather" ticks away, recording the flight of the hours with truth and accuracy and reminding me and mine of Bourbon County.

There was another grandfather—a Scotchman. Unlike the one who put most of his money in a clock, he put most of his in an oak-built, iron-bound liquor chest. That stands near the grandfather clock, and—just confidentially—the bottles it contains are all of quart size—there are no pints or half-pints in its divisions. Neither are there half pints in the citizenry of old Bourbon County. They are, as they were 150 years ago, full quarts of the finest flavor.

Bourbon County witnessed the introduction of the steam engine, the railroad, the telegraph, the telephone, the radio, the electric ice box, the electric stove, the automobile, the airplane.

They have adapted all of these to modern life; and yet Bourbon County has never permitted science, invention, war, peace, or political division to interfere with its fundamental concept of neighborly life, the family fireside, the traditions of the past.

In most old homes will be found the novels of Sir Walter Scott, the Scottish Chiefs, and Thaddeus of Warsaw, and it is said that sometimes Scott's novels are reread every year. This has bred a theory of human companionship which invention has not changed.

One may travel over the world and always find Kentuckians. I have met them in China, in Japan, in India, frequently in the Philippines, throughout Europe, and in every State in the Union, especially in the South, Central West, North and Southwest. This adventuring spirit has not died.

Nearly half a century ago, W. C. P. Breckinridge, then a Congressman from this district, addressed a great audience in St. Louis. The presiding officer was Gov. David R. Francis, himself a stalwart Kentuckian. In introducing Mr. Breckinridge, he called the names of Missouri's Senators and Governors and some of her Congressmen who had been born in Kentucky.

Your silver-tongued orator from the old "Ashland District" replied: "David, we are proud that Kentuckians have played such a prominent, conspicuous, and helpful part in the history of Missouri. It is a source of great pride to me." But with his inimitable smile and in courteous manner, he turned to Governor Francis and said: "But, David, to be fair and frank about it, you must know that Kentucky keeps her best at home."

Bourbon County can call the roll of the soldiers who marched 1,000 miles, half of them without arms, to assist General Jackson at the Battle of New Orleans. One of those who marched to New Orleans wounded an English officer, whom he later brought back to Kentucky where his family nursed the stricken foe and restored him to health. The English officer returned home and, as a token of his appreciation, sent a rifle with gold engravings and silver mountings, which was used by my great-grandfather, my grandfather, my father, and myself. It was one of my prized possessions, showing that even in battle a Kentuckian can carry sentiment to the form of restoring a wounded enemy back to health.

We can recall the Kentuckians who in 1812 marched north to Detroit and fought the Battle of the Thames in Canada. We can call the roll of those who went to Texas with the Stars and Stripes, which they later helped plant over the homes of the ancient Montezumas in Old Mexico.

We can remember, they sent Abraham Lincoln to the North and Jefferson Davis to the South.

We can recount the names of those who followed the Rough Rider over the hills of Santiago, and of those others who died in the faraway Philippines. We can keep in remembrance those who fought and fell at Chateau-Thierry and the Meuse-Argonne, repaying there this Nation's debt to France.

Bourbon County can write its name in books of poetry. It can point to pictures on the walls from its artists. It can sing many songs written by its musicians.

It has its mountains and its mines, its fast-running streams which, 150 years ago, were without pollution and gave the finest inland fishing. It can point to its borders—to the great Ohio, which forms its northern boundary, and to the Father of Waters, the Mississippi, which washes its western shores.

Its Housekeeping in the Blue Grass is still the standard for the culinary art. These old recipes of the housewives are used throughout the land; and if once in a while some humorist refers to the fact that "the corn is full of kernels and the colonels full of corn," we can laugh about it; because, after all, if one must have whisky—well, we know Bourbon is best.

It is best whether in the penny-royal country, where odor keeps the mosquitoes away, or in the blue-grass country, where the mint (with Bourbon) drives the snakes away.

We know that 150 years ago, your open spaces were filled with buffalo and deer, wild turkey and all the game-food birds that fly, and if your orators boast a little and paint pictures with vivid coloring, who can blame them?

I kissed the Blarney stone in Ireland, which is said to give "the gift of gab," but Bourbon County is all one big Blarney stone, which seems to inspire the gift of speech.

Looking back—afraid to mention some of the great names in your history lest I omit many others—I believe that two things stand out in which Kentucky's active, persistent demands have affected all America:

One was their demand for an open passageway down the Mississippi to the Gulf; their persistent and reechoed demand that French Louisiana should be purchased by the United States. It was largely the continued importunities of the frontier Kentuckian that brought about the Louisiana Purchase, thus adding to the Union Missouri and other great States.

The second was the adoption of the Kentucky Resolutions, which might be termed "the infant Bill of Rights." Of its inspiration we have two versions, followed by two historical schools. The one relates that the astute Jefferson desired the first Ten Amendments to originate in the new State of Kentucky—to have them come from the new West, and he brought this about through Wilson Cary Nicholas, residing in Virginia, through his son, George Nicholas, the first attorney general of Kentucky. The other theory is that the Kentucky Resolutions were begotten and born in Kentucky, in the then Bourbon County; that they were the work of the legislators of that day, prompted largely by John Breckinridge, and that they were carried east to Mr. Jefferson and were therefore wholly of Kentucky origin.

But whether born in the brain of Jefferson or in the Bourbon County district, the motivating force came from here.

Today, when kings have gone and self-appointed dictators have taken their places and democracy is on trial throughout the world, the best differentiation of democracy from totalitarianism or dictatorship is found in the Bill of Rights, the first Ten Amendments to the Constitution.

You will agree that, during the last 10 years, when a study of the Constitution was revived, the Bill of Rights furnishes the most human, the most persuasive, the most fundamental concept of democracy.

When religious intolerance stalks through Europe, we find the declaration for religious freedom a conspicuous test and token of liberty and tolerance.

When men are murdered because they disagree with the dictator, we are reminded of the guaranty given us in the Bill of Rights—"a trial by jury."

When property is assailed and thrift attacked, we rejoice that our Bill of Rights provides for "due process of law." But these are subjects too vital and sacred to be properly discussed within the limit of time allotted.

But Bourbon County is entitled to its share and full honor for the birthplace of the Kentucky resolutions, these great principles that men have fought over politically, died for upon the battlefield, and are so essential today if we must have a peaceful Europe and a peaceful Asia as well as a safe America. They are the American Magna Charta.

It was holding to spiritual things—human relationships and liberty—that distinguished these early settlers of yours.

An uncle, who was attorney for one of the railroad systems then trying to stretch across Kentucky, complained that a great-grand-uncle of mine had opposed the railroad right-of-way "Because," he said, "it would disturb his peaceful cattle and destroy his fox hunting." He resisted the railroads as a member of the legislature, and with a shotgun on his own property. Of course, he was wrong, but he had the human point of view.

Ladies of Bourbon! What is to be said of you? Nothing can be added to what nature has portrayed through all the years. But one must be careful. I remember a young friend, a resident of Missouri, speaking of Kentucky, on the steps of the Seelbach Hotel a quarter of a century ago. He said: "She is noted for her beautiful horses and fast women." Then someone punched him with a cane.

Beauty and wit and household skill seem to be a natural product. It is not for me to paint the lily or perfume the rose. And, as for courage, we shall always remember the women who left the blockhouse at Bryan Station to fill pails of water for the defenders of a stockade while a thousand hostile Indians looked on. They did not spill a drop, the Indians had waited for the men to appear.

Once when I was trout fishing in northern New York, a very-well-known and prosperous man, who had been in the Union Army, introduced me to his wife, and, noticing her southern accent, I inquired, "Where are you from?" She answered, "Kentucky." Jokingly I said: "Why did you marry this Yankee?" Her reply was, "I have always hated Yankees and the only way I could get even with one was to marry him."

The grandfathers who had the good fortune to be born in Kentucky and the good sense to remain there and pass over "The Great Divide" within her borders, have bequeathed something fine, for Kentucky still holds her high place in the House and in the Senate, in the courts and in executive office.

But we are not surprised when, like carrier pigeons freed from any place, her former sons and daughters fly back to Bourbon, to the "Old Kentucky Home."

Somewhere someone wrote lines that I memorized years ago. They ran something like this:

"Kentucky the land of the hardy and free,
Where all sweet blessings of Nature agree
To work out in beauty a wond'rous plan
That of old, for her progress, her vet'rans framed
When her land was unpeopled and forest untamed,
Here her hero, Dan Boone, with his axe and his gun,
For his bravery a glorious memory won.
And as the large heart in her bosom grows frisky
So famed through the world are her horses and whisky."

No Surplus, but Shortage of Our Inland Finny Tribe, so Hatch More

---

EXTENSION OF REMARKS

OF

HON. JOHN R. MURDOCK

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1940

Mr. MURDOCK of Arizona. Mr. Speaker and Members of the House, perhaps it may seem that I am an unqualified spender and that I am deaf to the demands for economy. Such is not the case, for I favor the right kind of economy. However, I am definitely opposed to the wrong kind of economy. Time after time when appropriation bills are before us, and supply bills are being considered by the House, I am reminded of the old saying, "Saving at the spigot and wasting at the bung." That is my notion of economy in reverse.

A few minutes ago when the distinguished gentleman from Massachusetts [Mr. TREADWAY] yielded to me for an observation concerning hatching and distributing fish, I pointed out that all classes of citizens in my State, but particularly businessmen and leaders in the community, were thoroughly behind any movement for more and better fish hatcheries.

Arizona has no Federal fish hatchery, and there is a very great and logical demand for one or more. Let me say that while my voluminous correspondence has been from business and professional men, the same enthusiasm is shared by laborers and farmers alike. Thousands of Arizona citizens are members of game protective associations and are equally insistent on fostering wildlife as in protecting it.

What is more refreshing to the bodies, and I think also the spirit, of the inhabitants of the hot agricultural valleys of Arizona than the opportunity to load the wife and the kids in the old "gas buggy" and run up to the lake for bass fishing, or further up into the hills for trout fishing in some mountain stream? This is a pleasure which the tired businessman now, with his expensive and varied tackle, can enjoy only a little less than he did when, as a barefoot boy, he used a bent pin and a hickory pole down along the river in one of our Eastern States. And I am not so sure but that his fisherman's luck will yield him more ideas than fish and also enlarge his philosophy of life even more than the dimensions of the fish he did not catch. There are some values in this sort of thing which even a genuine C. P. A. cannot compute.

Important as it is to save and foster wildlife in our forests and streams of the Eastern States, where forests have been cut and streams polluted, it is even more important in the Western States before the time when such work must be wholly restorational. The trout streams of the mountains of Arizona are being fished out; they must be replenished. The warm waters of the southern part of the State are ideal for the hatching of eggs and the production of fingerlings to stock the numerous artificial lakes which our irrigation plans have produced.

Our well-to-do men, if they must, can fly over El Camino del Diablo to the Gulf of California, where may be found the finest fishing grounds in the world. Many of our professional men take some chances on the desert, and drive from Phoenix to the Gulf of California in their cars over a dangerous stretch of country in Old Mexico. But "John Public" and his family, who have only a little time off Saturday afternoons or Sundays, cannot go to the Gulf of California, but they do welcome a chance to drive 50 or 60 miles up to a mountain lake for an afternoon fishing.

As many as can are doing that now, and the number is limited only by the available fish supply. Let this supply be increased and the number of citizens profiting will greatly increase also. Such appropriations will yield big returns and will also help to balance the budget—that is, balance the private, individual budget of the sportsman—for so valuable to the sportsman is each morsel of good time that a few hours of this princely sport will cancel out a week's headache at the office or on the farm. Here is a type of investment which the keenest businessmen will approve.

Tax Burden Drying Up Venture Capital

EXTENSION OF REMARKS

OF

HON. GEORGE HOLDEN TINKHAM

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1940

ARTICLE FROM STANDARD STATISTICS, INC.

Mr. TINKHAM. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Standard Statistics, Inc.:

ANNUAL REPORTS FOR 1939 REVEAL THAT GOVERNMENT IS TAKING LARGER SHARE OF PROFITS THAN STOCKHOLDERS IN MANY CASES—CUSTOMERS PAY IN HIGHER PRICES AND WORKERS IN LOWER WAGES—TAX BURDEN DRYING UP VENTURE CAPITAL

The 1939 annual reports tell once more the story of mounting taxes. One after another reveals that government, without assuming any of the risks of business enterprise, is now claiming a share of the profits greater in many cases than that accruing to the owners.

Consider, for example, these cases, chosen at random. United States Rubber last year paid the equivalent of over $10.50 a common share in direct taxes, while profits were $2.91 a share. Pacific Telephone paid $9.27 a share in taxes, while earnings were $7.87. Consolidated Edison of New York earned $2.22 a share and paid taxes equal to $4.77. Additional instances of heavy taxes are numerous, including Mathieson Alkali, with taxes $0.61 a share and earnings $1.12; Continental Can, taxes equal to more than 40 percent of net income left for the common stock; Western Auto Supply, taxes $1.57 a share, more than dividends paid, and many others.

Although Federal income is approximating only 75 percent of the rate of outgo, taxes are eating into an ever-larger slice of corporate income, absorbing funds which might otherwise be available for fuller employment of labor and for other productive uses.

CUSTOMERS AND WORKERS PAY ALSO

Typical examples of the tax problem, as brought to light in recently-released annual reports of leading corporations for 1939, provide investors with plenty of food for thought. Mentioned above are a few instances of the burden of taxes on the stockholder. But it is not only the stockholders who suffer; workers' salaries are also held down by the tax burden, and customers must pay more than they would otherwise have to.

Libbey-Owens-Ford Glass Co. had a 1939 tax bill of $2,537,000, equal to $440 for each one of the average number of hourly wage workers employed during the year. Sun Oil's total tax bill of $36,656,000 exceeded wages and salaries paid to its 15,575 employees. Pacific Telephone's taxes, excluding sales and gasoline taxes and taxes chargeable to construction, were equal to $9.27 for each telephone in service.

The utility industry, of course, is one of the most heavily taxed. Detroit Edison now turns over to the taxing authorities approximately 15 cents of each dollar it takes in. Peoples Gas Light & Coke paid in taxes approximately 12 percent of operating revenues. Taxes of Consolidated Edison of New York were almost half as large as all operating expenses.

BURDEN INCREASING

More than one of the annual reports points to the tendency of taxes to increase. New York Air Brake advised its stockholders: "By reason of the constantly increasing heavy burden of taxation, it may be of interest to shareholders to know that total direct taxes charged against income account in 1939 amounted to $309,386, this being equivalent to $1.19 per share of capital stock." Net income equaled $2.88 a share. Detroit Edison's taxes were up 12.8 percent from 1938. Local taxes imposed on Pacific Telephone have increased 64 percent in the past 10 years, while Federal taxes have increased 125 percent. In the same period taxes paid by Consolidated Edison of New York have increased more than 100 percent, and in 1939 they reached a new peak of $54,677,000, or more than a million dollars a week. The company's net income was only 66 percent as large as its tax bill, whereas in 1929 net income was about two and one-half times the tax bill. Taxes of E. I. du Pont de Nemours in 1939, in terms of cents per dollar of sales, were about 33 percent higher last year than in 1938.

UTILITY RATES DOWN

Notwithstanding the handicap of increased taxes, Detroit Edison has lowered rates to consumers to such an extent that if the 1939 electric sales had been priced at the 1928 rate schedule last year's revenues would have been some $10,000,000 greater than actually reported. Successive rate reductions by Consolidated Edison are saving customers in New York and Westchester about $51,800,000 compared with what they would have paid at 1929 rates for their present use of electricity and gas.

Obviously a downward trend in selling prices and an upward trend in taxes cannot exist side by side indefinitely. The utility industry must be gradually approaching a point beyond which further rate reductions will be prevented by the outgo to support government.

HIDDEN TAX LOAD

Heavy as the tax burden on corporations is in terms of dollars, the figures do not tell the whole story. For one thing, payments only by the corporation itself are listed. But United States Rubber, in addition to paying $2,186,000 in social-security taxes, had to deduct another $641,000 from the salaries and wages of employees and pay it to the Federal and State Governments. Detroit Edison had a 1939 tax bill of $8,670,000, and, in addition, State sales taxes paid by its customers as an increment to their bills amounted to $1,131,000.

There has, furthermore, been a heavy increase in accounting expense as a result of new taxes. Detroit Edison, in 1932, paid 4 varieties of taxes; it now pays 10, in addition to collecting the sales tax from its customers. Sun Oil, in its 1939 report to stockholders, itemizes 26 varieties of Federal, State, municipal, and foreign taxes, and significantly remarks: "To explain about all these items would require all the ingenuity of a Philadelphia lawyer; in fact, the legal and accounting work in connection with them demands a large share of the energies of a considerable corps of lawyers and accountants."

Clearly, private capital is providing more and more Government jobs, wages, and overhead costs at the expense of investors and all others whose savings flow into productive channels in the hope of a secure and reasonable return. Industry's formidable tax problem cannot be divorced from the reluctance of capital to venture, as denoted by the mere trickle of security flotations in recent years.

NONREVENUE TAXES

The problem is aggravated by the trend toward use of the taxing power for purposes other than the raising of revenues to finance government. In recent years, taxes have been levied to force distribution of dividends, to control agricultural production and marketing, to force workers to insure themselves against the hazards of unemployment and old age, and in general as a method of sharing wealth and meting out rewards and punishments.

The two things urgently needed are a return to the philosophy that taxation is a method solely of paying for the support of indispensable government functions and an effort to balance governmental budgets by paring the expenditure side rather than seeking new ways of finding funds to meet the demands of pressure groups—of which the Government bureaucracy is the greatest.

HOW TAXES HAVE AFFECTED ONE COMPANY

The following tabulation recently prepared by Jewel Tea Co. depicts the extraordinary growth in its taxes over a period of years. Note that the tax per employee in 1939 was six and one-half times that of the peak wartime year, 1917. Moreover, it was nearly three times as great as in 1929, and was even 50 percent greater than in 1935, only 4 years previously.

Jewel Tea Co. taxes

Year	Total tax	Tax per share	Tax per employee
1916	$78,271	$0.28	$23.79
1917	163,843	.59	47.80
1918	37,691	.13	10.85
1919	28,770	.10	8.59
1920	60,862	.22	19.07
1921	40,057	.14	19.15
1922	59,118	.21	29.68
1923	124,779	.45	62.51
1924	173,509	.62	84.72
1925	178,414	.64	84.44
1926	244,417	.87	115.84
1927	238,246	.85	112.38
1928	247,290	.88	116.26
1929	274,579	.98	116.94
1930	352,253	1.26	138.25
1931	316,609	1.13	120.57
1932	248,457	.89	87.57
1933	426,897	1.52	129.23
1934	589,069	2.10	176.13
1935	676,717	2.42	201.70
1936	850,605	3.04	246.52
1937	991,908	3.54	270.70
1938	1,100,415	3.93	298.22
1939	1,137,256	4.06	313.71

President Roosevelt Has Many Times Denounced Monopoly, and Especially the Kind of Monopoly Aimed at by H. R. 1, a Bill Providing for a Federal Tax on Interstate Chain Stores

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1940

Mr. PATMAN. Mr. Speaker, the bill that is now H. R. 1 in this the Seventy-sixth Congress was first introduced in 1938 during the Seventy-fifth Congress, and it was then known as H. R. 9464.

November 15, 1937, the President of the United States transmitted a message to Congress. This message is House Document 370, Seventy-fifth Congress, third session. In this message, which concerned the revision of our revenue laws, the President stated:

Small businesses or even those of average size have difficulties of financing and distribution which are not shared by large corporations. Therefore by special tax consideration they should receive more equal opportunity to compete with their more powerful competitors. In this way we may also find assistance in our search for a more effective method of checking the growing concentration of economic control and the resultant monopolistic practices which persist today in spite of antitrust statutes. A further search for additional methods to meet this threat to free competitive enterprise is called for at this time.

HELP SMALL BUSINESS

It will be noticed in this statement that the President refers to giving small business a more equal opportunity to compete with their more powerful competitors, and this should be done through special tax consideration.

CHECK ECONOMIC CONTROL

It should also be noticed that in dealing with the tax question the President suggests that we can find that we may also find an effective method of checking growing concentration of economic control and the resulting monopolistic practices.

LIBERTY OF DEMOCRACY

In the message from the President of the United States to Congress, April 29, 1938, and which is printed and available as Senate Document 173, Seventy-fifth Congress, third session, in regard to strengthening and enforcement of antitrust laws, the President stated:

The first truth is that the liberty of a democracy is not safe if the people tolerate the growth of private power to a point where it becomes stronger than their democratic state itself. That, in the essence, is fascism—ownership of government by an individual, by a group, or by any other controlling private power.

CORPORATIONS SO LARGE EVEN GOVERNMENT CANNOT COPE WITH THEM

We have many facts to support the conclusion that some large concerns are now so powerful that they have, in the language of the President, "become stronger than their democratic state itself." It costs the Government $100,000 to prosecute an antitrust suit against a large concern. A few suits and all of the money for antitrust violations is gone. Many of these concerns are so large that not only are the different States, their competitors, and other citizens of our country unable to cope with them in the courts of justice, but they have become so large that even the Government of the United States is unable to properly and adequately enforce laws against them and protect the rights of competitors and consumers.

UNPARALLELED CONCENTRATION OF PRIVATE POWER

The President stated further in this message:

Among us today a concentration of private power without equal in history is growing.

This concentration is seriously impairing the economic effectiveness of private enterprise as a way of providing employment for labor and capital and as a way of assuring a more equitable distribution of income and earnings among the people of the Nation as a whole.

THIS MESSAGE SHOULD BE THOROUGHLY CONSIDERED

This message is 10 pages long and deals with growing concentration of economic power, financial control of industry, the decline of competition and its effects on employment—competition does not mean exploitation, the choice before us, and a program. Anyone interested in this question should certainly read and study this message.

The President in this message stated:

We have learned that the so-called competitive system works differently in an industry where there are many independent units from the way it works in an industry where a few large producers dominate the market.

FARMERS HURT BY FEW BUYERS

It operates in the same way where there are many producers but few buyers. When the large interstate chain stores obtained sufficient control over the farmers' market to control prices, the number of cents that the farmer received of each consumer dollar went down and down and down every year. This is perfectly natural, since the fewer buyers a farmer has for his products, the lower the price he will receive, and these few buyers cannot resist the temptation of going in together and robbing the farmer. The Temporary National Economic Committee disclosed that when two concerns got sufficient control of the dairy industry that they were able to control prices the farmer received less and less for his milk.

REGULATE SELFISHNESS AND PREVENT GREED

Another significant statement in the President's message was:

Government can deal and should deal with blindly selfish men.

H. R. 1 will be before a subcommittee of the Ways and Means Committee of the House for hearings commencing March 27, 1940. If enacted into law, it will prohibit a few men who control a few banks from obtaining control of retail distribution in our Nation. It will preserve private enterprise and build local communities instead of destroying them.

The following notice of hearing is self-explanatory:

HOUSE OF REPRESENTATIVES,
COMMITTEE ON WAYS AND MEANS,
Washington, D. C., March 6, 1940.

NOTICE OF HEARINGS

The subcommittee of the Committee on Ways and Means, to which was referred H. R. 1, providing for an excise tax on retail stores, announces to all concerned that on Wednesday, March 27, 1940, at 10 o'clock a. m., it will begin public hearings on this proposed legislation.

The hearings will be conducted in the Ways and Means Committee room in the New House Office Building, Washington, D. C.

Persons desiring to be heard should apply to the clerk of the committee in order to be assigned time on the calendar.

Briefs may be submitted in lieu of or to augment oral testimony, but if such papers are printed on both sides of the sheet, two copies must be filed with the clerk for printing in the record.

MILTON COOPER, *Clerk.*

Colorado-Big Thompson Reclamation Project

EXTENSION OF REMARKS
OF
HON. LAWRENCE LEWIS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, March 7, 1940

STATEMENT BEFORE THE INTERIOR DEPARTMENT SUBCOMMITTEE OF THE APPROPRIATIONS COMMITTEE OF THE HOUSE OF REPRESENTATIVES ON FEBRUARY 14, 1940

Mr. LEWIS of Colorado. Mr. Speaker, the Colorado-Big Thompson reclamation project is not within my congressional district, which comprises the city of Denver only; but the entire State of Colorado and indeed all that part of the West will benefit from its construction and the added wealth in agricultural products which its waters will enable northeastern Colorado to produce. It will not bring new land under cultivation, but it will supplement the present deficient water supply of between 615,000 and 700,000 acres, much of which has been under cultivation by irrigation for 60 to 70 years.

These lands are situated within the Northern Colorado Water Conservancy District in Larimer, Boulder, Weld, Morgan, Logan, Washington, and Sedgwick Counties, in the Second Congressional District so ably represented by my colleague from Colorado, the Honorable FRED CUMMINGS. Included within this Conservancy District are the towns of Fort Collins, Loveland, Longmont, Greeley, Fort Morgan, and Sterling. This Conservancy District includes an irrigated area of approximately 700,000 acres, a population of 165,000 people, and an assessed valuation of $130,000,000.

Repayment of the cost of this project is certain because, by virtue of the powers granted by the Colorado statute under which the Conservancy District was formed, the annual installment repayments to the Federal Reclamation Fund are guaranteed by a mill tax on "all property, real, personal, and mixed," in the Conservancy District and the collection of the water charges by a tax lien on the lands benefited. Indeed, the Colorado statute authorizing the formation of this district is unique in that no other State has adopted this same principle for permitting the formation of districts for irrigation or reclamation districts. The Colorado statute amounts to a zoning law, or improvement district, under which "all property, real, personal, and mixed" is subject to taxation for the purpose of helping to pay for the cost of the irrigation or reclamation projects. This statute is based on the sound principle that such projects are beneficial to all industries and business in the towns and cities as well as to the irrigated farms within the area included in the Conservancy District. It has been upheld by the Supreme Court of Colorado. Even now, while the project is under construction and before any water is or can be delivered, about $50,000 a year is being collected by the district in taxes on "all property, real, personal, and mixed" within the district to assist in the development of the project.

On February 14, 1940, the Interior Department subcommittee of the Appropriations Committee of the House of Representatives granted a hearing to a number of Coloradans concerning this project. Hon. Ralph L. Carr, Governor of the State of Colorado: Hon. FRED CUMMINGS, Representative in Congress from the congressional district in which the lands to be benefited are situated; Mr. Clifford H. Stone, director, Colorado Water Conservation Board; and Mr. Charles Hansen, president, Northern Colorado Water Conservancy District, all made statements.

My statement was as follows:

COLORADO-BIG THOMPSON PROJECT

STATEMENT OF HON. LAWRENCE LEWIS, A REPRESENTATIVE IN THE CONGRESS FROM THE STATE OF COLORADO, FEBRUARY 14, 1940

Mr. LEWIS of Colorado. Mr. Chairman and other members of the subcommittee, at the outset, I wish to emphasize that I share wholeheartedly the view of many Members of the House that the Congress should examine critically all appropriations to the end that we may, at the earliest practicable moment, approximate at least a balance between Federal income and expenditure. As perhaps some of you may know, I have tried to do my part. During the 7 years I have been a Member of the House, I have voted against many billions of dollars of appropriations for worthy purposes, which nevertheless, I was convinced, elementary financial prudence demanded we should either do without or at least postpone. I have voted against appropriations for excellent projects and worthy purposes which would have been of advantage to Colorado. I have done this despite some protests from home. But if the Congress is really going to practice economy, each of us Members must be willing to forego expenditures for some of those things in which his own district and State are interested. None of us, however, should be expected to give up everything of vital interest to his own part of the country. Each of us should do his part. None of us should be expected to do more.

THE RECLAMATION FUND IS A TRUST FUND CREATED BY CONGRESS FOR DEVELOPMENT OF IRRIGABLE LANDS OF FAR WESTERN STATES

None of us men from the far West should be expected to relinquish on behalf of our States their fair share of a trust fund, set up by acts of Congress for the specific purpose of conserving and developing our water resources and of constructing projects to bring water to our arid lands—a fund which is made up of part of the revenue derived from Federal lands in our own part of the country and from cash installment repayments made by our citizens on the cost of Federal projects in our far Western States.

The reclamation fund is such a fund. It was created by the Reclamation Act of 1902 and acts amendatory thereof and supplementary thereto, for the specific purpose of conserving and developing our water resources and of constructing projects to bring water to lands in our Western States which have no water for irrigation or which have only an inadequate supply.

Although not carried on the books of the Treasury as a "trust fund" but merely as a "special fund," I submit that the facts surrounding its creation, the terms of the statute creating it, and the sources from which it is derived and continually replenished, render it beyond question a trust fund. If these facts and circumstances should arise between private citizens, any court of equity would declare it to be a trust fund and would so decree.

The Colorado-Big Thompson reclamation project, to which I wish to call your particular attention, is being constructed with appropriations from the reclamation fund.

With your indulgence, I wish to review certain facts, with which no doubt all of you are familiar, but which, like many familiar things, are frequently overlooked.

It has been about 100 years since any of the States east of the Mississippi River have had within their boundaries any public lands belonging to the Federal Government.

It has been little short of a century since any of the States east of the Missouri River have had any public lands owned by the Federal Government. Texas was never a Federal Territory. It was an independent nation until it entered the Union as a sovereign State. The Federal Government has never owned any public lands within the borders of the great State of Texas.

On the other hand in the States of the far West, in each of the so-called irrigated-land States, an enormous proportion of the area is still owned in fee by the Federal Government.

ABOUT ONE-THIRD OF AREA OF COLORADO STILL OWNED BY FEDERAL GOVERNMENT

In Colorado, for example, approximately one-third of the area of our State is still owned in fee by the Federal Government. This is made up of the national forests, of the national parks, of the grazing districts, and of other Government-owned public lands.

Mr. FITZPATRICK. You do not object to the Federal Government doing that, do you?

Mr. LEWIS. The Federal Government has always owned it. These lands have never been given to our State.

Mr. FITZPATRICK. Would you want to take that over?

Mr. LEWIS. If we could have had these lands much earlier, we should have been glad to have had them. But all tentative offers

made to cede to Colorado all the public lands within our borders were for the surface only. The Federal Government insisted on reserving all of the mineral rights in the lands—the coal, the oil, the gas, the precious and rare minerals under the surface. Moreover, much of the surface of those lands is of little value, except for grazing, because of the lack of water. Because of insufficient precipitation, our rich lands can produce few crops without irrigation. With an adequate water supply they would produce almost anything and would furnish a livelihood and homes for many citizens now without either.

But we are not now complaining about the Federal Government owning so much land in our State because the Congress has done its best to compensate us for not having ceded these lands in fee to us long ago. In order to place Colorado and other far Western States more nearly on a parity with the State of Texas and the Eastern and Middle Western States, the Congress has made to us certain concessions—a share in the revenue derived from these public lands.

RECLAMATION FUND IS MADE UP OF PART OF REVENUE DERIVED FROM FEDERAL LANDS IN FAR WESTERN STATES AND FROM INSTALLMENT REPAYMENTS OF COST OF RECLAMATION PROJECTS ALREADY CONSTRUCTED

By the Reclamation Act of 1902 there was set up the reclamation fund, which is made up in part by some of the proceeds derived from the sale of public lands. A part of the revenue obtained from the royalties on potassium and also a part of the royalties paid to the Federal Government for leases on oil lands go into this fund. And also the annual installment repayments made to the Federal Government by the reclamation districts are added to this fund. Now, that is what makes up the revolving reclamation fund. Congress enacted the Reclamation Act and created this reclamation fund for the express purpose of placing, so far as possible, the irrigated-land States on a parity with other older States of the Union where the public lands were eagerly and promptly taken up by homesteaders because ample water, sufficient to raise crops, came in the snows and rains—where construction of extensive and costly irrigation projects was not necessary to render fertile lands productive.

PRESENT STATUS OF RECLAMATION FUND

Now, let us look at the present condition of the reclamation fund—of this trust fund for the use of the irrigated-land States, including Colorado.

The Colorado-Big Thompson project, according to the Budget for the fiscal year July 1, 1940, to June 30, 1941, is to receive $2,000,000 out of the reclamation fund. The total of the estimates in the 1941 Budget for all construction on those reclamation projects payable out of the reclamation fund amounts to $6,897,000.

It is estimated—and this is a very careful, conservative estimate—that there will be on June 30, 1940, an unappropriated balance of $8,000,000 in that fund, or very nearly that amount, with the accretions which will come into the fund between now and June 30 of this year.

The estimated repayments and accretions to the reclamation fund during the fiscal year 1941 (that is to say from July 1, 1940, to June 30, 1941, the fiscal year for which this committee is formulating an appropriation bill), are as follows:

Repayments by reclamation districts between July 1, 1940, and June 30, 1941, $5,700,000.

This estimate of cash repayments, amounting to $5,700,000, to be made by citizens of our Western States on account of the cost of reclamation projects, is, by the way, a very careful estimate, an extremely conservative estimate——

Mr. FITZPATRICK (interposing). That will be just a little less than the total Budget estimate for this item.

Mr. LEWIS. That is correct. The estimates of repayments in cash on account of the cost of reclamation projects already constructed is only $1,197,000 less than the entire 1941 Budget estimate for construction of new reclamation projects payable out of the reclamation fund.

But this reclamation fund will receive, during the fiscal year 1941, substantial accretions besides the cash repayments on the cost of reclamation projects. The accretions from land sales and from the potassium and oil royalties are conservatively estimated at $3,400,000, making a total of all accretions during the fiscal year 1941 amounting to $9,100,000.

Adding the $8,000,000 approximately, that will be on hand as an unappropriated balance on June 30 of this year, and the $9,100,000 which will accrue to the fund and be paid during this coming fiscal year, we have a total of $17,100,000 in this trust fund.

Now, what are the charges for the fiscal year 1941 against this $17,100,000? As I stated a few minutes ago, the Budget estimate for construction during the fiscal year 1941 amounts to $6,897,000. The cost of operation and maintenance of existing reclamation projects during the fiscal year 1941, payable out of the reclamation fund, is estimated at $907,600. Certain other expenses, chargeable against the reclamation fund, the details of which it is unnecessary to go into, amount to $1,437,400, making a total of $9,242,000 of Budget estimates chargeable against the reclamation fund during the fiscal year 1941.

Deducting that $9,242,000 from the $17,100,000 you have a balance of $7,858,000 on hand, or certain to accrue during the fiscal year July 1, 1940, to June 30, 1941.

AMPLE MONEY IN RECLAMATION FUND TO PROVIDE FOR CONTINUING WORK ON COLORADO-BIG THOMPSON PROJECT

If the Congress should adhere strictly to the Budget estimate and appropriate out of the reclamation fund only $6,897,000 for construction of projects now under way, there would remain in the trust fund on June 30, 1941, an unappropriated balance of $7,858,000 which would be carried over, unused, to the fiscal year 1942. In tabulated form, the situation is as follows:

Estimate concerning reclamation fund, fiscal year 1941

Estimated amount in reclamation fund June 30, 1940, carried over to next fiscal year		$8,000,000
Estimated accretions to reclamation fund during fiscal year July 1, 1940–June 30, 1941:		
(a) Repayments by reclamation districts July 1, 1940–June 30, 1941	$5,700,000	
(b) Land sales, potassium royalties and oil royalties, etc	3,400,000	
		9,100,000
Total of amount in reclamation fund June 30, 1940, plus accretions July 1, 1940–June 30, 1941		17,100,000
Budget estimate for fiscal year July 1, 1940–June 30, 1941:		
(a) Construction	$6,897,000	
(b) Operation and maintenance	907,600	
(c) Other expenses and deductions	1,437,400	
		9,242,000
Balance (over and above Budget estimate for construction and other expenses) available in fiscal year July 1, 1940–June 30, 1941		7,858,000

We submit that out of this trust fund, which was created for the express purpose of constructing new reclamation projects, there should be appropriated to continue construction on projects already under way, more than the Budget estimate for this purpose of $6,897,000.

Mr. RICH. May I interrupt you for a question?

Mr. LEWIS. Yes.

Mr. RICH. You realize, of course, that we have many, many requests, which would more than take up the total amount of the trust fund.

Mr. LEWIS. Perhaps you have, but I think you should devote this trust fund to the uses for which it was created—to helping the States where the Federal Government owns much of the land.

Mr. RICH. The point I wanted to make is this: We have so many requests that the fund would be utilized in a very short time.

Mr. LEWIS. I am glad you asked that question because it brings up the point which I want to make.

COLORADO ASKS FOR AN ADDITIONAL $2,000,000 FROM RECLAMATION FUND FOR COLORADO-BIG THOMPSON PROJECT

This Colorado-Big Thompson project is practically the only reclamation project that we have had in Colorado for 35 years, except some minor projects which were built in part by P. W. A. funds. At this time we men from Colorado are not asking, and we have not asked, for any appropriation out of the general funds of the Treasury for this Colorado-Big Thompson project. We are asking for an additional $2,000,000 over and above the $2,000,000 Budget estimate, making a total of $4,000,000, out of this trust fund, this reclamation fund. We have demonstrated that there is and will be sufficient money in this fund. We have shown where we are going to get the money.

As Mr. Hansen, Judge Stone, and Mr. Cummings have emphasized, this is not a project to bring new land into cultivation; it is to increase, to supplement the deficient water supply for land which has been in use for 60 or 70 years. In passing I may say that the indications are we are not through with the drought which during the last 10 years has intensified the deficiency in the water supply in northern Colorado. It may be we are in the midst of a cycle of drought, such as that of several hundred years ago, which forced the cliff dwellers to move out of southwestern Colorado. There was one period, as shown by study of tree rings in timbers, when the drought lasted for 23 years. This indicates the desperate need for this project to be pushed ahead to completion as rapidly as possible.

1941 BUDGET ESTIMATE FOR COLORADO-BIG THOMPSON PROJECT NOT ENOUGH TO CARRY ON WORK EFFICIENTLY

Now what is the present situation in regard to the Colorado-Big Thompson project? Judge Stone briefly referred to it. The Congress authorized the entering into contracts last year in order to complete the compensating reservoir on the western slope. These contractual obligations already made will absorb a million and a half dollars.

The Budget has allowed the amount of $2,000,000. The balance of $500,000 over and above the contract obligations of $1,500,000 is not sufficient to start work on the main part of the project, namely, the tunnel through the Continental Divide. Furthermore, the Reclamation Bureau has erected work camps at each of the portals of the proposed tunnel, and the Bureau has assembled some expensive expert men and valuable heavy equipment there at Estes Park, on the eastern side, all ready to go ahead. These expert men and this assemblage of equipment must necessarily be dispersed unless a sufficient appropriation can be secured to begin the work of boring the tunnel.

I could argue cogently for more, but I tell you, gentlemen, that what we urgently need is $2,000,000 more than the Budget esti-

mate in order to enable the Reclamation Bureau to do really efficient work on that tunnel during the coming fiscal year. So, instead of $2,000,000, we should have $4,000,000 to carry on efficiently that work, which is so desperately needed.

Now where will we get the money? From the reclamation fund; from the trust fund created for the specific purpose of constructing reclamation projects like this Colorado-Big Thompson project in Colorado; from a fund made up from part of the revenues derived from lands in our Western States and from repayments on the cost of other such projects. I have already demonstrated that there will be carried over from the present year and will accrue during the coming fiscal year an unobligated balance almost four times as large as this $2,000,000 additional for which we are asking.

Mr. RICH. Do you have an estimate or justification from the Budget for that?

Mr. LEWIS. No.

Mr. RICH. Can you get one?

Mr. LEWIS. I do not know.

Mr. FITZPATRICK. Have you tried to get the Budget Bureau to recommend it?

Mr. LEWIS. We certainly will try.

Mr. FITZPATRICK. You know how I feel about the project, but at the present time, under the present situation, it is hard to go over the Budget's recommendations, and it would be nice if you could get a recommendation from the Budget Bureau.

Can you tell us whether or not in any of these projects they have received any money from the W. P. A.?

Mr. LEWIS. Do you mean the P. W. A.?

Mr. FITZPATRICK. No; the W. P. A.

Mr. LEWIS. No; none on large reclamation projects from the W. P. A.

Mr. FITZPATRICK. That aid is given in the form of work. That is different from the P. W. A. where they borrow the money, or where the P. W. A. makes a grant. I was referring to W. P. A. projects.

Mr. LEWIS. No; there has been no W. P. A. aid on large reclamation projects. The Reclamation Bureau is very proud of the record they have made. They have done most excellent, efficient work. For example, they have never had a dam "go out" or fail. There can be no work done by W. P. A. labor on a large project, such as the Colorado-Big Thompson, because it requires men of the highest skill and the operation of complicated machinery.

Mr. FITZPATRICK. I am in favor of the project, and I would like to see more people afforded an opportunity to go on the land and cultivate the soil, instead of having them go into the large industrial centers. I think it is money well invested where you place people on the land or where you bring land into use where the people can make a living on it by raising agricultural products, instead of having them go into the large cities where they cannot make a living. I think that by placing them in that position it would have a beneficial effect on the large cities and industrial centers. It would have a beneficial effect on them if we could help out the farming districts so that our people may have an opportunity to go on the land and make a living from the soil.

Mr. LEWIS. The people of the West certainly love you, Mr. FITZPATRICK, because they realize and deeply appreciate your sympathetic understanding of our problems and your helpful attitude toward us.

Thank you, gentlemen, for your patience in hearing me and your courteous attention.

Our Enlisted Personnel

EXTENSION OF REMARKS

OF

HON. MELVIN J. MAAS

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1940

ARTICLE BY CAPT. W. C. BARKER, UNITED STATES NAVY

Mr. MAAS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, written by Capt. W. C. Barker, United States Navy, and published in the February issue of Naval Affairs:

[From Naval Affairs for February 1940]

OUR ENLISTED PERSONNEL

(By Capt. W. C. Barker, U. S. Navy, Chief of Staff and Aide to Commandant Twelfth Naval District)

From time to time there appear in certain magazines and in the press some observations of naval officers concerning the high type of men now comprising the enlisted force of the United States Navy. On occasion civilians have also represented, in print, their opinions and judgments on this subject. These contributions with respect to an interesting and highly important naval matter are without exception complimentary to this splendid organization of selected young men.

We of the Navy appear to accept this situation without much comment or reflection; we feel that such a state of affairs is a natural part of a highly coordinated structure such as our Navy In short we take it for granted that good ships and fine leadership automatically produce fine crews. This is not necessarily so.

Most naval officers have some specialty, many of them an actual technical knowledge, others an absorbing interest in some activity, a sort of hobby to which they devote their spare time or thoughts. Many of these specialists are so-called matériel men, who in general look upon the enlisted men with a casual if not negative interest, under the theory possibly that association with the excellent tools furnished will, through some mysterious process, affect the desired results in their training.

A young officer was once asked if he intended to specialize in gunnery, engineering, or some restricted phase of the profession. He replied, "No; I propose to specialize in becoming a naval officer." The answer is informative in that it suggests a diversified experience, including, let us hope, a full appreciation of the enlisted personnel, their problems, their welfare, the great possibilities for full employment of their youth, enthusiasm and their talents. In return for these bountiful resources the Navy should concern itself more than it does with this human material which constitutes so large a part of the naval weapon.

The point brought out in these introductory remarks is that we have specialists of every kind among our officers, some identified with a very narrow specialty, whereas specialists in the field of enlisted personnel administration and welfare are few and far between. So-called personnel officers on the staffs of force commanders are concerned almost exclusively in routine matters of distribution, promotion, discipline. Little attention is given to welfare, in its broad sense, whereas after all the welfare of our enlisted men and their families should be one ofthe Navy's paramount concerns. I refer in this connection to such important matters, especially ashore, as housing, recreation and social betterment, items vitally affecting morale, which has been too long overlooked or neglected. At some of our navy yards much has been done along these lines; Craven Center and the rest camps at Puget Sound yard are outstanding examples of what may be done in this direction. At the fleet bases, however, where as many as 50,000 men are involved in the project, very little attention is given to their welfare once they get ashore. With the exception of available fleet athletic fields, the facilities of the Y. M. C. A. supply, in a very limited way, the needs of the men for healthy recreation and worthwhile associations.

The results of a policy which fails to recognize the essential and elemental social problems of the men ashore are well known to every commanding officer whose ship bases at San Pedro, Long Beach, and San Diego. We have, in fact, created as these drill bases a situation which invites misconduct of various categories; the easy credit extended to the men, who become desperate for spending money along the pike, has brought about the indebtedness problem, which, along with the automobile and its fruitful possibilities for trouble, have become the Navy's No. 1 disciplinary headaches. We must do something about these factors which, in increasing effect, enter into the fleet's administration. These matters are not adding to the Navy's good reputation; they are in fact creating in the minds of many of the Navy's friends a doubt concerning the quality of our personnel and also some question of the Navy's methods of training the splendid young men entrusted to our care.

I personally have long felt that the Navy is not meeting a primary responsibility and obligation in these respects. At the fleet bases some proper outlet must be provided for the energies and natural social impulses of our young enlisted men. The solution appears to be found in two major projects, costly ones no doubt, but certainly justified when the investment in our large enlisted force is considered. Less than the cost of one destroyer would provide the means for furnishing these essential safeguards. These projects are (a) recreational centers at San Pedro, Long Beach, and at San Diego, and (b) housing development at each of these bases. After all, the families of our enlisted ratings are in some degree one of the Navy's correlative responsibilities, a reciprocal obligation, as it were, in part payment of the loyal and sacrificing services rendered by the men. The first concern of any man of character is the welfare of his family; accordingly, the quality of the enlisted force would automatically improve and their loyalty to the Navy take on a finer meaning were the worries and anxieties of family life ameliorated in some degree. We must realize that a large percentage of the enlisted men are married, endeavoring, outside of duty hours, to live a normal man's life. These married men are the real tried and dependable framework of our ships' companies, the backbone of the Navy, who have made the service a career. They are entitled certainly in fulfillment of this paramount family relationship to the cost of one destroyer.

I well remember once finding a small colony of enlisted men living with their families in caves and shacks along the beach, being driven by high rental costs and other persecutions to such extremities. Such men could not conceivably be expected to be devoted wholeheartedly to their jobs. Such living conditions are necessarily reflected in performance of duty, in mental attitudes, in health, and in a general warped philosophy of life. A corollary of such conditions is the unfortunate effect on the Navy's reputation.

There is a modest housing development in Bremerton which came to my attention recently, which not only appealed to me by reason

of its attractive setting and homelike atmosphere but, and this aspect is of first importance, from the scale of rentals in effect in this dignified project. The proprietor, who was an ex-Navy man, was planning a 50-house program, with rentals just sufficient to carry the undertaking and provide a safe investment. Needless to say this fine man was being harassed and embarrassed by every expedient of law and organization on the part of the local real-estate fraternity. The success of this project is evidence enough of the possibilities of similar developments at the fleet bases under Government auspices.

There are at the present time many Government projects of like purposes, such as those under the Federal Resettlement Program and Housing Administration. Many millions of dollars are being expended in these developments. It appears accordingly that no unusual departure from Federal policy would be involved in providing for these normal and vital needs of our married enlisted men. No public works could be better justified than such a Federal-housing plan for the fleet bases. The effect on the morale and general well-being of the men, resulting from such establishments, would be tremendous. Money so expended would be returned tenfold in loyalty, esprit de corps, and dignified pride of service.

As a parallel project and in the interest primarily of the unmarried men, though available to married men and their families, we should have also at the fleet drill bases recreational centers, comprising on a large scale (a) club facilities, including restaurants, libraries, locker rooms, and reading rooms; (b) athletic fields, gymnasia, pool and billiard rooms, bowling alleys, swimming pools, barber shops; and (c) social facilities for dances, receptions, and parties. These institutions could be made self-supporting by virtue of small revenues obtained from supplies and services furnished. An administrative staff, composed of capable retired enlisted men and Fleet Reservists, would manage these centers. The original investments should be the only financing necessary, and even that might be liquidated in time by means of excess profits, Navy relief contributions, and gifts from philanthropic individuals.

In connection with the establishment of these recreation centers we may visualize endowments from certain sources to cover the initial cost of construction. A Morgan or a Rockefeller could not dedicate his money to a worthier cause; and not much advertising of the suggestion would, in my opinion, be necessary for the discovery of a sponsor, this alternative being resorted to in the event a W. P. A. allocation is not forthcoming.

In developing this vision of a wholesome and dignified solution to one of the fleet's pressing problems and vital responsibilities, it appears that much more is at stake than the physical and moral welfare of the enlisted men. The readiness of the fleet for its mission in the event of war is intimately dependent on the efficiency and fitness of its personnel; the part the personnel plays in battle depends on the methods of training in time of peace and of this training—the conduct of the men while on liberty on shore is a major factor.

The disciplinary losses to the Navy resulting from unhealthy influences at the fleet drill bases are not only large and costly but also a reflection on the Navy's training methods, indicating an indifference on the part of officers to the men's welfare once they have gone ashore and become removed temporarily from the control exercised on board ship. Our present methods of meeting this situation are punitive and not initially corrective or preventive; in brief, an ounce of medicine in timely and early measures is worth a pound of cure. Unfortunately, the cure in our system is disciplinary and does not reach the source of the evil.

The first-year losses occurring during the difficult adjustment period in the life of the recruit constitute a serious indictment of our methods in absorbing new men. These losses may also be interpreted, and with considerable justification, as even evidence of a breach of faith on the part of the Navy in making good on its recruiting publicity and promises. From the writer's own experience as recruiting inspector there is always some embarrassment among recruiting officers in attempting to explain what parents and friends of recruits insist is a definite insincerity and misrepresentation in procurement propaganda. The answer is without question a greater effort on our part to bring the recruits through their first year successfully, and this effort points directly to a program centered in the recreational developments suggested.

The only naval station or base which has taken the matter at all seriously is the navy yard, Puget Sound, where the magnificent Craven Center in the yard and three outlying well-equipped rest camps have made the visits of ships to that yard a profitable and thoroughly enjoyable experience, paralleled in astounding degree with a highly satisfactory record in the matter of liberty breaking and other disciplinary irregularities. These excellent facilities are maintained by the ship's service of the yard, supplemented by ship's service contributions from visiting ships. They are self-supporting, as similar activities at the fleet bases would be after the original cost were provided. One function of this institution at Puget Sound is of particular interest, and that lies in the frequent dances given for the men. These parties are under the supervision of ships' officers, assisted by social-welfare organizations in town. The young ladies attending the dances are sponsored by these organizations. The good order everywhere in evidence and the very attractive and well-behaved group of invited guests invariably occasion favorable comment. Here we have, therefore, a practical demonstration of the value and excellent results of this long-delayed social objective.

Contrast the above picture with the situation at San Pedro, Long Beach, and San Diego. Misconduct of the men ashore in these localities has become a service scandal, and the sole contribution of the Navy to this one of its major responsibilities has been almost entirely a tightening of the schedule of punishments. These cities are notorious in their influences and agencies for evil. These conditions have been built up because of the absence of facilities, under Government control, which would provide a wholesome outlet for the normal recreational and social demands of healthy young men.

I submit that a solution of this problem should be the Navy's No. 1 priority project. I recommend an earnest consideration of the suggestions herewith offered.

Naturalized American Citizens

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Friday, March 8 (legislative day of Monday, March 4), 1940

ADDRESS BY JUDGE ALBERT W. JOHNSON AND EDITORIAL FROM THE SCRANTON (PA.) TRIBUNE OF MARCH 6, 1940

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a notable address delivered by Judge Albert W. Johnson, of Lewisburg, Pa., when he held a naturalization court at Scranton for the purpose of administering the oath to 250 aliens who were being naturalized on March 6, 1940. This address is an able and comprehensive statement of the rights and obligations which come to American citizens under this great charter of liberty.

I also ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Scranton Tribune of March 6, 1940, referring to the address I have mentioned.

There being no objection, the address and editorial were ordered to be printed in the RECORD, as follows:

ADDRESS BY ALBERT WILLIAMS JOHNSON TO NATURALIZED AMERICAN CITIZENS

Ladies and gentlemen, and now my fellow citizens, I congratulate you on your citizenship in the world's greatest Republic. After taking a severe test you have been found qualified for this honor, and on taking the oath you have now acquired the rights and privileges and are clothed with the duties and responsibilities of citizens of the United States. This citizenship is established and governed by the Constitution of the United States, which you have sworn to obey.

This Constitution is the supreme law of the land, the greatest written constitution in existence, a model for other democratic constitutions of the world. It was made by a convention of 54 delegates from the Thirteen Colonies 153 years ago in the city of Philadelphia—the greatest body of statesmen that ever met at one time to establish a government. Of these 54 Members, 31 were lawyers, 12 educated in the best law schools of England and Scotland; 39 had been Members of the First and Second Continental Congresses; and 8 had helped to frame their State constitutions. At least 22 were college graduates, 9 of Princeton, 3 of Yale, 2 of Harvard, 4 of William and Mary, and 1 each from the Universities of Oxford, Columbia, Glasgow, and Edinburgh. Among them were James Madison, called the father of the Constitution; Alexander Hamilton, the author of the Federalist; Benjamin Franklin, probably the most versatile genius of the eighteen century; and George Washington, "the greatest man who ever stood at the forefront of a nation's history." They had studied every known form of government and were familiar with the classics of all times on the subject. The work of this convention may be summed up in the words of Mr. Gladstone, the great English statesman: "The American Constitution is the most wonderful work every struck off at a given time by the brain and purpose of man."

This Constitution is both ideal and practical; ideal as Plato's Republic or Moore's Utopia, providing for the development of the most advanced ideas and visions of the people, and more practical and stable than any other form of government that has ever existed. It is the oldest comprehensive form of government now existing, and its essential provisions will remain for all time, because they are based upon fundamental and eternal principles. The storms which have destroyed other paper constitutions have left almost untouched the fabric of ours. In its construction the ideal of Washington was followed, as expressed by him to the Convention: "Let us raise a standard to which the wise and just can repair. The event is in the hand of God."

Our Constitution is the result of dreams of the human race for liberty and self-government, the work and experience of the greatest students and statesmen of all time, the flower of the world's civilization. Our experience and the results under it show that it is the best form of government for us and should never be changed materially in form or substance. Its principles are not temporary, but they are permanent and eternal.

The spirit and principles of the Constitution will be understood by a study of its fundamental purposes as expressed in the preamble:

"We, the people of the United States, in order to form a more perfect union, establish justice, insure domestic tranquillity, provide for the common defense, promote the general welfare, and secure the blessings of liberty to ourselves and our posterity, do ordain and establish this Constitution for the United States of America."

"We, the people of the United States." This Constitution was not established by any class. It was established by all the people and became the Government "of the people, by the people, and for the people," the first great democracy of the world.

"In order to form a more perfect union." By union of the States, power and national government are obtained, and by the States local government is secured; thus we have an indivisible union of indestructible States. This Federal plan or union of the States gives us on the one hand the most powerful government in the world, and on the other hand the freest government with the greatest amount of liberty and opportunity. This Federal plan was our great contribution in government given to the world now followed by many other governments.

"In order to establish justice." The Constitution established a Federal judiciary. A common tribunal for all the people and all the States became necessary from motives both of justice and policy. The establishment of justice for every citizen and every State in the Union was the sublime purpose of the Constitution.

"In order to insure domestic tranquillity." Prior to the Constitution the States were obliged to deal single-handed with rebellions and insurrections. The Confederation has not helped because it had no power to interfere in the internal troubles of any State. The new Constitution gave to the new Government power to keep peace in a State. The promise of the preamble in this respect has been well executed; outside of the Civil War waged to save the Union and test the strength of the Constitution, internal peace has reigned and property and life have been secure from the adoption of the Constitution to the present day.

"In order to provide for the common defense." For 153 years the Union has met every emergency; it not only stood the great strain of the Civil War when one-half of the States of the Union of 1861 attempted to destroy it but it also protected us from external attacks from the War of 1812 to the present day; and under the Constitution the Nation has never lost a war.

"In order to promote the general welfare." The Constitution has brought the Nation from a population of less than 4,000,000, including nearly 1,000,000 slaves, to 125,000,000 citizens; from a state without money or credit to the wealthiest Nation twice over on earth, offering the greatest opportunities to every citizen. Poor boys have become heads of business, leaders of professions, legislators, judges, and Presidents of the Republic. A tree is judged by its fruit, and by this standard the Constitution meets the supreme test.

"In order to secure the blessings of liberty to ourselves and our posterity." Here we have a guarantee of individual liberty by constitutional limitations. Each individual as a responsible moral being has certain "inalienable rights" which neither the State nor the people can take away, among them liberty of the press and speech, religious freedom, enjoyment of property, the pursuit of happiness, and moral and intellectual growth. Surely under the Constitution this has become a land of liberty and opportunity for all.

This Constitution secures for you the rights and privileges secured by no other government or constitution in the world. It provides personal security of life, limb, body, health, and reputation. It provides personal liberty, the right to move about freely without restriction except by the law of the land, and the right of everyone to build a home and to live therein with freedom. It establishes the right to personal property, one of the dearest privileges of the human heart. Communism has been tried for thousands of years, always resulting in failure.

In this land under this Constitution you may worship God according to the dictates of your conscience, and you have the freedom of education. You may freely assemble to discuss personal, local, and national problems. You are free to petition your local State and National Governments for redress of grievances. You are secure in your persons, your houses, papers, and effects from unreasonable search and seizure.

In these great rights enumerated above you are protected, all alike, by the Constitution and the law of the land. The courts are open to you all, the rich and poor alike. No American citizen can be proceeded against for any serious offense without first an indictment or presentment by a grand jury, and all citizens have the right to trial by a jury of his peers.

You will have every important right of a public nature; the right of franchise, the right to vote, to elect officers of your local State and National Governments, and you will have the right to hold all offices, excepting the Presidency of the United States, who must be born an American citizen. Your children will have such supreme right. This right to vote and this right to hold office in this Republic raises every citizen to the stature of a ruler. It was one time said, "It is greater to be a Roman than to be king." It may be said in America, "It is greater to be an American citizen than to be a king."

This citizenship with these rights and privileges place on you duties and responsibilities. You will have the duty to respect, to obey, and to defend the Constitution of the United States. You will have no moral or legal right to attempt in any manner to overthrow it. There is no room in this land for communism, fascism and nazi-ism. The place for communism is in Russia, for fascism in Italy, and for nazi-ism in Germany. This land is the place for true Americans only, who believe in our Constitution and our form of government, which have made us the freest, the happiest, and the most prosperous people on earth.

It is the duty of the citizens of the United States to exercise the franchise honestly, intelligently, and conscientiously. The Constitution and our laws will not enforce themselves; they must be enforced by honest and efficient officers elected by honest and intelligent voters.

You must serve your country in time of peace and also in time of war. You must build homes and help to make this a Nation of homes; you must establish families with the love and ties that belong to the true American family. The home and the family are the source of good citizens. The home need not be magnificent or expensive; it may be very modest, it may be built by your own hand, but it should be healthy and though modest and inexpensive it should be beautiful inside and outside. The grounds should be landscaped and made beautiful—this you can do with your own hands. You can level off the ground and plant trees and flowers and grass. You can paint or whitewash the house and thus make the outside beautiful and the inside can be clean and pictures may be hung on the walls representing high ideals. In this simple way you can beautify your home in which you will live and rear your children, who should be taught to be honest, industrious, and law-abiding citizens. In this way you can make a contribution to your country, greater than the accumulation of wealth. You can go further—you can acquire in most places a little land where you can raise fruit and vegetables and poultry and, in many places, cattle and hogs. In this way you can become independent and maintain and increase your self-respect and add to the peace, good order, and strength of the Nation.

It will be your duty, as it is the duty of all Americans, to seek education for yourself and for your children. Education is necessary in our democracy, for here all the people are rulers.

You can succeed personally and serve the Nation only by work and service. The Nation does not owe every person a living; every person must work for his own welfare and the advancement of the Nation. By honesty, intelligence, and industry every one of you can be successful and happy and you can contribute to the welfare of the State.

It is your duty to serve this Nation not only in time of peace but also in time of war. If the Nation, by decision of Congress, declares war, it will be your duty to serve and defend the Nation against all other nations in the world, and it should be a pleasure for you to defend your country. May you have the spirit of Nathan Hale in the American Revolution who said: "I regret that I have but one life to give for my country."

In conclusion I am very happy to admit you to citizenship and I hope you will live long to enjoy it in "this land of the free and the home of the brave."

[From the Scranton (Pa.) Tribune of March 6, 1940]

JUDGE JOHNSON ON CITIZENSHIP

The admittance of 249 men and women to citizenship of the United States yesterday by Federal Judge Albert W. Johnson was marked by an address of great merit and special meaning by the jurist.

In his career on the bench, Judge Johnson has admitted hundreds of aliens to American citizenship, and upon such occasions he has never been found wanting in lucidly explaining the privileges and responsibilities of United States citizenship. It is in no sense disparaging of his remarks upon similar occasions in the past to state that yesterday's address to the new citizens' class was an admirable summation of the whole case.

The court strongly impressed upon the new citizens that the Constitution of the United States gave them rights not enjoyed by any other people on earth. Judge Johnson said, in part:

"The Constitution secures for you the rights and privileges secured by no other government or constitution on earth. It provides personal security of life, limb, body, health, and reputation. * * * This citizenship with these rights and privileges places upon you duties and responsibilities. You will have the duty to respect, to obey, and to defend the Constitution of the United States. You will have no moral or legal right to attempt in any manner to overthrow it. There is no room in this land for communism, fascism, and nazi-ism."

In these days when the horrors of war are being visited upon so many people, the harbor of American citizenship is likely to be more highly prized than in ordinary times. The protective cloak which the Constitution throws about the citizens of this country is a precious, invaluable garment. It is to be hoped that all who wear it will be ever mindful of its true value.

In connection with Judge Johnson's address the thought arises that it would be a nice gesture if it were possible to have such utterances given permanency in the form of a brochure and presented to new citizens by the court upon the occasion of their embracing American citizenship.

The St. Lawrence Waterway Project

EXTENSION OF REMARKS

OF

HON. ERNEST W. GIBSON

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Friday, March 8 (legislative day of Monday, March 4), 1940

ARTICLE FROM THE WASHINGTON POST

Mr. GIBSON. Mr. President, a few years ago the United States entered into a treaty with the Dominion of Canada for the development of the St. Lawrence waterway. This treaty was not ratified by the United States Senate.

I am informed that a new treaty has been entered into, and that it will be submitted to the United States Senate for acceptance or rejection. I ask unanimous consent that an article which appeared in a recent issue of the Washington Post relating to this treaty be printed in the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post]

THE GREAT ST. LAWRENCE PROJECT—PREMIER HEPBURN, OF ONTARIO, NOW SUPPORTS IT

(By G. Raleigh Parkin)

MONTREAL.—Once more the St. Lawrence deep-waterway question is before the Canadian public, and a draft treaty is reported to be in the final stages of negotiation. No question of public policy placed before Canadians in the last 20 years has been more difficult for the average citizen to form a clear-cut view on than this issue of whether or not to proceed with the creation of the St. Lawrence deep waterway. The scale of the project is so huge, the technical factors involved so intricate, the ultimate cost necessarily somewhat uncertain, and both the immediate and ultimate economic consequences appear so difficult to predict with any accuracy that the ordinary individual is apt to feel helpless, in the face of all these complexities, in forming any definite opinion on its merits.

It was in 1921 that the International Joint Commission recommended that Canada and the United States should negotiate a treaty to enlarge and improve the St. Lawrence waterway. In 1932 a treaty was actually signed, but failed to pass the Senate; while in 1938, when the United States Government again raised the proposal, it became impossible for the Canadian Government to act because of the hostile attitude then adopted by the Ontario government. It has been the complete change in the Ontario government's attitude in recent months which has been the main factor enabling the Dominion Government to resume the negotiations in Washington.

The St. Lawrence deep-waterway project is both a navigation and a power enterprise. The revival of the project at this time despite the heavy expenditures in which the Dominion Government is going to be involved because of the war appears to arise primarily from the desire to proceed with the power enterprise. In addition, the persistent interest of successive Dominion Governments, whether conservative or liberal, in the project would appear to have been greatly influenced by considerations connected with western Canada and the desire now, as in the past where railways were concerned, to develop and maintain transcontinental communication to the full.

It is consideration of power requirements which has made Mr. Hepburn, Ontario's Premier, change from an attitude of complete hostility to one of support. Demand for electric power has been rising in Ontario as elsewhere in Canada and the United States. This has presented Ontario with a problem which will best be understood if a few general facts regarding Canadian water-power resources and Ontario's own position are borne in mind.

Over 90 percent of Canadian electrical output is derived from water power, which has been the mainspring of industrial progress in the two central Provinces of Ontario and Quebec, neither of which has any indigenous coal supplies. Eighty percent of all hydroelectric power in Canada is generated in Ontario and Quebec, and this development in Canada's two central Provinces has been a major factor in investment activity and industrial development. Private enterprise and public ownership have both played important roles in this development. While development in Quebec has been almost entirely by private enterprise, Ontario represents an outstanding example of a development through public ownership, the Hydro-electric Power Commission of Ontario being the most important publicly owned system in Canada and also one of the largest power undertakings in the world.

The existence in one Province—Ontario—of a great system of public ownership whose raison d'etre was to distribute power at cost to an ever-widening range of rural and industrial communties while next door was another Province—Quebec—where the supply of power to similar types of community was in the hands of private enterprise whose raison d'être was the making of profit, has not unnaturally provided the basis for much controversy over the hydroelectric question in Canada.

Specifically, Hydro in Ontario has at intervals been faced with the necessity of deciding between alternative sources from which to obtain the new power to meet the rapidly increasing demands of the last 20 years. These alternatives included the development of certain provincial water powers available without involving the Boundary Waters Treaty; the use of international waters in the St. Lawrence system, which involved the Dominion and required negotiations with the United States; the erection of steam plants, which meant dependence upon imported coal from the United States; the purchase of power from private enterprise in Quebec; and the development of interprovincial waters which required negotiations with government and private interests in Quebec.

During the last 15 years Ontario had adopted a policy of long-term contracts with private enterprise in Quebec. The Ontario government's later repudiation of these contracts and its subsequent unsuccessful attempt, because of the United States Government's opposition, to secure the right to divert certain Ontario waters into the Great Lakes-St. Lawrence system as a basis for power development, is now a matter of history.

Now, Ontario's Hydro officials, faced once more with the necessity of deciding how they will plan to deal with increasing requirements in the next few years, appear to see in the St. Lawrence development a means of satisfying at the same time their more immediate as well as their longer-term needs. The extra requirement that may arise through war-created industrial activity will not be met by the deep-waterway development itself because there would be no chance of this being completed for a considerable number of years. But the negotiation of the treaty would certainly carry with it permission for Ontario to proceed with the diversion unsuccessfully suggested in 1937, and this development could be made a source of power at a considerably earlier date.

The Silver-Purchase Program

EXTENSION OF REMARKS

OF

HON. JOHN G. TOWNSEND, JR.

OF DELAWARE

IN THE SENATE OF THE UNITED STATES

Friday, March 8 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE WASHINGTON POST

Mr. TOWNSEND. Mr. President, I ask unanimous consent to have printed in the RECORD an editorial which was published in the Washington Post of today under the heading "Our Silver Folly."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post of March 8, 1940]

OUR SILVER FOLLY

At its last meeting in Washington about 2 weeks ago the Federal Advisory Council endorsed Senator TOWNSEND's bill to discontinue purchases of foreign silver. The New York State Chamber of Commerce followed this week with an appeal to Congress likewise urging cessation of foreign silver buying.

In its resolution the Federal Advisory Council called attention to the inflationary potentialities of the silver acquisitions by stressing the fact that silver purchases increase our already excessively large bank reserves. But that is only one of numerous reasons why the policy should be abandoned. As the New York State Chamber of Commerce says, "Gold has been pouring into the United States in such volume that 'the objective of silver reaching the 1-to-4 ratio of the combined monetary stocks of gold and silver seems presently to be impossible.'"

The alternative aim of raising the price of silver to $1.29 per ounce is equally hopeless. Indeed, the present price of silver is maintained only by Government purchases. Any attempt to dispose of our present great holdings would result in a world-wide price collapse.

The only remaining argument in favor of a program that has been a conspicuous failure as a monetary experiment is that it is a useful instrument of foreign policy. There is no doubt that Mexico, the world's largest silver-producing country, has benefited from our folly. But our relations with Mexico have certainly not been improved by subsidization of her silver industry.

In short, innumerable reasons can be cited in support of Senator TOWNSEND's bill. It seems impossible to discover any good reasons for not passing it. If there are any, the Department of State and the Treasury have kept the secret from the public.

The First Postmistress

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Friday, March 8 (legislative day of Monday, March 4), 1940

ARTICLE BY W. E. HENNESSEE

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the CONGRESSIONAL RECORD an article from the pages of the State magazine, published at Raleigh, N. C., by Hon. Carl Goerch, entitled "The First Postmistress." In this connection I might add that, in addition to the first postmistress having been appointed in North Carolina by President Washington, North Carolina is the home of the first rural free-delivery route and service in the United States.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the State magazine, Raleigh, N. C.]

THE FIRST POSTMISTRESS—SHE WAS APPOINTED BY PRESIDENT WASHINGTON AND WAS THE FIRST WOMAN EVER TO SERVE IN THAT CAPACITY IN THE UNITED STATES

(By W. E. Hennessee)

In addition to being the home of the first rural free-delivery route and service in the United States, Rowan County has the distinction of having had the first postmistress in the country.

The name of this first postmistress was Mrs. Elizabeth Balfour, and she was appointed to the Salisbury office.

Mrs. Balfour was a native of Scotland and came to America in 1772. Her maiden name was Elizabeth Dayton, but soon after her arrival on these shores this was changed by her marriage to Andrew Balfour, also a native of Scotland, who had preceded her to America.

LIVED IN RANDOLPH COUNTY

The couple lived in Randolph County, which was at that time a part of Rowan. At the first sign of trouble with England Mr. Balfour offered his services to General Washington and served with distinction in the Continental Army. Soon after the beginning of hostilities he reached the rank of colonel, which he retained until his death. He became a close personal friend of General Washington and was engaged in several of the fiercest battles of the war.

Toward the latter part of the war, in March 1782, Colonel Balfour came home on leave. He chose an inauspicious time, for while at home he was murdered at his own fireside by Tory raiders under the leadership of the notorious Colonel Fanning.

Things did not go well with Mrs. Balfour after the death of her husband. They owned a large plantation but their children were small and there was no one to work the land or oversee its cultivation.

Mrs. Balfour's affairs finally became so straitened that mutual friends informed General Washington, then President, of her circumstances. President Washington at once remembered that the post office in Salisbury was vacant and at the same time recalled Colonel Balfour's splendid and patriotic service in the Revolution. He immediately appointed his wife to the office.

The appointment of a woman as postmistress, though against all precedent at a time when woman's place was universally thought to be in the home even though she starved there, met with instant approval with all those knowing the circumstances.

SERVED LONG TERM

Mrs. Balfour was appointed March 31, 1796, and at once assumed her duties. She served the Salisbury office for 26 years, from 1796 to 1822, the longest term ever served at that office.

It is recorded that when Mrs. Balfour entered the present boundaries of Rowan County, at Trading Ford upon the Yadkin River, she drove her own wagon, in which were her children and most of her remaining worldly goods. She was met there by a delegation of leading citizens and escorted into Salisbury. Here she made her home for many years, a beloved and respected member of local society.

Mrs. Balfour never again married. Her children grew up, married, and became the ancestors of substantial citizens of the State and county.

The records show that Mrs. Balfour handled the affairs of the Salisbury office in a most commendable manner and that there never was any complaint about her efficiency.

In addition to being the first postmistress, she also has the distinction of having held the chief executive position in a North Carolina post office for an unusually long period—26 years—although we do not know whether this constitutes a record for the State or not. Anyway, the fact that she was reappointed time and again is sufficient evidence that she was a most capable official.

National Labor Relations Board

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Friday, March 8 (legislative day of Monday, March 4), 1940

STATEMENT BY WILLIAM M. LEISERSON

Mr. WAGNER. Mr. President, I ask unanimous consent that there may be printed in the RECORD a statement made by Mr. William M. Leiserson, one of the members of the National Labor Relations Board, before the Special House Committee to Investigate the National Labor Relations Board, on December 11, 1939. The statement is very interesting, and was made by a man who is probably the highest authority on these questions.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

The National Labor Relations Act is a simple law designed to accomplish a simple purpose. It is intended to afford to employees the same right of human association, the same freedom to associate with their fellows for common benefit that employers enjoy in their manufacturers' associations, chambers of commerce, and trade associations. A labor union is nothing more than a trade association of employees. I think the Labor Relations Act is a good law. We shall be proud of it in the future, just as we now are proud of our public schools, compulsory education, and workmen's compensation acts, all of which were vigorously denounced as socialistic when they were first advocated and when the first steps were being taken to put them into practical effect. I do not think that the act needs to be amended in any important respect.

It is indeed regrettable that we should ever have reached a condition that made it necessary for Congress to enact the National Labor Relations Act. Most of the great industrial nations of the world do not have any statutes of this kind. The reason is, apparently, that in those countries it did not occur to the great body of employers that they had the right to deny to their employees the freedom of organization which they claimed for themselves. It may be recalled that a few years ago a judge in England denounced the managers of an American corporation for trying to bring to that country some of our practices of labor spying and coercion directed against employees' organizations.

In this country, however, employers who enjoyed the right of associated activity took it upon themselves to restrain and to interfere with any similar activities on the part of their employees; they felt it was a management prerogative to destroy their employees' organizations. They even appealed to the courts to protect what they thought was their constitutional right to restrain organizational activities of their employees, so that it was necessary for Chief Justice Hughes, in the *Texas & New Orleans case*, to pronounce that employers had no constitutional right to interfere with the right of employees to have organizations represent them in dealing with management.

This decision was made in 1930, and it upheld the constitutionality of the Railway Labor Act of 1926. Two years later Congress found it necessary to declare the public policy of the United States with respect to organization rights of employees. It did this in the following words of the Norris-LaGuardia Act:

"Whereas under prevailing economic conditions, developed with the aid of governmental authority, for owners of property to organize in the corporate and other forms of ownership association, the individual unorganized worker is commonly helpless to exercise his freedom of labor, and thereby to obtain acceptable terms and conditions of employment, wherefore, though he should be free to decline to associate with his fellows, it is necessary that he have full freedom of association, self-organization, and designation of representatives of his own choosing to negotiate the terms and conditions of his employment, and that he shall be free from the interference, restraint, or coercion of employers of labor, or their agents, in the designation of such representatives or in self-organization or in other concerted activities for the purpose of collective bargaining or other mutual aid or protection * * *."

It is to be noted that this declaration was adopted before there was any New Deal administration, and that its wording was later incorporated in the National Labor Relations Act.

But the Norris-LaGuardia Act was primarily concerned with unfair labor practices of labor organizations, not with unfair practices by employers. The courts had developed a body of law to restrain improper concerted activities by employees and union leaders which they enforced by injunctions. Many union people have gone to jail for improper conduct under this law, and whatever may be our opinion of the Wagner Act, it is well to remember that no employer has yet gone to jail for violating it, although many have been guilty of violations. I mention this here because of the

charges that are frequently made that the Wagner Act is one-sided and does not protect the employer. There is plenty of law dealing with unfair practices by labor organizations. But in enforcing this law by the injunction process, the courts had developed policies and procedures which Congress saw fit to modify and clarify. It did not, however, take away the right of the courts to restrain improper conduct by labor organizations.

Although the Norris-LaGuardia Act declared the rights of employees to be free from interference and restraint in their organizational activities, it did not implement any administrative machinery by which workers' rights might be protected against trespass by their employers. This Congress undertook in 1934 when it amended the Railway Labor Act of 1926 to afford a full measure of protection to railroad employees. A year later the Wagner Act was adopted extending the same protections to employees in other interstate industries.

Everything that is prohibited to employers by the Wagner Act also is prohibited by the Railway Labor Act. If one is unfair or one-sided, the other is equally unfair and one-sided. If we consider it one-sided to have a law confined to dealing with labor's rights only, then the Railway Act is more one-sided than the Wagner Act, for it prohibits employers from petitioning for elections among employees. Indeed, it excludes them even from being parties to representation disputes among employees. The Wagner Act is more lenient in this respect. The Board makes them parties to representation cases before the Board, and it is permissible for the Board to accept petitions from employers for employee elections. If Congress is to amend the Wagner Act so as to relax or to abolish any of the protection it affords to employees, then it will have to adopt similar amendments to the Railway Labor Act, and perhaps also modify the declared policy in the Norris-LaGuardia Act.

As I had occasion to state to the Senate Committee on Education and Labor some months ago, the three laws—Norris-LaGuardia Act, Railway Labor Act, and National Labor Relations Act—are not disconnected statutes. They are related, built one upon another, and together they constitute one solid structure of congressional policy for the protection of legal and property rights of employees. If one is changed, the others will also have to be changed, and the declaration of the public labor policy of the United States contained in the Norris-LaGuardia Act will have to be modified.

I think it would be a very serious error if Congress were to change its declared labor-relations policy and to amend the Wagner Act in any vital respect. Such a course would involve turning back the pages of our history, retracing the progressive steps we have taken, and going back to the days when labor law was class legislation in favor of employers only. It might be well to remind those who are attacking the Government interference that is involved in the Labor Relations Act that Adam Smith, who first promulgated the doctrine of individual liberty and private enterprise in systematic form, wrote in his Wealth of Nations in 1776 that labor laws were necessary for the protection of working people, because the governing classes were employers and property owners who saw to it that laws were enacted in their favor.

In our own country, until about a century ago, it was not only an unfair labor practice for working people to organize to improve their conditions of employment by bargaining with their employers; it was a crime. The members of a society of shoemakers in Philadelphia in 1806 were found "guilty of a combination to raise their wages," fined, and assessed costs. In 1842, however, the Supreme Court of Massachusetts, reversing a conviction for labor conspiracy, ruled that a combination of employees to improve their conditions is not essentially different from a combination of people to fight the evils of intemperance. As workmen may join together and refuse to work in a shop where liquor is furnished or refuse to work with any employee who habitually uses liquor, the court reasoned, so also may they combine to refuse to work for wages they consider too low or to work with an employee who will accept lower wages.

Other courts subsequently took the same view, and for nearly a hundred years the legality of labor organizations has not been questioned. But until recently the freedom of working people to organize meant only freedom from prosecution by the Government. Employers were free to destroy unions by spying on those who joined them, discharging members, refusing employment to union men, imposing "yellow dog" contracts on employees, and organizing company unions with forced memberships. Management, bargaining collectively for great numbers of stockholders, was protected in its right to insist on bargaining individually with helpless workers in need of jobs.

The legal rights favored the employer, and class strife was the inevitable result. Congress and the States attempted to put employees and employers on the basis of equality before the law in the matter of bargaining, but the Supreme Court declared the early efforts unconstitutional. In the cases of Adair against The United States and Coppage against Kansas, the Court held that an employer's property right in his business included the right to discharge or discriminate against employees for any or no reason. Apparently neither Congress nor the State legislatures could protect employees against employers who used their economic position to trespass on the rights of those who worked for them. Courts could not hear cases of employees discharged for exercising their legal right to join labor organizations.

The labor-relations acts changed all this. The basis for the change was laid by the Supreme Court in 1930 in the Texas and New Orleans case already mentioned, when it ruled that the decisions in Adair against United States and Coppage against Kansas were not applicable because employers had no constitutional rights to trespass on the rights of employees. In making this decision the Court considered a contention of the employer that no property interest was involved in the right of employees to choose their own representatives for bargaining. The answer of the Court was that if it is necessary to show a property interest, then "we are of the opinion that there was such an interest with respect to the selection of representatives to confer with the employer in relation to contracts of service." Citing this decision, a United States district court ruled in 1935 in the Virginian Railway case that "the right of self-organization and representation in the matter of rates of pay, hours of labor, and working conditions is a property right, the loss of which would result in irreparable damage to complainants." This decision later was upheld both in the circuit court of appeals and in the Supreme Court.

In a hundred years, therefore, the labor policy of the United States has been developed and changed by slow steps from one in which organization for collective bargaining was held to be a crime to one in which it is protected by law as a property right with the sanctions that surround private ownership of property. Shall we now undo all this development and retrace our steps so that the property rights thus achieved may be taken away from employees by their employers? Fairness and justice in labor relations cannot be achieved or maintained without regarding the property rights of employees every bit as sacred as the property rights of employers. The three acts of Congress—Norris-LaGuardia, Railway Labor, and Labor Relations Act—together with the supporting decisions of the courts, are designed, I take it, to establish and maintain a national labor policy of treating the employees' property rights as equal in sanctity to the employers' property rights.

Turning now to the specific provisions of the Labor Relations Act, the meat of them is contained in section 8, which lists five prohibited unfair labor practices. These are:

1. Employers must not interfere with, restrain, or coerce employees in the exercise of their right to self-organization, to form or join labor organizations, or to bargain collectively through representatives of their own choosing.

2. They must not dominate or interfere with the formation of administration of any labor organization or contribute to the financial or other support of it. That refers to the well-known company unions.

3. They must not discriminate in hiring, discharge, or any condition of employment to encourage or discourage membership in any labor organization.

4. They must not discharge or otherwise discriminate against employees who file charges or give testimony under the act.

5. They must not refuse to bargain collectively with representatives of employees designated in accordance with the act.

Congress was not original in making up this list of practices. It did not just think them up as a good list to prohibit. It found that employers had been practicing all these things; they had become established practices in American industry in order to prevent employees from organizing and bargaining collectively. Many investigations had established the facts, and there was much complaint against the unfairness and injustice of the practices. Industrial managers had every opportunity to rid themselves of the practices. They would not do so, and the working people of the country turned to their Government to make them get rid of the practices. Certainly the workers did not act hastily in the matter. They waited patiently for many years, and only as a last resort did they use their votes to remove an intolerable condition.

The fifth unfair labor practice makes it necessary that the employer shall know who is the true representative of the employees duly designated and selected in accordance with the act. Section 9 deals with this problem. It provides that a majority of the employees in any unit appropriate for collective bargaining shall have the right to designate or select an exclusive representative of all the employees in such unit. Then it authorizes the National Labor Relations Board to decide in each case whether the bargaining unit shall be the employer unit, craft unit, plant unit, or subdivision thereof. If a dispute arises as to the representation of employees, the Board may investigate and certify in writing the name of the designated or selected representative. In such an investigation the Board must provide for a hearing, may take a secret ballot, or use any other suitable method of ascertaining the choice of the employees.

These provisions of sections 8 and 9 are about all there is to the National Labor Relations Act. The rest is concerned mainly with procedures for carrying the provisions into effect. The National Labor Relations Board is empowered to prevent employers from engaging in any of the listed unfair practices, and the Board is given authority to issue rules and regulations to carry out the provisions of the act. The procedures outlined in the law and elaborated in the Board's regulations work out in the following manner:

An employee, or group of employees, or a union files a charge at any one of the 22 regional offices maintained by the Board covering all parts of the country. The charge must be in writing, and the allegations that an employer has engaged in or is engaging in any unfair labor practices must be sworn to. This charge is then assigned for investigation by the regional director to one of his subordinates known as a field examiner. The employer is notified, and after the evidence in support of the charge has been canvassed he is interviewed and given an opportunity to tell his side of the story. Quite often this brings about conferences which result in a settlement of the case without further procedure.

In many cases the charges prove to be unfounded, and they are then dismissed by the regional director. Provision is made for an appeal from such a dismissal to the Board in Washington. If it appears that the law has been violated and attempts to secure compliance are unsuccessful, a full report is prepared in the form of a request for authorization of a complaint which is forwarded to the Board. In preparing this report the regional director has the assistance not only of the field examiner but also of attorneys on his staff, and the request for authorization of a complaint is signed both by the regional director and by the regional attorney who is in charge of the legal staff at the regional office.

This request is then reviewed in Washington, and if the Board finds it has merit the regional director is authorized to issue a complaint and to provide for a hearing of the charges. A trial examiner is then assigned from Washington to conduct the hearing, and a record is made. On the basis of the record, the trial examiner issues an intermediate report in which he makes findings of fact and recommendations as to what disposition should be made of the case. If he finds that the employer has engaged in unfair labor practices, he recommends such affirmative action as will effectuate the policies of the act.

This report is then served upon all the parties to the case. If the employer complies with the trial examiner's recommendations, the Board ordinarily closes the case. Similarly, if the trial examiner finds that the employer has not engaged in unfair practices and no exceptions are filed, the case is considered closed. All parties are afforded opportunity to file exceptions to the intermediate report, and any party may request oral argument before the Board in Washington.

There is a review division in the legal department of the Board which carefully reviews the whole record in the case as well as the findings of the trial examiner, the exceptions, and the briefs. On the basis of all this and the oral arguments the Board makes its decision. But in its decisions the Board has no authority to punish an employer or any of his agents. It may only order those whom it has found have violated the law to cease and desist from their violations. If, however, an employer has illegally punished employees by loss of employment or wages, the Board may order reinstatement of such employees and refund to them the wages they have lost.

When the decisions and orders of the Board are issued, there are no penalties imposed on the employer if he does not obey them. He may disregard them if he sees fit. Then it becomes necessary for the Board to go to a circuit court of appeals, submit the whole record and all the papers in the case, and show the court that the decision is supported by substantial evidence. If the court so finds, it issues an enforcement order. Then, if the employer refuses to obey, he may be cited for contempt of court.

These procedures, it seems to me, safeguard the rights of employers at every step. They are the same procedures that Congress has provided for the elimination of unfair practices against shippers by the railroads, for the prevention of monopolistic practices and restraints of trade by combinations and trusts, and for the abolition of fraud and deceit in the sale of securities and foods and drugs. The Interstate Commerce Commission, the Federal Trade Commission, the Securities and Exchange Commission, and many other administrative agencies are governed by the same kind of law that governs the activities of the National Labor Relations Board.

It is difficult to understand, therefore, why the procedures of the Labor Relations Act should be subject to such furious attacks, as if they were new and unique in our system of law. When it is remembered, however, that the Interstate Commerce Act and the Federal Trade Commission law, in the early days of their existence, were subjected to exactly the same kind of attacks and criticisms, then perhaps the explanation is to be found in the fact that those who enjoy special privileges from the Government never learn anything from history. They resent the loss of their privileges, and they always use the same arguments against every effort of the Government to provide equal protection of the laws for all its citizens.

If there is nothing in the labor-relations law itself to justify the attacks on it, then is there anything in the administration of the act by the Board and in the work of its staff of 900 people that justifies any of the criticism? That there are faults and weaknesses in administration may be readily admitted. But it is a serious question if those who are opposing the law and demanding that it be revised are not more responsible for these defects than the Board itself. You will recall that after the act was adopted in July 1935 a national committee of 58 leading members of the American bar took it upon themselves to declare the law unconstitutional. More than a hundred court injunction suits tied the hands of the Labor Relations Board, and its work all but came to a standstill. Attorneys advised their clients that it was not necessary to obey the law until the Supreme Court said so. Flagrant violations and defiance of the authority of the Board were excused by allegations of unconstitutionality.

This did not set the working people of the country a very good example of obedience to law, but it did accomplish the purpose of demoralizing the administration of the act. The effects of this demoralization are still being felt, and the obstructive policies of those who are opposed to the act are being continued. There is room for much improvement in the administrative methods of the Board, but the act cannot be made to work altogether efficiently until the opposition to it, and the attempts to weaken it by revisions, have ceased.

It seems strange to me that almost every day we should be reading of attacks on the Board and its personnel, but hardly anyone thinks of attacking or even criticizing the conduct of those employers who have flouted the law of Congress and who have been found guilty of violations that the courts as well as the conscience of the American people have condemned. If we had a little more criticism of those who engage in unfair labor practices and who defy the law of the land, and a little less criticism of those who are honestly trying to carry out their oath of office in enforcing the law, we would get a better perspective on the perplexing problems of labor relations with which the Government has been trying to deal by means of the Wagner Act.

Chairman Madden and Edwin Smith, the other two members of the Board whom the committee is to hear later in the week, can give you a better idea of the operations of the Board than I can. They set up the administrative organization, selected the personnel, and devised the necessary procedures. Their task was unusually difficult because they had to do all these things and carry on all the other work of the Board while they were under fire. They were constantly being attacked and subjected to successive investigations by one congressional committee after another. I have been a member of the Board for only 6 months, and knowing the difficulties of the Board's problems in these months of relative quietness, I must say that on the whole the other members of the Board are to be commended for the good job they have done under very trying circumstances.

It is no accident that out of 19 of the Board's cases that went to the Supreme Court, the positions of the Board were upheld completely in 15. In two cases the Board's decisions were upheld with some modifications, and in only two cases were the Board's decisions reversed. In the Circuit Courts the Board's record has not been quite as good, but it has been excellent nevertheless, and a good many of the Circuit Court decisions against the Board have been reversed by the Supreme Court. This record is due to careful and efficient work on the part of the Board and its legal and field staff and a devotion to duty of the personnel that should receive public commendation instead of the brickbats they have been getting. I do not know of any other Government agency that has had a better record of approval of its work by the higher courts.

This does not mean that all the work of the Board is carried on efficiently, that no mistakes are made, that no wrong decisions are issued, that all the employees are efficient and fully qualified and trained for their jobs. On the contrary, the Board is fully aware of many deficiencies in operations, of troublesome mistakes, doubtful policies, and weaknesses in organization and personnel. The members of the Board, more than anyone else, are constantly criticizing and reexamining methods, policies, and procedures for the purpose of securing improvements in administration and a more prompt and effective enforcement of the provisions of the act.

Because I have had occasion to write some dissenting opinions, there have been public intimations that I was critical of the other members of the Board. As a matter of fact, my remarks have been no different from the criticisms that all three of us have always directed against our own work and that of the employees of the Board. Without internal skepticism of the policies we pursue and without such self-criticism of the work we do, no organization can be kept on its toes to meet the problems that arise every day in an effective manner. It is natural and healthy that the members of a quasi-judicial body should disagree on important problems, just as courts disagree. Such disagreement is a basic condition for progressive improvement.

So far as the complaint cases involving charges of violations of the law are concerned, there is no essential disagreement among the three members of the Board. At times, of course, we view details of evidence differently, but such disagreements are usually ironed out in conferences, so that dissenting opinions in these cases are rarely written. Most of the dissents occur in connection with representation cases and revolve around the question of the appropriate bargaining unit. That the problems raised by this question are extremely complex and bound to develop diverse views is evident from the fact that there have been as many separate concurring opinions as there have been dissenting opinions, and many have concurred in part and dissented in part.

The problems are problems of democracy, and to some extent they are bound to be with us so long as our working people will be free to associate themselves in organizations for mutual benefit and bargaining in any manner they see fit. If we have industrial dictatorship or autocracy, the problem disappears. If we want democracy in industry as well as in government, we must pay the price in possible disputes among free men as to what they consider best promotes their interests.

Among the unions affiliated with the American Federation of Labor as well as among the independent railroad brotherhoods there have been for many years bitter jurisdictional controversies, and the disputes about bargaining units arise out of such differences regarding the jurisdiction of various labor organizations. When the Wagner Act was passed in 1935 we had a united labor movement, and if that condition had continued, the difficulties of the Board in handling representation disputes would have been serious enough. But they would never have reached the proportions and they would not have developed the bitterness of feeling that has come since the split between the American Federation of Labor and the Congress of Industrial Organizations. I doubt if the opposition to the Labor Relations Act itself would have been taken as

seriously as it is now if it had not been for this division in the ranks of organized labor.

I do not regard the problem as insoluble, however. That it is possible to get labor organizations which are fighting among themselves to accept a rule for deciding disputes as to bargaining units in good spirit, and to follow that rule uniformly in all cases involving choice of representatives is evident from the experience under the Railway Labor Act, although the problems under that act are not as complex as they are in the vast field covered by the National Labor Relations Act. The essential requirement for satisfactory adjustment of disputes as to the appropriate unit is that the Government Board shall not undertake to pass judgment on whether organization of employees along the lines of an industrial unit is better than on craft lines, or that craft or plant units are preferable to industrial or other units.

The employees who organize themselves along one line or another believe that the units they prefer are the most effective for their purposes in collective bargaining. It is wrong, I think, for the Government to say that one structure or form of labor organization is more effective than another in accomplishing the purposes of collective bargaining. All forms have their advantages and disadvantages.

But section 9 of the Labor Relations Act provides that in deciding disputes as to which unit is appropriate, the Board shall make its decisions "in order to insure to employees the full benefit of their right to self-organization and to collective bargaining, and otherwise to effectuate the policies of the act." This wording is rather broad; it appears to leave it to the judgment of the members of the Board to decide what form of unit is best to insure the right of self-organization and will best effectuate the purposes of collective bargaining. I do not think Congress intended by this wording to give such large powers to the Board. The intent was rather, it seems to me, that the customs and practices of the employees in establishing their forms of self-organization and collective-bargaining relationships with employers would reveal the preferences of the employees themselves as to the most effective bargaining units, and that the Board would make its decisions accordingly.

This is a matter of interpretation which can be worked out by more experience in administration with the assistance of the courts, as it has been under the Railway Labor Act. I am of the opinion that both the A. F. of L. and the C. I. O., as well as the employers, would agree that it is unwise to vest a government agency with any such authority as would give it a free hand in deciding what form of organization is best for labor bargaining. However difficult it may be to bring together the divided labor camps in a united organization, I think it not at all impossible that both camps could reach an agreement that the practices, customs, and forms of organization established by the employees themselves and by their collective agreements with employers should control the Board in deciding disputes as to bargaining units. If such an interpretation of section 9 were accepted by the A. F. of L. and the C. I. O., and were applied by the Board in deciding disputes as to bargaining units, it is my judgment that much of the difficulty in handling these cases would disappear.

The greatest weakness in the work of the Board is the delay in handling cases. All the members of the Board are of one mind in believing that the complaints on this account are justified, and all of us are devoting our energies to speeding up the process. Progress is being made in this direction and, so far as the handling of election cases is concerned, there has been great improvement during the last few months. But, despite all our efforts, there is still a very large backlog of cases. This is being reduced, however, and our position a year from now promises to be a good deal better than it is now, just as we are now in a much better position than we were 2 years ago.

We have filed with us more than 10,000 cases a year. Considering the careful procedures the law and the Board's regulations require in order to protect every party's interest, the immensity of the task before us becomes evident. Then it should be remembered that in 1937, when the law was upheld by the Supreme Court, the Board had a backlog of practically 2 years' cases because of the injunctions that stayed proceedings and because of the recalcitrant conduct of many of the parties who appeared before the Board. If, since April 1937, we have reduced the backlog of cases to where we are only a year behind, substantial progress has been made.

It is perhaps inevitable that the parties who suffer by the delay should ascribe ulterior motives to the Board and its agents for delaying the cases. They get the idea that the Board delays their cases in order to help other parties. Many of the charges of partisanship directed against the Board stems from this fact. But as the most recently appointed member of the Board, who had no part in selecting the staff, I want to say that as a whole the personnel of the National Labor Relations Board is made up of unusually intelligent, hard-working, sincere and honest men and women. They compare most favorably with the employees of any public or private organization with which I have been associated. I think a great injustice has been done to a devoted body of public servants by the manner in which blanket charges of partisanship and misbehavior have been directed at employees and agents of the Board.

Of course, there may be black sheep among them, and some are inexperienced and untrained. But what private or public organization does not have such employees among its personnel? The Board has had occasion to dismiss employees for misbehavior, and some for incompetence, as is the case with every other big organization. Every time this has happened the new employees have been of a higher caliber, and the level of performance has been thus improved and raised. If there are faults in the work of the staff, I think that for the most part they are due to deficiencies in administrative organization and supervision, lack of training, and lack of experienced direction of the staff by capable and experienced men who are both good administrators and have expert understanding of the problems of labor relations.

Such defects, however, are common during the early years of all large and important undertakings. Some of the departments of the Board's work have developed effective administrative organizations with experienced and capable executives. Other departments have this still to achieve, and there are places where a change in personnel would bring improvement. But full accomplishment in these respects is a matter of time, experience, and financial resources with which to carry on the work. The administrative deficiencies of the Board are no different from those that have been characteristic of all other agencies of the Government in the early years of their existence. And so are the public attacks and criticisms. The Supreme Court and our whole judicial system was not as efficient in the first few years of their existence and did not have the standing that they now enjoy. Neither did the other old and established agencies of the Government. Compared with the early experiences of other governmental agencies, the National Labor Relations Board and the great body of its personnel have records of service to which I think the people of the country will look back in future years with grateful pride.

H. R. 1, a Bill Providing a Federal Tax on Interstate Chain Stores Is a Death Sentence to Monopoly

---

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, March 7, 1940

Mr. PATMAN. Mr. Speaker, the Subcommittee on Ways and Means, the gentleman from Massachusetts, the Honorable JOHN W. MCCORMACK, chairman, which will conduct hearings on H. R. 1, a bill providing for a Federal tax on interstate retail stores, has announced that the hearings will commence March 27. This bill will seriously affect about 20 Wall Street chain-store concerns that are trying to obtain a monopolistic control of retail distribution in the 3,070 counties in the United States. There are more than 7,000 chain-store companies in the United States, and our bill, H. R. 1, will seriously affect only about 20 of them. It is a "death sentence" bill; that is, a death sentence to monopoly in retail distribution.

PRESENT ADMINISTRATION FAVORS INDEPENDENT BUSINESS

The present administration has many times indicated its friendliness toward independent business. The problem is in the hands of Congress. If effective laws to curb absentee ownership are not passed it will not be because the present administration opposes them. How can any Member of Congress listen to the appeals of the President of the United States in behalf of local ownership of business and not be inspired to work unceasingly to that end?

PRESIDENT SAYS LOCAL OWNERSHIP PREFERRED TO ABSENTEE CONTROL

President Roosevelt, in his great speech at the Jackson Day dinner, January 8, 1938, made several very significant statements. In this speech he stated:

I was interested the other day to read the report of a correspondent of a London financial magazine who had recently surveyed conditions in the Middle West and other parts of the Nation. He found a point of view in other parts of the country wholly different from that of the principal financial centers such as New York, Philadelphia, and Chicago. And he found this other interesting development: Wherever an enterprise is controlled locally its managers have a local, independent point of view. But when the business is controlled from great financial centers the local manager takes his cue from what his bosses are saying and reflects the state of mind prevailing hundreds of miles away.

I desire to call your attention especially to one part of the statement, in which he states that where an enterprise is controlled locally its managers have a local, independent point of view:

LITTLE MAN SHOULD BE PROTECTED

In this speech the President also stated:

I have recently described many other activities that should not be tolerated in our democracy—price rigging, unfair competition directed against the little man, and monopolistic practices of many kinds. Call them evils, call them abuses, call them unfortunate

facts. It makes no difference. Give to me and give to your Government the credit for a definite intention to eradicate them. Give to me and give to your Government the credit for believing that in so doing we are helping and not hurting the overwhelming majority of businessmen and industrialists in the United States.

* * * * * * * *

The White House door is open to all our citizens who come offering to help eradicate the evils that flow from undue concentration of economic power or unfair business practices—who offer to do all that is possible by cooperative endeavor and to aid in corrective and helpful legislation where necessary.

We know that there will be a few—a mere handful of the total of businessmen and bankers and industrialists—who will fight to the last ditch to retain such autocratic controls over the industry and the finances of the country as they now possess. With this handful it is going to be a fight—a cheerful fight on my part, but a fight in which there will be no compromise with evil—no let-up until the inevitable day of victory.

Please do not overlook what the President said in this statement regarding unfair competition directed against the little man and monopolistic practices of many kinds.

The Freedom of Opportunity Foundation, 222 North Wells Street, Chicago, Ill., is sponsoring this bill. The president of this organization is the Honorable Theodore H. Christianson, who was three times Republican Governor of the State of Minnesota, a former Member of the House of Representatives, and now public relations counsel of the National Association of Retail Druggists. Mr. C. T. Habegger, of Berne, Ind., a clothing manufacturer, is chairman of the board. This organization has authorized the following statement relating to H. R. 1.:

THE CHAINS' CONCERN FOR THE FARMER

It will be recalled that in their statement of public policy, published a year ago, at great expense, in newspapers throughout the United States, the brothers Hartford were emphatic in their profession of solicitude for agriculture. Since entering the political arena they have adopted and made their own the politicians' time-honored appeal—"We just love the farmer." By doing so they have subjected themselves to the test which candidates for office have always had to meet. How sincere are they?

Have chain stores shared their claimed economies with the farmer? Have they "divided up," or have they insisted on the lion's share of the profits of the new partnership?

What will be the verdict of Texas onion growers when they learn from the Federal Trade Commission's report that while they have been getting 12.2 cents of the consumer's dollar the chains have kept 44.39 cents for themselves? Or of Texas cabbage raisers, whose share has been only 14.95 cents, while the chains have retained 37.63 cents?

Will the Florida cabbage grower feel that he ought to be grateful to a system of distribution that has kept 45 cents for itself, for every 11.29 cents that he has received for plowing, planting, cultivating, and harvesting?

What will be the temper of Pacific coast lettuce growers, whose share in the consumer's dollar is only 19.88 cents, when they learn that the chain's "take" is 37.91 cents? And what about the tomato growers? In California they get 23.09 and in Florida 30.03 cents, while the chains' gross profit is 45.22 and 52.17 cents, respectively.

So much for vegetables. What about fresh fruits? California Valencia, California navel, and Florida oranges return to the grower 39.11, 33.23, and 29.65 cents, respectively, of every consumer's dollar, while the chain's margin is 30.18, 31.82, and 34.88 cents. Florida grapefruit pays 23.69 cents to the grower, and 37.47 to the chain distributor.

In the division of the proceeds from California table grapes, the grower gets 28.04 cents and the chain distributor 29.53. Orchardists of the Pacific Northwest get 21.37 for growing a dollar's worth of apples, and the chains get 34.61 cents for selling them. Georgia and Carolina peaches return 31.15 cents to the grower, and 32.3 cents to the chain stores.

It is not our purpose to prove either that the chains get too much or that the growers get too little. But we can understand why the farmer is puzzled and why he is disposed to ask: For whom are the Hartford boys most concerned, us or themselves?

THE CHAIN AND ITS LANDLORD

The chains are working real-estate row hard in their present propaganda campaign. They are making a special effort to rally the support of all owners of rental property against the Patman bill to tax chain stores. Lansing P. Shields, vice president of the National Association of Food Chains, appearing before the Real Estate Association of the State of New York, called the proposed law a menace to the existence of a business which provides landlords "nearly one-third" of their revenue. "Last year they—the chain stores—paid over $450,000,000 in rents," he declared.

Perhaps some of the real-estate men present swallowed the argument "hook, line, and sinker." In the minds of the thoughtful ones, however, some questions must have arisen.

Even if every national chain were put out of business, wouldn't there be independent operators at hand to take over the premises vacated?

Is not the growing number of vacancies, even in the choicest metropolitan areas, due largely to concentration of trade in a smaller number of stores, toward which chain-store operation, and especially the chains' recent entry into the supermarket field, is contributing?

Would not rents decline sharply if the chain-store movement were permitted to grow until chains became the only desirable tenants in high-rental areas?

What business would be left for independent real-estate brokers dealing in property suitable for retail stores if most of the available tenants were large corporations maintaining their own real-estate departments?

A TRAVELING MAN WRITES IN

"I'm a traveling salesman, selling men's wear. Formerly I was sales manager for an independent manufacturer of men's pajamas and underwear. In 1933 our concern's business was liquidated by its owner—a large investment concern. The cash obtained by liquidation was needed to secure control of United Fruit. They threw 1,100 people out of work in Baltimore.

"This liquidation caused only a tiny ripple on the vast sea of commerce. But it changed the lives of each and every one of those 1,100 people, many of whom found employment in similar lines but at the expense of less capable people, who in turn lost their jobs. Most of the 1,100, however, never did secure permanent positions.

"Multiply this one episode by thousands like it during the past 20 years. The result is 20,000,000 United States citizens either out of work or earning so little they are dependent on the charity of friends or relatives, or on relief agencies, for bare existence.

"The traveling salesman today can get business only from a fast-dwindling number of independent merchants. Naturally his income is getting smaller and smaller, and in the near future there will be no further need of traveling salesmen; that means several hundred thousand more added to relief rolls. Yet our United States of America could never have achieved its greatness without the help of salesmen from the pioneer trader to present-day travelers.

"Organize these salesmen as shock troops to get your message across to independent retailers; have them inspire and lead their customers in the crusade.

"Restore competition, which still is the life of business—clean competition creates employment" (Lakewood, Ohio).

NO CHANCE AFTER 50

"When I came to California 29 years ago a 5-acre orange grove properly cared for would net the owner from $2,500 to $3,000 a year. Now, from such a grove one can hardly make expenses, no living. There is now absolutely no chance of citizens over 50 years of age unless they are rich. The chain stores will certainly not employ them. But for the chain stores people of small means could probably succeed in a small business" (San Diego, Calif.).

FARMER'S EYES OPENED

"We had some 'eye openers' ourselves with the chain stores in trying to dispose of some fine quality apricots and avocados. They offered us less than half what our little local store paid us" (Farmer, Camarillo, Calif.).

STOCKHOLDER, BUT—

"Our family owns a few shares of chain stock, but we are all against them and their vicious methods. You can add this letter to your file of letters that have not been prompted by any organization. Just a sincere desire to see evil methods abolished" (Fort Thomas, Ky.).

The Eagles' Ludlow Stabilization-of-Employment Plan

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1940

Mr. LUDLOW. Mr. Speaker, the Fraternal Order of Eagles has an unchallenged and unchallengeable record of humanitarian service. Other organizations of a social nature may think they are fulfilling their mission in the world when they give themselves over to ease and pomp, amusement, and luxury, but the Fraternal Order of Eagles has a different outlook on life. It is not looking for anything soft and easy. Its motto is service, and it is always reaching down to lift humanity to higher and happier levels of living. It is the best friend of the common people, millions of whom have been helped by its beneficent activities.

The poor and the underprivileged are the special objects of its solicitude. It was fostering sentiment for old-age pensions and was crystallizing that sentiment into statutes in various States when the idea of substituting pensions for the poorhouse brought only sneers and contumely from the

idle rich and it has done more than any other organization or influence in America to protect our old people and to make life's evening serene and secure. Likewise it was the Fraternal Order of Eagles that did the spade work for the stabilization of industry and while the bill which it brought forth years ago on that subject has never been enacted into law the idea has so grown in popularity and favor that many authorities, both governmental and industrial, have in the course of years been won over by the indubitable soundness of the plan and have given their sanction to the principle involved. That principle, if enacted into law, would create a governmental mechanism that would operate constantly to balance production and consumption, keep employment at a regular flow and give labor steady jobs at a saving wage.

The Eagles' magazine for March, in an editorial written by its gifted editor, Hon. Frank E. Hering, presents a most interesting narrative of the progress that has been made by the Eagles' stabilization plan since December 1, 1930, when, as the spokesman for the Fraternal Order of Eagles, I introduced the first bill on this subject in the National House of Representatives. The editorial is entitled "We Were Right! Labor, Capital, and Government Consider Ways to Stabilize Employment." It is as follows:

EDITORIAL SHOWING HOW THE EAGLES' LUDLOW STABILIZATION PLAN HAS BEEN VINDICATED

After 10 bitter years of the great depression, the people of the United States no longer ask for a "way out" of this depression. Today, the country asks for a "way out" of all depressions. It asks for insurance against the reliving of the tragic years that began in October 1929 and continue even to this day.

A "way out" was actually offered to the country a few months after that fateful day in October 1929. Yes; a "way out" similar to that which Government and financial and labor leaders are now agreed must be taken if our country is to pull itself permanently out of depressions. That "way out" is the plan set forth by the Fraternal Order of Eagles in the Eagles' Ludlow bill.

Here is a brief history of the bill: In August 1930 the Grand Aerie unanimously adopted a resolution which declared that "the economic stability of our country is based upon the right of every American adult to work continuously at a saving wage." To put this resolution into effect, the Grand Aerie commissioned four past grand worthy presidents—Conrad H. Mann, Frank E. Hering, Otto P. Deluse, and John M. Morin—to prepare and to introduce in Congress a bill that would have in purpose to stabilize employment; to insure a saving wage to the industrious worker; and to protect the dollars of the honest investor.

The bill that these Eagle leaders prepared is what is known as the Eagles' Ludlow bill. It was first introduced in the House of Representatives on December 1, 1930, by an Eagle Congressman, LOUIS LUDLOW, of Indiana. On December 3, 1930, an Eagle Senator, John J. Blaine, of Wisconsin, introduced an identical bill in the Senate. Soon thereafter members of the Eagles' stabilization of employment commission went before various committees of both Houses of Congress to urge adoption of the bill. These committee hearings were held on December 17, 1930, December 11, 1931, and March 2, 1932. After the last hearing a subcommittee of the House, appointed to study our bill, unanimously recommended that the Eagles' Ludlow bill be adopted.

What does this bill seek to do? It provides for the creation of a Federal Industrial Commission of five members, to be appointed by the President, by and with the advice and consent of the Senate. Members of the Commission would be men chosen for their thorough knowledge of the problems of labor, industry, agriculture, and commerce. Through surveys and investigations, the Commission would analyze economic problems in the light of both group and national interests. For instance, the problems of labor would be studied not only as they affect the workingman but also as they affect the farmer, the merchant, the professional man, and the investor who puts his savings in business.

From these studies, the Commission would make recommendations to the President and the Congress as how best to balance production and consumption in industry and agriculture; to encourage capital; and to give to labor steady jobs at a saving wage.

In other words, what the Fraternal Order of Eagles is really saying in its Eagles' Ludlow bill is this: We can prevent depressions. But to do the job, we need two things. First, we must have cooperation among labor, capital, and Government. Secondly, we must have a Commission of unbiased men who will see to it that whatever Government, or business, or labor undertakes to do is for the good of all rather than for the good only of a group, or some special interest. Such an agency is the Federal Industrial Commission that the Eagles' Ludlow bill advocates.

Today, the Eagles' Ludlow bill is where it was 10 years ago—awaiting congressional action. There is, however, one important difference: Labor, capital, and Government—grown wiser through experience—are now convinced that unemployment can be solved only by such a plan as is set forth in the Eagles' Ludlow bill. Here are the proofs for this assertion.

On January 17, 1938, the National Association of Manufacturers advocated "the formation of a committee on a national policy of coordination and cooperation" in industry.

On April 29, 1938, President Roosevelt asked for a "bureau of industrial economics which would warn against the dangers of temporary overproduction and excessive inventories."

On June 16, 1938, the Temporary National Economic Committee was created. Its chairman is Senator JOSEPH C. O'MAHONEY, of Wyoming. The first recommendation made by the Committee was "the establishment of a Federal industrial-research bureau to make constant studies of economic trends." More recently—on February 6, 1940, to be exact—Senator O'MAHONEY announced that the Temporary National Economic Committee would hold an economic hearing "in which employers, employees, and the investing public may be represented."

On June 23, 1939, Congress appropriated $225,000 to be used by Secretary of Commerce Harry Hopkins "to hire business experts to advise him on industrial economics." The administration hopes that this group of experts will be the nucleus of a projected Bureau of Industrial Economics, which will become "a vast and vital storehouse of data to assist operations of American business and guide businessmen in planning their future courses."

On January 16, 1940, Senator ROBERT F. WAGNER, of New York, proposed in Congress the creation of a council representing "employers, employees, and the general public," which will study "our foremost domestic problem—full employment security."

On January 28, 1940, Donald R. Richberg, former N. R. A. Administrator and onetime member of the President's inner circle of advisers, wrote in the New York Times: "Our economic system is working badly because * * * we have not established the ways and means of cooperation between business managers, workers, property owners, and Government. * * * We should establish a national institution for statistical information, research, and long-range planning that would cooperate with the representatives of investors, managers, and workers in promoting a healthy expansion of business and in planning for the steady increase of production and employment."

On January 29, 1940, the 2,400 delegates to the golden jubilee convention of the United Mine Workers of America unanimously adopted a resolution urging the "White House to call a conference of labor, industry, agriculture, and Government to solve unemployment."

On January 31, 1940, the executive council of the American Federation of Labor, speaking for 4,000,000 American workingmen, made this formal declaration: "The American Federation of Labor has come to the conclusion that it would be suicidal for this Nation to continue groping in the dark about unemployment. * * * We recommend that efforts to reduce unemployment be integrated. To this end, we urge Congress to create a national advisory council on unemployment which would have representatives of Government, business, labor, farmers, and consumers. Such a council could bring about unity of purpose and unity of action on a constructive program."

Labor, business, and Government have been slow to recognize the soundness of the Eagles' plan for stabilizing employment; they have been too busy knifing one another in the back to see the wisdom of our proposal. Business tried retrenchment, and labor suffered. Labor tried the only weapon at its command—the strike—and business suffered. Government tried relief and work projects—at a huge cost to taxpayers. In the past 8 years the Federal Government has spent $66,000,000,000. That is the same amount of money that 28 administrations—from George Washington's to Woodrow Wilson's—spent in 131 years.

Yet 10,000,000 persons are still without jobs. Millions more have jobs, but are without job security. We still do not have stabilization of employment.

However, after 10 years of groping in the dark, the country is beginning to see the light. All sane thinking and planning for the curing of our sick economy are now patterned after the economic principles set forth in the Eagles' Ludlow bill.

The Farm Situation

EXTENSION OF REMARKS

OF

HON. JOHN H. BANKHEAD, 2D

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Saturday, March 9 (legislative day of Monday, March 4), 1940

ADDRESS BY THE PRESIDENT

Mr. BANKHEAD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered last night by the President of the United States to the farmers of the country assembled at the A. A. A. farm dinners.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

As I listened to the remarks of Henry Wallace and Jim Farley just now, and in my mind's eye saw the hundreds of groups of farmers and their friends meeting throughout the country, my memory went back to the scenes of other years.

I remembered the day in September 1932, when, at Topeka, Kans., under the very hot sun that beat down on the steps of the State Capitol, I talked with an audience of farmers about the farm problem. I gave them my pledge that, if I were called to serve in the White House, I would take the lead in action to reverse the process of agricultural decay which had been eating at our national foundations for many years.

And I have sought consistently and constantly to keep that pledge. Four days after I took office in 1933, while the banks of the country were still closed, and we were sternly wrestling with the question of how to get them open again, I called the conference of farmers and leaders of farm organizations to which Secretary Wallace has referred. Seven years ago tonight the call went out to farm leaders by wire and by telephone to convene here in Washington on March 10.

A FAR-REACHING DECISION

Well do I remember the historic conference at the White House that followed. In that grave emergency past disagreements were forgotten and all the farm groups quickly united on a new farm plan.

The adoption of that plan in its essential outlines by the Congress marked a far-reaching decision in our national life. We stopped asking agriculture to pay the bill for industry's high tariff. We decided that as a Nation we would no longer promote commerce and industry at the expense of agriculture. We decided that as a Nation we would abandon the policy of rural neglect.

That old policy of neglect had brought on 10 years of depression on our farms and had contributed greatly to depression in the cities. It had hastened the bank panic which in February and early March 1933 paralyzed business all over the United States.

In the 7 years that have elapsed since that time the national farm program has properly undergone a continual evolution. That first piece of legislation—the Agricultural Adjustment Act of 1933—was a long step forward, but it was not perfect. As the years went by, weather conditions changed, market conditions changed—yes, and even court conditions changed. So that provisions of the farm program have been correspondingly changed.

CALLS CONSERVATION A NECESSITY

We have learned from experience, and have gradually adapted the program more and more closely to the needs of the individual farmer, to the needs of the Nation, and to the needs of the land itself. We realized that we had reached our last frontier of new lands, and had no choice but to conserve and rebuild our existing soil.

All through these 7 years one fundamental feature has run like a thread through the successive adjustment and conservation and ever-normal-granary programs. That is the essential policy of localized control, with the program run by committees of farmers elected by farmers—and that goes for farmers regardless of what party they happen to be enrolled in.

Experience has amply borne out the wisdom of the safeguards with which those county associations and committees were surrounded. In 3,000 counties—practically all the counties of the Nation which are not occupied wholly by cities—they win respect and they deserve respect. None but those farmer committeemen themselves will ever know how they have sweated over details of the program, how they have sacrificed their own personal interests and their leisure as they spent thousands of hours and drove thousands of miles to make the program succeed.

STRESSES TRADE-PACT AIMS

Back of these committeemen, helping them in their work, giving support to the program, have been some of the great general farm organizations. Not only in the farm communities but right here in Washington these organizations have helped to shape and perfect the successive farm laws.

When we launched the national farm program 7 years ago we hoped that recovery in the United States would be accompanied by a great revival of our trade with other countries.

I wish I could tell you tonight that the whole world had been restored to prosperity and friendly commerce. I wish I could tell you that the markets which your fathers and grandfathers once enjoyed were again open to receive more of your wheat, your pork, your lard, your cotton, your tobacco, and your fruit.

I can tell you this—that we have done many things which have helped the situation. Through our reciprocal-trade program we have tried to spread our good-neighbor philosophy through many nations of the world. That program has brought results—results not only in better markets for our industrial goods but in better markets for our farm goods—results which are mathematically proved in terms of pounds and bushels and dollars and cents. If Congress consents, we shall continue that useful work.

BLOW TO COMMERCE FROM WAR

But in spite of all we have done to help preserve and restore peace in the world, the bitter truth is that the world is not at peace. As I speak to you tonight, guns are thundering on the battlefields of Europe and Asia. Ships that ply the seas are exposed to the hazards of bomb and torpedo.

In the midst of a world at war, we find that the foreign commerce we had managed to achieve is rudely disturbed. Some people may say, "What of that? Does not our domestic trade comprise 90 percent of all our business?" Yes; that is true for the Nation as a whole. But for some industries export trade accounts for considerably more than 10 percent of sales. In agriculture, for example, that is true of cotton, tobacco, apples, lard, wheat, and other products. And all agriculture is certain to be seriously affected if our export market disappears.

So it is more than ever important for farmers to have a government in Washington that is looking out for their interests—not just by uttering glittering generalities but by specific policies and concrete action. It is more than ever important to maintain a national farm program that can be adapted to meet whatever emergencies arise—whether they are emergencies of drought or of lost markets overseas. It is more than ever important to have a government in Washington that can act to protect the interests of our farmers as well as our businessmen when foreign-trade conditions are upset.

HAILS FARM PLAN AS DEMOCRATIC

In Europe economic failure has led in some lands to dictatorship. In America we are using the tools of democracy to make our economic system efficient, to preserve our freedom, and to keep away even from any talk of dictatorship. The national farm program is American democracy's response to agricultural distress. And any unprejudiced person who knows anything about the subject not only admits but proclaims the fact that our national farm program was democratically conceived and is being democratically conducted with the active help of our farmers themselves.

Furthermore, they proclaim that they know—that their Federal Government counts on farm aid and farm advice to improve that program through the process of actual experience as the need arises. That I call a truly democratic process of government.

These are troubled times we of this generation are living through. Some of us, I know, are tempted to give way to doubt and fear, even to despair.

But when we are beleaguered by thoughts like these, let us remember how the Nation has come through its dark hours of the past and take courage. Think of Adams and Jefferson and Madison as they guided the Nation through the confusion of the Napoleonic period, with ships rotting at the docks and millions of dollars of farm products stored on the wharves of the Atlantic seaboard. Think of Lincoln as year after war-torn year he sheltered in his great heart the truest aspirations of a country rent in twain.

We believe our beloved United States will come through all its trials and tribulations of the present. Ever since 1929 the people of the United States have demonstrated the stuff of which they are made.

ACCLAIMS RESPONSE TO PROGRAM

One of the reasons we know we shall win through is the national farm program, the inception of which you are commemorating tonight. The farm program is a splendid example of what 6,000,000 American families can do when they have the will and leadership to do it.

The farmers have had a long, hard struggle to get laws and programs which give them an opportunity to obtain economic and social justice, to make it possible for them to conserve the good earth which, next to our people and our tradition of freedom, is our greatest heritage.

I am happy in the thought that American farmers have gone part way along that road to economic and social justice, even though they have not reached the goal. I am happy in the thought that American farmers understand full well that other great groups, such as industrial and retail groups in the cities, great and small, such as the small-business men of the Nation, have not yet attained the goal of social and economic justice even though in these 7 years they have made undisputed progress toward it.

Many years ago I was told by men of experience in State and National affairs that American farmers could never agree on a program. I did not share that pessimistic belief. My friends and I went out to disprove it and the farmers of America showed clearly that we were right. To them goes the honor and the glory.

In the spirit of progressive action that has animated these American farm families all of us tonight can face with confidence whatever difficulties the future may hold.

Dedication of Tablet to President Theodore Roosevelt

EXTENSION OF REMARKS

OF

HON. DAVID I. WALSH

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Saturday, March 9 (legislative day of Monday, March 4), 1940

ADDRESS BY HON. DAVID I. WALSH, OF MASSACHUSETTS

Mr. WALSH. Mr. President, I ask unanimous consent to have inserted in the CONGRESSIONAL RECORD a speech delivered

by me on the occasion of the dedication of a tablet to the late President Theodore Roosevelt at Montauk, N. Y., on August 13, 1939, 3 weeks before the breaking out of the present war in Europe.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is with pleasure that I greet those of you who have come today to this hallowed spot to rededicate it, this time with formality and ceremony, where the heroes and patriots of the Spanish-American War enacted an immortal chapter in the history of our country. The presence of some of the men who served in that conflict under the leadership of that indomitable and gallant American, Theodore Roosevelt, must of necessity serve to inspire us all in a renewed appreciation of the worth and pricelessness of American citizenship, as well as to inspire us with a consciousness of the gratitude our Nation feels for their valor and self-sacrifice.

Montauk Point and Theodore Roosevelt are inevitably identified with the story of the Spanish War. It was here that the veterans of that war came, after it was over, wounded, diseased, emaciated, even dying, on their return from Cuba. It was here they were herded and isolated like lepers by a Government that feared contagion and disease might be carried by them from the foreign soil where their glorious exploits were recorded in the name of liberty. They were heroes, gallant soldiers—all. They had been sent overseas to fight the cause of their country. But they returned to this beautiful countryside, surrounded by the antiseptic sea, to be purified and purged of the diseases, which are some of the concomitants of war.

Here, too, came one of the great leaders of the Spanish War, Theodore Roosevelt, later a distinguished President who gave generously of his great talents in time of peace, as he had given so tirelessly of his great energies in time of war. He possessed many outstanding attributes. Strength of character, personal courage, a nimble and alert mentality, great capacity for leadership—all were combined in this rugged American. But there is one quality of heart and mind, one attribute of his basic character that seemed to stand out in clear relief from all his other attributes of greatness. It was his intense love of country. Call it patriotism, call it nationalism, call it isolationism, call it pro-Americanism, or by any other name. In essence, it embodied his pride and deep-burning love for the institutions of America; his determination to exalt the democratic system of government and protect it against every possible enemy.

We can well afford to emulate his spirit of pro-Americanism today. Throughout the world, old forms are crumbling; monarchy has almost entirely disappeared. Religion is under challenge. Ruthless leaders commanding the absolute powers of ancient kings have appeared on the horizon determined to throttle democracy, stifle religion, and destroy liberty. In many places today, fundamental rights of person and property, believed by us for over a century and a half to be vital and necessary ingredients in the free existence of the individual, have been arbitrarily stripped from the people, until millions are living in a condition infinitely more abject than the ancient feudal vassal.

In this clash of ideas and theories between totalitarian states, between Communists who would destroy God, human liberty, and the age-old validity of private property and fascism, which also seeks to expunge many elementary concepts of freedom and which would, like communism, merge every citizen immutably into an insensible superstate, the foundations of popular democratic government are threatened. Certain of the nations embracing these new and untested systems are not content with adopting them for themselves. They seek by fomenting poisonous propaganda to foist their ideas on others; to bring other governments and other peoples under the almost imperial sway of dictatorship of the mind, of the body, of the very life of the individual and of the entire economic system. In self-defense against the threatened inroads of territory, markets, and ideology, still other nations of the world, in some cases democratic in form and sympathy but often imperialistic in practice and tradition, have found it necessary for self-protection, indeed, for self-preservation, to build up unprecedented and costly arrays of military, naval, and aerial strength. This mad race in armament arising, in part, as a natural consequence of a world system of power diplomacy in which it has been the wise policy of this Government in the past to disavow and carefully avoid, still continues with unabated speed on a scale never before encompassed in the history of the world.

Where such ominous trends may lead our sorry world, already disillusioned by the tragic failure of the last war to save democracy either for the world or its people, already aware of the menacing revival of old jealousies, envies, and quests for territory and commercial domination, no prophet of our day can foretell. When another frightful holocaust of blood and treasure will be visited upon the helpless and the weak who live in constant dread of another war forced on them by ruthless, ambition-crazed leaders, no one can know.

Against this forbidding spectacle of world disorder, in what may well be the death struggle of European civilization as we have known it, of this clash of philosophies of conquest, doom, and godlessness, our country alone stands as a beacon light and immovable bulwark, as the hope and light of the democratic way of national and individual life.

It is fitting today, when our feelings and attentions are vividly directed to the sacrifices of our brave and gallant rough riders, when we shudder again at the trials and grief they underwent for the cause of their country, the wounds, the disease, the horrors of slaughter and bloodshed, that we should in acknowledging the Nation's debt of gratitude to them take firm resolution that these things shall not happen again.

Let us resolve here and now in the spirit of rededication to the ideals and principles under which we have lived over 160 years in a prosperity, happiness, and self-sufficiency unparalleled in world history that we shall never again by our voice and vote send clean, upright, ambitious American boys to bloodshed, disease, and slaughter to save one inch of foreign soil.

Let us resolve in the solemnity of this occasion which perpetuates on this spot the patriotism and gallantry of Theodore Roosevelt and the brave men of his command to adhere to his intense pro-American principles—pride and faith in our country, appreciation for the blessings of liberty and justice it has given its citizens, and a determined intention to defend it against its enemies both from without and within our borders.

If the time comes when America needs its sons to defend it against foreign aggression, let there be no doubt that we will rally to the cause of defense of our America. Let us be prepared for any eventuality which may arise out of present unsettled conditions in the world about us. No American has championed the policy of preparedness more than Theodore Roosevelt. Our Navy and armed forces must be ready to protect our homes and our people. But we are not willing as a nation to fight again on foreign soil, to spend our money, to waste our substance, to sacrifice the best and finest of our youth in the hopeless maze of jealousies and conflicts that beset other nations of the world.

Let us fully appreciate that our primary concern is for the solution of our own grave domestic problems which affect our fellow citizens in almost every strata of American life. Let us keep America for our descendants, inviolate alike in territorial integrity and political independence, a government of laws by men, free from the insidious influences of both dangerous radicalism and stagnating reaction; a nation where equal opportunity for all is protected, where free enterprise and ambition is encouraged, and where human liberty may find a permanent shelter. In that faith of our fathers, under the auspices of omnipotent Providence, democracy and freedom will live forever.

Agriculture

EXTENSION OF REMARKS

OF

HON. HARRY S. TRUMAN

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Saturday, March 9 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY EDWARD A. O'NEAL

Mr. TRUMAN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered today by Edward A. O'Neal, president of the American Farm Bureau Federation, over the National Broadcasting Company Farm and Home Hour.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Once more it becomes necessary for the American farmer to urge on the Nation and Congress the necessity of fulfilling its promises to him.

We are told that the Senate of the United States will start its consideration of the agricultural appropriation bill on Monday. The committee agreed yesterday to include $212,000,000 for parity payments and eighty-five million additional for section 32. This is not enough to raise agriculture to parity.

We are greatly disappointed that the committee is willing to go only one-third of the way. It has provided only one-third of the additional funds needed.

This will be especially hard on the producers of surplus crops that are considerably below parity, particularly corn and cotton. In the 5-year period 1931–35 the average cash income of the 13,000,000 farm people in the 10 principal cotton-producing States was only $95 per year. Based on December 15 prices, and allowing for conservation payments, we need $242,000,000 additional to bring parity to the cotton growers, and two hundred and eighteen million additional to bring parity to the corn growers. I'm hoping the Senate will go further and provide the full amount of funds that are needed.

This is a critical time for farmers. They now have the most comprehensive and effective program ever enacted for agriculture. But the success of this program depends upon adequate funds to finance it. Farmers are now looking to Congress for the funds needed to make their program fully successful. The success of

this program on which the welfare of the Nation depends hangs in the balance.

Last week the board of directors of the American Farm Bureau Federation met here in Washington. The members of this board represent 39 States and nearly 2,000,000 farm people. They expressed their views in positive and specific terms.

They said, "We reaffirm our uncompromising support of the broad principles of the Agricultural Adjustment Act of 1938." They said that the methods provided in this legislation are sound and that if sufficient funds are appropriated the parity price and parity income objectives of this legislation can be achieved. They pointed further to the fact that the national economic welfare is dependent upon restoring agriculture to parity, and they insisted that appropriations sufficient to make the law fully effective be made. They pointed out that careful study of the facts shows that $607,000,000 will be required to enable the farm program to achieve full parity for the basic commodities. They also insisted upon an appropriation of an additional $100,000,000 for the removal of farm surpluses. This one hundred million, together with the $100,000,000 estimated revenue from 30 percent of customs receipts, as authorized in section 32 of the A. A. A., would make available a total sum of $200,000,000 to dispose of surpluses, at home and abroad, of other farm commodities, especially dairy products, fruits, and vegetables, to bring them to parity. The cost of purchase and distribution of surpluses to low-income families should be paid out of relief funds, and not out of funds appropriated for agriculture. The welfare of producers of dairy products and fruit and vegetables will be greatly affected by the decision of Congress with respect to an adequate appropriation to right the wrong of surpluses on the farm and hunger in the cities.

Responsible leaders of Government have asked Farm Bureau leaders to suggest possible sources from which the needed revenue can be obtained. It is our belief that, if properly adjusted and directed to basic needs, an appropriation of $707,000,000 can be provided within the present Federal Budget recommendations and within the statutory debt limitations.

We believe that the need for larger appropriations for agriculture is so urgent and so manifestly in the public interest as to justify reducing the size of some other appropriations in order to provide funds for agriculture. Without intending to single out any particular Budget item but using it as the most obvious example, we suggest that from the Budget amount for national defense could be taken most, if not all, the requirements of agriculture.

If Congress shall find it impossible to make readjustments within the suggested items in the Budget and within the statutory debt limitation, the American Farm Bureau Federation proposes that the Congress consider the adoption of an excise tax on manufacturers' sales, and that section 303, which authorizes parity payments, be amended to cover the revenue from such tax into a fund so as to provide a permanent source of revenue for parity payments as they may be required—in the same way that 30 percent of import revenues are earmarked for use under section 32 of the A. A. A. Such a tax would be a measure of tariff equalization.

Because farmers have had to come to Congress every year for the past several years and ask for appropriations for parity payments, some people believe that the national farm program is just a temporary measure.

It is not temporary; it is the end toward which American agriculture has been striving for nearly 20 years. It is working effectively to the extent that funds have been provided for it.

For a program so firmly established in law and policy so generally agreed to it is ridiculous that an an annual fight must be made to obtain the money required to carry out the program.

Why must this parade go on year after year? What other great industry in this country is called upon annually to justify to Congress the appropriation of the funds which the Congress itself has declared, as a matter of policy, shall be forthcoming to it?

There is none. Certainly the manufacturing industry is not required each year to justify its need for the protective tariff which Congress had declared shall be the policy of this country. The tariff program for industry is a permanent policy. We are not called upon each year to enact enabling legislation to carry out that program. Neither is labor called upon each year to enact legislation to protect the wages and hours of labor. The objective of obtaining parity prices and parity income for American farmers as set forth in the Agricultural Adjustment Act is no less the declared policy of this country. It, too, is a permanent program.

It is time the farmers of the United States, no less than the Congress, come to see that the agricultural adjustment program is not some temporary stopgap enacted to meet an emergency, but that it is permanent. It has developed over a period of at least 20 years on principles that are fundamentally sound. If the $607,000,000 are made available, which careful study indicates will have to be appropriated if the provisions of the 1938 act are to be fully effective, we can achieve the goal of parity prices and parity of income.

It is our firm conviction that unless the parity position promised to agriculture in this act is more nearly achieved than it has been in the past, the economic well-being of the Nation as a whole will continue to suffer.

Some people have assumed that the war would solve agriculture's problems, and that wartime prices and wartime demand would relieve Congress of its responsibility for providing equality for agriculture.

What are the facts? The initial speculative boom has already been deflated. Agriculture as a whole has profited but little from the war; to some farm groups it has been an economic disaster. The warring nations have large supplies of farm products, and the normal export markets of large groups of producers have been greatly restricted as a result of the war.

Compared to the money proposed for Army and Navy appropriations for national defense, the amount asked by agriculture is modest indeed. I say our first line of defense is an economically sound agriculture, which can do its full part in bringing complete economic recovery for the Nation. Yet we are told that despite this situation we must economize in appropriations for restoring the farmers to a just parity in order that we, too, may pour additional hundreds of millions into building machines of death. We will build beyond parity in battleships and airplanes. Yet we hesitate when the suggestion is made that we spend a sum not half so large as that paid for national defense in order to insure something like an adequate standard of living for the producers in our basic industry.

The fact that industry is benefiting while agriculture is suffering as a result of the war situation increases the disadvantage of agriculture. This is an important added reason for adequate appropriations for agriculture.

Furthermore, there is no immediate prospect for improved foreign demand for farm products. World supplies in several important farm commodities are at record levels this year. The largest world carry-over of wheat in history is in prospect for 1940. The present strength of wheat prices in this country is due not to the war but to drought and the prospects of a short crop. The present world supply of American cotton is 25,000,000 bales. One-third of our tobacco export market has been cut off as a result of the war. Farmers are doing their part in liquidating excessive surpluses and yet maintaining adequate reserves against scarcity. The Government should do its part in safeguarding farm prices and farm income.

Some people criticize these appropriations as subsidies to agriculture. The truth is, farmers have been subsidizing the public for years. Secretary Wallace recently stated that "had farm prices been in line with other prices during the last 10 years farmers would have had more than $20,000,000,000 additional cash income, an average of more than $2,000,000,000 additional cash income per year. This indicates the extent to which farmers have subsidized the rest of the public since 1929."

That ends the quotation.

Senator CAPPER in a recent statement called attention to this $2,000,000,000 annual tax on American agriculture to subsidize the public, and ably quoted what the philosopher Benjamin Franklin wrote from England 200 years ago about the situation of farmers there. Franklin said:

"You say poor laborers cannot afford to buy bread at high price unless they had higher wages. Possibly. But shall we farmers afford our laborers higher wages if you will not allow us to get, when we might get it, a higher price for our corn?

"But it seems we farmers must take so much less that the poor may have it so much cheaper.

"This operates, then, as a tax for the maintenance of the poor. A very good thing, you will say. But, I ask, why a partial tax? Why laid on us farmers only? If it be a good thing, Messieurs the Public, take your share of it by indemnifying us a little out of your Public Treasury."

I'm afraid this philosophy still exists among a large number of our people. Some city people seem to take the attitude that farmers have an obligation to feed and clothe the Nation regardless of price. Is there any other group of producers supplying the needs of consumers regardless of price? Is any other group of producers expected to supply the needs of consumers regardless of price?

Right now large groups of farmers are selling products at a loss. Farmers in general, through the farm program, are carrying huge reserves of essential commodities that protect the consumer against the danger of scarcity prices in case of crop failure. While farmers are willing to do their part in providing this protection for consumers, they realize it is essential that this feature of the program be permanent so that these reserves will not depress market prices. They realize that both producers and consumers benefit from the stability provided by these reserves. But they do feel that they should not be penalized for providing this protection for consumers. In order to protect the ever-normal granary for the benefit of consumers and to protect prices for producers, funds must be provided on a permanent basis to continue the program effectively so that farmers will not be penalized.

Moreover, farmers are now engaged in the greatest conservation efforts the Nation has ever seen. This is work which farmers are doing for everyone. Whatever the cost, the Nation has got to conserve its soil. Farmers will have to do it if it is done at all, and farmers can't do it unless they have adequate incomes.

The enemies of our national farm program are fighting these appropriations in the name of economy. In some instances the plea of economy is just a smoke screen for the real purpose, which is to cripple and destroy this program. There are some, however, who are genuinely interested in economy. Let me assure all who are interested in real economy that the most effective way to balance the National Budget is to raise the national income by restoring American agriculture to parity of purchasing power with industry and labor.

Think what full equality for agriculture during the last 10 years could have meant to national welfare. In the last 7 years cash farm income has risen from four and one-half billions to eight and one-half billions, and national income during the same period has risen from forty billions to sixty-eight billions.

I placed in the record of the hearings of the Senate and House Appropriations Committees estimates submitted by President Roosevelt in his 1940 Budget message to Congress, which showed that an $85,000,000,000 national income would yield about eight and one-half billion dollars in Federal revenue, or enough to balance the Federal Budget without increased taxes.

There is much evidence to demonstrate that raising farm income to full parity would result in increasing the national income from $70,000,000,000 to $85,000,000,000, and that this increased purchasing power would provide enough added jobs for workers so that relief funds could be reduced by at least $800,000,000 annually.

During the last 7 years, payments to farmers have amounted to a little over $3,000,000,000. These payments have been a major factor in making possible an increase in our farm income during this period of about $20,000,000,000. The increase in farm income, in turn, has helped to increase national income during this period by a total of $130,000,000,000. Every dollar of increased farm income has been accompanied by an increase of more than six times as much in the national income.

Agriculture is one of the three pillars that support our whole economic structure. Industry and labor are the other two. When these three pillars all reach the proper height on the parity scale the economic structure which they support is in good balance. When agriculture is down the economic structure is out of balance and fails to function as it should. When labor demands more than its share, and industry exacts a greater share, the economic structure is thrown out of balance, ultimately damaging all three groups and the welfare of the whole Nation.

Right now the prime need is for increasing the height of the agricultural income pillar. We know it will increase national income and bring our whole economic structure into better balance.

Right now we hear prominent candidates talking and promising parity for agriculture. It takes more than mere promises to get parity. The immediate question is, Will they and their party associates in Congress vote now for full parity for agriculture? Many of their associates belong to the economy bloc in Congress, and they have shown recently they were not willing to give the farmers full parity. They talk economy and Budget balancing, but they do it at the expense of the farmer. They can't be for this kind of economy and for full parity to agriculture at the same time.

For more than a decade, beginning in the early 1920's under Republican administrations, farmers worked on a nonpartisan basis for a program of equality for agriculture, but farmers were unable to get this program carried out in spite of a sympathetic Congress. Under the succeeding Democratic administration for the next 7 years, in which we have made great progress, farmers at last obtained the adoption of a program which is capable of bringing agriculture to full parity, but Congress has failed to provide adequate funds to make the program completely effective.

Farmers are now looking to Congress for the needed funds to make their program fully successful and they are going to hold Members of Congress accountable for their decisions in this vital action. The time has come to vote for parity and not just talk about it.

Those who say they are for parity to the farmer now have the chance to prove their sincerity by working for and voting for parity—not 75 percent of parity or some other fraction of parity. All farmers ask is that their prices be brought into balance with industrial prices and industrial wages.

In the fight for the parity payments in the past 2 years, you will recall how narrow was the victory in the House. The House Appropriations Committee this year refused parity payments for farmers. The agricultural appropriations bill was passed without additional funds for parity or for surplus removal. If the Senate votes for the additional appropriations we will still have a hard fight in the House when it goes back for final vote. The enemy is again strongly entrenched and we have a real fight on our hands. Congress, in pledging farm parity, made a sacred contract with millions of farmers. It is up to you to tell your Members of Congress that you are holding them to their pledge.

Political Activities of Federal Employees

EXTENSION OF REMARKS

OF

HON. CARL A. HATCH

OF NEW MEXICO

IN THE SENATE OF THE UNITED STATES

Saturday, March 9 (legislative day of Monday, March 4), 1940

ARTICLE FROM THE WASHINGTON DAILY NEWS OF MARCH 8, 1940

Mr. HATCH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a newspaper account from the Washington Daily News of Friday, March 8, 1940, showing the recent ruling of the Attorney General of the United States on the act passed by the last session of the Congress, relating to political activities of Federal employees.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of March 8, 1940]

HATCH ACT RESIGNATIONS ARE "FINAL," SAYS JACKSON

(By Fred W. Perkins)

Attorney General Jackson is as fully disposed to strict enforcement of the Hatch Act as was his predecessor, Justice Murphy.

He has decided, it was learned today, that when Federal employees resign to engage in political activity, such as running for elective office, they cannot get their old jobs back again.

It is understood the Attorney General's position is that the attempted practice of resigning "temporarily" to engage in purely political activity is an attempted evasion of the Hatch Act and if permitted would destroy the effectiveness of that statute.

STARTED BY MURPHY

Thus Mr. Jackson follows a policy stated by Mr. Murphy—that "Hatch law resignations are final." When a Federal employee quits to go into active politics he "stays quit." He might be reappointed eventually to his former position or some other, but only after the lapse of a period long enough to cut connections between the two tenures of public office.

This is one of the vital problems put up to the new Attorney General by Democratic politicians in an effort to soften the rigorous rulings of Mr. Murphy. It is understood that Mr. Jackson refuses to reverse the Murphy policy, and that he has President Roosevelt's backing.

Among the cases that have arisen in the "temporary resignation" class are two from the United States district attorney's office in Pittsburgh. Last September District Attorney Charles F. Uhl was forced under the Hatch Act to resign, because he was running for a judgeship, and Assistant District Attorney John D. Ray gave up his position so that he might run for a State office. Both were defeated.

Bethlehem Steel Co. 1939 Income

EXTENSION OF REMARKS

OF

HON. BENNETT CHAMP CLARK

OF MISSOURI

IN THE SENATE OF THE UNITED STATES

Saturday, March 9 (legislative day of Monday, March 4), 1940

ARTICLE FROM THE ST. LOUIS STAR-TIMES

Mr. CLARK of Missouri. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a United Press dispatch from the St. Louis Star-Times with reference to the annual statement of the Bethlehem Steel Co., showing that in 1939 it had the best year since 1929.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the St. Louis (Mo.) Star-Times]

BETHLEHEM STEEL 1939 INCOME EQUAL TO $5.75 PER SHARE—COMPARES WITH DEFICIT OF 70 CENTS ON COMMON STOCK IN 1938, PRESIDENT'S REPORT SHOWS

BETHLEHEM, PA., March 6.—Eugene G. Grace, president of Bethlehem Steel Corporation, today issued formal reports to stockholders and to employees on the company's second best year since 1929 and looked "to the future with confidence."

The report on 1939 operations to employees, now a regular part of the corporation's routine, was sent to 110,000 workers, a record high total. It showed a gain of 25,000 employees for the year 1939 and disclosed that the company paid a record high average wage of 91.6 cents per hour.

Antilynching Legislation

EXTENSION OF REMARKS

OF

HON. TOM CONNALLY

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Saturday, March 9 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE GREENVILLE (S. C.) NEWS

Mr. CONNALLY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial

from the Greenville (S. C.) News entitled "Weak Lynch Bill Argument."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Greenville (S. C.) News]

WEAK LYNCH-BILL ARGUMENT

Sponsors of the Federal antilynching bill in the United States were not fortunate in the two Negro witnesses who appeared before the Judiciary Committee Tuesday in behalf of the measure.

Of the Negro Communist and associate editor of the Communist paper, the Daily Worker, Benjamin J. Davis, who appears to have sought an opportunity to be heard chiefly for the purpose of making insulting remarks about the Vice President and various Members of Congress, little needs to be said. There will be general agreement with Senator VAN NUYS that his argument for the bill was more of a liability than an asset.

Of a different nature entirely were the arguments of John P. Davis, representative of the National Negro Congress, who submitted a prepared statement designed to present a plausible claim that the lynch spirit is rampant and unchecked in South Carolina in the activities of the Ku Klux Klan.

When the committee learns, as it no doubt will, that this statement leaves the absolutely false impression that nothing whatever has been done to curb and punish violations of the law in this State by masked and hooded bands, it will realize that its witness has been very much less than fair in the presentation of his case.

All South Carolinians know that State and local officers strongly backed by emphatic expressions of public opinion in all parts of the State, have acted vigorously to apprehend persons guilty of assaults upon the persons of citizens by hooded bands—whether or not they were members of the Klan is not a matter of exact public knowledge, nor does it matter. Some arrests have been made in connection with a case of that sort at Anderson, and thoroughgoing investigations have been put under way by State law-enforcement agencies acting under the direct instructions of the Governor with the purpose of bringing to justice all who were directly concerned or indirectly instigated such acts of lawlessness in the State. Among those taken in custody by officers in this connection was a high official of the Klan, and further developments in the case are expected.

It is a matter of common knowledge in South Carolina that since the arousal of a strongly condemnatory public opinion over such acts of lawlessness and the initiation of vigorous law-enforcement steps, no further such acts have come to public knowledge. Knowing these things, and realizing that both the officers of the State and the citizenship are determined to see that law is enforced in an orderly manner, South Carolinians have reason to resent the false implication that the Klan or any other organization is being permitted to engage in activities of "lynch spirit" characteristics with no effective move to check them.

Amendments to the National Labor Relations Act

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

Mr. HOFFMAN. Mr. Speaker, any law, to justify its existence, must operate equitably upon all those who fall within its provisions.

The N. L. R. A. was put upon the books, so it was declared, to lessen the causes of industrial disputes affecting interstate and foreign commerce. The principal instrumentality by which this was to be accomplished was collective bargaining.

Because ordinarily the employer had far greater economic power than did the employee and because the employer might, and sometimes did, arbitrarily discharge an employee who had for years followed one line of employment, and the power of discharge placed the future economic welfare of the employee at the mercy of the employer, they did not stand on an equal footing. It was therefore found necessary that some Federal law be placed upon the books which would prevent arbitrary discharge of employees.

The right to bargain collectively had always existed, but it was said could not be commonly exercised because of the refusal of employers to bargain with representatives of their employees.

If the theory of the law had been followed, the result would have been salutary.

While much of the criticism of the present act may be justly charged to the manner in which it has been administered, the law itself is unfair in several particulars.

The Smith committee was first given $50,000 and subsequently another $50,000 to carry on investigations to determine whether the law had functioned properly, and, if not, what should be done to remedy the defects. That committee has made a thorough investigation. In my judgment it has functioned judicially and fairly. It has recommended certain amendments which will do much to make the law better.

Last year, reading the decisions of the Board and of the courts, I reached the conclusion that, while part of the injustice growing out of the operation of the law was due to the construction placed upon it by the Board and by the courts and by the biased action of the Board, there were certain fundamental defects in the law itself which must be corrected before industrial peace would be on its way.

To make these corrections, on March 13, 1939, H. R. 4990 was introduced. There is no claim that this bill is perfect, or anywhere near perfect, for I had neither $50,000 nor $50 to spend in research. The claim is made, however, that sound common sense, past experience, and a reading of the court decisions will show that the changes suggested by H. R. 4990 are basically just.

To show the original act, the amendments proposed by the Smith committee, and the changes proposed by H. R. 4990, I have caused to be printed the law and the two bills in parallel columns.

At this time an attempt will not be made to compare the act and H. R. 4990 and H. R. 8813. Suffice it here to call attention to one definition. As defined in the National Labor Relations Act, a "labor dispute" has been held to include—and please read this carefully—the refusal of an employer to hire a man seeking a job. As proof of this you need but read *New Negro Alliance* v. *Grocery Co.* (303 U. S. 552), decided on March 28, 1938.

A labor dispute has been construed to mean a dispute between a union and employees who do not belong to that union but who the union insists shall join. As proof of this, read the case of *Fur Workers' Union* v. *H. Zirkin & Sons, Inc.*, decided March 27, 1939, and reported in One Hundred and Fifth Federal Statutes, second edition, page 1, affirmed by the United States Supreme Court on December 11, 1939.

True, this particular decision arose under the Norris-LaGuardia Act, but the same definition has been adopted by the Board and the Courts in cases arising under the N. L. R. B. But two are cited: *Lauf v. Shinner* (303 U. S. 323), *Senn* v. *Tile Layers Protective Union* (301 U. S. 468).

As a local illustration of this last contention, we all well recall that here in Washington A. F. of L. pickets marched in front of a store being rebuilt at 703 H Street NE., because work was being done by members of a C. I. O. union. In retaliation the C. I. O. picketed an A. F. of L. job at 713 H Street.

Another case happening this year here in Washington is where members of one union did a paint job at a store on F Street. Members of another union picketed, and, in retaliation, the first union picketed Jelleff's, where a construction job was being carried on by the second union—an absurd, intolerable situation in which the public and the innocent employer were made to suffer.

Within the shadow of the Capitol is a third illustration, where pickets, who never worked in the cafeteria, conducted in the Methodist Building by a woman who is endeavoring to make a living, are picketing her place of business at a time when not one single employee is on strike or has pending any demand as to wages, hours, or working conditions.

The following is most respectfully and humbly submitted for the convenience of those Members of the House who care to make a comparative study of three of the propositions which will come before the House or the House Committee on Labor, for consideration.

The following statement will show the NLRB, the amendments proposed to that act by H. R. 4990, introduced on March 13, 1939, and the amendments proposed by H. R. 8813, introduced on March 7, 1940:

National Labor Relations Act (Public, No. 198, 74th Congress)

An act to diminish the causes of labor disputes burdening or obstructing interstate and foreign commerce, to create a National Labor Relations Board, and for other purposes.

Be it enacted etc.

FINDINGS AND POLICY

SECTION 1. The denial by employers of the right of employees to organize and the refusal by employers to accept the procedure of collective bargaining lead to strikes and other forms of industrial strife or unrest, which have the intent or the necessary effect of burdening or obstructing commerce by (a) impairing the efficiency, safety, or operation of the instrumentalities of commerce; (b) occurring in the current of commerce; (c) materially affecting, restraining, or controlling the flow of raw materials or manufactured or processed goods from or into the channels of commerce, or the prices of such materials or goods in commerce; or (d) causing diminution of employment and wages in such volume as substantially to impair or disrupt the market for goods flowing from or into the channels of commerce.

The inequality of bargaining power between employees who do not possess full freedom of association or actual liberty of contract, and employers who are organized in the corporate or other forms of ownership association substantially burdens and affects the flow of commerce, and tends to aggravate recurrent business depressions, by depressing wage rates and the purchasing power of wage earners in industry and by preventing the stabilization of competitive wage rates and working conditions within and between industries.

Experience has proved that protection by law of the right of employees to organize and bargain collectively safeguards commerce from injury, impairment, or interruption, and promotes the flow of commerce by removing certain recognized sources of industrial strife and unrest, by encouraging practices fundamental to the friendly adjustment of industrial disputes arising out of differences as to wages, hours, or other working conditions, and by restoring equality of bargaining power between employers and employees.

It is hereby declared to be the policy of the United States to eliminate the causes of certain substantial obstructions to the free flow of commerce and to mitigate and eliminate these obstructions when they have occurred by encouraging the practice and procedure of collective bargaining and by protecting the exercise by workers of full freedom of association, self-organization, and designation of representatives of their own choosing, for the purpose of negotiating the terms and conditions of their employment or other mutual aid or protection.

DEFINITIONS

SEC. 2. When used in this Act—

(1) The term "person" includes one or more individuals, partnerships, associations, corporations, legal representatives, trustees, trustees in bankruptcy, or receivers.

(2) The term "employer" includes any person acting in the interest of an employer, directly or indirectly, but shall not include the United States, or any State or political subdivision thereof, or any person subject to the Railway Labor Act, as amended from time to time, or any labor organization (other than when acting as an employer), or anyone acting in the capacity of officer or agent of such labor organization.

H. R. 4990 (introduced by Mr. Hoffman on March 13, 1939)

A bill to repeal the National Labor Relations Act and to diminish the causes of labor disputes burdening or obstructing interstate and foreign commerce, to create a National Labor Relations Board, and for other purposes.

Be it enacted etc.

FINDINGS AND POLICY

SECTION 1. It is hereby declared to be the policy of the United States to eliminate the causes of certain substantial obstructions to the free flow of commerce and to mitigate and eliminate these obstructions when they have occurred by furthering the development of friendly and mutually fair labor relations, by protecting the practice and procedure of collective bargaining and by protecting the exercise by all workers of full freedom of association, self-organization, and designation of representatives of their own choosing, for the purpose of negotiating the terms and conditions of their employment or other mutual aid or protection.

DEFINITIONS

SEC. 2. When used in this Act—

(1) The term "person" includes one or more individuals, partnerships, associations, corporations, legal representatives, trustees, trustees in bankruptcy or receivers.

(2) The term "employer" includes any person acting in the interest of an employer, directly or indirectly, but shall not include the United States, or any State or political subdivision thereof, or any person subject to the Railway Labor Act, as amended from time to time, or any labor organization (other than when acting as employer), or anyone acting in the capacity of officer or agent of such labor organization.

H. R. 8813 (introduced by Mr. Smith of Virginia on March 7, 1940)

A bill to amend the National Labor Relations Act.

Be it enacted etc., That this Act may be cited as the National Labor Relations Act Amendments of 1940.

SEC. 2. Section 1 of the National Labor Relations Act (including the heading thereof) is amended to read as follows: (See Sec. 16 of N. L. R. A., Sec. 17 of H. R. 4990)

"FINDINGS AND POLICY

"SECTION 1. The failure to bargain collectively between employers and employees leads to strikes and other forms of industrial strife or unrest, which have the necessary effect of burdening or obstructing commerce by (a) impairing the efficiency, safety, or operation of the instrumentalities of commerce; (b) occurring in the current of commerce; (c) materially affecting, restraining, or controlling the flow of raw materials or manufactured or processed goods from or into the channels of commerce, or the prices of such materials or goods in commerce; or (d) causing diminution of employment and wages in such volume as substantially to impair or disrupt the market for goods flowing from or into the channels of commerce.

"The inequality of bargaining power between employees who do not possess full freedom of association or actual liberty of contract, and employers who are organized in the corporate or other forms of ownership association substantially burdens and affects the flow of commerce, and tends to aggravate recurrent business depressions, by depressing wage rates and the purchasing power of wage earners in industry and by preventing the stabilization of competitive wage rates and working conditions within and between industries.

"Experience has proved that protection by law of the right of employees to organize and bargain collectively safeguards commerce from injury, impairment, or interruption, and promotes the flow of commerce by removing certain recognized sources of industrial strife and unrest, by encouraging practices fundamental to the friendly adjustment of industrial disputes arising out of differences as to wages, hours, or other working conditions, and by restoring equality of bargaining power between employers and employees.

"It is hereby declared to be the policy of the United States to eliminate the causes of certain substantial obstructions to the free flow of commerce and to mitigate and eliminate these obstructions when they have occurred by protecting the exercise by workers of full freedom of association, self-organization, and the designation of representatives of their own choosing, for the purpose of negotiating the terms and conditions of their employment or other mutual aid or protection."

National Labor Relations Act (Public, No. 198, 74th Congress)—Continued

(3) The term "employee" shall include any employee, and shall not be limited to the employees of a particular employer, unless the act explicitly states otherwise, and shall include any individual whose work has ceased as a consequence of, or in connection with, any current labor dispute or because of any unfair labor practice, and who has not obtained any other regular and substantially equivalent employment, but shall not include any individual employed as an agricultural laborer, or in the domestic service of any family or person at his home, or any individual employed by his parent or spouse.

(4) The term "representatives" includes any individual or labor organization.

(5) The term "labor organization" means any organization of any kind, or any agency or employee representation committee or plan, in which employees participate and which exists for the purpose, in whole or in part, of dealing with employers concerning grievances, labor disputes, wages, rates of pay, hours of employment, or conditions of work.

(6) The term "commerce" means trade, traffic, commerce, transportation, or communication among the several States, or between the District of Columbia or any Territory of the United States and any State or other Territory, or between any foreign country and any State, Territory, or the District of Columbia, or within the District of Columbia or any Territory, or between

H. R. 4990 (introduced by Mr. Hoffman on March 13, 1939)—Continued

(3) The term "employee" shall include any employee, and shall not be limited to the employees of a particular employer, unless the act explicitly states otherwise, and shall include any individual whose work has ceased as a consequence of any employer's unfair labor practice, as defined in section 8 hereof, and who has not obtained any other regular and substantially equivalent employment, but shall not include any individual employed as an agricultural laborer, or in the domestic service of any family or person at his home, or any individual employed by his parent or spouse, or any individual who has been discharged for any cause other than lawful union activities or whose work has ceased in violation of a valid contract, or laid off for lack of work, inefficiency, misconduct, or other good cause.

(3) The term "any individual employed as an agricultural laborer" shall include any person engaged as an employee in farming in all its branches and, among other things, includes the cultivation and tillage of the soil, dairying, the production, cultivation, growing, and harvesting of any agricultural or horticultural commodities (including commodities defined as agricultural commodities in section 15 (g) of the Agricultural Marketing Act, as amended), the raising of livestock, bees, fur-bearing animals, or poultry, eggs, baby chicks, and poults and any practices (including any forestry or lumbering operations when it is performed in connection with bona fide farming) perform by or for a farmer or on a farm as an incident to or in connection with such farming operations, including preparation for market, delivery to storage, or to market or to carriers for transportation to market; and shall also include employees of establishments engaged in ginning or compressing of cotton, or canning or freezing during the harvesting season from their raw or natural state, or pasteurizing, or drying, or preparing in their raw or natural state, of any agricultural or horticultural commodities for market, or making cheese or butter or any other dairy products, and such packing or handling or storing as is used in connection therewith or is incidental thereto, when such establishment is located (1) at a point where the major commodity used in such establishment is normally produced in commercial quantities within a radius of fifty miles thereof; and (2) within the general territory in any region of the United States where the farming district or districts are located from which such commodity is produced and within or in close proximity to any such farming district; or at such place in the general territory in proximity to such farming district, where such commodity is produced (but outside of any metropolitan industrial city) as is necessary to obtain reasonable, available, and adequate transportation, water power, or other required operating facilities; and (3) such establishment is engaged in the above operations on products produced from any farming district within the same general territory.

(4) The term "representatives" includes any individual or labor organization.

(5) The term "labor organization" means any organization of any kind, or any agency or employee representation committee or plan, in which employees participate and which exists for the purpose, in whole or in part, of dealing with employers concerning grievances, labor disputes, wages, rates of pay, hours of employment, or conditions of work.

(6) The term "commerce" means trade, traffic, commerce, transportation, or communication among the several States, or between the District of Columbia or any Territory of the United States and any State or other Territory, or between any foreign country and any State, Territory, or the District of Columbia or within the District of Columbia or any Territory or between

H. R. 8813 (introduced by Mr. Smith of Virginia on March 7, 1940)—Continued

SEC. 3. (a) Section 2 (3) of the National Labor Relations Act is amended to read as follows:

"(3) The term 'employee' shall include any employee and shall not be limited to the employees of a particular employer, unless the act explicitly states otherwise, and shall include any individual whose work has ceased as a consequence of, or in connection with, any current labor dispute or because of any unfair labor practice, and who has not obtained any other regular and substantially equivalent employment, but shall not include any individual employed as an agricultural laborer, or in the domestic service of any family or person at his home, or any individual employed by his parent or spouse, and for the purposes of the provisions of section 10 (c) relating to reinstatement by any employer, does not include any employee who a preponderance of the testimony taken shows has willfully engaged in violence or unlawful destruction or seizure of property in connection with any current labor dispute or unfair labor practice involving such employer, or in connection with any organizational activities of a labor organization among employees of such employer. For the purposes of this subsection, 'agricultural laborer' means any person employed in performing 'agricultural labor' as that term is defined in section 1426 (h) of the Internal Revenue Code, as amended."

National Labor Relations Act (Public, No. 198, 74th Congress)—Continued

points in the same State but through any other State or any Territory or the District of Columbia or any foreign country.

(7) The term "affecting commerce" means in commerce, or burdening or obstructing commerce or the free flow of commerce, or having led or tending to lead to a labor dispute burdening or obstructing commerce or the free flow of commerce.

(8) The term "unfair labor practice" means any unfair labor practice listed in section 8.

(9) The term "labor dispute" includes any controversy concerning terms, tenure, or conditions of employment, or concerning the association or representation of persons in negotiating, fixing, maintaining, changing, or seeking to arrange terms or conditions of employment, regardless of whether the disputants stand in the proximate relation of employer and employee.

(10) The term "National Labor Relations Board" means the National Labor Relations Board created by section 3 of this act.

(11) The term "old Board" means the National Labor Relations Board established by Executive Order Numbered 6763 of the President on June 29, 1934, pursuant to Public Resolution Numbered 44, approved June 19, 1934 (48 Stat. 1183), and reestablished and continued by Executive Order Numbered 7074 of the President of June 15, 1935, pursuant to Title I of the National Industrial Recovery Act (48 Stat. 195) as amended and continued by Senate Joint Resolution 133 approved June 14, 1935.

NATIONAL LABOR RELATIONS BOARD

SEC. 3 (a) There is hereby created a Board, to be known as the "National Labor Relations Board" (hereinafter referred to as the "Board"), which shall be composed of three members, who shall be appointed by the President, by and with the advice and consent of the Senate. One of the original members shall be appointed for a term of 1 year, one for a term of 3 years, and one for a term of 5 years, but their successors shall be appointed for terms of 5 years each, except that any individual chosen to fill a vacancy shall be appointed only for the un-

H. R. 4990 (introduced by Mr. Hoffman on March 13, 1939)—Continued

points in the same State but through any other State or any Territory or the District of Columbia or any foreign country.

This act shall not apply to any person whose sales in "commerce" (as defined herein) during the calendar year preceding the date of filing a complaint or petition relating to that person were less than 50 per centum of that person's total sales.

(7) The term "affecting commerce" means in commerce, or substantially burdening or obstructing commerce or the free flow of commerce, or having led or tending to lead to a labor dispute substantially burdening or obstructing commerce or the free flow of commerce.

(8) The term "unfair labor practice" means any unfair labor practice listed in section 8.

(9) The term "labor dispute" includes any controversy concerning terms, tenure, or conditions of employment, or concerning the association or representation of persons in negotiating, fixing, maintaining, changing, or seeking to arrange terms or conditions of employment, provided the disputants stand in the proximate relation of employer and employee.

(10) The phrase "collective bargaining" for the purposes of this act shall be understood to mean the meeting together, on written request of one of the disputants, on a reasonable number of occasions and for a reasonable length of time, the reasonableness of the number of meetings and the length of the negotiations to be determined by taking into consideration the views of the parties to the negotiations and the prospects of an agreement, of the employer and his employees, through accredited representatives voluntarily chosen by them, with the full and free oportunity for negotiating concerning the terms or conditions of employment.

(11) The term "National Labor Relations Board" means the National Labor Relations Board created by section 3 of this act.

(12) The term "old Board" means the National Labor Relations Board established by Executive Order Numbered 6763 of the President on June 29, 1934, pursuant to Public Resolution Numbered 44, approved June 19, 1934 (48 Stat. 1183), and re-established and continued by Executive Order Numbered 7074 of the President of June 15, 1935, pursuant to title I of the National Industrial Recovery Act (48 Stat. 195), as amended and continued by S. J. Res. 133, approved June 14, 1935.

NATIONAL LABOR RELATIONS BOARD

SEC. 3. (a) There is hereby created a Board to be known as the National Labor Relations Board (hereinafter referred to as the Board), which shall be composed of three members, one representing the public, who shall be appointed by the President, by and with the advice and consent of the Senate, after the date of enactment of the National Labor Relations Act of 1939, for terms of 5 years except as hereinafter provided, but each member of the Board in office on such date shall continue to serve as a member of the Board until February 1, 1940. Each member

H. R. 8813 (introduced by Mr. Smith of Virginia on March 7, 1940)—Continued

(b) Section 2 (11) of such act is amended to read as follows:

"(11) The term 'Administrator' means the Administrator of the National Labor Relations Act provided for in section 3 (d)."

(c) Section 2 of such act is amended by adding at the end thereof the following:

"(12) The terms 'collective bargaining' and 'bargain collectively' shall be deemed to include the requirement that an employer or his representatives meet and confer with his employees or their representatives, listen to their complaints, discuss differences, and make every reasonable effort to compose such differences, but shall not be construed as compelling or coercing either party to reach an agreement or to submit counterproposals."

SEC. 4. (a) The heading of section 3 of the National Labor Relations Act is amended by adding at the end thereof the following: "; ADMINISTRATOR OF THE NATIONAL LABOR RELATIONS ACT".

(b) Section 3 (a) of such act is amended to read as follows:

"SEC. 3. (a) There is hereby created a Board, to be known as the National Labor Relations Board (in this Act called the 'Board'), which shall be composed of three members, who shall be appointed by the President, by and with the advice and consent of the Senate. One of the original members shall be appointed for a term of 1 year, one for a term of 3 years, and one for a term of 5 years, but their successors shall be appointed for terms of 5 years each, except that any individual chosen to fill a vacancy shall be appointed only for the unexpired

National Labor Relations Act (Public, No. 198, 74th Congress)—Continued

expired term of the member whom he shall succeed. The President shall designate one member to serve as chairman of the Board. Any member of the Board may be removed by the President, upon notice and hearing, for neglect of duty or malfeasance in office, but for no other cause.

(b) A vacancy in the Board shall not impair the right of the remaining members to exercise all the powers of the Board, and two members of the Board shall, at all times, constitute a quorum. The Board shall have an official seal which shall be judicially noticed.

(c) The Board shall at the close of each fiscal year make a report in writing to Congress and to the President stating in detail the cases it has heard, the decisions it has rendered, the names, salaries, and duties of all employees and officers in the employ or under the supervision of the Board, and an account of all moneys it has disbursed.

H. R. 4990 (introduced by Mr. Hoffman on March 13, 1939)—Continued

of the Board so appointed shall be qualified by previous experience for the representative capacity in which he is appointed. No one shall be eligible to appointment hereunder if he shall have been an employer or shall have been on the pay roll of a labor organization within a period of 2 years prior to the effective date of such appointment. Upon the expiration of the terms of the members of the Board in office on the date of enactment of the National Labor Relations Act of 1939, the successors to such members shall be appointed one for a term of 1 year, one for a term of 3 years, and one for a term of 5 years, as designated by the President at the time of nomination, and thereafter each member shall hold office for a term of 5 years from the expiration of the term of his predecessor, except that any individual chosen to fill a vacancy shall be appointed only for the unexpired term of the member whom he shall succeed. The President shall designate one member to serve as the Chairman of the Board. Any member of the Board may be removed by the President, upon notice and hearing, for neglect of duty or malfeasance in office, but for no other cause.

(b) A vacancy in the Board shall not impair the right of the remaining members to exercise all the powers of the Board, and two members of the Board shall, at all times, constitute a quorum. Vacancies shall, however, be filled as promptly as possible in order to preserve the representative characteristics of the Board. The Board shall have an official seal which shall be judicially noticed.

(c) The Board shall at the close of each fiscal year make a report in writing to Congress and to the President stating in detail the cases it has heard, the decisions it has rendered, the names, salaries, and duties of all employees and officers in the employ or under the supervision of the Board, and an account of all money it has disbursed.

term of the member whom he shall succeed. The President shall designate one member to serve as Chairman of the Board. Not more than two of the members of the Board shall be members of the same political party. Any member of the Board may be removed by the President, upon notice and hearing, for neglect of duty or malfeasance in office but for no other cause. It shall be the duty of the Board, as hereinafter provided, to hear and determine complaints made and filed with it by the Administrator charging persons with engaging in unfair labor practices, to hold and supervise elections to ascertain representatives who have been selected for the purposes of collective bargaining, to determine units appropriate for the purpose of collective bargaining, and to exercise such other functions as are conferred upon it by this act."

(c) Section 3 of such act is amended by adding at the end thereof the following:

"(d) There is hereby established an Administrator of the National Labor Relations Act. The Administrator shall be appointed by the President, by and with the advice and consent of the Senate, and shall receive compensation at the rate of $10,000 per annum. He shall not engage in any other business, vocation, or employment. The Administrator may appoint, without regard to the provisions of the civil-service laws but subject to the Classification Act of 1923, as amended, an executive secretary, and such attorneys and regional directors, and may appoint such other employees, with regard to existing laws applicable to the employment and compensation of officers and employees of the United States, as he may from time to time find necessary. The Administrator may establish or utilize such regional, local, or other agencies, and utilize such voluntary and uncompensated services, as may from time to time be needed. Attorneys appointed under this subsection may, in the discretion of the Administrator, appear for and represent the Administrator in any case in court. In case of a vacancy in the office of Administrator, or in case of the absence of the Administrator, the President shall designate the officer or employee of the Administrator who shall serve as Administrator during such vacancy or absence. Expenses of the Administrator, including all necessary traveling and subsistence expenses incurred by the Administrator or employees of the Administrator under his orders while away from his or their official station shall be allowed and paid on the presentation of itemized vouchers therefor approved by the Administrator or by any employee he designates for that purpose. It shall be the duty of the Administrator, as hereinafter provided, to investigate charges of unfair labor practices, to issue complaints if he has reasonable cause to believe such charges are true, to prosecute such complaints before the Board, to make application to the courts for enforcement of orders

National Labor Relations Act (Public, No. 198, 74th Congress)—Continued

SEC. 4. (a) Each member of the Board shall receive a salary of $10,000 a year, shall be eligible for reappointment, and shall not engage in any other business, vocation, or employment. The Board shall appoint, without regard for the provisions of the civil-service laws but subject to the Classification Act of 1923, as amended, an executive secretary, and such attorneys, examiners, and regional directors, and shall appoint such other employees with regard to existing laws applicable to the employment and compensation of officers and employees of the United States, as it may from time to time find necessary for the proper performance of its duties and as may be from time to time appropriated for by Congress. The Board may establish or utilize such regional, local, or other agencies, and utilize such voluntary and uncompensated services, as may from time to time be needed. Attorneys appointed under this section may, at the direction of the Board, appear for and represent the Board in any case in court. Nothing in this act shall be construed to authorize the Board to appoint individuals for the purpose of conciliation or mediation (or for statistical work), where such service may be obtained from the Department of Labor.

(b) Upon the appointment of the three original members of the Board and the designation of its chairman, the old Board shall cease to exist. All employees of the old Board shall be transferred to and become employees of the Board with salaries under the Classification Act of 1923, as amended, without acquiring by such transfer a permanent or civil service status. All records, papers, and property of the old Board shall become records, papers, and property of the Board, and all unexpended funds and appropriations for the use and maintenance of the old Board shall become funds and appropriations available to be expended by the Board in the exercise of the powers, authority, and duties conferred on it by this act.

(c) All of the expenses of the Board, including all necessary traveling and subsistence expenses outside the District of Columbia incurred by the members or employees of the Board under its orders, shall be allowed and paid on the presentation of itemized vouchers therefor approved by the Board or by any individual it designates for that purpose.

SEC. 5. The principal office of the Board shall be in the District of Columbia, but it may meet and exercise any or all of its powers at any other place. The Board may, by one or more of its members or by such agents or agencies as it may designate, prosecute any inquiry necessary to its functions in any part of the United States. A member who participates in such an inquiry shall not be disqualified from subsequently participating in a decision of the Board in the same case.

H. R. 4990 (introduced by Mr. Hoffman on March 13, 1939)—Continued

SEC. 4. (a) Each member of the Board shall receive a salary of $10,000 a year, shall be eligible for reappointment, and shall not engage in any other business, vocation, or employment. The Board shall appoint, without regard for the provisions of the civil-service laws but subject to the Classification Act of 1923, as amended, an executive secretary and such attorneys, examiners, and regional directors, and shall appoint such other employees with regard to existing laws applicable to the employment and compensation of officers and employees of the United States, as it may, from time to time find necessary for the proper performance of its duties and as may be from time to time appropriated for by Congress: *Provided, however*, That the Board shall not appoint any person to any position who is not at the time of such appointment an American citizen.

The Board may establish or utilize such regional, local, or other agencies, and utilize such voluntary and uncompensated services, as may from time to time be needed: *Provided*, That persons or agencies so utilized do not at the same time represent any party to any controversy under the terms of this act before the Board, either personally or through partners.

(b) Upon the appointment of the three original members of the Board and the designation of its Chairman, the old Board shall cease to exist. All employees of the old Board, who shall be for that purpose so designated as employees by the Board, shall be transferred to and become employees of the Board with salaries under the Classification Act of 1923, as amended, without acquiring by such transfer a permanent or civil-service status. All records, papers, and property of the old Board shall become records, papers, and property of the Board, and all unexpended funds and appropriations for the use and maintenance of the old Board shall become funds and appropriations available to be expended by the Board in the exercise of the powers, authority, and duties conferred on it by this act.

(c) All of the expenses of the Board, including all necessary traveling and subsistence expenses outside the District of Columbia incurred by the members or employees of the Board, under its orders, shall be allowed and paid on the presentation of itemized vouchers therefor approved by the Board or by any individual it designated for that purpose.

SEC. 5. The principal office of the Board shall be in the District of Columbia, but it may meet and exercise any or all of its powers at any other place. The Board may, by one or more of its members, or by such agents or agencies is it may designate, hold hearings necessary to its functions in any part of the United States; except that in connection with duties relating to the prevention of unfair labor practices, as defined in section 10 hereof, the Board shall act only in a judicial capacity in disposing of complaints under that section, and shall not, directly or indirectly, by its employees or otherwise, assist either the complainant or respondent by conducting investigations or acting as advocate for any party to the issue.

H. R. 8813 (introduced by Mr. Smith of Virginia on March 7, 1940)—Continued

of the Board, and to exercise such other functions as are conferred on him by this act. The Administrator shall be made a party to all proceedings before the Board, and shall present such testimony therein and request the Board to take such action with respect thereto as in his opinion will carry out the policies of this act. Any function which may be exercised by the Administrator may also be exercised by any officer or employee or agency of the Administrator designated by the Administrator for that purpose."

SEC. 5. Section 4 of the National Labor Relations Act is amended to read as follows:

"SEC. 4. (a) Each member of the Board shall receive a salary of $10,000 a year, shall be eligible for reappointment, and shall not engage in any other business, vocation, or employment. The Board may appoint, without regard for the provisions of the civil-service laws but subject to the Classification Act of 1923, as amended, an executive secretary, a secretary to each member, and such attorneys and trial examiners, and may appoint such other employees with regard to existing laws applicable to the employment and compensation of officers and employees of the United States, as it may from time to time find necessary for the proper performance of its duties and as may be from time to time appropriated for by Congress. Nothing in this act shall be construed to authorize the Board or the Administrator to appoint or employ individuals for the purpose of conciliation or mediation or for statistical work.

"(b) All of the expenses of the Board, including all necessary traveling and subsistence expenses outside the District of Columbia incurred by the members or employees of the Board under its orders, shall be allowed and paid on the presentation of itemized vouchers therefor approved by the Board or by any individual it designates for that purpose."

SEC. 6. Section 5 of the National Labor Relations Act is amended to read as follows:

"SEC. 5. The principal offices of the Board and of the Administrator, respectively, shall be in the District of Columbia, but they may exercise any or all of their respective powers at any other place. The Board may, by one or more of its members or by such trial examiner or examiners as it may designate, conduct hearings in any part of the United States. The conducting of any such hearing by a member shall not disqualify such member from subsequently participating in a decision of the Board in the same case."

National Labor Relations Act (Public, No. 198, 74th Congress)—Continued

Sec. 6. (a) The Board shall have authority from time to time to make, amend, and rescind such rules and regulations as may be necessary to carry out the provisions of this Act. Such rules and regulations shall be effective upon publication in the manner which the Board shall prescribe.

RIGHTS OF EMPLOYEES

Sec. 7. Employees shall have the right to self-organization, to form, join, or assist labor organizations, to bargain collectively through representatives of their own choosing, and to engage in concerted activities, for the purpose of collective bargaining or other mutual aid or protection.

Sec. 8. It shall be an unfair labor practice for an employer—

(1) To interfere with, restrain, or coerce employees in the exercise of the rights guaranteed in section 7.

(2) To dominate or interfere with the formation or administration of any labor organization or contribute financial or other support to it: *Provided*, That subject to rules and regulations made and published by the Board pursuant to section 6 (a), an employer shall not be prohibited from permitting employees to confer with him during working hours without loss of time or pay.

(3) By discrimination in regard to hire or tenure of employment or any term or condition of employment to encourage or discourage membership in any labor organization: *Provided*, That nothing in this Act, or in the National Industrial Recovery Act (U. S. C., Supp. VII, title 15, secs. 701–712), as amended from time to time, or in any code or agreement approved or prescribed thereunder, or in any other statute of the United States, shall preclude an employer from making an agreement with a labor organization (not established, maintained, or assisted by any action defined in this Act as an unfair labor practice) to require as a condition of employment membership therein, if such labor organization is the representative of the employees as provided in section 9 (a), in the appropriate collective bargaining unit covered by such agreement when made.

(4) To discharge or otherwise discriminate against an employee because he has filed charges or given testimony under this Act.

(5) To refuse to bargain collectively with the representatives of his employees, subject to the provisions of Section 9 (a).

H. R. 4990 (introduced by Mr. Hoffman on March 13, 1939)—Continued

Sec. 6. (a) The Board shall have authority from time to time to make, amend, and rescind such rules and regulations as may be necessary to carry out the provisions of this Act. Such rules and regulations shall not favor or discriminate against any party to any controversy to which this Act is applicable and shall be effective upon publication in the manner which the Board shall prescribe.

RIGHTS OF EMPLOYEES

Sec. 7. Employees shall have the right to self-organization, to form, join, or not to join a labor organization and shall have the right to assist labor organizations, to bargain collectively through representatives of their own choosing, and to engage in concerted activities for the purpose of collective bargaining or other mutual aid or protection: *Provided, however*, That employees, in exercising the foregoing rights, shall not by force, intimidation, or otherwise, except by peaceful argument, interfere with the right of any other employee to continue in his employment or to join or to refuse to join any labor organization.

Sec. 8. (a) It shall be an unfair labor practice for—

(1) Any person to threaten, restrain, or coerce employees in the exercise of the rights guaranteed in section 7: *Provided*, That nothing in this section shall abridge the freedom of speech or of the press.

(2) Any person to dominate or interfere by threat, restraint, or coercion with the formation or administration of any labor organization or any employer to contribute financial or other support to it: *Provided*, That nothing herein shall prohibit employers, individually or collectively, from furnishing housing, heating, lighting, and other facilities without charge for meetings relative to activities of such organizations, provided no discrimination is exercised among their employees in offering such facilities: *Provided further*, That an employer shall not be prohibited from permitting employees to confer with him during working hours without loss of time or pay: *And provided further*, That nothing contained herein shall prevent any employee or employees, of their own initiative, discussing any problem of common interest with their employer; or any employer discussing with any employee or employees any such subject if in connection therewith labor practices prohibitions herein contained are observed.

(3) An employer by discrimination in regard to hire or tenure of employment or any term or condition of employment to encourage or discourage membership in any labor organization.

(4) To discharge or otherwise discriminate against an employee because he has filed charges or given testimony under this Act, unless such testimony be proved to be willfully false.

(5) To refuse to bargain collectively with the representatives of his employees, subject to the provisions of section 9 (a).

(6) To deduct from the wages of employees any dues, fees, assessments, or other contribution payable to labor organizations, or

H. R. 8813 (introduced by Mr. Smith of Virginia on March 7, 1940)—Continued

Sec. 7. Section 6 of the National Labor Relations Act is amended to read as follows:

"Sec. 6. The Board and the Administrator, respectively, shall have authority from time to time to make, amend, and rescind such rules and regulations as may be necessary to carry out their respective functions under this Act. Such rules and regulations shall be effective upon publication in the manner which the Board or the Administrator, as the case may be, shall prescribe."

(Section 7 not amended by H. R. 8813.)

Sec. 8. (a) Section 8 (1) of the National Labor Relations Act is amended to read as follows:

"(1) To interfere with, restrain, or coerce employees in the exercise of the rights guaranteed in section 7, but nothing in this section or in this Act shall be construed or interpreted to prohibit any expressions of opinion with respect to any matter which may be of interest to employees or the general public, provided that such expressions of opinion are not accompanied by acts of coercion, intimidation, discrimination, or threats thereof."

(b) Section 8 (5) of such Act is amended to read as follows:

"(5) To refuse to bargain collectively with the representatives of his employees, subject to the provisions of section 9 (a), except that such refusal to bargain collectively with any such representative shall not, unless a certification with respect to such representative

National Labor Relations Act (Public, No. 198, 74th Congress)—Continued

REPRESENTATIVES AND ELECTIONS

SEC. 9. (a) Representatives designated or selected for the purposes of collective bargaining by the majority of the employees in a unit appropriate for such purposes, shall be the exclusive representatives of all the employees in such unit for the purposes of collective bargaining in respect to rates of pay, wages, hours of employment, or other conditions of employment: *Provided,* That any individual employee or a group of employees shall have the right at any time to present grievances to their employer.

H. R. 4990 (introduced by Mr. Hoffman on March 13, 1939)—Continued

to collect or to assist in the collection of any such dues, fees, assessments, or other contribution, unless such deductions have been authorized in writing by the employee from whose wages such deductions are made.

(7) Benefits under this Act shall not accrue to individuals or organizations who support or participate in strikes without presentation of written demands or grievances and reasonable oportunity for their consideration; strikes in violation of employment agreements, including agreements to accept an arbitration award; strikes accompanied by repeated or systematic acts of violence and intimidation; sit-down strikes, or other strikes which involve illegal occupation of property; general strikes.

(b) It shall be an unfair labor practice for a labor organization, or any officer or officers of a labor organization, or any agent or agents of a labor organization, or anyone acting in the interest of a labor organization, or for an employee, or for employees acting in concert—

(1) To interfere with, restrain, or coerce employees in the exercise of the rights guaranteed in section 7.

(2) To threaten, intimidate, restrain by force or threat, or coerce any employee, directly or indirectly, for the purpose and with the intent of compelling such employee (a) to join or to refrain from joining any labor organization; (b) to continue or to suspend or to cease his employment; (c) or for the purpose or with the intent of influencing or affecting his selection of representatives for the purposes of collective bargaining.

(3) To resort to or engage in, during the course of any labor dispute and in connection with such dispute, any act or practice which is a violation of any criminal law effective in the jurisdiction in which such act or practice occurs.

(4) To interfere by threat, intimidation, or force or threat of force, with the exercise of the right by any employee to continue at his work or to go to or from his place of employment.

(5) To strike in violation of a valid contract or agreement.

(c) It shall not be considered an unfair labor practice for an employer to discharge or to refuse to reemploy any person who, under the terms of this Act, is guilty of an unfair labor practice; nor shall it be considered an unfair labor practice for an employer to refuse to bargain with any organization or employee who fails to recognize or be bound by the official certificate of collective bargaining representatives issued under section 9 hereof.

(d) It shall not be considered an unfair labor practice for an employer to fail to reach an agreement after it has bargained collectively.

REPRESENTATIVES AND ELECTIONS

SEC. 9. (a) Representatives designated or selected for the purposes of collective bargaining by the majority of the employees in a unit appropriate for such purposes shall be the exclusive representatives of all the employees in such unit [who are members of the organization whose representatives have been so designated or selected for the purposes of collective bargaining,] for the purposes of collective bargaining in respect to rates of pay, wages, hours of employment, or other conditions of employment: *Provided,* That any individual employee or a group of employees shall have the right at any time to present grievances to their employer; bargain collectively for themselves individually, for the members of their organization, provided it is not company dominated, [and provided further that they do not belong to the organization whose representatives have been designated for the purposes of collective bar-

is in effect under section 9, be an unfair labor practice in any case where any other such representative (not established, maintained, or assisted by any action defined in this Act as an unfair labor practice) has made a claim that it represents a majority of the employees in a conflicting bargaining unit."

SEC. 9. Section 9 (including the heading thereof) of the National Labor Relations Act is amended to read as follows:

"REPRESENTATIVES AND ELECTIONS

"SEC. 9. (a) Representatives designated or selected for the purpose of collective bargaining by the majority of the employees in a unit appropriate for such purposes shall be the exclusive representatives of all the employees in such unit for the purposes of collective bargaining in respect to rates of pay, wages, hours of employment, or other conditions of employment: *Provided,* That any individual employee or group of employees shall have the right at any time to present grievances to their employer.

National Labor Relations Act (Public, No. 198, 74th Congress)—Continued

(b) The Board shall decide in each case whether, in order to insure to employees the full benefit of their right to self-organization and to collective bargaining, and otherwise to effectuate the policies of this Act, the unit approprite for the purposes of collective bargaining shall be the employer unit, craft unit, plant unit, or subdivision thereof.

(c) Whenever a question affecting commerce arises concerning the representation of employees, the Board may investigate such controversy and certify to the parties, in writing, the name or names of the representatives that have been designated or selected. In any such investigation, the Board shall provide for an appropriate hearing upon due notice, either in conjunction with a proceeding under section 10 or otherwise, and may take a secret ballot of employees, or utilize any other suitable method to ascertin[1] such representatives.

[1] So in original.

gaining,] and to enter into contracts with the employer as individuals or as an organization.

(Note—The words in brackets in Section 9 (a) are not in H. R. 4990, but will be proposed as an amendment.)

(b) The Board shall decide in each case within twenty days after the taking of testimony whether, in order to insure to employees the full benefit of their right to self-organization and to collective bargaining, and otherwise to effectuate the policies of this Act, the unit appropriate for the purposes of collective bargaining shall be the employer unit, plant unit, or any subdivision thereof: *Provided*, That if the majority of any craft union within a plant or employer unit signify its wish for the craft unit, the Board shall designate the craft unit as the unit appropriate for the members of that union: *Provided further*, That without prejudice to the preceding provision if the majority of the employees of any plant within an employer unit signifies its wish for the plant unit for voting or representation in preference to the employer unit the Board shall designate the plant unit as the unit appropriate for collective bargaining for the employees of that plant: *Provided further*, That any such unit or subdivision may by majority vote in secret ballot obtain recognition as the appropriate bargaining unit. Such election shall be called by the Board within five days after receiving a petition signed by 20 per centum or more of employees who are members of such unit or subdivision, or when petitioned by the employer.

(c) Whenever a question concerning commerce arises concerning the representation of employees, the Board shall recognize such controversy and certify to the parties in writing, the name or names of the representatives that have been designated or selected. Prior to such certification, the Board shall provide for an appropriate hearing upon due notice, either in conjunction with a proceeding under section 10 or otherwise, and must thereafter within ten days after such hearing take a secret ballot of employees, with adequate opportunity for all employees concerned to vote secretly in order to determine the views of the majority, if any, desiring representation under section 9 (a) hereof, and the Board shall certify as representatives for collective bargaining those persons receiving a majority vote of the bona fide employees employed in the plant where the vote is taken. All facts developed from such hearing and used in connection with the purposes of this Act shall be made public.

On written petition filed by any employer the Board shall cause an election to be held by secret ballot to determine collective-bargaining representatives, as set forth under section 9 (a), within twenty days from the date of the filing of such petition.

When representatives for collective bargaining have been chosen under the terms of this Act, the result shall be binding for one year, unless a labor organization representing, or a group of employees numbering, at least 20 per centum of those employed in the unit in which the vote was taken, or the employer, shall file a petition with the Board or its representative showing a substantial change of sentiment in the unit for which representatives were chosen as to the choice of such bargaining representatives.

H. R. 8813 (introduced by Mr. Smith of Virginia on March 7, 1940)—Continued

"(b) The Board shall upon application under, and subject to the provisions of, subsection (c) of this section determine in each case whether, in order to insure to employees the full benefit of their right to self-organization and to collective bargaining, the unit appropriate for the purposes of collective bargaining shall be the employer unit, craft unit, plant unit, or subdivision thereof.

"(c) Whenever written application is made to the Board under oath—

"(1) by an employer alleging that two or more representatives have each presented to him a claim with respect to the same bargaining unit that it represents a majority of his employees in such bargaining unit, that none of such representatives is a labor organization established, maintained, or assisted by any action defined in section 8 as an unfair labor practice, and that such employer intends to bargain collectively with the representatives designated for that purpose by the majority of his employees in the unit determined by the Board to be appropriate for the purposes of collective bargaining when such representatives are ascertained, or

"(2) by employees, or a representative representing employees, of any employer who constitute not less than 20 per centum of the employees in the bargaining unit claimed to be appropriate for the purpose of collective bargaining, alleging (A) that a controversy has arisen among the employees in the unit so claimed as to who have been designated their representative or representatives for collective bargaining, or whether the majority of the employees in such unit have designated a representative or representatives for collective bargaining, or (B) that a controversy has arisen as to the unit or units appropriate for the purposes of collective bargaining, and (C) that they are not members of, or that such representative is not, a labor organization established, maintained, or assisted by any action defined in section 8 as an unfair labor practice,

the Board shall give due notice to interested persons of the filing of such application and set the question for hearing within a reasonable time either in conjunction with a proceeding under section 10 or otherwise. Any interested person may file with the Board an intervening application, which shall be under oath and be in such form and contain such allegations as the Board may by rules and regulations prescribe. If upon the evidence adduced at the hearing the Board finds that the allegations of the application are true and that the question is one affecting commerce, it shall, subject to

(d) Whenever an order of the Board made pursuant to section 10 (c) is based in whole or in part upon facts certified following an investigation pursuant to subsection (c) of this section, and there is a petition for the enforcement or review of such order, such certification and the record of such investigation shall be included in the transcript of the entire record required to be filed under subsections 10 (e) or 10 (f), and thereupon the decree of the court enforcing, modifying, or setting aside in whole or in part the order of the Board shall be made and entered upon the pleadings, testimony, and proceedings set forth in such transcript.

PREVENTION OF UNFAIR LABOR PRACTICES

SEC. 10. (a) The Board is empowered, as hereinafter provided, to prevent any person from engaging in any unfair labor practice (listed in section 8) affecting commerce. This power shall be exclusive, and shall not be affected by any other means of adjustment or prevention that has been or may be established by agreement, code, law, or otherwise.

(b) Whenever it is charged that any person has engaged in or is engaging in any such unfair labor practice, the Board, or any agent or agency designated by the Board for such purposes, shall have power to issue and cause to be served upon such person a complaint stating the charges in that respect, and containing a notice of hearing before the Board or a member thereof, or before a designated agent or agency, at a place therein fixed, not less than 5 days after the serving of said complaint. Any such complaint may be amended by the member, agent, or agency conducting the hearing or the Board in its discretion at any time prior to the

H. R. 4990 (introduced by Mr. Hoffman on March 13, 1939)—Continued

(d) Whenever an order of the Board made pursuant to section 10 (c) is based in whole or in part upon facts certified following an investigation pursuant to subsection (c) of this section, and there is a petition for the enforcement or review of such order, such certification and the record of such investigation shall be included in the transcript of the entire record required to be filed under subsections 10 (e) or 10 (f), and thereupon the decree of the court enforcing, modifying, or setting aside in whole or in part the order of the Board shall be made and entered upon the pleadings, testimony, and proceedings set forth in such transcript.

(e) Before the Board shall issue any order certifying representatives for collective bargaining, the labor organization or representatives seeking certification shall qualify by filing with the Board a sworn statement setting forth the following information, which shall be brought up to date at least annually and whenever during any year any substantial change occurs in any of the facts set forth in the statement: (1) The official name or title of the labor organization or collective-bargaining agency; (2) the date established; (3) a copy of the constitution or articles of organization and of any bylaws in effect; (4) the names of all officers of the organization, with the certification that each is an American citizen; (5) the official address or principal place of business of the organization; (6) the names and addresses of the individuals who will actually function in collective bargaining with the employer, the majority of whom shall be bona fide employees of that employer, with the certification that each is an American citizen, the Board to be notified of any changes in the identity of the individuals who will function thus and those changes to be in accordance with the foregoing provisions; (7) a statement that its members are a majority of the employees in the bargaining unit in which such representatives were chosen.

PREVENTION OF UNFAIR LABOR PRACTICES

SEC. 10. (a) The Board is empowered, as hereinafter provided, to prevent any person from engaging in any unfair labor practice (listed in section 8 (a)) affecting commerce. This power shall be exclusive, and shall not be affected by any other means of adjustment or prevention that has been or may be established by agreement, code, law, or otherwise.

(b) Whenever it is charged that any person has engaged in or is engaging in any such unfair labor practice, the Board, or any agent or agency designated by the Board for such purposes, shall have power to issue and cause to be served upon such person a complaint which shall contain (1) a short and plain statement of the grounds upon which the Board's jurisdiction depends; (2) a short and plain statement of the charges against the respondent, stating the relief to which any of respondent's employees claim to be entitled; and (3) a demand for judgment for the relief to which the Board deems respondent's employees entitled. Relief in

the provisions of subsection (e), by order determine the unit appropriate for the purpose of collective bargaining, which shall in no case be larger than the largest unit claimed in an application filed by employees or representatives in the proceeding. After determining the unit appropriate for collective bargaining, the Board shall take a secret ballot of employees in the unit so determined and by order certify the name or names of the representatives which a majority of the employees voting have designated or selected as their representative or representatives for collective bargaining. Such certification shall be effective for 1 year from the date of the entry of such order.

"(d) Whenever an order of the Board made pursuant to section 10 (c) is based in whole or in part upon facts certified following an investigation pursuant to subsection (c) of this section, and there is a petition for the enforcement or review of such order, such certification and the record of such investigation shall be included in the transcript of the entire record required to be filed under subsections 10 (e) or 10 (f), and thereupon the decree of the court enforcing, modifying, or setting aside in whole or in part the order of the Board shall be made and entered upon the pleadings, testimony, and the proceedings set forth in such transcript.

"(e) Whenever two or more representatives in applications filed in a proceeding under subsection (b) have each alleged with respect to conflicting bargaining units that a majority of the employees therein have authorized such representative to be their representative for collective bargaining, the Board shall make a finding to that effect and shall not have any power to determine the unit appropriate for the purposes of collective bargaining until such representatives have by written agreement settled the dispute between them as to the appropriate unit, or to determine any unit to be appropriate for such purposes which is not specified and agreed upon in such agreement as being appropriate for such purposes. For the purposes of this subsection 'representative' does not include a labor organization established, maintained, or assisted by any action defined in this act as an unfair labor practice."

SEC. 10. Section 10 (including the heading thereof) of the National Labor Relations Act is amended to read as follows:

"PREVENTION OF UNFAIR LABOR PRACTICES

"SEC. 10. (a) The Board is empowered, as hereinafter provided, to prevent any person from engaging in any unfair labor practice (listed in section 8) affecting commerce. This power shall be exclusive, and shall not be affected by any other means of adjustment or prevention that has been or may be established by agreement, code, law, or otherwise.

"(b) Whenever it is charged that any person has engaged in or is engaging in any such unfair labor practice, the Administrator shall investigate such charge, and if he has reasonable cause to believe such charge is true, he shall issue and cause to be served upon such person a complaint stating such charge, except that the Administrator shall not have power to issue a complaint stating a charge of any unfair labor practice which occurred more than 6 months prior to the date on which such charge was filed with the Administrator. Upon the filing by the Administrator of such complaint with the Board, the Board shall set the case for hear-

National Labor Relations Act (Public, No. 198, 74th Congress)—Continued

issuance of an order based thereon. The person so complained of shall have the right to file an answer to the original or amended complaint and to appear in person or otherwise and give testimony at the place and time fixed in the complaint. In the discretion of the member, agent or agency conducting the hearing or the Board, any other person may be allowed to intervene in the said proceeding and to present testimony. In any such proceeding the rules of evidence prevailing in courts of law or equity shall not be controlling.

(c) The testimony taken by such member, agent or agency or the Board shall be reduced to writing and filed with the Board. Thereafter, in its discretion, the Board upon notice may take further testimony or hear argument. If upon all the testimony taken the Board shall be of the opinion that any person named in the complaint has engaged in or is engaging in any such unfair labor practice, then the Board shall state its findings of fact and shall issue and cause to be served

H. R. 4990 (introduced by Mr. Hoffman on March 13, 1939)—Continued

the alternative or of several different types may be demanded: *Provided*, That within 30 days following the commission of any unfair labor practice (listed in section 8 (a)) affecting commerce by any employer, any employees considering themselves aggrieved must serve on said employer in writing, a short and plain statement advising said employer what unfair labor practice he is accused of having committed and the kind of relief desired from said employer by said employees; and that the failure of any employee to make and serve upon the employer such a statement within the said period shall constitute a waiver of any and all rights of redress under this act against said employer for such violation: *Provided further*, That if an employer shall fail, within 30 days after receiving such a statement from any of his employees, to adjust satisfactorily said differences with such employees, thereafter such employees may within 60 days file a charge with the National Labor Relations Board against said employer, which charge shall be limited to the unfair labor practices of which the employer was accused and to the relief requested by said employees in their statement to the employer: *And provided further*, That no complaint shall issue from the National Labor Relations Board against any employer charging him with engaging in any unfair labor practice which has occurred more than 6 months prior to the date of service of the complaint upon the employer, and that such complaint and any amendments thereto shall be limited to the unfair labor practices alleged and to the relief requested by said employees in their charges filed with the National Labor Relations Board. Before answering to a pleading the respondent may within 15 days after the service of the complaint upon him, move for a more definite statement or for a bill of particulars of any matter which is not averred with sufficient definiteness or particularity to enable him properly to prepare his answer or to prepare for hearing. The motion shall point out the defects complained of and the details desired. Upon motion made by a respondent before answering said complaint within 15 days after the service of the complaint upon him, any redundant, immaterial, impertinent, or scandalous matter may be stricken from said complaint. Said complaint shall be accompanied by a notice of hearing before the Board or a member thereof or before a designated agent or agency at a place therein fixed, not less than 20 days after the serving of said complaint. Any such complaint may be amended by the member, agent, or agency conducting the hearing or the Board in its discretion at any time prior to the termination of such hearing. The person so complained of shall within 20 days of the receipt of a copy of such complaint file an answer to the original or amended complaint and shall appear in person or otherwise and give testimony at the place and time fixed in the complaint. Any employee, labor organization, or group with members employed by the person so complained against shall have the right, in the discretion of the member, agent, or agency conducting the hearing of the Board, to intervene in the said proceeding and to present testimony. In any such proceeding the rules of evidence prevailing in courts of law or equity shall be substantially followed but shall not be absolutely controlling.

(c) The testimony taken by such member, agent or agency, or the Board shall be reduced to writing and filed with the Board. Thereafter, in its discretion, the Board upon notice may take further testimony or hear argument. If upon all the testimony taken the Board shall be of the opinion that any person named in the complaint has engaged in or is engaging in any such unfair labor practice, then the Board shall state its findings of fact and shall issue and cause to be

ing before the Board or a member thereof, or before a designated trial examiner or examiners, at a place which the Board shall fix, not less than 15 days after the serving of such complaint. Any such complaint may, with the approval of the Board, or with the approval of the member, examiner, or examiners conducting the hearing, be amended by the Administrator at any time prior to the issuance of an order based thereon. The person so complained of shall have the right to file an answer to the original or amended complaint and to appear in person or otherwise and give testimony at the place and time fixed by the Board. In the discretion of the Board, or the member, examiner, or examiners conducting the hearing, any other person may be allowed to intervene in the said proceeding and to present testimony. Any such proceeding shall, so far as practicable, be conducted in accordance with the rules of evidence applicable in the district courts of the United States under the Rules of Civil Procedure for the District Courts of the United States, adopted by the Supreme Court of the United States pursuant to the act of June 19, 1934 (U. S. C., title 28, secs. 723–B, 723–C).

"(c) The testimony taken by the Board, member, examiner, or examiners shall be reduced to writing and filed with the Board. Thereafter, in its discretion, the Board upon notice may take further testimony or hear argument. If upon the preponderance of the testimony taken the Board shall be of the opinion that any person named in the complaint has engaged in or is engaging in any such unfair labor practice, then the Board shall state its findings of fact and shall issue

National Labor Relations Act (Public, No. 198, 74th Congress)—Continued

on such person an order requiring such person to cease and desist from such unfair labor practice, and to take such affirmative action, including reinstatement of employees with or without back pay, as will effectuate the policies of this act. Such order may further require such person to make reports from time to time showing the extent to which it has complied with the order. If upon all the testimony taken the Board shall be of the opinion that no person named in the complaint has engaged in or is engaging in any such unfair labor practice, then the Board shall state its findings of fact and shall issue an order dismissing the said complaint.

(d) Until a transcript of the record in a case shall have been filed in a court, as hereinafter provided, the Board may at any time, upon reasonable notice and in such manner as it shall deem proper, modify or set aside, in whole or in part, any finding or order made or issued by it.

(e) The Board shall have power to petition any circuit court of appeals of the United States (including the Court of Appeals of the District of Columbia), or if all the circuit courts of appeals to which application may be made are in vacation, any district court of the United States (including the Supreme Court of the District of Columbia), within any circuit or district, respectively, wherein the unfair labor practice in question occurred or wherein such person resides or transacts business, for the enforcement of such order and for appropriate temporary relief or restraining order, and shall certify and file in the court a transcript of the entire record in the proceeding, including the pleadings and testimony upon which such order was entered and the findings and order of the Board. Upon such filing, the court shall cause notice thereof to be served upon such person, and thereupon shall have jurisdiction of the proceeding and of the question determined therein, and shall have power to grant such temporary relief or restraining order as it deems just and proper, and to make and enter upon the pleadings, testimony, and proceedings set forth in such transcript a decree enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part the order of the Board. No objection that has not been urged before the Board, its member, agent or agency, shall be considered by the court, unless the failure or neglect to urge such objection shall be excused because of extraordinary circumstances. The findings of the Board as to the facts, if supported by evidence, shall be

H. R. 4990 (introduced by Mr. Hoffman on March 13, 1939)—Continued

served on such person an order requiring such person to cease and desist from such unfair labor practice, and to take such affirmative action as will effectuate the policies of this act. If reinstatement of employees with back pay is required by such order, then back pay shall be for a period terminating on a date not exceeding 30 days after the case is argued and submitted; except that, if the order is appealed by the employer, the added time required may be considered in connection with back pay.

Such order may further require such person to make reports from time to time showing the extent to which it has complied with the order. If upon all the testimony taken the Board shall be of the opinion that no person named in the complaint has engaged in or is engaging in any such unfair labor practice, then the Board shall state its findings of fact and shall issue an order dismissing the said complaint.

If the Board shall find, as part of its findings of fact in any proceeding before it, that the party or parties filing the charges upon which the complaint was based have engaged in an unfair labor practice (listed in section 8 (b) in connection with or as a part of the actions forming the basis of the complaint, such findings shall constitute a complete defense to the complaint and no order shall issue thereon against the respondent; nor, if such party or parties is a labor organization, shall the respondent be held to have violated the act for refusal to recognize or to bargain collectively with such organization as the representatives of his employees during any part of the term for which it was designated or certified as a collective bargaining agency for his employees subsequent to the commission of such unfair labor practice by such party or parties.

(d) Until a petition for the enforcement of such an order or a petition for the review of such an order shall have been filed in a court, as hereinafter provided, the Board may, at any time within 30 days after the making of such order, upon reasonable notice and in such manner as it shall deem proper, modify or set aside, in whole or in part, any finding or order made or issued by it.

(e) The Board shall have the power to petition any circuit court of appeals of the United States (including the Court of Appeals of the District of Columbia), or if all the circuit courts of appeals to which application may be made are in vacation, any district court of the United States (including the Supreme Court of the District of Columbia) within any circuit or district, respectively, wherein the unfair labor practice in question occurred or wherein such person resides or transacts business, for the enforcement of such order and for appropriate temporary relief or restraining order, and shall certify and file in the court a transcript of the entire record in the proceeding, including the pleadings and testimony upon which order was entered and the findings and order of the Board. Upon such filing, the court shall cause notice thereof to be served upon such person, and thereupon shall have jurisdiction of the proceeding and of the question determined therein, and shall have power to grant such temporary relief or restraining order as it deems just and proper, and to make and enter upon the pleadings, testimony, and proceedings set forth in such transcript a decree enforcing, modifying, or enforcing as so modified, or setting aside in whole or in part the order of the Board. No objection that has not been urged before the Board, its members, agent, or agency, shall be considered by the court unless the failure or neglect to urge such objection shall be excused because of extraordinary circumstances. The findings of the Board as to the facts, if supported by the preponderance of

H. R. 8813 (introduced by Mr. Smith of Virginia on March 7, 1940)—Continued

and cause to be served on such person an order requiring such person to cease and desist from such unfair labor practice, and to take such affirmative action requested in the complaint, which may include reinstatement of employees with or without back pay, as will effectuate the policies of this act. Such order may further require such person to make reports from time to time to the Administrator showing the extent to which he has complied with the order. If upon the preponderance of the testimony taken the Board shall not be of the opinion in the case of any person named in the complaint that such person has engaged in or is engaging in any such unfair labor practice, then the Board shall state its findings of fact and shall issue an order dismissing the said complaint as to such person. No order of the Board or of any court requiring the payment by an employer of money by reason of a finding that such employer has engaged in or is engaging in any unfair labor practice shall require such payment with respect to a period longer than 6 months, or with respect to a period which when added to any previous period with respect to which such payment was required either by the Board or by any court by reason of the same finding, is longer than 6 months. In case the testimony taken is taken before a member of the Board, or before an examiner or examiners thereof, such member, or such examiner or examiners, as the case may be, shall issue and cause to be served on the parties to the proceeding a proposed report, together with a recommended order, which shall be filed with the Board, and if no exceptions are filed within 20 days after service thereof upon such parties, or within such further period as the Board may authorize, such recommended order shall become the order of the Board and become effective as therein prescribed.

"(d) Until a transcript of the record in a case shall have been filed in a court, as hereinafter provided, the Board may, at any time, upon reasonable notice and in such manner as it shall deem proper, modify or set aside, in whole or in part, any finding or order made or issued by it or by any member, examiner, or examiners thereof.

"(e) The Administrator shall at the request of the Board, or may on his own motion, petition any circuit court of appeals of the United States (including the United States Court of Appeals for the District of Columbia), or if all the circuit courts of appeals to which application may be made are in vacation, any district court of the United States (including the District Court of the United States for the District of Columbia) within any circuit or district, respectively, wherein the unfair labor practice in question occurred or wherein such person resides or transacts business, for the enforcement of such order and for appropriate temporary relief or restraining order, and shall file in the court a transcript of the entire record in the proceeding, certified by the Board, including the pleadings and testimony upon which such order was entered and the findings and order of the Board. Upon such filing the court shall cause notice thereof to be served upon such person, and thereupon shall have jurisdiction of the proceeding and of the question determined therein, and shall have power to grant such temporary relief or restraining order as it deems just and proper, and to make and enter upon the pleadings, testimony, and proceedings set forth in such transcript a decree enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part the order of the Board. No objection that has not been urged before the Board, its member, examiner, or examiners shall be considered by the court, unless the failure or neglect to urge such objection shall be excused because of extraordinary

National Labor Relations Act (Public, No. 198, 74th Congress)—Continued

conclusive. If either party shall apply to the court for leave to adduce additional evidence and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for the failure to adduce such evidence in the hearing before the Board, its member, agent, or agency, the court may order such additional evidence to be taken before the Board, its member, agent, or agency, and to be made a part of the transcript. The Board may modify its findings as to the facts, or make new findings, by reason of additional evidence so taken and filed, and it shall file such modified or new findings, which, if supported by evidence, shall be conclusive, and shall file its recommendations, if any, for the modification or setting aside of its original order. The jurisdiction of the court shall be exclusive and its judgment and decree shall be final, except that the same shall be subject to review by the appropriate circuit court of appeals if application was made to the district court as hereinabove provided, and by the Supreme Court of the United States upon writ of certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347).

(f) Any person aggrieved by a final order of the Board granting or denying in whole or in part the relief sought may obtain a review of such order in any circuit court of appeals of the United States in the circuit wherein the unfair labor practice in question was alleged to have been engaged in or wherein such person resides or transacts business, or in the Court of Appeals of the District of Columbia, by filing in such court a written petition praying that the order of the Board be modified or set aside. A copy of such petition shall be forthwith served upon the Board, and thereupon the aggrieved party shall file in the court a transcript of the entire record in the proceeding, certified by the Board, including the pleading and testimony upon which the order complained of was entered and the findings and order of the Board. Upon such filing, the court shall proceed in the same manner as in the case of an application by the Board under subsection (e), and shall have the same exclusive jurisdiction to grant to the Board such temporary relief or restraining order as it deems just and proper, and in like manner to make and enter a decree enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part the order of the Board; and the findings of the Board as to the facts, if supported by evidence, shall in like manner be conclusive.

H. R. 4990 (introduced by Mr. Hoffman on March 13, 1939)—Continued

the evidence, shall be conclusive in cases where no affirmative action is required by the order of the Board; in all cases where affirmative action is required by such order of the Board, the findings of the Board as to the facts shall be prima facie evidence of the facts therein stated. If any party shall apply to the court for leave to present additional evidence and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for the failure to present such evidence in any prior hearing, the court may order such additional evidence to be taken before the Board, its member, agent, or agency, and to be made a part of the transcript. The Board may, within thirty days, unless, on reasonable cause shown, further time appears to be necessary, modify its findings as to the facts, or make new findings, by reason of additional evidence so taken and filed, and it shall file such modified or new findings, which, if supported by the weight of the evidence, shall be conclusive in cases where no affirmative action is required by the order of the Board, and shall file its recommendations, if any, for the modification or setting aside of its original order. In all cases where affirmative action is required by the order of the Board or the modified order of the Board, the new or modified findings of the Board as to the facts shall be prima facie evidence of the facts therein stated. The jurisdiction of the court shall be exclusive and its judgment and decree shall be final, except that the same shall be subject to review by the appropriate circuit court of appeals if application was made to the district court as hereinabove provided, and by the Supreme Court of the United States upon writ of certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347).

(f) Any person and any employee or the representative of an employee employed in the unit designated by the Board under section 9, feeling himself aggrieved by a final order of the Board or by the issuing of a certificate or the making of any order by the Board, a member or representative thereof under section 9 of this Act, may obtain a review of such order or certificate in any circuit court of appeals of the United States in the circuit wherein the unfair labor practice in question was alleged to have been engaged in or wherein such person resides or transacts business, or in any district court of the United States wherein such person resides, transacts business, or where the unfair labor practice is alleged to have occurred, if all the circuit courts of appeals to which application may be made are in vacation, or in the Court of Appeals of the District of Columbia, by filing in such court a written petition praying that the order of the Board be modified or set aside. A copy of such petition shall be forthwith served upon the Board, and thereupon the Board shall forthwith certify and file a transcript of the entire record in the proceeding, including the pleadings and the testimony, certified by the Board. Upon such filing, the court shall proceed in the same manner as in the case of an application by the Board under subsection (e), and shall have the same jurisdiction to grant to any party to the proceeding such temporary relief or restraining order as it deems just and proper, and in like manner to make and enter a decree enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part the order of the Board; and the findings of the Board as to the facts, if supported by the weight of the evidence, shall in like manner be conclusive in cases where no affirmative action is required by the order of the Board; in all cases where affirmative action is required by such order of the Board, the findings of the Board as to the facts shall be prima facie evidence of the facts therein stated.

H. R. 8813 (introduced by Mr. Smith of Virginia on March 7, 1940)—Continued

circumstances. The findings of the Board as to the facts shall be conclusive unless it is made to appear to the satisfaction of the court (1) that the findings of fact are clearly erroneous, or (2) that the findings of fact are not supported by substantial evidence. If either party shall apply to the court for leave to adduce additional evidence and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for the failure to adduce such evidence in the hearing before the Board, its member, examiner, or examiners, the court may order such additional evidence to be taken before the Board, its member, examiner, or examiners and to be made a part of the transcript. The Board may modify its findings as to the facts, or make new findings, by reason of additional evidence so taken and filed, and it shall file such modified or new findings, which shall be conclusive unless it is made to appear to the satisfaction of the court (1) that such findings are clearly erroneous, or (2) that such findings are not supported by substantial evidence, and the Board shall file its recommendations, if any, for the modification or setting aside of its original order. The jurisdiction of the court shall be exclusive and its judgment and decree shall be final, except that the same shall be subject to review by the appropriate circuit court of appeals if application was made to the district court as hereinabove provided, and by the Supreme Court of the United States upon writ of certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347).

"(f) Any person aggrieved by a final order of the Board (including a final order under section 9) granting or denying in whole or in part the relief sought may obtain a review of such order in any circuit court of appeals of the United States in the circuit wherein the unfair labor practice in question was alleged to have been engaged in or wherein such person resides or transacts business, or in the United States Court of Appeals for the District of Columbia, by filing in such court a written petition praying that the order of the Board be modified or set aside. A copy of such petition shall be forthwith served upon the Administrator, and thereupon the aggrieved party shall file in the court a transcript of the entire record in the proceeding, certified by the Board, including the pleading and testimony upon which the order complained of was entered and the findings and order of the Board. Upon such filing, the court shall proceed in the same manner as in the case of an application by the Administrator, under subsection (e), and shall have the same exclusive jurisdiction to grant to the Administrator such temporary relief or restraining order as it deems just and proper, and in like manner to make and enter a decree enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part the order of the Board; and the findings of the Board as to the facts shall in like manner be conclusive, unless it is made to appear to the satisfaction of the court (1) that the findings of fact are clearly erroneous, or (2) that the findings of fact are not supported by substantial evidence.

National Labor Relations Act (Public, No. 198, 74th Congress)—Continued

(g) The commencement of proceedings under subsection (e) or (f) of this section shall not, unless specifically ordered by the court, operate as a stay of the Board's order.

(h) When granting appropriate temporary relief or a restraining order, or making and entering a decree enforcing, modifying, and enforcing as so modified or setting aside in whole or in part an order of the Board, as provided in this section, the jurisdiction of courts sitting in equity shall not be limited by the Act entitled "An Act to amend the Judicial Code and to define and limit the jurisdiction of courts sitting in equity, and for other purposes", approved March 23, 1932 (U. S. C., Supp. VII, title 29, secs. 101–115).

(i) Petitions filed under this Act shall be heard expeditiously, and if possible within ten days after they have been docketed.

(No. similar section in N. L. R. A.)

H. R. 4990 (introduced by Mr. Hoffman on March 13, 1939)—Continued

(g) The commencement of proceedings under subsection (e) or (f) of this section shall operate as a stay of the Board's order, and the court in its discretion upon good cause shown may suspend the accrual of the remedial financial damages against the respondent during the pendency of the appeal.

(h) When granting appropriate temporary relief or a restraining order, or making and entering a decree enforcing, modifying, and enforcing as so modified or setting aside in whole or in part an order of the Board, as provided in this section, the jurisdiction of courts sitting in equity shall not be limited by the Act entitled "An Act to amend the Judicial Code and to define and limit the jurisdiction of courts sitting in equity, and for other purposes", approved March 23, 1932 (U. S. C., Supp. VII, title 29, secs. 101–115).

(i) Petitions filed under this Act shall be heard expeditiously, and if possible within ten days after they have been docketed.

(j) Any labor organization with members or any employee employed in the unit designated by the Board under section 9 aggrieved by a certification for collective bargaining purposes or an order of election by the Board under section 9 (b) or (c) may obtain a review of such certification or order of election in any circuit court of appeals of the United States in the circuit wherein the labor organization thus aggrieved has its principal office or place of business, or in the Court of Appeals of the District of Columbia, by filing in such court a written petition praying that such certification or order of election of the Board be modified or set aside.

(k) A settlement between the Board or anyone acting under its authority and any person charged with an unfair labor practice, approved by the Board, shall foreclose further action upon the same issues as long as the terms of the settlement are adhered to by such person: *Provided, however,* That a settlement between the bargaining agent designated by the Board and any person charged with an unfair labor practice, or any settlement between the Board or anyone acting under its authority, and any person charged with an unfair labor practice, or any settlement entered into by the Board or anyone acting under its authority, and any person charged with an unfair labor practice and the bargaining agent designated by the Board, shall not foreclose nor prevent any labor organization with members or any individual employed in the unit designated by the Board under section 9 from obtaining a review of any certificate or order issued by the Board under section 9 or section 10.

(l) Whenever any person aggrieved shall seek a review of any order or certification or final order made by the Board in either a representation or a complaint case, or whenever any person who is a party to any proceeding before the Board, any member of the Board, or any of its agents, shall so request, the Board shall furnish a daily copy of the transcript of the testimony taken, at the same price that is charged for like service to the Board or any governmental agency, and at no greater charge than the customary commercial rate for like service.

PROCEEDINGS IN DISTRICT COURTS (NEW SECTION)

SEC. 11. (a) Notwithstanding anything to the contrary hereinbefore or hereinafter, the district courts of the United States shall have jurisdiction in all cases that shall be removed to said courts from the National Labor Relations Board as hereinafter provided.

(b) Any person against whom any proceeding has been or shall be instituted before the Board may at any time within twenty days after the service of the complaint upon such person file a petition for removal in the appropriate district court, alleging the institution of such proceeding and attaching thereto a copy of such papers as may have

H. R. 8813 (introduced by Mr. Smith of Virginia on March 7, 1940)—Continued

"(g) The commencement of proceedings under subsections (e) or (f) of this section shall not, unless specifically ordered by the court, operate as a stay of the Board's order.

"(h) When granting appropriate temporary relief or a restraining order, or making and entering a decree enforcing, modifying, and enforcing as so modified, or setting aside in whole or in part an order of the Board, as provided in this section, the jurisdiction of courts sitting in equity shall not be limited by the Act entitled 'An Act to amend the Judicial Code and to define and limit the jurisdiction of courts sitting in equity, and for other purposes', approved March 23, 1932 (U. S. C., Supp. VII, title 29, secs. 101–115).

"(i) Petitions filed under this Act shall be heard expeditiously, and if possible within ten days after they have been docketed."

(No similar section in H. R. 8813)

National Labor Relations Act (Public, No. 198, 74th Congress)—Continued

H. R. 4990 (introduced by Mr. Hoffman on March 13, 1939)—Continued

H. R. 8813 (introduced by Mr. Smith of Virginia on March 7, 1940)—Continued

been served upon such person in the proceeding, and praying that said proceeding be removed to said district court whereupon such court shall, as of course, and without requiring bond or undertaking, issue its order staying such proceeding before the Board and requiring the Board to certify and send to such court all pleadings and papers filed with the Board in such proceeding.

(c) Upon the filing in any district court of such petition for removal as provided hereinbefore, the court shall consider promptly, and if possible within ten days after docketing, the matter or matters presented to it, upon the proofs and allegations of the parties and without regard to any proceeding had prior thereto, and after hearing if the court shall be of the opinion that any person named in the complaint has engaged in or is engaging in any such unfair labor practice, then the court shall state its findings of fact and shall issue and cause to be served on such person an order requiring such person to cease and desist from such unfair labor practice, and to take such affirmative action, including remedial-severance pay, but not including reinstatement of employees against the will of the employer, as will effectuate the policies of this act. Such order may further require such person to make reports from time to time showing the extent to which he has complied with the order. If upon all the testimony taken the court shall be of the opinion that no person named in the complaint has engaged in or is engaging in any such unfair labor practice, then the court shall state its findings of fact and shall issue an order dismissing the said complaint. If the court shall find, as part of its findings of fact in any proceeding before it, that the party or parties filing the charges upon which the complaint was based have engaged in an unfair labor practice enumerated in section 8 (b) in connection with or as a part of the actions forming the basis of the complaint, such findings shall constitute a complete defense to the complaint and no order shall issue thereon against the respondent; nor, if such party or parties filing the charges upon which the complaint was based is a labor organization, shall the respondent be held to have violated this Act for refusal to recognize or to bargain collectively with such organization as the representatives of his employees during any part of the term for which it was designated or certified as a collective bargaining agency for his employees, subsequent to the commission of such unfair labor practice by such party or parties.

(d) Jurisdiction in the case of a proceeding that shall have been removed from the Board as provided hereinbefore shall be in the district court of the judicial district where the petitioner for such removal resides or engages in business, or where the proceeding before the Board was instituted.

(e) Such proceeding in the district court shall be governed by the same rules, including rules of evidence, as may at the time be applicable in a suit in equity in the district court. Any party to any such proceeding shall have the same right of appeal and upon the same terms and conditions as in a suit in equity in the district court to which such proceeding is removed.

(f) For the purposes of this section, the term "district court" shall mean any district court of the United States, including the district courts of Alaska, Hawaii, Puerto Rico, Canal Zone, Virgin Islands, and the District of Columbia, and the supreme courts of Hawaii and Puerto Rico, and the United States Court for China.

(g) The President of the United States is authorized, upon request by the Chief Justice of the United States, to appoint from time to time, by and with the advice and consent of the Senate, such additional district judges

National Labor Relations Act (Public, No. 198, 74th Congress)—Continued

INVESTIGATORY POWERS

SEC. 11. For the purpose of all hearings and investigations, which, in the opinion of the Board, are necessary and proper for the exercise of the powers vested in it by section 9 and section 10—

(1) The Board, or its duly authorized agents or agencies, shall at all reasonable times have access to, for the purpose of examination, and the right to copy any evidence of any person being investigated or proceeded against that relates to any matter under investigation or in question. Any member of the Board shall have power to issue subpenas requiring the attendance and testimony of witnesses and the production of any evidence that relates to any matter under investigation or in question, before the Board, its member, agent, or agency conducting the hearing or investigation. Any member of the Board, or any agent or agency designated by the Board for such purposes, may administer oaths and affirmations, examine witnesses, and receive evidence. Such attendance of witnesses and the production of such evidence may be required from any place in the United States or any Territory or possession thereof, at any designated place of hearing.

(2) In case of contumacy or refusal to obey a subpena issued to any person, any District Court of the United States or the United States courts of any Territory or possession, or the Supreme Court of the District of Columbia, within the jurisdiction of which the inquiry is carried on or within the jurisdiction of which said person guilty of contumacy or refusal to obey is found or resides or transacts business, upon application by the Board shall have jurisdiction to issue to such person an order requiring such person to appear before the Board, its member, agent, or agency, there to produce evidence if so ordered, or there to give testimony touching the matter under investigation or in question; and any failure to obey such order of the court may be punished by said court as a contempt thereof.

(3) No person shall be excused from attending and testifying or from producing books, records, correspondence, documents, or other evidence in obedience to the subpena of the Board, on the ground that the testimony or evidence required of him may tend to incriminate him or subject him to a penalty or forfeiture; but no individual shall be prosecuted or subjected to any penalty or forfeiture for or on account of any transaction, matter, or thing concerning which he is compelled, after having claimed his privilege against self-incrimination, to testify or produce evidence, except that such individual so testifying shall not be exempt from

H. R. 4990 (introduced by Mr. Hoffman on March 13, 1939)—Continued

as may be necessitated by the enlarged jurisdiction conferred upon the district courts of the United States by the terms of this section.

(h) If and to the extent that any provision of this section shall conflict with any provision of any other section of the act as amended or of any other statute of the United States, the provisions of this section shall be controlling.

INVESTIGATORY POWERS

SEC. 12. (1) Any member of the Board shall have power to issue subpenas requiring the attendance and testimony of witnesses and the production of any evidence that relates to any matter in question, before the Board, its member, agent, or agency conducting the hearing. The Board is required to issue subpenas upon the request of any party interested: *Provided*, That the Board or its agent may require a statement in writing that the parties subpenaed have knowledge pertinent to the question at issue.

Any member of the Board, or any agent or agency designated by the Board for such purposes, may administer oaths and affirmations, examine witnesses, and receive evidence. Such attendance of witnesses and the production of such evidence may be required from any place in the United States or any Territory or possession thereof, at any designated place of hearing.

(2) In case of contumacy or refusal to obey a subpena issued to any person, any district court of the United States or the United States courts of any Territory or possession, or the Supreme Court of the District of Columbia, within the jurisdiction of which the inquiry is carried on or within the judisdiction of which said person guilty of contumacy or refusal to obey is found or resides or transacts business, upon application by the Board shall have jurisdiction to issue to such person an order requiring such person to appear before the Board, its member, agent, or agency, there to produce evidence if so ordered, or there to give testimony touching the matter under investigation or in question; and any failure to obey such order of the court may be punished by said court as a contempt thereof.

(3) No person shall be excused from attending and testifying or from producing books, records, correspondence, documents, or other evidence in obedience to the subpena of the Board, on the ground that the testimony or evidence required of him may tend to incriminate him or subject him to a penalty or forfeiture; but no individual shall be prosecuted or subjected to any penalty or forfeiture for or on account of any transaction, matter, or thing concerning which he is compelled, after having claimed his privilege against self-incrimination, to testify or produce evidence, except that such individual so testifying shall not be exempt from prose-

SEC. 11. Section 11 (including the heading thereof) of the National Labor Relations Act is amended to read as follows:

"INVESTIGATORY POWERS

"SEC. 11. For the purpose of any proceeding before the Board, or before a member, examiner, or examiners thereof, or for the purpose of any investigation provided for in this Act—

"(1) The Board, or any member thereof, or any trial examiner shall, upon application of the Administrator or of any party to such proceeding, whether before or during any hearing in the case of any such proceedings, forthwith issue to the Administrator or to such party, as the case may be, in the name of the Board, subpenas requiring the attendance and testimony of witnesses or the production of any evidence in such proceeding or investigation requested in such application. Within five days after the service of a subpena on any person requiring the production of any evidence in his possession or under his control, such person may petition the Board or its duly authorized agent or agents to revoke, and the Board or such agent or agents shall revoke, such subpena if in its, his, or their opinion, as the case may be, the evidence whose production is required does not relate to any matter under investigation, or any matter in question in such proceeding, or if in its, his, or their opinion, as the case may be, such subpena does not describe with sufficient particularity the evidence whose production is required. The Administrator or any member of the Board or any examiner or examiners designated by the Board for such purposes may administer oaths and affirmations, examine witnesses, and receive evidence. Such attendance of witnesses and the production of such evidence may be required from any place in the United States or any Territory or possession thereof at any designated place of hearing.

"(2) In case of contumacy or refusal to obey a subpena issued to any person, any district court of the United States, or the United States courts of any Territory or possession, or the District Court of the United States for the District of Columbia, within the jurisdiction of which the inquiry is carried on or within the jurisdiction of which said person guilty of contumacy or refusal to obey is found or resides or transacts business, upon application by the person to whom such a subpena was issued by the Board, shall have jurisdiction to issue to such person so guilty of contumacy or refusal to obey an order requiring him to appear before the Board, its member, examiner, or examiners, or before the Administrator if the subpena so directs, there to produce evidence if so ordered, or there to give testimony touching the matter under investigation or in question; and any failure to obey such order of the court may be punished by said court as a contempt thereof.

"(3) No person shall be excused from attending and testifying or from producing books, records, correspondence, documents, or other evidence in obedience to the subpena of the Board, on the ground that the testimony or evidence required of him may tend to incriminate him or subject him to a penalty or forfeiture; but no individual shall be prosecuted or subjected to any penalty or forfeiture for or on account of any transaction, matter, or thing concerning which he is compelled, after having claimed his privilege against self-incrimination, to testify or produce evidence, except that such individual so testifying shall not be exempt from prose-

National Labor Relations Act (Public, No. 198, 74th Congress)—Continued

prosecution and punishment for perjury committed in so testifying.

(4) Complaints, orders, and other process and papers of the Board, its member, agent, or agency, may be served either personally or by registered mail or by telegraph or by leaving a copy thereof at the principal office or place of business of the person required to be served. The verified return by the individual so serving the same setting forth the manner of such service shall be proof of the same, and the return post office receipt or telegraph receipt therefor when registered and mailed or telegraphed as aforesaid shall be proof of service of the same. Witnesses summoned before the Board, its member, agent, or agency, shall be paid the same fees and mileage that are paid witnesses in the courts of the United States, and witnesses whose depositions are taken and the persons taking the same shall severally be entitled to the same fees as are paid for like services in the courts of the United States.

(5) All process of any court to which application may be made under this act may be served in the judicial district wherein the defendant or other person required to be served resides or may be found.

(6) The several departments and agencies of the Government, when directed by the President, shall furnish the Board, upon its request, all records, papers, and information in their possession relating to any matter before the Board.

SEC. 12. Any person who shall willfully resist, prevent, impede, or interfere with any member of the Board or any of its agents or agencies in the performance of duties pursuant to this act shall be punished by a fine of not more than $5,000 or by imprisonment for not more than one year, or both.

LIMITATIONS

SEC. 13. Nothing in this act shall be construed so as to interfere with or impede or diminish in any way the right to strike.

SEC. 14. Wherever the application of the provisions of section 7 (a) of the National Industrial Recovery Act (U. S. C., Supp. VII, title 15, sec. 707 (a)), as amended from time to time, or of section 77B, paragraphs (l) and (m) of the act approved June 7, 1934, entitled "An act to amend an act entitled 'An act to establish a uniform system of bankruptcy throughout the United States' approved July 1, 1898, and acts amendatory thereof and supplementary thereto" (48 Stat. 922, pars. (l) and (m)), as amended from time to time, or of Public Resolution No. 44, approved June 19, 1934 (48 Stat. 1183), conflicts with the application of the provisions of this act, this act shall prevail: *Provided*, That in any situation where the provisions of this act cannot be validly enforced, the provisions of such other acts shall remain in full force and effect.

SEC. 15. If any provision of this act, or the application of such provision to any person or circumstance, shall be held invalid, the remainder of this act, or the application of such provision to persons or circumstances other than those as to which it is held invalid, shall not be affected thereby.

SEC. 16. This act may be cited as the "National Labor Relations Act."

Approved, July 5, 1935.

EFFECTIVE DATE

SEC. 13. (a) As used in this section—

(1) The term "old act" means the National Labor Relations act in effect prior to the enactment of this act.

(2) The term "new act" means the National Labor Relations Act, as amended by this act.

(3) The term "old Board" means the National Labor Relations Board created by section 3 (a) of the old Act.

(4) The term "new Board" means the National Labor Relations Board created by section 3 (a) of the new act.

(b) The amendments made by this act shall take effect on the ninetieth day after the date of its enactment, except that prior to such ninetieth day the President may appoint the new Board and the Administrator, and they may exercise their respective powers under such amendments of employing necessary personnel and making rules and regulations to carry out their respective functions.

(c) Effective as of the expiration of the eighty-ninth day after the date of enactment of this act, the old Board is hereby abolished.

(d) All orders issued by the old Board and in effect at the time the old Board is abolished shall continue in effect until superseded or revoked by the new Board, or if modified by the new Board, shall continue in effect as so modified, and all such orders may be enforced by the Administrator or reviewed by any person aggrieved thereby in the same manner and to the same extent as if issued by the new Board under the new act, except that the validity of such orders and the effect given to the findings of fact (including new or additional findings of fact by the new Board) upon which they are based shall be governed by the old act in the same manner and to the same extent as if this act had not been enacted. All proceedings and investigations pending before the old Board under section 9 of the old act at the time of the abolition of the old Board shall be continued by the new Board in the same manner, and shall be subject to the provisions of the new act to the same extent, as if an application had been filed with the new Board under section 9 (c) of the new act, and all petitions for such investigations shall, within twenty days after the abolition of the old Board, be amended accordingly, or dismissed. Subpenas issued by the old Board under section 11 of the old act shall remain effective, but the issuance of such subpenas may be revoked by the new Board, and such subpenas may be enforced by the persons to whom they are issued, in the same manner and to the same extent as if issued by the new Board under section 11 of the new act. No proceeding in any court for the enforcement or review of any order of the old Board shall abate by reason of the abolition of the old Board, but the Administrator shall be substituted as petitioner or respondent, as the case may be, and the validity of such order, and the effect given to the findings of fact (including modified or new findings of fact by the new Board in case the court orders additional evidence to be taken before the new Board) shall be governed by the old act in the same manner and to the same extent as if this act had not been enacted. In the case of any proceeding pending before the old Board under section 10 (b) of the old act at the time of the abolition of the old Board in which a charge has been made but no complaint issued, such charge shall be transferred to the Administrator, and shall be acted upon by him under, and shall be governed by, the new act in the same manner and to the same extent as if such charge had been made to him under the new act. In the case of any proceeding pending before the old Board under section 10 (b) of the old act at the time of the abolition of the old

National Labor Relations Act (Public, No. 198, 74th Congress)—Continued

Board in which a complaint has been issued but in which a hearing has not been commenced, the time and place of hearing fixed in such complaint, or such time or place as extended or modified by the old Board shall be ineffective. The Administrator shall file such complaint with the new Board, and the new Board shall fix the time and place for a hearing thereon in accordance with the new Act. Such proceeding, and every other proceeding pending before the old Board under section 10 (b) or 10 (c) of the old Act at the time of the abolition of the old Board in which no order has been issued shall be governed by the provisions of the new Act, except that in any such proceedings wherein a hearing has been commenced or completed prior to the abolition of the old Board, the rules of evidence prevailing in the courts of law or equity shall not be controlling. In the case of any proceeding pending before the old Board under section 10 (b) or 10 (c) of the old Act at the time of the abolition of the old Board wherein an order has been issued and wherein the new Board directs the taking of additional testimony, and in the case of any proceeding for the enforcement or review of any order of the old Board pending in any court at the time of the abolition of the old Board wherein the court orders the taking of additional testimony before the new Board, the rules of evidence prevailing in the courts of law or equity shall not be controlling in the taking of such testimony.

(e) All files, reports, records, documents, papers, and property (including office furniture and equipment) under the control of the old Board shall be distributed, upon the abolition of the old Board, between the new Board and the Administrator in such manner as the President may determine.

The Farm Credit Administration

EXTENSION OF REMARKS

OF

HON. WALTER M. PIERCE

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

Mr. PIERCE. Mr. Speaker, the attention of Members of the Congress is being drawn to the affairs of the Farm Credit Administration because of the introduction of a bill to reinstate it as an autonomous agency, and to break the connection with the Department of Agriculture established through the reorganization bill passed by this Congress. I think the change, following our legislation, has been an improvement. I believe farm-credit matters will be handled more satisfactorily under the new plan. I desire to state my reasons for supporting the change and urging that there should be no interference with the present organization. I have had some experience with the Farm Credit Administration and with farm-credit legislation, as I have been a member of the Agriculture Committee during my four terms in Congress. For several years I was president of a local farm-loan association under the Federal land bank. I was, also, at one time, a borrower so may speak from the borrower's point of view. I have, however, had no relation to the organization as a borrower during my service in Congress.

My section of the country is served by the Federal land bank at Spokane, so many of my illustrations are drawn from my experience with the organization in that district—the twelfth farm-credit district. Most of the farmers from my congressional district have had experience with Federal farm loans. The road to Spokane is much traveled by farmers of the Northwest. Those who "go to Spokane" have impressed upon them, not only the importance of an efficient farm credit system, but also the difficulties in connection with it, and its shortcomings from the farmer's point of view. Officialdom tends always to become dictatorial and somewhat intolerant of the suppliants who must come before it, begging relief from burdensome financial situations. All the difficulties are not, however, to be traced to the personal deficiencies of the officials, but were inherent in the system as it was organized and previously administered. I regret that the Congress has this matter again before it, as it should have been settled permanently by the action already taken; but, since malcontents are apparently determined to disturb the orderly functioning of the Farm Credit Administration, I am convinced that such a statement as I am about to make should be written into the RECORD.

FARM CREDIT ADMINISTRATION TRANSFERRED

On July 1, 1939, the Farm Credit Administration was transferred to the Department of Agriculture, pursuant to an act of Congress, following recommendation by the President, as part of a plan of governmental reorganization. Even before the transfer became effective, a vigorous campaign was commenced by those entrusted with the supervision of the Farm Credit Administration, to defeat the transfer and continue the independent status of the agency. Delegations waited on the President, and employees of the Farm Credit Administration called upon a large number of Congressmen. Despite these efforts, I failed to observe any serious question in this House as to the desirability of consolidating the administration of Farm Credit agencies with a Government department equally responsible for the welfare of farmers. The Department of Agriculture is the governmental agency closest to the farmers. It has operated exclusively in the interests of agriculture.

The Secretary of Agriculture apparently tried to go along with the dissatisfied officials of the Farm Credit Administration. He had issued a preliminary order on June 3, 1939, providing that the Farm Credit Administration would continue to function as an autonomous agency after the

Reorganization Act became effective, except that it would report to the Secretary rather than to the President. This order stated that it was issued with the concurrence of the President and was subsequent to the approval by the Congress of Reorganization Plan No. I.

OFFICEHOLDERS DEFY THE LAW

For a time there was no further complaint by officials of the Farm Credit Administration, but farmers and farm groups in several areas, hopeful of better things, began forwarding sharp protests against prevailing practices. They wanted to know why something could not be done to modify onerous policies and previous practices of land banks. Then, on September 26, 1939, the Comptroller General ruled that Secretary Wallace could not continue the Farm Credit Administration in an autonomous status. The ruling pointed out, and properly so, that the Reorganization Act of 1939 and reorganization plans approved pursuant to it are law and cannot be modified by Executive order or delegation by a Cabinet officer. When, following that ruling, the Secretary of Agriculture set about complying with the law, another storm of protest emanated from the Farm Credit Administration. The Governor, Mr. F. F. Hill, resigned and submitted statements to the press calculated to show that the national financial structure was imperiled because of the consolidation and the reduction in his power and authority. Representatives of some farm organizations have been actively and prominently identified with a movement to regain an independent status for this agency. It is, however, my understanding that their farmer members have not expressed themselves. No resolutions have been received by me from farmers in my section of the country in opposition to the change.

I call attention to these developments because it is one of the few times that minor executive officials of agencies of the Federal Government have set out to defy both the Congress and the President by an open, undisguised lobbying campaign. I assumed that when Mr. Hill's resignation was accepted and the present Governor, Dr. Albert G. Black, was appointed and confirmed by the Senate those gentlemen who have enjoyed high-salaried positions in the Farm Credit Administration would be content to abide by the decision of Congress. But such was not the case. Since January 1 several resolutions opposing the transfer have been received in Washington from national farm-loan associations, production-credit associations, and other groups closely affiliated with the Farm Credit Administration. The number of resolutions has not been large enough to be representative; the important fact is that they have been inspired. Inspired, not by farmers who loved the system but by officeholders who wanted no interference with their determination of the national agricultural credit policy.

THEY INCITE FARMER OPPOSITION

I have before me copies of two letters. One of them is addressed to the members, officers, and directors of all national farm-loan associations in the twelfth farm-credit district, and is signed by Mr. E. M. Ehrhardt, who recently resigned as president of the Federal land bank at Spokane. This letter was apparently sent to all the borrowers of the Federal land bank in Oregon, Washington, Idaho, and Montana. I assume that it was mailed under Government frank, possibly 40,000 copies. It is dated January 12, 1940. The concluding paragraph of the letter reads as follows:

> Some of you may feel that we have talked too much in these letters and in our meetings about the necessity of zealously guarding the cooperative feature of the land-bank system, but we must say again emphatically that this is a matter of gravest importance. We believe it is up to the members, officers, and directors of national farm-loan associations to see that their cooperative credit system establishes its permanent place among the institutions of this country. All during the period of hard times there have been many contentions for more direct Government loans in larger amounts and upon more liberal terms than can be made through a cooperative land-bank system. The hazard of the dependence upon direct lending of Government funds as a permanent system, with all of its attendant economic, social, and political consequences, has been mentioned in previous letters. American farmers, in all probability, will have the kind of system they want. It is up to them to say whether or not we shall lay a new pipe line to the Federal Treasury or keep the one we have, which leads to the private money markets of the world. There are many implications, too many, in fact, to discuss in a letter, but the matter merits your earnest study and consideration, for in our opinion the voice of the members of national farm-loan associations will have great weight in the determination of this question.

I call attention to the sentence about the "pipe line which leads to the private money markets of the world." "Aye, there's the rub." Shall farm credit be returned to banker and insurance company control in the big money centers?

When this letter was received by the associations there was only one way in which it could be interpreted by them. That is, they were expected to send resolutions to their Congressmen asking restoration of the independent status of the Farm Credit Administration. This letter followed immediately one addressed on January 2, 1940, to all national farm-loan associations and production-credit associations by Mr. F. F. Hill. Permit me to call your attention to the following statement in that letter:

> There is only one issue in the situation, so far as I am concerned. That issue may be stated as follows:
> Should the Farm Credit Administration be reestablished as an independent Federal agency supervising cooperative credit institutions set up to serve agriculture or should it become part of a large department of Government responsible for the administration of a great many other programs, some of which, regardless of the intentions of administrators, may tend to weaken and perhaps ultimately destroy the cooperative credit system.

FARM BORROWERS MISLED

It is generally recognized that the success of any agricultural credit program depends largely on the success of other programs designed to adjust, improve, and stabilize agriculture. Those "other programs" which Mr. Hill views with alarm are the ones on which farm credit depends for its solvency. But, more importantly, what responsibility of the former Governor compelled him to circularize associations of farmers in regard to this issue? It is generally supposed that Members of Congress represent the people of their districts. This is not the function of the appointed officials of the executive branch of the Government. If Mr. Hill as Governor—and he was still on the pay roll at that time—or presidents of the land banks are going out to campaign in the country against acts of Congress they dislike, they should run for elective office and not use the privileges of appointive posts to indulge in what is clearly a campaign against an administrative order of the Secretary of Agriculture.

It is not surprising that there have been some resolutions in opposition to this consolidation. It is surprising that there have not been more in view of the campaign which has been carried on. These documentary records tell only part of the story. In my district, false stories have been circulated that the Department of Agriculture intended to deny any loan to a farmer who did not participate in the agricultural-adjustment program and that farm-credit agencies were to be converted into instruments for relief. The Reorganization Act changed no functions of Farm Credit. Its loans must be made under the provisions of the Farm Credit Act, as has been the case in the past. If that act is changed, the change will be made by Congress, and again, it may be observed, that it is for Congress to determine such changes, and it is not the function of disappointed officeholders of a Federal agency to legislate. Unfortunately this Congress may be called upon to consider proposals to restore the Farm Credit Administration to an independent status. Congress will then again become interested in the future policies and administration of Farm Credit. It seems important to me and to the welfare of our greatest industry that we examine the real issues and study the situation before we give credence to the inspired protests emanating from those whose authority may have been lessened.

SOUNDNESS DEPENDS ON CONGRESS

The claim is made that the land-bank system as it has been conducted is sound. That claim is based on the fact that land-bank bonds sell readily at low rates of interest. That is true, but the favorable market situation which has

been developed for these bonds is not due to the condition of the mortgages securing the bonds, which are delinquent 20 percent or more, but rather to the fact that the investors know that the land banks are so close to the Government their bonds will probably never be defaulted.

In January 1932, when the land-bank system was virtually bankrupt, Congress voted $125,000,000 additional capital stock, and I have no doubt that we would do so again if necessary, though none of that appropriation had been repaid to the Government on December 31, 1939. So it seems far-fetched to contend that land banks are sound, independent financial institutions. If Federal support had been withdrawn at any time after their establishment, they would have been bankrupt. The same holds true today. The Federal Government, having created the land-bank system and having financed it for almost 24 years, has a direct and responsible interest in its policies. When some of those policies are exposed to the light of public discussion, such changes as have recently been made in the Farm Credit Administration will appear to have been fully justified. These new policies have aroused in my mind a hope that the Secretary of Agriculture will give effect to the real purpose and intent of Congress when it passed the Farm Credit Act. I am convinced that the change will relieve the distress of hundreds of thousands of farmers who have been subjected to policies and practices in credit operations more ruthless than the practices of any private bank or insurance company. These practices were as crushing to the farmers as the vicious practices of some money lenders, which led to the creation of the land-bank system in 1916.

GROWTH OF FEDERAL FARM CREDIT

In the two decades since Congress created the Federal land-bank system, the country has experienced two periods of acute depression, 1920–22 and 1929–33. On each occasion the Federal land-bank system has been called upon to assume additional responsibilities in connection with agricultural financing problems. The development has placed the Federal land-bank system in a dominating position among mortgage institutions. Today the Federal land bank and land bank commissioner hold about 40 percent of the total farm-mortgage debt. In 1918 the total farm-mortgage debt was $7,160,085,000. Of this amount the Federal land banks held 0.6 percent. In 1938 the total farm-mortgage debt was $7,121,093,000, of which the Federal land banks and the land bank commissioner held 38.2 percent.

The land-bank system has acquired large holdings of real estate. In the Spokane district alone it holds at this time 928,895 acres of farm land, or 2,764 farms. Today the Federal land banks and land bank commissioner dominate the agricultural mortgage field and hold in their hands the financial welfare of American farmers. Consequently, if the National Government is to make real progress toward solving the problems of agriculture, credit practices of the farm-credit system must be in harmony with policies of the Federal Government. This, I think, is true whether or not it corresponds to the personal desires or convictions of a Farm Credit Governor or a land bank commissioner.

It is high time that the Congress reexamine the farm-credit structure, built up over the past 20 years, to determine whether the program intended by farm-credit laws has been carried out. It is imperative that attention be given by Congress, the creator of the system, to the protests of farmers against harsh collection policies, widespread foreclosures, and deficiency judgments.

BUSTED BANKERS RAN THE SYSTEM

As a standard by which to determine changes that should be made by the Secretary of Agriculture and the new Governor, it is advisable to review the standards of administration and policy of our various credit agencies. The background, training, and habits of many of the present officials of the banks operating under the Farm Credit Administration has been limited to the private commercial banking field. Many of them were former officials in local private banks which were forced to close in 1932 and 1933; in short, they were busted bankers who had political pull but little conscience. In many cases they were not in sympathy with the system and were not able to distinguish the difference in purpose between a commercial bank dealing in short-term credits and a great national agricultural credit system which was intended to be responsive to the needs of individual farmers. Too often, these bankers, because of their inflexible attitudes, carried into the farm-credit system policies and methods which were not adaptable to such a system nor beneficial to the great industry which it was created to serve. This not only prevented the system from rendering a full measure of service to those for whom it was intended, but oftentimes these policies operated to weaken the system itself. Now a new era in administrative policies is indicated by the actual, rather than nominal, transfer of the Farm Credit Administration to the Department of Agriculture.

One phase of financing in the 1920's which affects the present agricultural credit situation was the method by which a substantial part of existing farm indebtedness was incurred. The agents of large mortgage-loan and life-insurance companies, the branches of metropolitan banks and the local units of chain banking systems, as well as some local independent banks, were making farm loans in many parts of the country for which they received substantial commissions or bonuses. The natural tendency was to saddle the farmer with just as much indebtedness as he was willing to accept. If he fell behind in his payments, the debt was not usually liquidated through foreclosure, but was compounded by making a new mortgage and adding delinquent interest and service charges to the principal until many farms were hopelessly indebted. This was not an instance of a credit institution advancing new funds to an enterprise on the supposition that the original indebtedness might be paid from increased earnings. It was merely saddling men with additional indebtedness beyond their ability to pay. That private banking could not survive such practices was very much in evidence in 1933. This indebtedness was passed on to the Federal Government, when the Farm Credit Administration, through commissioner loans, commenced refinancing the same bad loans which had nearly wrecked private institutions.

COLD-BLOODED FORECLOSURES

The governmental refinancing program of 1933 and 1934 undoubtedly saved large numbers of farm homes. Since it was done under pressure, it was to be expected that mistakes would be made. The fact stands out, however, that thousands of American farmers are now attempting to carry mortgage debts much larger than they can ever hope to pay out of farm income, even in times of greatest prosperity. I do not know how many of them there are throughout the country. I know of several such cases in my own district. The Farm Credit Administration, it seems to me, should immediately take steps to ascertain cases in which farmers are indebted beyond their capacity to pay out, and make some adjustment.

Nothing is to be gained by forcing those unfortunate borrowers through foreclosure and putting them on the relief rolls, as has been the practice of the Farm Credit Administration for the past few years. So far, in such cases land-bank policies have, I fear, been too severe. Fortunately new policies in regard to foreclosures have now been announced. Farmers who were foreclosed under such circumstances have not been permitted to repurchase the farms which have been their homes. One of the dogmas of the mysterious ritual of land-bank credit has been to refuse resale or lease of the property to the unfortunate borrower or any of his relatives. The only apparent requisite for the new purchaser was that he be an entire stranger to the land, or a covetous neighbor who had secured the cooperation of the land bank. In other words, land-bank policy has said that because a farmer failed once he is to be forever barred from farming. If such a policy were adopted with respect to bankers, the exodus of personnel from farm-credit institutions would be classic, and would leave them short of operating officials.

DEFICIENCY JUDGMENTS

Not only was the foreclosed borrower barred from acquiring a farm in which the land bank had an interest, he was usually subjected to a deficiency judgment, because the bank could not sell his farm for as much as he owed. Deficiency judgments have, in many instances, been kept alive for years so that whatever the farmer acquired was subject to seizure. What man would have the courage to start over again under such circumstances? The natural reaction is for him to take a resentful attitude and to conclude that the Government owes him a living. In cases such as that, the Government has a definite interest. Consider the fact that, in 1938, there were 10,500 foreclosures taken by the Federal land-bank system; 10,500 families may have been forced on relief by an agency of the Federal Government. There were 4,650 cases left pending at the end of the year. In 1939, 12,963 foreclosures were taken by the Federal land banks and the Land Bank Commissioner and 3,424 were pending at the end of the year. Could that be the sound banking to which Mr. Hill referred in his circular letter? If it is, let me again point out that the Federal land bank at Spokane now owns 2,764 farms or 928,895 acres of farm land. The bank estimates it will lose $4,790,797 on that land, and to that amount may be added $10,946,500 of losses incurred on real estate transactions prior to December 31, 1939, by the Federal land bank at Spokane. If solvency of a bank is any factor, this type of banking is not sound. I wonder how many of these loans would have been repaid if the borrowers had been given a chance? Knowing how deficiency judgments crucify the farm debtor, I have hoped, in Congress, to secure modification of the Federal land-bank law to prevent any court granting deficiency judgments in such foreclosures. Failure to secure such just and constructive legislation as was proposed in my bill has been due to the uncompromising rigidity and harshness of the Farm Credit Administration officials in Washington. When States have enacted or proposed such acts, these farm-credit dictators have demanded repeal of laws or cessation of activity for them, on penalty of withdrawal from the State of all Federal farm credit. These same financial dictators set up by our Government have refused to consider legislation allowing compromise of excess Federal loans.

LAND-BANK COLLECTION POLICIES

The collection policy of land banks reduced to its essentials is this: For every $1,000 a farmer borrows he agrees to pay back somewhat more than $2,000 in yearly installments over 34 years. He cannot pay it in advance for the first 5 years, and after that he is discouraged from paying more than his annual installment. If he has a good crop year and can pay more than is due it is counted against payments at the end of the pay periods, 25 or 30 years hence. The average man does not want to invest the fruits of his toil that far ahead, so if there is a surplus of farm income it is spent some other way. If a year of drought, or insect pestilence destroys a crop, however, and the borrower cannot meet a payment he is subjected to a penalty interest rate which may be as high as 8 percent, though 6 percent is usual. The following year he owes two annual payments plus penalty interest on the one which became delinquent. If there are 2 or 3 years of bad crops the land-bank borrower finds that he owes in one lump sum an amount he could not pay in his best year—and all the while that sum is accumuating penalty interest.

It must be remembered, and the fact should be stressed and printed in capitals, that the Federal land bank, while levying these penalties impossible for payment, retains, presumably as an investment in stock of the land bank, without crediting interest, 5 percent of the amount originally lent the delinquent borrower, when, in fact, the borrower from the Federal land bank has actually been obliged to pay a bonus of 5 percent to get his loan. Through all the 30 or more years the farm borrower actually pays interest on the 5 percent exacted from him and actually surrendered to the system. This should be reversed and interest should be paid him for money lent the system. It is the theory, probably unsound, that he surrenders 5 percent of his own loan to guarantee his neighbor's loan. It is the supposition that the borrower has that much stock in his local association and that it may be repaid when he finally settles his loan. As a matter of fact, he is the only private citizen who furnishes capital to this institution without receiving interest and he is then penalized to the tune of 6 percent, possibly 8, if he fails to pay his installment. There should be legislation, immediately, correcting this abuse, and crediting on the farmer's debt to the land bank the amount of this enforced stock subscription.

VICTIMS OF THE SYSTEM

In Malheur County, Oreg., a farmer who is indebted to the land bank, makes an annual payment of $197.50. He had paid on his loan for several years without substantial difficulty, but in 1934 drought destroyed his crop and he could not pay. The following year the land bank sent him a bill for two annual payments plus interest on the delinquency—a little over $400. This was an amount which would have been difficult in a good year, and his crops were not good in 1935. Nevertheless, the land bank hounded him for payment. He received threats of foreclosure and collectors visited his farm. Finally, he took the only way open to him and sold some of his horses to meet the payment. In other words he dipped into operating capital. A few weeks ago that farmer stated that this one experience virtually ruined him, and that he was doubtful that he could ever again catch up to where he was in 1934. When depreciation is allowed to begin on a farm it is almost impossible to stop it.

On cattle ranches I have seen fine herds depleted and pastures ruined by pressure for the annual payment on Farm Credit indebtedness. In the dairy sections of Wisconsin and Minnesota dairy farmers have sometimes been forced to sell half their herds to meet installments; then, having liquidated their only means of making an income, they must stand helpless with their farms and homes going to foreclosure. The same situation can be duplicated countless times wherever land-bank loans exist. If a borrower once misses a payment, he is forced to "mine" his farm through cash cropping, failure to make necessary repairs, or selling livestock. It is thus made progressively more difficult to meet subsequent payments, until foreclosure is inevitable.

UNSOUND BANKING PRACTICES

The practices cited do not, in my judgment, constitute sound or intelligent banking. They would be condemned by any successful private bank. No one has ever heard of an institution like the Chase National Bank tearing up a railroad track and selling it to meet a payment on a mortgage. Such an institution would be more likely to advance additional funds for track maintenance, because without it the borrowing railroad company could never make any money to pay the debt.

Likewise, the farmer who is forced to mine his soil or liquidate his operating capital can never pay his debt. Furthermore, when the bank finally gets the property, its value has usually declined well below the value of the mortgage. Land-bank collection policies have literally killed the goose, the cow, and everything else which produces agricultural gold. It would be well for the Congress to see to it not only that Farm Credit stays in the Department of Agriculture, but that immediate action is taken to put some agriculture into Farm Credit.

The lack of adjustment of credit policies to agricultural needs may have something to do with the fact that 126,971, or 28.9 percent, of all land bank commissioner borrowers were delinquent on December 31, 1939. One hundred and twenty-seven thousand and eighty-two borrowers, or 20.5 percent of all land-bank borrowers were delinquent at the same time. In both cases delinquency increased over the year 1938. At this time the rate of delinquency in the Pacific Northwest is 21 percent. Of a total of 56,934 land bank and commissioner loans, 12,222 are delinquent. The average rate of delinquency is $455.51 per borrower. In terms of dollars, delinquent loans in that district amount to $27,646,520 out of a total of $138,433,656 in loans.

NEW POLICIES DEMANDED

These facts lead me to believe that there are three major points on which policy with respect to farm mortgages urgently

needs reconsideration by the Congress, as well as by the Department now charged with the responsibility of administering the system.

First. The alarming and widespread foreclosures remove good farmers from their farms and place them on relief rolls.

The policy which has brought this about is damaging to the banks and to the Government, and it creates a body of resentful and suspicious citizens. In its trail follows the write-down of the mortgage value for resale, the depreciation of the land and improvements during foreclosures and the period of redemption, the administrative expense of foreclosure and resale, and the burden which must be borne by W. P. A., the Farm Security Administration, or some other public agency in caring for the foreclosed victims. Since the agency has been placed under Secretary Wallace, I understand foreclosures, in all but the bad-faith cases, have been suspended. Some more permanent solution must be worked out.

Second. Deficiency judgments, about which I have already spoken, must be abolished. These judgments which are taken against a foreclosed borrower if the sale of the property does not satisfy the debt, are a curse in our economic structure. The judgment may be taken either against the foreclosed borrower or against previous owners who held the land subject to the same mortgage. In one case which occurred in the State of Washington, a land-bank borrower died, leaving the mortgaged farm to his widow. She was unable to farm the place and sold her equity. She moved to a city and commenced working at whatever menial tasks she could secure. After several years she had acquired a boarding house and was making a small income. The land bank at Spokane foreclosed the mortgage on the farm she had once owned. There was a deficiency, and that widow was forced to pay it at $30 per month. In Jefferson County, Oreg., I personally observed a similar case of the collection of a deficiency by the Spokane land bank. In my opinion, the deficiency judgment procedure is neither fair nor necessary. It is but one step removed from imprisonment for debt. It has no place in civilized society. The Farm Credit Administration should take the lead in removing it from our agricultural credit system. I hope it will do so. I will make another attempt to secure action by this Congress, knowing that it may not now be thwarted by unsympathetic officials in the Farm Credit Administration.

Third. Collection policies must be changed. If a man owes you one or two thousand dollars, the time to collect it is when he has it. It does you no good to press him hard when he is broke. That statement is probably not included in textbooks on banking, but it ought to be, because it is recognized as a fundamental principle of sound banking by every successful banking institution in the world. If there were a possibility of making a profit by removing farmers from their farms and selling the properties in the open market, land-bank policies would be less open to condemnation, but experience has abundantly demonstrated that almost uniformly through the country land banks are losing money on foreclosing and selling farm homes. Let us have no more of the handbills and blatant advertising of "finest farm lands" for sale by the Federal land banks. Shame on a system which would take such lands from the farmer who has paid taxes on them for years, enriched them by his labor, and slaved through our depressions to hold them. It is only natural that the man who owns a farm, who has made it his home throughout most of his life, values the place more highly and farms it more advantageously than does a stranger. In the vast majority of cases the best credit risk on any farm is the man who owns it and understands it, who has put his life's toil into it and has raised his family upon the bounty of its production. There are no end of cases to be cited to demonstrate that arbitrary collection policies prosecuted by absentee officials of land banks have forced the liquidation of the only means a borrower has to make a living. Dairy herds have been sold, herds of cattle have been reduced to the lowest grade stock, buildings have fallen into disrepair, and land has been exhausted by cash cropping to meet the rigidly inflexible annual mortgage payment.

BENEFICIAL POLICY CHANGES SUMMARIZED

I think it is safe to say that, for the last 15 years at least, it has been fairly well recognized that the land banks should, first, give greater consideration to scaling down or refinancing indebtedness where property is overloaned; second, give greater service and agricultural guidance either on its own initiative or in cooperation with other Government agencies; third, provide for repayment of indebtedness on the basis of farm income rather than a fixed scale of payment, and by that I mean a variable-payment contract which calls for a reasonable share of the income of a farm as an annual offset against principal and interest indebtedness; fourth, return to the forest or public domain land which is unsuited to agricultural use instead of foreclosing one borrower and selling it to another, only to foreclose him and sell again, providing a recurring, never-ceasing method of destroying the lives and hopes of a certain number of farmers.

I do not recommend reconsideration of these policies exclusively as an aid to agriculture but as an aid to the farm-credit system itself.

THE SYSTEM VERSUS THE FARMERS

Whatever success the Farm Credit Administration has had in collection of principal and interest in the past few years has not been due to their policies nor to their initiative but rather to the beneficial effects of the laws passed by the Congress since 1933. I refer particularly to those important acts worked out by the Department of Agriculture, which now, very fortunately, assumes responsibility for administering the farm-lending system.

The phrase "sound banking" which has been used so frequently in recent discussions refers only to the welfare of the banks themselves. The borrower's welfare is in fact the bank's welfare, and the situation of the borrower has been largely disregarded under present practices. We are not confronted with a question of preserving a sound cooperative credit system so much as with the necessity of determining whether the system is sound at all, and I think we might well inquire whether it is even cooperative.

OFFICIALS OPPOSED LOWER INTEREST RATES

I always recall with bitter resentment that it was upon the advice of such a controlling group that the President twice vetoed the bill Congress passed reducing farm-loan interest rates to 3½ percent. The Congress then passed this over the veto, compelling friends of the administration, much against their wills, to vote to override the veto. At my last conference with the Farm Credit Governor and the Land Bank Commissioner, in August 1939, I pleaded with them to recognize the needs of agriculture and not continue their opposition to lower interest rates. They were insistent on continuing the higher rate though railroads were then getting Government money for 2¾ percent.

THE BORROWER'S SHARE IN ADMINISTRATION

When the Farm Credit Act was passed provision was made that local associations of any 10 or more borrowers should be formed and incorporated under Federal law, to be known as national farm loan associations. Each borrower was required to purchase an amount of stock in the local association equivalent to 5 percent of his loan. I repeat, he received no interest on this so-called "investment," but he paid interest on it. The association in turn subscribed to a like amount of stock in the Federal land bank. The association was to have an income in the form of dividends on the stock it purchased in the Federal land bank. With that income it was to establish a dynamic local administrative agency which would meet the day-to-day problems of credit and offer solutions based on first-hand knowledge of the borrower's circumstances. It was also to guide credit policy in any given area on the basis of conditions in the area. Such important elements of credit as the character of the borrower and his ability to handle credit were to be determined by the local board of directors who were to be substantial citizens of the community.

In theory the Federal Farm Loan Act contemplated a cooperative system, but administration of the land banks has prevented the theory from becoming effective. It is sometimes claimed that members of local associations have a voice in selecting the directors who administer each of the land banks, and thus may, indirectly, affect its policies. This claim is absurd. The borrower who is called to the annual meeting of the local association is given a slate already prepared and has no alternative but to vote for those originally selected by processes unknown to him. It is not popular nor people's government, and it is not democratic nor cooperative. An occasional rebel candidate is severely punished, and he must command considerable capital and make heavy personal sacrifices in order to be heard at all. The head official in Washington has power to name directors who will cast the weight of the board in favor of his policies. Cooperative? I should say not. A borrower has about as much chance to cooperate as has the holder of the smallest policy in one of the great so-called "mutual" life-insurance companies.

FINANCIAL STATUS OF ASSOCIATIONS

Most of the local associations are now seriously indebted to the land banks, and their stock cannot be liquidated to make it possible for the individual borrower who has paid off his loan to get back the value of his stock. In the Spokane district there were once 600 of these local associations. At the present time there are 275, of which only 70 are solvent. One hundred and eight of the associations in the Spokane district are indebted to the land bank for more than 100 percent of their stock. That may be attributed to bad economic conditions, but it is certainly due, in part at least, to the policies land banks have adopted with respect to their associations. Most responsible officials within the system itself will admit that land banks have tried to conduct the entire credit operation from the central office. Far too frequently the recommendation of a local board of directors, familiar with local conditions, has been disregarded in making a loan. Their requests for forbearance in meritorious cases have been ignored. Where pressure for payment is heavy, the farmer mines the soil and frequently foreclosure has been pushed to completion only to find that the farm involved has deteriorated so it is no longer worth the amount of the indebtedness. Although the associations have had but a very small part in deciding who should get a loan and how that loan should be serviced, they are held liable for any losses incurred by the bank up to the full amount of their stock in the association. Under the indemnity agreement, the slightest obligation any borrower has to the land bank must be paid before any other borrower can liquidate his stock, even though his own loan is paid. So, for practical purposes the framework of policy has operated to destroy the financial integrity and the basis of personal responsibility as well as the interest of the local cooperative associations. The local associations have been given no real source of income, although millions of dollars have been spent by the land banks employing high-salaried officials to try to do the things which could better be done by a local group of farmers.

Nationally, here is the situation of the national farm loan associations. On June 30, 1939, there were 1,267 associations with no capital impairment; 320 associations with very slight impairment; 1,116 with impairment ranging from 5 to 100 percent; and 1,187 having impairment exceeding 100 percent. Those having very slight impairment, and with a capital stock of $15,411,400, owed on December 31, 1938, $915,800; those with impairment from 5 to 100 percent and capital stock of $30,219,600, owed $13,072,600; and those with impairment of over 100 percent and capital stock of $19,672,400 owed $77,366,200. These figures include estimated losses from currently delinquent loans as well as established losses. The total loss actually established on the books since organization of the system was approximately $36,492,000 on December 31, 1938.

SYSTEM MUST BE MADE COOPERATIVE

I do not feel that a far-flung system of agricultural credit can succeed unless farmers who borrow from the system are permitted to participate in its operation, its administration, and the formation of its policies. Responsible officials in the Spokane bank have said repeatedly that the national farm loan association is nothing more than a name. Its functions have been curtailed, its powers have been destroyed, the real basis of its usefulness has long since been forgotten by a group of administrative officials more interested in private banking business and in holding their jobs than in the credit structure of agriculture.

I should like to call upon the Secretary of Agriculture and the new Governor of the Farm Credit Administration to do something about making effective the cooperative features of the land banks. It is utterly hopeless to try to get cooperative administration from a group of bankrupt, downtrodden, nominal associations. If the farm-credit system is to get out of the financial hole in which it now finds itself, the cooperative effort of its hundreds of thousands of borrowers is absolutely necessary. The more I hear about preserving our sound, cooperative, agricultural credit system, the more I am convinced it is not sound; it is not cooperative; and it will not be either sound nor cooperative so long as the concepts of its administration disregard fundamental principles of the farming business and follow classical concepts of banking. A change is needed, and I hope the Secretary of Agriculture will be able to make that change.

The men who have been in charge of the administrative policies of the Farm Credit Administration have always subordinated the interests of the farmer to other groups, even to the extent of questionable legality. There is, of course, no doubt that those who have invested money in farm-loan bonds issued by land banks should be given proper protection. But let us never forget that the main purpose of the Farm Loan Act was relief to agriculture and not the extorting of unreasonable and unlawful rates of interest from farmers.

JOINT-STOCK LAND BANKS DEFRAUDED FARMERS AND BONDHOLDERS

Most of us know the history of the Farm Loan Act. The abuses of usury as well as extortionate charges and exactions of private lenders led to the enactment of this act, in 1916, after a commission had toured Europe to examine European land-credit systems, and after extensive hearings had been held.

Let us examine the operations of a particular type of land bank resulting from the act—namely, joint-stock land banks—and see how a group of dictatorial and willful men guiding the policies of the Farm Credit Administration have allowed the joint-stock banks to treat farmers. I discuss these banks in order to show what practices have been tolerated by those in control. These joint-stock banks were organized to offer bigger loans. They were sheltered under the umbrella of the Federal Farm Loan Board. People felt that they had a definite relation to the Government which supervised their activities, though they owed their origins to the profit motive. These banks had the same tax exemption given to Federal land banks—complete, except from taxation of their real estate. It was because of this exemption and other advantages that these banks were prohibited by law from charging a rate of interest on farm mortgages taken by them which should exceed by more than 1 percent the rate of interest paid to bondholders. In other words, the "spread" for administrative expenses and profits was limited to 1 percent.

In this connection it may be of interest to refer to certain statements made in the Congress while the Farm Loan Act was under consideration. In the reports accompanying the introduction of the bill the Joint Committee on Rural Credits said, among other things:

The land banks are permitted to charge farmers 1 percent more for interest than they pay bondholders. For example, if the current rate on farm-loan bonds is 4 percent, the bank may charge not to

exceed 5 percent to farmers who borrow. This margin of 1 percent on the amount of unpaid principal outstanding is available to the bank for expense and earnings.

During the course of the remarks of Senator Hollis in presenting the bill to the Senate it was said:

The entire expense and profit must come out of the 1-percent difference between the amount that the farm-loan bonds carry and the amount at which the money is loaned to the farmer.

Nothing could be much clearer than this.

After the economic depression had been in existence for some time, interest rates fell about as low as they have ever been in this country. Accordingly these joint-stock land banks proceeded immediately to call outstanding issues of bonds, paying on an average approximately 5 percent, and to pay off such bond issues by issuing new bonds carrying an interest rate, generally speaking, of about 3 percent. Thus, if a joint-stock land bank had $2,000,000 in bonds outstanding and was operating on a legal income of $20,000—1 percent of $2,000,000—by such device they increased their tax-exempt income from $20,000 to $60,000, since no reduction was ever granted any farmer whose 6-percent mortgage was part security for their issue of bonds. The figures are not available to me at this time as to just how much money the American farmer has lost as a result of such refunding transactions of the joint-stock land banks. It runs into millions, however, and one of the first things which should be done should be to compel these banks, and also the Federal land banks, to pay back moneys extorted in such manner from the farm classes of this country.

WHO GOT THE PROFIT?

It may be said that it was necessary to keep the old interest rates on farm mortgages because if such reductions were made in mortgage rates upon such refunding transactions at the lower interest rates the banks would go into receivership. If these banks have been unable to keep their own houses in order, certainly it has not been the fault of the farmer. But even granting that such argument would have some weight, attention is drawn to the policy of the Farm Credit Administration in connection with refunding activities. The Farm Credit Administration would never allow any joint-stock land bank to refund any bond issues unless the appraisal made by its own appraisers showed that, even if the refunding transactions were not allowed, the bank would ultimately pay 100 cents on the dollar to every bondholder. Hence, it is obvious where the profits have gone—they have gone into the pockets of the stockholders and the officers of the joint-stock land banks. It certainly carries the theory of protecting invested capital to a very far extent when the stockholding class is allowed to extort illegal interest from the farming class with the approval of the Government agency which is supposed to protect him.

Similar refunding transactions have been effected by the Federal land banks. No matter what few extra phrases may have been incorporated into the act which may purport to give the Farm Credit Administration, or the Governor thereof, the complete power over interest rates, there is no denying the fundamental premise that the spread between what the farmer paid and what the bondholder received as interest should never be more than 1 percent. This has been well known among farm organizations. As a matter of fact, certain farm organizations took the position that Federal land banks, upon refunding their farm-loan bonds at lower interest rates, should pass these savings on to the farmer. They have never done so and never intended to do so.

There is no amendment necessary to the statutory set-up of the Farm Credit Administration, and the institutions which it supervises, to compel the return of surplus interest payments taken from the farmer by such refunding practices. The only thing which is necessary is to have in control of policies of such an organization a group of men who will carry out the full intent of the Congress when it passed the Federal Farm Loan Act. It certainly has not had such a group in control up to the present time.

SPECULATORS WERE FAVORED

There is another point which might be of interest in this connection. When these joint-stock land banks went into receivership, in a number of instances the assets of a bank, after they had been administered for a certain while by a receiver, would be sold, at an enormous discount, to private speculators. In this connection, study should be made of receiverships handled by the Farm Credit Administration. The exact amount of discount on these assets cannot now be stated, but we may fairly assume that these assets were sold at 50 cents on a dollar. The speculators who bought these assets never, of course, reduced the principal of the mortgages so bought, and never gave the farm borrower the benefit of the discount at which the purchase was effected.

FARMERS DENIED REFINANCING PRIVILEGES

In my own section we had a joint-stock land bank which became insolvent. The proposition was advanced that the farm borrowers and former farm owners who had been foreclosed should join themselves together as a cooperative and borrow from the Bank for Cooperatives enough money to pay the bondholders what the appraised value of the assets amounted to and purchase all the assets of the insolvent bank. Then each former mortgagor or former owner could refinance his mortgage at the deflated value and in that way the loans received by the cooperative would be paid off. In such manner the deflation in values brought on through economic necessity would be passed on to the farmers.

I am advised that this plan was presented to his superior by one of the members of the legal section of the land bank division of the Farm Credit Administration but it was completely disregarded. The general attitude of responsible Farm Credit officials seems to have been that a group of farmers seeking to take advantage of deflated values constituted a conspiracy. A group of bankers doing the same thing constitutes good business and sound banking.

THE BONDHOLDER BOGEY

The instances cited are but typical of the philosophy which has been characteristic of the Farm Credit Administration. Whenever any change of policy has been suggested as an aid to agriculture, a hue and cry has been raised about the bondholders. Whether we are willing to recognize it or not, bondholders are interested in farm-credit bond issues simply because they are as good as guaranteed by the Treasury. I, for one, am ready to write that guaranty into the law and to destroy for all time to come this fallacious but effective argument which everlastingly is the basis for making credit persecution out of what Congress intended to be credit aid.

The basic reason for placing the Farm Credit Administration in the Department of Agriculture and the philosophy of the reorganization bill was to reduce administrative costs of governmental and semigovernmental agencies by eliminating duplicating services and unnecessary overhead. When the false issues now being created by vociferous but uninformed groups are cleared away, I think we shall recognize that we now have an unparalleled opportunity for reorganization of the farm credit system in the interests of economy and of the farm borrower.

EXCESSIVE OVERHEAD COSTS, RED TAPE

In Farm Credit there are 7,649 active separate and distinct corporations, the existence of each of which involves an expense. A production credit association is organized by the Production Credit Corporation in a district. When it makes a loan, it sends that loan to the Federal Intermediate Credit Bank for discount. If production credit is needed by a group of farmers rather than by just one, they must go to the bank for cooperatives; and if the loan is made, it is sent to the Federal Intermediate Credit Bank for discount. Thus we have three well-staffed, expensive banks engaged in the work of one.

The Federal land banks with their far-flung organization have been engaged in making first-mortgage loans. When the land bank commissioner's fund was created by Congress

to permit second-mortgage loans, the land banks were designated to act as agent in making those loans. Subsequently we find that resident vice presidents of the Federal farm-mortgage corporations have been established in all the districts, duplicating the land bank's administration of Federal farm-mortgage funds.

Another deterrent factor which I have observed is that within the individual land banks there has been evolved the most complicated procedure and the worst red tape which winds up any activity of the Federal Government.

The annual cost of operating the 12 lands banks was $21,793,100 in 1939. During the same year the cost of operation of the Federal intermediate credit banks was $1,552,800; the Production Credit Corporation, $1,343,000; the banks for cooperatives, $990,100. The total administrative bill of the 12 regional offices of these 4 institutions was $26,679,000. I doubt that any agency which must operate on appropriated funds spends a comparable amount for a comparable service. It can and has been said that this money does not come out of the Federal Treasury, but it does come out of the income of farmers with the consent of the Federal Government, and I hope that the new administration of the farm-credit system will make a careful examination of procedures and organizations with a view to elimination of this useless, wasteful, and unjustifiable expense to the farmers of the country.

HOPE FOR THE FUTURE

I hope that the association of farm-credit agencies with the Department of Agriculture will give them a realization of conditions affecting agriculture and an understanding that credit must be adjusted to agricultural needs. I hope that policies may be revised so that the farm-credit organization may be looked upon as an agency of service and not one of destruction. I hope that one of the effects of the reorganization will be to give to the hundreds of thousands of farm borrowers a voice in the administration of the credit system they helped to create and for which they are paying the bills. I hope, finally, that administrative officials of the Farm Credit Administration will, in the future, be encouraged to devote their efforts to the sound, helpful, cooperative administration of credit and that they will not find it necessary to devote their time and energy to lobbying for the preservation of their own jobs. I hope, also, that they will cease to influence the President to veto bills for lower interest rates to farmers, while making possible huge earnings for dishonest speculators. I hope, finally, that they will cease to "bear down with terrific oppression upon that class which derives its sustenance from the soil" and that they will help us to put an end to deficiency judgments on farmers in favor of an agency of the Federal Government which should protect them. That would, indeed, be a real farm-aid program.

LEGISLATION NEEDED

More than 6 years ago I made two speeches in this House on the defects of the Federal land bank system. In those speeches I outlined some of the features of farm legislation which I regarded as absolutely necessary. I insisted that interest should be decidedly lower. The statement I made at that time was that the farmer could not pay interest exceeding 2 percent and that a borrower should not be expected to have 5 percent taken from the face of his loan to guarantee his neighbor's loan in the same association. Bills to that effect were then introduced into the Congress.

On the 4th of March this year the chairman of the House Committee on Agriculture introduced H. R. 8748, which incorporates many of the features I advocated 6 years ago. Under this pending bill, interest is to be 3 percent, and the Government is to furnish the money directly to the farmers without any of the subterfuge such as has been used. The pending bill is a vast improvement over the existing law, and will be of incalculable value to the farmers who are obliged to have financial help. Deficiency judgments are therein abolished except in bad-faith cases. I have been contending for many years for this reform.

A bill has been introduced into the Senate, sponsored by several Senators, to reinstate the Federal Farm Credit Administration as an independent agency. This unquestionably has the backing of the Wall Street group. The big insurance companies in New York have again actively entered the best farm loan field and are offering loans at from 4 to 4¼ percent. This group of bankers and financiers is very anxious to keep the interest rates high, so they, very naturally, want no fundamental change in the farm-credit law. They want local associations to continue to take 5 percent of the borrower's money to buy stock in an association. They know this makes the farmers prefer the insurance-company loan, as they have resented what actually was a bonus. In rare cases only has the borrower been able to realize anything from the 5 percent exacted of him when he takes the loan. Those in opposition to the administration are trying to make a political issue out of this.

So the fight has really advanced until it is a contest between those urged on by the Wall Street bankers, who are determined to regain the old system under an independent head, with a pipe line to Wall Street, and those like myself, who are very anxious to make of the farm-credit system a really cooperative institution, farmer controlled, and of greatest value to the farming communities of the country.

The Department of Agriculture has not yielded to "frenzied finance" as have some other agencies of the Government.

Banquet of the Associated Young Democrats of Baltimore County

EXTENSION OF REMARKS

OF

HON. WILLIAM P. COLE, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

ADDRESSES BY HON. HERBERT R. O'CONOR AND HON. JAMES A. FARLEY

Mr. COLE of Maryland. Mr. Speaker, on Thursday, March 7, at the armory in Towson, Baltimore County, Md., which is the town where I was born, reared, and now live, a great nonfactional banquet and dance was held under the auspices of the Associated Young Democrats of Baltimore County, which is affiliated with the Young Democrats of Maryland and the Young Democrats of America. Their president, Mr. Harry J. F. Korrell, presided, and Hon. James J. Lindsay, also a member of the club and State senator of Baltimore County, acted as toastmaster.

In addition to the short address which I delivered, the meeting was attended by the Honorable GEORGE L. RADCLIFFE, United States Senator of Maryland, and addressed by the Honorable Howard Bruce, Democratic national committeeman of Maryland, and by the Honorable Herbert R. O'Conor, the distinguished Governor of Maryland, who welcomed and introduced the guest speaker of the evening, the Honorable James A. Farley, Postmaster General of the United States, who delivered the principal address.

Printed as a foreword to the menu of this occasion was the following:

The Associated Young Democrats of Baltimore County were organized in December 1937, with an original membership of about 40, which has grown to more than 1,250. The purposes of the organization are to stimulate in young people of Baltimore County an active interest in governmental affairs, to increase the efficiency of popular government, to foster and perpetuate the ideals and principles of the Democratic Party, and, through its administration, provide the highest degree of social justice and welfare, together with efficiency and honesty in government.

As an organization, the Associated Young Democrats of Baltimore County take no part in, and are pledged to no candidate or candidates in, any party primary, although there is no restriction on

individual members, as such, pursuing the dictates of their own inclinations. The Associated Young Democrats, however, individually and collectively, are, in the spirit of true democracy, pledged to loyally support the nominees of the party.

I congratulate the young Democrats of my home county upon the ability, determination, and courage displayed, not only in arranging such an affair but in having Postmaster General Farley as their guest speaker, thereby bringing to the people of Maryland one of the most convincing and logical speeches it has been my pleasure to hear.

I am especially indebted to Postmaster General Farley for his kind references to me.

In my remarks I referred to the administration of the Post Office Department of this Government by Postmaster General Farley, during which time he has taken it out of the red until today, the first time in many years, the Department is operating at a profit. I referred to Postmaster General Farley as one of the most popular Cabinet members with the Congress and, finally, as the very effective and capable chairman of the Democratic National Committee. But for the fact the distinguished Governor of Maryland, who introduced Postmaster General Farley, and whose remarks I shall insert herein, covered the life and service of this distinguished Democrat so well, I would incorporate at greater length my own remarks. With permission of the House, Mr. Speaker, I insert at this point the two addresses referred to above—that of the Honorable Herbert R. O'Conor, who welcomed and introduced Postmaster General Farley, and Postmaster General Farley's address of the evening:

ADDRESS BY GOVERNOR HERBERT R. O'CONOR

It is a distinct privilege for us to have as our guest this evening one of the outstanding men in public life in America, who, possibly beyond all other representatives of our Government, is known individually to many thousands of the residents of these United States. He is, we are pleased to observe, particularly well known to Marylanders, for we have had opportunities to entertain him before. It can be said, I believe, that there is no man who could come to address this or any other representative Democratic gathering in our State who would be welcomed more cordially for his own personal traits than our guest of this evening.

No organization is more worthy of such an honored guest and speaker as we have this evening than your own group, the Associated Young Democrats of Baltimore County. It was my personal good fortune 2 years ago to be a guest and speaker at your first annual banquet, a banquet which launched your group on an era of progress that really has been astonishing. As I recall it, there were only about 250 members at that time. Now your ranks number well over a thousand, and through your affiliation with the State and National Associations of Young Democrats you are an integral and important part of one of the most influential groups of our political life today.

Recently during a newspaper interview in Florida, I volunteered the statement that Mr. Farley is the outstanding political strategist of our times. Through a slight misunderstanding of a word, the Associated Press dispatch quoted me as describing him as the outstanding strategist of all times. While I realize that that is taking a good deal of territory, I am willing to accept the amendment. Certainly the memory of Mr. Farley's remarkable achievement in the field of national politics, preliminary to the 1932 election, stamps him as a political organizer and leader of the first order. While campaign managers of other leading candidates then in the field publicly proclaimed the availability of their respective candidates, Mr. Farley quietly, but most effectively, was lining up in each State the all-important votes for Mr. Roosevelt. When the other candidates and their managers finally reached the climax they found that Mr. Farley had harvested the bulk of votes and that it was too late for them to attempt to undo his efforts. Since then, I need not cite the additional proofs he has given of his extraordinary ability in this respect.

There is no man within the ranks of the Democratic Party today who has done more telling personal-contact work with the responsible Democratic leaders throughout the country, and more particularly with thousands upon thousands of individual voters. By his personal efforts he has contributed enormously to the present high estate of the Democratic Party throughout the Nation. Yet, loyal Democrat that he is and party man to the core, few there were, even among his political enemies, to question the sincerity of his recent declaration at Winston Salem, N. C., when he went on record definitely as saying: "I would like to make it perfectly clear, without pretense of flag waving, that I am partisan in politics and honestly devoted to the success and welfare of my party. I also want to make it clear that if at any time I am confronted with the issue of the welfare of my party, on the one hand, or the welfare of my country on the other, that issue has already been decided. I love my country better than I love the Democratic Party. It is my constant hope that I will never be confronted with such an issue, but if it should come in this hour of international chaos, I owe too much to America to sacrifice my first loyalty upon the altar of party expediency or party fealty."

In his work of building up the Democratic Party during these last 8 years Mr. Farley has been called upon to be not only an organizer but a diplomat in the truest sense. He has been an inveterate traveler in the interests of the Democratic Party and he has shown a "social ability," if I may term it so, that is truly extraordinary. Those of us in public life in Maryland who are called upon to make many contacts throughout the year in various parts of the State can appreciate, possibly more than the average nonpolitical person, Mr. Farley's ability to meet people just once, under ordinary conditions, and then not only to remember them months and even years later, but to be able to greet them by their first names.

So highly publicized have been his political activities over this period of years that one might be tempted to forget the other side of his versatile nature—namely, his well-developed grasp of the fundamental economic issues that face our country today. Along these lines I would like to call attention to the same Winston-Salem speech, wherein Mr. Farley presented, impressively and intelligently, his concept of the responsibilities of employers and employees in industry, of stockholders, and lastly of the proper attitude of government toward industry. Striking out strongly in defense of the profit motive and of the system of free enterprise, which have been the bases of the economy of our democratic Government, Mr. Farley went on to say that he would allow government only to occupy the status of an umpire and not that of dictator or usurper. While some residents of our country, both in public office and out, may feel that there is an antipathy between government and business, Mr. Farley definitely does not share this view. He dismissed with scorn the erroneous view that government and business are naturally arrayed in hostile camps and asserted the contrary doctrine that there can be no sane and durable prosperity unless all the elements—government, industry, labor, and agriculture—work together for the common good.

In his own particular sphere of the business management of the Government, the Post Office Department, Mr. Farley has given a convincing demonstration of what quiet business efficiency can accomplish. During all of the 8 years that he has been the head of this Department there has been general approval of the conduct of its affairs. During this span of 8 years the modern problem of airplane transportation of the mails and the overseas expansion of airplane mail delivery has been met and is being solved in the same quiet and efficient manner. Where publicity is desirable and where new avenues of revenue legitimately can be found, Mr. Farley has been alert to make use of them. I refer to the many interesting issues of commemorative stamps that have been brought out by the Post Office Department in the past few years—issues that have been eagerly sought by interested persons all over the world.

Over the past several years, in great measure as an acknowledgment of the splendid qualities of public and political enterprise shown by Mr. Farley, his name has come forward prominently for consideration as a possible nominee for the Presidency of the United States. This development has occasioned wide interest among Democratic circles everywhere and has elicited much comment from newspapers throughout the country.

I quote from one southern paper, which said: "If James A. Farley is a candidate for high office in this land, we believe that he has stated an attitude toward fundamental problems which should, in that respect at least, qualify him for any position of solemn trust to which he might aspire. We do not know his plans. There are things we do know however: That he is an inspiration and an example for every mother's son in his personal habits; that his honesty is as long as the tall shadow which he casts over the length and breadth of this land; that his word is as steadfast as the smiling sky above him; and that his growth in stature as a man and as a leader has been an American phenomenon. No; we do not know what will happen at the Democratic National Convention, but we do know that Jim Farley and his views will not be ignored there, and that his strong voice will sing loud in the chorus which shapes our country's destinies. And practical politician or not, we salute him as a statesman."

Mr. Farley is a public servant whose official and personal conduct are beyond reproach, whose business ability and integrity are conceded universally, whose political sagacity is acclaimed within his party and respected by his opponents, whose reputation as an interpreter of the American mind and as a prophet of political futures ranks him absolutely in a class to himself. I know that in presenting such a remarkable person to this group I am delivering him into the hands of his friends, and it is therefore my great and valued privilege to announce to you your next speaker—Postmaster General of the United States and the Chairman of the Democratic National Committee the Honorable James A. Farley.

ADDRESS BY JAMES A. FARLEY

Mr. Toastmaster, I thank Governor O'Conor very much for the flattering and, I hope deserved, tribute which he has paid to me. It is a real pleasure for me to be in the home town of my friend, Congressman "BILL" COLE. Congressman COLE is one of the most conscientious, able, and efficient Members of Congress. You are fortunate in having him as your Representative.

Maryland supplies a fine forum for a political discussion, especially so when the program is in the hands of its young men and women voters.

While normally Democratic, the Free State has a rare sense of political independence, and the party hoping to capture its electoral

vote must first present a convincing case to the public. This is our task in the Presidential year of 1940, and with your good help, Maryland should once again be found on the right side of the political ledger on the 5th of next November.

A healthy sign in the last few years has been the growing influence of Young Democratic Clubs in national affairs. Your organization is still relatively young. When first organized, the clubs had a wealth of enthusiastic members who wanted to play a useful part in public affairs, but without very definite notions on the best way to accomplish their purpose. That is far from the fact today. Your organization has found a place and a purpose, and the political observer who tries to gage the prevailing tides must make ample reckoning for the power and the influence of the Young Democrats.

It is a fine thing also that you have had the good sense to look beyond immediate needs to the general welfare. Youth has its problems, but these cannot be set aside in a separate compartment and given treatment without considering the needs and aspirations of other citizens. You have escaped the danger of becoming a class group whose sole purpose is to agitate for special favors of its own.

The Young Democratic Clubs have lived up in splendid fashion to the ideals of those who brought them into being. The primary purpose was to fuse the energy, the zeal, and the courage of youth into the party councils, and to create a means by which young voters could cooperate with their elders on a common footing. This purpose has been realized and the outcome has been fortunate both for the party and for the Nation.

The political atmosphere is always confusing just before a national election and this year is no exception. In the bustle and excitement caused by the conflicting claims of rival candidates, we are apt to lose sight of fundamental issues. Yet, when the preliminaries have been disposed of, two outstanding questions will remain for the disposition of the voters at next fall's election. These are: First, has the Democratic Party measured up to its responsibilities? Second, has the Republican Party recovered its balance and regained the power of leadership?

It may be well to consider the second question first. After the disastrous defeat of 1936, the master minds of the G. O. P. reached the unhappy conclusion that the party needed something positive and constructive to recapture public confidence. The practice of condemning everything undertaken by the Roosevelt administration had been a flop. In other words they recognized that the time had come to go through the bankruptcy wringer, get rid of liabilities and frozen assets, and start business afresh with a new line of goods.

Dr. Glenn Frank was appointed a kind of friendly receiver to see what could be done. He was given the job of picking the best Republican brains in the hope that something might be found out of which to fashion a program. He was given a couple of hundred helpers because the task was great.

After a lapse of some two and a half years, Dr. Frank's committee recently made its report. Although the full text was made public by the Republican National Committee, that cautious body quickly disclaimed responsibility for its contents. The committee pointed out that the findings of the Frank committee were not official—it was merely a sort of amateur or extra-legal group engaged in a pleasant pastime. The report was nothing more than a trial balloon which might or might not be accepted by the Republican Party.

Under these circumstances it might be unwise to attack the findings of the Frank committee because the Republicans might respond that they disliked them also. However, to be honest, it must be conceded that the tone of the report was a refreshing substitute for the fountain of muddy oratory which has gushed forth from G. O. P. sources during the course of weary years. The Frank committee acknowledged that the country has problems and that something should be done about them.

In fact, the Frank committee went further. In effect, it placed the stamp of approval upon many of the measures which the Republican leaders did their best to stifle in Congress and have been condemning ever since. The Frank committee report is a long step forward from the Republican platform of 1936—and a step in the direction of Democratic policies. This is true in several respects, most of which have been pointed out in the daily press. Among other things, it is ironic to recall the bitter fight waged by the Republicans against the social-security program in the 1936 campaign—in view of Dr. Frank's recommendation for extending the system. This thought inevitably brings into question the sincerity of the Republicans in their new-found liberalism.

But the outstanding fact is that this canvass of the best Republican brains, embodied in the Frank report, has failed to uncover a single new idea or approach for dealing with national problems. Everything suggested is either an adaptation of what the Roosevelt administration has already done or a return to the methods that prevailed in the good old days. After years of trying, the Republicans can think of nothing more exciting to offer the voters than a modified New Deal.

The progressive outlook of the Frank committee on labor, the farm, tariff, and foreign policies is unique in G. O. P. circles, but it may not last long. When the Old Guarders gather in the back room at the Philadelphia convention this coming June, I fear for the fate of Dr. Frank's noble brain child. If it survives at all, it will probably be scarred and marked beyond recognition. And the task of framing a platform on which the party can unite won't be any harder than the task of finding a standard bearer.

There are three eminent gentlemen who seem to have the edge in the spirited contest for the Republican Presidential nomination. Their divergent viewpoints cast a revealing light on the confusion of thought in party ranks. One of the three aspirants, after a tremendous preliminary build-up, tossed his hat in the ring by coming out boldly for optimism and against pessimism. In his forthright appeal for the brighter side of life, the spirit of Pollyanna still carries on.

Another prospective candidate has arrived at the profound conclusion that most of the Democratic program is excellent, but he thinks it would be a good idea to assign him the task of administering it. The third candidate, frank but cautious, has let it be known that he will throw out just as much of the Democratic program as he dares.

Two of these Republican candidates are Members of the United States Senate. They are in hearty accord in suspecting the motives of the Chief Executives, yet they are far apart on the best way of circumventing his deep designs. On the administration's neutrality program, on Finnish relief, and on other highly controversial matters they have found it advisable or expedient to cast their votes on opposite sides.

I almost overlooked Mr. Hoover. That he is willing to make the supreme sacrifice and enter the lists, no one doubts for a moment. Unfortunately, the ground swell of popular demand for his candidacy has failed to get under way. But undaunted and undiscouraged, Mr. Hoover still goes forth to the political wars, proclaiming that he had the depression licked in 1932 until the Democrats took over the controls and spoiled it all. He makes the plea that, although he failed to see the depression coming when he peeked around the corner, he delivered a knock-out blow the minute he sensed its presence. The public has a different viewpoint.

In bygone years, when the G. O. P. was in the majority with a comfortable margin to work on, the selection of a Presidential standard bearer was a fairly easy task for the party managers and operators. They had a formula and a standard pattern which seldom varied. The candidate ultimately selected, regardless of popular feeling, had to be solid, substantial, and "safe." In other words, they picked a man who delivered a good front-porch speech, talked in pleasing generalities, and responded readily to the notions and suggestions of those who put across his nomination. They wanted a figurehead instead of a leader, and usually they got what they wanted.

A goodly portion of the Republican leaders still yearn to employ the old formula, and certainly their wish is seconded by the solid citizens who supply the party war chest. They long once again for a "safe" President—meaning, of course, a Chief Executive who will do their bidding and let things drift. Some of the more thoughtful, however, are keenly alive to the dangers of such a course. The country is not in the mood, in this time of troubled world affairs, to ratify a Presidential candidate who was selected not because of his talent for leadership but because of his lack of it.

So the search for a likely Republican candidate goes forward. It may be that between now and convention time the miracle will happen. The ideal candidate may spring forth from some hidden corner ready to give voice, fire, and purpose to his party. Unless the unexpected does happen, however, frankly I see small reason for concern among us Democrats. The opposition candidates already in the field are hardly the type to cause you sleepless nights or anxious days. Far from fanning the flame of public enthusiasm, they have failed to excite even a flicker of popular approval.

The plain truth is that after 7 years out of power the Republican Party has failed to develop leaders of outstanding national caliber. The party has wasted too much energy in obstructing the program of the administration and devoted too little attention to the larger task of building up something constructive and worth while. It has become a negative force instead of a positive force, and therefore it must rely for success at the polls not on its own merits but on the errors and mistakes of the opposition.

This brings us to the other question, Has the Democratic Party lived up to its responsibilities?

The record of the administration must be measured against the magnitude of the public problems which it faced upon assuming direction of Federal affairs. These are abnormal times and the public was well aware of that fact when it voted the Republican Party out of office in 1932 by a substantial majority. The people demanded a change because they were tired of inaction, caution, timidity, and hesitation. The Nation's economic machinery had broken down and something more than platitudes was necessary to set it running again.

The Democratic Party, in the intervening years, has borne the burden of many complaints and criticisms. Undertaking a massive job of reconstruction under the most trying circumstances, the party leaders, from President Roosevelt down through the lists, have been accused of almost every known crime on the political calendar. That is, all but one. No one has charged that the party has tried to evade responsibility, that it lacked the courage and the purpose to do what was considered best for the public interest. On the contrary, the party has gone bravely forward, facing difficult problems instead of ignoring them, honestly trying to accomplish the greatest good for the greatest number. It has provided leadership when leadership was badly needed, and it has made a sincere effort to live up to the principles of its illustrious founders, Jefferson and Jackson.

The Democratic Party has written into law a series of enactments that will never be undone because they bear the full approval of the American people. The stabilization of the banking system, the insurance of bank deposits, the Social Security Act, the policy of Federal aid for agriculture, the restraints on reckless stock speculation; these are not crackpot ideas that were foisted on the public by dreamers and visionaries. They were born in the needs of the great mass of humble citizens and their adoption as wise Federal policy should have been accomplished years before it was.

These basic reforms will live because they have behind them the solid weight of public approval. If the opposition party dares to advocate their repeal, we welcome the contest on that issue.

About the time the Republican Party was fumbling its way out of power, an unhealthy loss of faith in democratic government was beginning to make itself felt in this country. The idea was given voice by a Republican Member of the United States Senate, who stated openly that perhaps a dictator might be necessary to pull the country out of the economic doldrums. Like many others, he had watched developments abroad and formed a false impression of the efficiency of despotic government. He also realized the fundamental inability of his own party to cope with the problems at hand.

This discontent with popular government has long since disappeared for two excellent reasons. The first is that dictatorship abroad has run its inevitable course and the unhappy results are there for all to see. The second is that the process of democracy in this country has been vindicated by the wise use of public power.

The old idea, too widespread at one time, that the Government cares nothing about the welfare of the average citizen has been dissipated. The administration has been sensitive to human needs and has moved with resolute purpose to undo social and economic wrongs. The result has been a wholesome revival of popular faith in the Nation's ability to solve its problems within the framework of free institutions.

The task of restoring a shattered economic system was only one of the problems which the Roosevelt administration faced upon coming to power. That in itself was a work of almost superhuman proportions. In addition, there was the supreme duty of keeping this Nation at peace in a world torn by a succession of bloody wars. These wars have not only interrupted the normal channels of trade but they have thrown up a constant stream of grave and perplexing international problems.

No one doubts the fervent desire of the American people to remain at peace. At the same time, every fair-minded individual realizes the heavy duty which rests upon those responsible officials who must deal with foreign nations at a time when the passions of war are burning at fever heat. Nations, like individuals, are prone to impose on the rights of others under the stress of strong emotions.

The skill and foresight with which President Roosevelt and the State Department under Secretary Cordell Hull have handled foreign affairs constitute a bright page in the Nation's diplomatic annals. The United States has been kept free from even a suspicion of entanglement without forfeiting any of its basic rights or the respect of other nations. At the same time, the beacon of peace has been held aloft for all the world and the Nation's moral influence has been invoked in a constant effort to restore friendship and good will between the nations.

In looking back over the past 7 years, the record shows that the Democratic Party has given the Nation what it needed most—constructive leadership. Over the stubborn opposition of a minority party, with its roots still buried in the past, the Government has been brought abreast of the times and made responsive to the needs of a people living in an industrial age. The mistaken notion that things will be all right if nothing is done, has been supplanted by the sane and sensible policy of correcting social and economic evils at the source.

Despite all the criticism that has been directed against the administration, the fact remains that the United States has weathered the storms of this crucial era in human affairs better than any nation on the globe. The Government has used its energies to raise the standards of living and to conserve the great storehouse of natural resources. The substance of the Nation has not been wasted in war or destruction. The morale of the people has been lifted and the heritage of free institutions preserved intact.

This fortunate position has not resulted from blind chance. The condition of the country would be far different from what it is if weaker hands had been at the controls. Democracy is the finest system of government ever devised by man, but it is not self-operating. The destiny of the Nation is still bound up closely in the quality of its leadership.

The Presidential campaign will soon be here. We have a story to tell and the outcome may well depend upon the vigor and resourcefulness displayed by us in getting the facts before the public. And please remember, the facts are on our side.

The country wants a continuance of sane and progressive government. The electorate will never willingly return to the old haphazard method of drift and reaction. The opposition knows the temper of the public; it will offer a diluted form of the Democratic program in the guise of something new. We must be prepared to meet that type of campaign.

As members of the Young Democratic Club, you compose a loyal corps in the Democratic army. The success of the party in recent national elections has been due in large measure to the devoted efforts of the humble soldiers in the ranks. They carried the message into every hamlet, village, and town; worked and labored for the cause, and never wearied of the strife. This year we want you back at your posts of duty, shouldering the burden with the same untiring loyalty and zeal.

As members of the party, you have a healthy curiosity concerning the identity of the party nominees. You are not alone in that respect—several millions of worthy citizens have a similar curiosity. I can only advise the exercise of patience and restraint until the Chicago convention has completed its deliberations. But you may rest assured that the nominees will be worthy of the party, and worthy of the high offices to which they aspire.

The first requisite for victory is a united and militant party. That is your job and mine, and if we do the part well, there can be no doubt about the outcome of the November election.

Work Performed by Wyoming Young People Eligible for National Youth Administration Work and Assistance

EXTENSION OF REMARKS

OF

HON. H. H. SCHWARTZ

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, March 11 (legislative day of Monday, March 4), 1940

LETTER FROM ERNEST P. MARSCHALL

Mr. SCHWARTZ. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a communication from Mr. Ernest P. Marschall, State administrator of the National Youth Administration for Wyoming, and a county and State tabulation in reference thereto. This letter and the tables, covering the last 6 months of 1939, show in detail the amount and character of work performed by Wyoming young people eligible for N. Y. A. work and assistance. Three significant items in the report show that State sponsors contributed over one-third of the total expenditures, that the turn-over of those employed averages 100 percent annually, and that more than one-half of the terminations during the 6 months covered by this report were youths going into private employment, and that the work performed and the character thereof did not displace private jobs.

There being no objection, the communication and tabulation were ordered to be printed in the RECORD, as follows:

FEDERAL SECURITY AGENCY,
NATIONAL YOUTH ADMINISTRATION FOR WYOMING,
Cheyenne, February 7, 1940.

Senator H. H. SCHWARTZ,
Washington, D. C.

DEAR SENATOR SCHWARTZ: I am enclosing a summary of N. Y. A. activities for the first 6 months of the fiscal year, which was prepared for the State advisory committee. I am sure this information will also be of interest to you.

Many worth-while projects have been completed or are in the process of construction in all parts of the State. Community buildings have been completed at Fort Francis E. Warren and at Casper. The building at Fort Warren is being used by the young people of the fort for their community center. The Boy Scouts and Girl Scouts from the town of Cheyenne have also been invited to use this building. The community building at Casper is being used by all age groups in North Casper and is meeting a real need. A third building is in the process of construction in the new city park at Sheridan. This building is approximately 95 percent complete and will be used for young people's work in Sheridan.

The construction of a park has been started for the town of Lusk. Many hundreds of trees and shrubs were planted during the summer, a concrete tennis court was constructed, part of the bank of the Niobrara River riprapped with rocks, a footbridge built across the river, and many other improvements made. This project will provide work for several years.

In the town of Manville, youth workers at present are making dressing rooms under the stage and building a permanent coal house. At Evanston they have erected an ornamental wire fence around the grade school and at present are remodeling the basement at one of the grade schools.

Last summer N. Y. A. workers made possible recreational programs in many towns in the State, the communities hiring a full-time supervisor to direct these activities. Outstanding recreational programs were conducted with this arrangement at Buffalo and Kemmerer.

The shop projects located in many towns of the State have proved of outstanding value, constructing playground equipment, repairing furniture for the schools, and many other types of work.

Public offices in all counties of the State except Sublette have received valuable help from the stenographic and clerical project.

Library facilities have been made available in many sections of the State where they have never had such facilities before. The circulation of these libraries during the month of December was approximately 25,000 volumes.

In no case has the employment of youth workers caused a person who would normally be employed for this work to be displaced.

You will note that 326 youths were terminated from youth-project work during the first 6 months of the year. Many of these youth have received private employment as a direct result of their work experience with the National Youth Administration. The number of youth leaving projects will be approximately 60 percent of the average monthly employment for that period. This would indicate that the turn-over in a year's time is over 100 percent.

Many young people have been kept in high school and college due to the fact that they could earn a small amount of money and thus earn enough for clothes, supplies, and other incidentals that are necessary with a school education.

At the present time funds are not sufficient to take care of the number of out-of-school youth certified for N. Y. A. employment or the number of students making application for the student-work program. I have attempted, insofar as possible, to make the allotments to the counties and schools on the basis of the actual need in those places.

I will be glad to answer questions regarding any particular project in which you may be interested in the State. The brief description of projects given above has been a sampling to show the type of work that is being performed. Sections of the State not mentioned above have projects that are just as worth while as those I have given.

Yours sincerely,

ERNEST P. MARSCHALL,
State Administrator.

National Youth Administration for Wyoming—summation of activities July 1, 1939, to Dec. 31, 1939

American Forum of the Air

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

RADIO ADDRESSES BY HON. ROBERT A. TAFT, OF OHIO, AND HON. JAMES F. BYRNES, OF SOUTH CAROLINA

Mr. CELLAR. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following program of the American Forum of the Air:

Announcer MCCORMICK. The American Forum of the Air.

Listeners from coast to coast once more are invited to hear another forum broadcast emanating from the broadcasting studios of the new Department of the Interior Building in Washington, D. C., presented by WOL in cooperation with WOR.

The facilities of these studios have been extended by the Secretary of the Interior, Harold L. Ickes, in the interest of promoting

educational radio programs which present national problems, temperately discussed by leaders of various schools of thought and conducted under nonpartisan and nonpolitical auspices.

Tonight's American Forum of the Air will be presented in two parts.

Under the direction of the chairman, Theodore Granik, pioneer in educational radio discussion and newspaper columnist, you will first hear the formal presentation of opinion of both sides, followed by an extemporaneous panel discussion.

And now your chairman, Theodore Granik.

Chairman GRANIK. Thank you, Mr. McCormick.

National leaders continue to weigh the vital problem of Government spending, which has flared into heated controversy over the past several weeks.

The fight was begun in December, when Senator ROBERT A. TAFT, of Ohio, on a campaign tour through New England, said that the Budget must be balanced if we are to maintain national solvency, and that it can be balanced in 2 years at a level of about $7,000,000,000.

President Roosevelt immediately took up the challenge. He said in a press conference that he would be interested in seeing a plan for balancing the Budget, and offered Senator TAFT a handsome prize if he could show how to do it. From this point the press battle was on.

On the issuance of the new Budget, Senator TAFT answered the President's request for a specific program, citing several fields in which he believes major savings can be achieved. Last week the President again came to the defense of deficit spending, stating that the New Deal policy will bring the national income to the $80,000,000,000 level, so that revenues will increase and the Federal income will balance expenditures.

As public controversy on the subject continues, we have arranged a discussion this evening on How to Balance the Federal Budget. The participants tonight do not differ in their desire to achieve prosperity and wipe out unemployment as quickly as possible. They probably differ, however, in their views as to the desirable means to this end.

The President in his Budget message contrasted the strenuous but unsuccessful efforts to maintain a balanced Budget at a relatively low level of expenditures in the years 1931 and 1932, with the fiscal policy followed since 1933.

In his words, "Following 1933 the fiscal policy of the Government was more realistically adapted to the needs of the people. All about were idle men, idle factories, and idle funds, and yet the people were in desperate need of more goods than they had the purchasing power to acquire.

"The Government deliberately set itself to correct these conditions by borrowing idle funds to put idle men and idle factories to work." Following a résumé of the relation of fiscal policy to business conditions since 1933, the President concluded: "Government must have the wisdom to use its credit to sustain economic activity in periods of economic recession and the courage to withhold it and retire debt in periods of economic prosperity."

Opponents of the Government's spending philosophy maintain that the recession of 1937 was the direct result of such a policy, and that a continued unbalanced Budget will bring inflation, with resulting ruin to our political and economic systems. And the report of the National Economy League states that deficit spending has not cured unemployment, because it has discouraged the private capital investment needed to put men to work; that continued deficits have resulted in a new high level of spending from which it will be difficult to retreat and which cannot be covered by taxes under our present laws, even in boom years; and that our public debt will become unmanageable unless provisions are soon made for debt retirement.

And so tonight, to pass upon the merits of these conflicting viewpoints, we have invited several distinguished authorities on the subject. We will hear first from Senator TAFT. He will be followed by Senator JAMES F. BYRNES, of South Carolina.

We will then have an informal panel discussion.

Our panel members are: Senator Josh Lee, of Oklahoma; Congressman Robert F. Rich, of Pennsylvania; Ernest Lindley, newspaper columnist; and Ernest Angell, chairman of the National Economy League.

And now our opening speaker—Senator TAFT.

ADDRESS BY SENATOR ROBERT A. TAFT

Friends of the radio audience, the United States Government today is pursuing the deliberate policy of spending money vastly in excess of its income. There is no more dangerous policy for any government to pursue. Our deficit for the year ending July 1 will be about $4,000,000,000. That means that every day, every 24 hours the United States Government is spending over $10,000,000 more than all the money it takes in in taxes. We have grown used to astronomical figures, but $10,000,000 is still a lot of money in anybody's language. It is as much as the total assessed value of many a small American city; as much, for example, as the valuation of Athens, Ohio, or any other American city with a population of about 10,000 people. Three days of this spending consumes as much wealth as the value of all the farms and farm buildings in any typically rich agricultural county, such as those we have in Ohio, Indiana, and Illinois. Yet every day we are adding to the debt of the Government, and that means the debt of all the people, $10,000,000, on which we have to pay interest until we finally have to pay it back.

A month ago in Chicago, I stated in detail how I thought the Budget ought to be balanced, and I said that the first requisite was the President shall actually wish to balance it. Then came the President's new Budget message for the year beginning July 1, 1940, which sounded for a moment like a movement toward economy. But today we see that the new Budget is not economy, but a political maneuver, and the President has openly espoused again the discredited theory that the American people can spend themselves into prosperity.

An analysis of the new Budget shows that the expenditures recommended are actually greater by $30,000,000 than those recommended in the Budget a year ago. Decreases in relief, public works, and agricultural expenditures have been more than made up by other increases, especially those for national defense. The new Budget proposes smaller expenditures, it is true, than the actual Government bill for 1940, but that is because those expenditures were increased after the Budget by supplemental estimates from the President and congressional appropriations. In 1939 the President estimated a deficit of $3,326,343,200. This year's estimate is $2,876,231,570. That hypothetical reduction, however, is caused by an estimate of increased tax receipts, which may or may not occur.

The Budget message estimated the deficit at only $2,176,000,000, because the President proposes to transfer back from Government agencies $700,000,000 of capital which was advanced to them years ago, and which it is said they do not need. Some of them, like the Farm Credit Administration, probably do need the capital, but, in any event, it is certainly not real income, will not recur in future years, and does not reduce the real deficit.

Then the President, in his Budget message, recommended increased taxes of $460,000,000 without specifying the kind of tax. It was represented that these taxes were to pay increased national defense expenditures, but it appears that if this exact amount is levied, it will hold the national debt on July 1, 1941, to $44,932,000,000, or just under the debt limit.

In short, the whole Budget is designed, apparently, for the purpose of avoiding an increase of the debt limit before the next election. The administration is terrifically concerned that a debate on raising the debt limit would center the attention of the people on the situation into which we have come, and the question whither we are going. The administration is afraid that if this question is made prominent in the campaign, the people will realize the fatal end to its extravagant policies.

Congressional leaders have declared their opposition to levying additional taxes, which is not so easy to do, particularly in an election year. There is only one other way to avoid an increase in the debt limit, and that is to reduce expenditures by $460,000,000. In my judgment, it would be an easy task if the Democratic leaders in Congress had the real cooperation of the President. But they do not have that cooperation, and his public statements, since the Budget message, show that he is again openly espousing the spending theory. He is determined that the Budget figures shall not be cut. He vigorously protested the elimination by Congress of two bureaus which the Government could well do without. He protested cuts in the agriculture bill. Nor has he made any protest whatever against budgetary increases initiated in Congress. We have, on the contrary, evidence that he would like to see the farm and public works appropriations increased. There is not the slightest fear in Congress that he would veto such increases. In short, the President's Budget apparently must be taken, not as his maximum, but as a minimum below which he is vigilant to see that Government expenditures must not go.

The advocates of economy in Congress are hopelessly handicapped by the President's attitude. I fear that we have little chance of avoiding, by legitimate means, an increase in a debt limit already stupendous. We hear talk here in Washington of alternative measures. Certain New Deal economists, it is said, hope to avoid that increase by issuing silver certificates. That would be currency inflation pure and simple. After all, the increase in the debt limit is a necessary result of the deficit policy. Until that is cured, the debt is bound to increase, limit or no limit. The responsibility for that increase, whenever it occurs, rests squarely on the spending policy of the present administration.

In spite of occasional lip-service to economy, the President, in his Hyde Park statement of February 5, made it clear that he is again an unquenchable advocate of the strange theory that the Government can spend itself into prosperity. He made it clear that he was not in favor of balancing the Federal Budget by the reduction of expenditures. He attributed the depression of 1937 to what he called a "sharp and sudden reduction in Government spending" in that year. He attributed the increase in national income between 1932 and 1939 to Government spending, although we have no evidence of any kind that Government spending produced that rise in income. He compares the year 1939, 7 years after the bottom of the depression, with the very bottom year of that extraordinary world catastrophe. We have had many depressions in this country. Always before this, the national income—without the dubious hypodermic of Government spending—has rapidly recovered, climbing to a higher level than before the depression. There is always an inevitable reaction toward increased business prosperity, with or without Government spending. To be fair, the calendar year 1939 should be compared to some period 7 years later than the bottom of previous depressions, such as the year 1900, 7 years after the depression of 1893; or 1928, 10 years

after the depression of 1921. We might even take 1910, 3 years after the panic of 1907. In 1900, in 1910, and in 1928, we had returned to a prosperity far surpassing that which preceded the depression.

During the first 29 years of the twentieth century, our income increased, not in proportion to population growth, but at a much faster rate, namely 4 percent per annum. If that growth had continued to 1939, our income last year should have been $112,000,000,000 instead of $68,000,000,000, or 65 percent greater than it actually is. For several years before 1929 the national income averaged $80,000,000,000, which we have never been able to approach again. If this income had increased only as fast as population, our income today should be 90 billions instead of 68 billions, or 32 percent greater than it actually is.

Certainly actual results are no recommendation of the spending theory. Instead the principal result of a 20-billion-dollar increase in debt was the new depression of 1937. This was not caused by any sudden and drastic curtailment in Federal spending, as stated by the President. In fact, there was no such curtailment. In fact, the figures show that from 1933 to 1938 there was a steady increase every year in Government expenditures, apart from the dislocation caused by bonus payments.

In my opinion, the depression of 1937 was caused by the too rapid increase in taxes, wages, and all other costs, which was stimulated by, and directly resulted from, the policy of the Federal Government.

Take the railroads. Their costs increased tremendously, and, of course, they could not raise their rates. The margin became less and less, so that by the summer of 1937 they had to eliminate not only new capital expenditures but even maintenance and replacement. The same was true of the utilities. Other industries, like the hotel industry and the automobile industry, could legally raise their prices, but they would have been unable to sell their product at increased prices, so that they also were compelled to eliminate all plant expansion and even normal replacements. It was the capital-goods industry which collapsed in the summer of 1937, and it collapsed because every other industry in the United States was forced by Government policy to stop spending for permanent plant.

Of course, the capital-goods industry at best has been completely discouraged by Government policy, because excessive regulation of business and the whole tax policy of the Government has discouraged all investment by individuals, and even the reinvestment of earnings by corporations to expand their business. The Government insisted that dividends be paid out so that the money might be spent for consumption. In short, the depression of 1937 was a direct result of the spending philosophy.

There is no evidence that a policy of Government spending has more than the most temporary effect on the economy of the country. Four billion dollars is a lot of money, but it is nothing compared to the increase in national income which could be produced by the encouragement of private industry, the investment of money in new enterprises, and the restoration of a free economy. We must restore a condition in which every man of energy and ambition in this country can see some chance of success if he starts out for himself and puts his time and money into building up his own business. Only in that way has this country increased its income and living standards for 150 years. Government spending is no substitute for that policy.

The policy must be abandoned; the Budget must be balanced. A continuous policy of unbalanced Budgets has always resulted ultimately in inflation of the currency. The longer the Budget remains unbalanced, the harder it is to balance, because the country adjusts itself to deficit spending as a drug addict adjusts himself to morphine. Vast groups come to rely on Government subsidy. Additional taxation becomes harder and harder to impose.

No one can say how much debt this country can safely stand, but there is a danger point somewhere, and it is determined as much by psychological causes as by figures. The burden of paying the interest and principal becomes greater and greater until finally the people ask why they should burden themselves with tremendous taxes to pay for the sins of past governments. Already many people are asking why we cannot pay our bills in greenbacks, which bear no interest, instead of with Government bonds.

When that point is reached, and it has been reached in every country which has failed to hold its expenses within its income, inflation of the currency has begun. That inevitably produces rapidly rising prices, which hit the poor man harder than the well-to-do. This makes the Government Budget still harder to balance, and more currency is printed. Prices continue to rise until, as in Germany, it costs $1,000 to buy a pair of shoes.

Of course, this means the wiping out of all savings. It reduces the men on fixed salaries to penury. A man still has dollars in the savings bank, but they are not worth anything. After life insurance has been paid for a lifetime, the widow will find that she gets a check for dollars, but the dollars won't pay the light bill. Of course, every endowed institution is ruined, and universities can only be continued with aid and direction from the Federal Government. The only man who makes any profit out of this condition is the speculator. It means a complete break-down of the whole business system, a reduction in real income, and a depression which will make the depression of 1932 look like Coolidge prosperity.

The law of inflation simply means that we cannot have something for nothing. If we don't pay our bills as we go in the normal manner, we pay them by the destruction of savings. Inflation not only destroys the business system, but it would almost certainly destroy our political system. There would be no alternative except a government-regulated totalitarianism. It is no accident that dictators flourish in Russia and Germany. A dictator is simply a receiver, called in when people believe that their economic and political system is bankrupt. We can't call in a receiver and retain the freedom and liberty of the individual which are guaranteed by the Constitution of the United States.

The Budget must be balanced. It can only be balanced if the President of the United States abandons the spendthrifty fallacy, and shows a real desire for economy and sound business principles in Government. The present policy is insane. It is not only utterly vain, but, if continued, will completely destroy the America which we have known for a hundred and fifty years.

Chairman GRANIK. Thank you, Senator TAFT. You are listening to the American Forum of the Air presenting a discussion on How to Balance the Federal Budget.

You have just heard Senator ROBERT A. TAFT, of Ohio. And now we present Senator JAMES F. BYRNES, of South Carolina.

ADDRESS BY SENATOR JAMES F. BYRNES

A few weeks ago Senator TAFT undertook to qualify for a prize by specifying how he would balance the Budget. He would balance it not by levying additional taxes but by reducing expenditures. He was boldly specific on a few small items and magnificiently vague on the larger items.

Starting to reduce the Budget from $9,000,000,000 to $7,000,000,000, he marked for destruction a number of highly useful agencies. The list sounded as if it would save big money. It included agencies like the Disaster Loan Corporation, which made relief loans to the flood sufferers in the Ohio Valley and the tornado sufferers in New England. It is maintained as a part of the R. F. C. to collect the money due on those loans. I have examined the Budget submitted by the President for the next year. If you eliminate the amounts asked for all of the agencies Senator TAFT wants to abolish, you would save out of next year's Budget $5,328,000. That would make it necessary for the Senator to cut out of the Budget an additional $1,995,000,000.

He suggested that public works be ended. Well, there is no request for P. W. A. for the next fiscal year. He said he would make some cuts in agricultural appropriations, but he did not say what appropriations. He would take it out of the hides of the farmers, but he would not specify what part of the hide. He came out flat-footedly in favor of eliminating waste. We are all in favor of cutting out waste, just as we are all in favor of America for Americans and in favor of the women, God bless them!

As to national defense, constituting almost one-fourth of the total Budget, Senator TAFT said it should be "subject to critical analysis." Of course, it should. And so should every request for any purpose. But you cannot balance the Budget merely by analyzing requests. The only other specific reduction the Senator made was in the appropriation for work relief. The President asked for $1,000,000,000 for next year. Senator TAFT said he would cut it to $750,000,000. That means a saving of $250,000,000. It leaves the Senator's Budget unbalanced by the sum of $1,745,000,000.

Now, let us subject to critical analysis his suggested cut in relief appropriations. For this fiscal year ending June 30, the Federal Government will spend $1,400,000,000 for relief work. Senator TAFT would cut this in half for the next fiscal year beginning July 1. That means he would dismiss from the rolls one-half of the people who are now working.

The day after Senator TAFT made his proposal, Republican Governor James, of Pennsylvania, complained about the cutting of the W. P. A. staff and work in Pennsylvania. Then Mr. Thomas Dewey, another Republican who has talked a great deal about balancing the Budget, became envious of Mr. TAFT talking about economy. He declared he believed in reducing expenditures in the "hard way," and cited figures to show that as district attorney he spent a couple of hundred thousand dollars less a year of the taxpayers' money than his predecessor. But he forgot to tell us that in order to bring about that reduction of expenses in his office he had gotten $90,000 from W. P .A. He forgot to tell us that he had written to Harry Hopkins that the discontinuance of this W. P. A. project in his office would be "nothing short of a calamity in the administration of criminal justice in New York County." That certainly is one W. P. A. project that the Republicans will not call "boondoggling."

Hopkins could not cause a calamity in the administration of justice in New York, so he let Dewey keep the W. P. A. workers—and Jimmy Hines was convicted. Now, if because Hines goes to jail Dewey goes to the White House, I declare Harry Hopkins should be Vice President.

I do not know when Senator TAFT reached the conclusion that the unemployment situation was such that we could safely cut to $750,000,000 the appropriation for work relief. On June 28, 1939, just 7 months ago, there was introduced in the Senate a bill, S. 2721, which provides that for relief and work relief "there is hereby authorized to be appropriated for the fiscal year ending June 30, 1941, the sum of $1,250,000,000." That is the same year for which Senator TAFT now says the appropriation should be $750,000,000. That bill was introduced by three Senators. One was Senator BARBOUR, of New Jersey, who, I understand, is a supporter of District Attorney Dewey. The second Senator was the Senator from Michigan [Mr. VANDENBERG]. The third was the distinguished Senator

from Ohio [Mr. TAFT]. That bill is pending before the committee of which I am chairman. Because it represented, as I thought, the collective wisdom of the Republican Presidential candidates, I studied it. I looked forward to the day when they would ask for a hearing. They have not asked, and now Brother TAFT has run out on them.

When this bill was introduced last June, the amount appropriated for work relief for the current year was $1,400,000,000. Some suspicious persons might think that these candidates fixed their figure at $1,250,000,000 just to show they were more economy minded than the President. And they might suspect that when the President in his Budget estimate for the year beginning next July 1 asked only $1,000,000,000 for relief work, Candidate TAFT had to have an issue and, therefore, quit Candidate VANDENBERG and fixed the relief figure at $750,000,000. But I do not believe that. I believe Candidate TAFT was sincere. He is a wonderful fellow. He just changed his mind. I believe that Candidate VANDENBERG was sincere. He, too, is a wonderful fellow. I am confident that when the relief bill is considered he will move to increase the amount from $1,000,000,000 to $1,250,000,000. I am going to oppose it and rely upon Senator TAFT to help me defeat the Vandenberg amendment. But I warn him now that if Dewey still has those W. P. A. workers in his office, he will be found working against us.

The Budget should be balanced. It requires, however, the services of a surgeon and not a blacksmith. We cannot balance the Budget in 1 year. We should profit by experience. In 1937 we made a too drastic reduction of Government expenditures in a short period, and by doing so, delayed recovery. There must be a gradual reduction.

We cannot balance the Budget by indulging in generalities about lack of confidence. If there is lack of confidence, how did we during last December produce more goods than ever before? Lack of confidence exists principally among the Republican politicians. The figures published by the Federal Reserve Board last week show that during the last quarter of 1939 industry produced more goods than it did in the last quarter of 1929, the boom year of all time. We produced more with 1,000,000 less persons employed. That was due to machines displacing workers. You will appreciate the unemployment problem when you consider that we had 1,000,000 less people at work than in 1929, and at the same time we had 5,750,000 more people of working age. Should we cut $2,000,000,000 out of the Government's Budget today we would further increase unemployment. We would impair the purchasing power of the people, retard recovery, and reduce the amount of taxes to be collected next year. But under our program, with business improving and the national income increasing, we will have increased revenues and can balance the Budget without destroying activities of the Government which the people demand and which are essential to the welfare of the Nation.

Under the Democratic administration remarkable progress has been made in increasing the national income. In the fiscal year 1939 the national income was up 71 percent, compared with the last Republican fiscal year of 1932. Cash farm income was up 82 percent. On the business page of your newspaper you will find a statement of increased sales and increased net profits by every well-managed corporation reporting.

If newspapers would publish on the first page the reports of the net earnings of the industries of the Nation, instead of the pessimistic prophecies of politicians, there would be a further increase in confidence and a further increase in employment.

The Government has spent money; but this money has gone to build up our national resources, to conserve the health and morale of our citizens. It has made possible the reduction of the debts of many local governments. It has built courthouses, hospitals, roads, airports, sewerage systems, and paving projects, which were formerly constructed by local governments with taxes levied upon the homes of the people.

If you ask Senator TAFT about the part of the national debt represented by loans to business enterprises he would have little complaint. He would object to that part of the debt which was incurred by the appropriation of $5,000,000,000 for public works in March 1935. Well, when that bill was voted upon in the Senate, had every Democrat left the Chamber, the bill would have been passed, 13 Republicans having voted for it and only 10 against it. On the $3,000,000,000 public-works bill of June 1938, 7 Republican Senators voted for and 7 against it. I think it was justified. You may think differently. But, even if you do, I think you will agree with me that the Republican Party can with poor grace complain of a debt they themselves helped to create.

The President in his Budget message recommended a reduction of expenditures for the next fiscal year of $675,000,000. This is a conservative Budget. He wisely gave warning that the Budget was based upon the assumption that current levels of business would be maintained and that if conditions changed, the appropriations for work relief and agriculture might have to be modified.

The Democratic Congress has reduced some appropriations below the estimate of the President. I am confident the total will not exceed the estimate of the President. But we are not going to accept the advice of Republican Presidential candidates and make the entire reduction at the expense of the farmers and the unfortunate unemployed of the Nation.

Chairman GRANIK. Thank you Senator BYRNES. You are listening to the American Forum of the Air presenting a discussion How to Balance the Federal Budget.

You have just heard Senator JAMES F. BYRNES, of South Carolina.

This concludes the first part of tonight's presentation.

Announcer MCCORMICK. Immediately following station identification we shall continue with the extemporaneous discussion.

This is the Mutual Broadcasting System.

This is the American Forum of the Air originating in the broadcasting studios of the new Department of the Interior Building in Washington, D. C., and presented over the Mutual network by WOL in cooperation with WOR.

We return you to the chairman, Mr. Granik.

Chairman GRANIK. And now as part two of tonight's broadcast of the American Forum of the Air we present an informal panel discussion. Our panel participants are: Senator Josh Lee, of Oklahoma; Congressman Robert F. Rich, of Pennsylvania; Ernest Lindley, newspaper columnist; and Ernest Angell, chairman of the National Economy League.

Mr. Lindley will open the discussion.

Mr. LINDLEY. Thank you, Mr. Granik.

First let me say that I am a Federal taxpayer, not a big one but enough of a one to know it when March 15 comes around, and also that I have some savings invested in Government bonds and in insurance, so that nothing that Senator TAFT nor anybody else may say here can intensify my opposition to a superinflation.

So I pricked up my ears a few weeks ago when Senator TAFT announced that he knew how to balance the Budget. I have here a copy of his speech on January 5, the speech to which Senator BYRNES referred. That speech was entitled "Mr. President, Here Is How to Balance the Budget." I read that speech with care and took the trouble to add up the savings Senator TAFT proposed to make. It is a long speech and I was a little more generous than Senator BYRNES; whenever Senator TAFT was vague I gave him the benefit of the doubt and made a reduction, but when I got through I found he had subtracted only $320,000,000 from the total of the Federal Budget, as submitted by the President.

Now that Budget as by the President for next year is out of balance by $2,176,000,000. After subtracting these savings of Senator TAFT, I found that Senator TAFT's Budget was still out of balance by $1,756,000,000. Here, perhaps, I am a little more exacting than Senator BYRNES, because Senator BYRNES only tried to get Mr. TAFT down to $7,000,000 whereas I am trying to get him to balance his Budget.

Well, of course, my spirits picked up tonight when I saw an advance copy of his speech and saw the words "Senator TAFT resumes Budget balancing." I have listened with care and I don't see that he has made another dollar's worth of progress toward balancing the Budget. It seems to me there is no way we could spend these next few minutes more profitably than to ask Senator TAFT where he is going to make that additional $1,756,000,000 worth of savings to bring about the balanced Budget. So I will ask him that.

Senator TAFT. The statements made by Senator BYRNES and Mr. Lindley are so very far from an accurate copy of the speech I made that it is hard to cover a speech which lasted half an hour in a few moments.

My first suggestion was that every bureau be cut by 25 percent, which was what Franklin D. Roosevelt said should be done when he was running for election in 1932. That would take care of nearly $1,000,000,000. The reduction in relief is from $1,125,000,000 to $750,000,000, which is $375,000,000 for that alone. Incidentally, it does not mean a reduction of the men on the rolls, because what I proposed was that a complete change be made in the system—that all relief be returned for administration to the States and local governments—and if that is done the average cost per case will be considerably less than one-half what it is today. There will be more men on the rolls, there will be a more adequate care of relief, there will be more people taken care of, and no hiatus; you will take care of the transients, you will take care of the people who aren't able to engage in work or be included in an expensive work program like W. P. A., and you will handle the thing more effectively.

Answering Senator BYRNES again, the reduction which last year we proposed was to an appropriation for that kind of a system of $1,250,000,000. At that time the Federal Government was spending $2,250,000,000. The Federal Government has found that the requirements have been reduced in these last 8 months until today they are estimating a W. P. A. cost of $1,125,000,000, and on the same basis we propose to cut from $1,125,000,000 because of improved conditions in employment to $750,000,000.

The farm appropriations this year are well over $1,000,000,000, and in the statement I made I said that every beneficiary of the Federal Government is going to have to participate in the reductions that are made in Federal Government expenditures, and from that billion dollars there could be a reduction, I would think, of several hundred million dollars.

The House has made some reductions already from that figure proposed by the President.

I think that the Senator quoted some dozen or so bureaus which I mentioned merely as examples. I say the Federal Government is full of bureaus which can be entirely eliminated. Of course, they are all performing nice functions, but if you haven't got the money to pay for the things you would like to have, you don't have them that year, and the Federal Government is in exactly the same position as the average individual. If you haven't got the money to pay for things, you can't have them simply because they happen to be nice things to have.

Senator BYRNES. Senator, would you not agree that the relief bill passed early in June 1939 provided only $1,400,000,000 for work relief for the year beginning July 1, 1939?

Senator TAFT. One billion four hundred twenty-five million as I remember it, yes; and at that time I remember when that figure was reached by the committee, I, at least, whether we adopted a new bill or not, proposed $1,000,000,000 instead of $1,250,000,000, but whether it was carried through on the bill I don't know.

Senator BYRNES. I understood you to say a moment ago that when you introducted the bill the expenditures for relief were at the rate of more than $2,000,000,000.

Senator Taft. Two billion two hundred and fifty dollars was the cost of relief ending July 1939.

Senator BYRNES. The date you introduced the bill was June 28, 1939, after the relief bill had been passed for the fiscal year beginning July 1, because it was only 2 days before the end of the fiscal year.

Senator TAFT. No; I think the Senator is mistaken. As I remember, the bill was introduced early in the session.

Senator BYRNES. I will hand the Senator the bill.

Senator TAFT. We then introduced an amendment, you will remember, to the relief bill itself.

Senator BYRNES. I will hand you the Senator's own bill S. 2721.

Senator TAFT. We introduced then an amendment to the relief bill, if you will remember. As I remember it, we made an appropriation of $1,000,000,0000 at that time and a reduction from $1,425,000,000.

Representative RICH. Ladies and gentlemen of the radio audience, I don't want Senator BYRNES and Senator TAFT to take all the time, and I can't help but feel that Senator BYRNES and Mr. Lindley were trying to keep Senator TAFT from going into the President's chair. Senator BYRNES said a few moments ago that he was in favor of balancing the Budget and that balancing the Budget required a surgeon, not a blacksmith. I want to take exception to that and say that balancing the Budget needs good sound businessmen and statesmen, and not New Deal politicians.

I want to say that the way to balance the Budget is to get at and balance the Budget.

Now, I am not running for President and never expect to get in the President's chair, so I have no fear in making some suggestions as to what we can do to balance the Budget. The first thing I would do would be to stop making these great large lump sums for relief available to the President and put relief back to the States and local communities, with aid from the Federal Government. We have given the President of the United States since 1933, in 7 years, over $17,323,000,000, the largest amount of money that was ever put into the hands of any one man in the history of the world, and there never has been so much waste and extravagance in the history of the world as there has been in administering these funds in the guise of relief.

Then I would eliminate the Electric Home and Farm Authority, I would eliminate the Export-Import Bank of Washington, eliminate the Federal Emergency Relief Corporation, the Federal Housing Administration, the Federal Subsistence Homestead Corporation, National Labor Relations Board, the Puerto Rican Reconstruction Administration, the Tennessee Valley Associated Cooperatives, the War Minerals Relief Board. They have been 20 years in operation; it is time to get rid of them.

As Senator TAFT said a few moments ago, we must start to balance the Budget, but I see nobody in the administration and nobody on the Hill that is trying to balance the Budget. Let's eliminate the Division of Press Intelligence, one of the greatest propaganda agencies, that is costing the taxpayers of this country money, and they will never be able to pay it if we don't get rid of some of these agencies that are squandering the Federal funds with no thought of trying to get down to a balanced Budget.

Let's restore to the people of this country freedom and opportunity. Opportunity for the businessmen of this country was the thing that made this country great, and the business people of this country, if given the opportunity, will put men back to work and not politicians.

I want to say in 1933 we had 563,000 employees in the Government, and today we have 987,000—an increase of 423,000. It seems preposterous that we should have these employees to this number and we are never going to restore the confidence of the people of this country until we eliminate a great many of these employees, and we can do it in good sound orderly fashion and put them back into the hands of industry and we will give them employment.

I am sorry I have to stop now because I could enumerate a hundred other articles.

Chairman GRANIK. Senator LEE.

Senator LEE. My good friend, Mr. RICH, surely could tell you all about cutting down and cutting out a number of Government agencies, but he still would be far short, as is Senator TAFT, of balancing the Budget. All of those added up that he has enumerated amount to some $100,000,000, but it does not balance the Budget.

Now, the President is making an effort on a sensible scale to balance the Budget. He even recommended to Congress this year taxes to pay additional expenditures, if we vote those additional expenditures. He gave us a budget. Do you know what a budget is? On one side of the ledger is what the Government does for the people; on the other side of the ledger is what the people do for the Government.

Now, Senator TAFT and Mr. RICH have been telling us how much we owe ourselves in here, but each time their radio time ended before they got around to telling us what to do about it. This $17,000,000,000 that Mr. RICH refers to was paid to the people, of course. He said it was given to the President, but the President passed it on to the people and it brought us out of a Republican depression. I remember when those folks—poor people, hungry men—were sitting around the street corners counting the wrinkles in their stomachs and that year, 1938, the Republicans tried to feed them on the Constitution, and it is obvious this year that they are going to try to feed them the old dried Budget. They can't eat that thing. I suggest to Mr. TAFT, if he cuts the spending 25 percent, doesn't he believe that will also reduce the general income of the country? Certainly it will; and that will reduce the revenue of the Government, and he will have to cut the expenses another 25 percent. That will reduce the revenue of the Government, and he will have a vicious spiral of descending income, and the people will be back where they were the last time the Republicans had the power of government in this country.

I remember those freight trains going through covered with hungry men, their empty stomachs flapping like a pair of rayon bloomers in an Oklahoma windstorm, and these folks are going to feed them the Budget and perhaps sprinkle it a little bit with the Constitution this time.

This money is not lost. It comes right back. The thing this Government is doing is forcing money from Wall Street out to Main Street and forcing it into circulation. That does not make less money in the country. It makes more money by having it in circulation.

Mr. ANGELL. Mr. LEE, you have said what the administration is doing, and I am speaking from a nonpolitical point of view just as a citizen, and I am not concerned one iota whether it is the Democrats or Republicans who are responsible for the present level of spending and boosting the debt up to $42,000,000,000. I think the men who put the debt up to that level and caused these vast appropriations to be made have got the responsibility of seeing that they are cut down. You said just a moment ago, sir, if I understood you, that this deficit spending policy was having the effect of pushing the money out from Wall Street into the country and making it work. I have before me the Federal Reserve Bulletin of January 1940, which shows that while the amount of money in the banks, the deposits, is just as much now as in 1929, the last big year, that the money turns over more and more slowly. From 1933 to 1937, the first 4 years of the full deficit spending policy, money in the banks turned over on the average 16 times a year. In 1938 it dropped down to 14 times a year, and in 1939 it has dropped down to 13½ times a year. That is just the trouble with that policy that you gentlemen here are advocating. It doesn't work, sir. You still have 9,000,000 unemployed walking the streets, and they are being carried by the 45,000,000 workers.

Senator LEE. What would you do with those unemployed, Mr. Angell?

Mr. ANGELL. I would see that your Budget is balanced within a period of 2 years; yes, sir, because balancing the Budget more than any other one single thing, an attitude of the Government toward balancing it, in my opinion, will restore the confidence, get the money out of the banks. It will provide the jobs; it will take the 8,000,000 unemployed off the backs of the 45,000,000 employed today.

Representative RICH. Mr. Angell, Mr. LEE never saw anyone starve during a Republican administration, and you aren't going to see anyone starve in a Republican administration.

Senator LEE. Mr. Angell, it isn't confidence business needs today; it is cash customers, and there can't be cash customers when you have 9,000,000 unemployed, and you are proposing and Senator TAFT is proposing to cut off half of those on W. P. A. What would you do with them? How would you take care of them? What are you going to feed them? What are you going to give them to pay rent with, Congressman RICH?

Representative RICH. We are going to pay them for raising produce, so we will have a land of abundance, instead of burning the wheat and killing the pigs and plowing down the cotton; that is what we are going to do, give them a land of plenty.

Senator LEE. How are you going to balance the Budget if you are going to pay them? What are you going to pay them with?

Representative RICH. We are going to pay them because the people in this country will have confidence.

Senator LEE. Are you going to pay them with confidence?

Representative RICH. They will have confidence because we have a balanced Budget. Any time you get a New Deal professor talking that is the argument he puts up, but we want to get down to sound, fundamental principles. Let me ask Mr. Angell the effect of the debt and taxes on the workers of the Nation.

Mr. ANGELL. I am glad you mentioned that, Mr. Rich. I think some thought should be given to that, when you consider that an American family, on the average, with an income of $1,500 a year, now pays about $185 a year in taxes, and that doesn't mean income taxes, that means taxes on the land where the house lies in which he lives, or the apartment; it means taxes on the clothes that he and his family wear, taxes on the food they buy, taxes on the tobacco and beer they consume; and if you have that proportion of income which is paid out in taxes, it is time to stop the method of spending which has produced taxes at

that level; and the taxes have risen—they have just doubled in 8 years.

Mr. GRANIK. I think Senator TAFT wants to say a word.

Senator TAFT. I want to say I have looked over the bill Senator BYRNES gave me and I find the bill nearly a year ago authorized to be appropriated for the fiscal year 1940 the sum of $1,250,000,000. That, of course, was nearly a year in advance of the time that appropriation would actually be made, and, of course, no one could tell what the conditions might be at that time, so that $1,250,000,000 was an outside figure, and it is entirely consistent with my present position at this present time, that $750,000,000 would be sufficient to take care of the form of relief which this bill proposes.

Senator BYRNES. What the Senator says is that he fixed his figure of $1,250,000,000 to cause him to believe that amount would be appropriated but it is entirely consistent to say now he would give them but $750,000,000.

Mr. LINDLEY. I have been wanting to get back to Senator TAFT because when he stopped working on the Budget, according to my figures, he was still a billion dollars short of balance, although, meanwhile, he would cut old-age pensions 25 percent, the Civilian Conservation Corps 25 percent, veterans' pensions and benefits and all other items in the Budget 25 percent, and still wasn't anywhere near a balance. I think we are entitled, in view of his pledges, to have him show us how to balance this Budget and give us a little more information on it.

Senator TAFT. The present Budget is $10,000,000,000. If you save 25 percent in the divisions which can be saved, you can save $1,000,000,000 on about $4,000,000,000 worth of expenditures representing these various departments.

It takes the Budget commissioner a year to make this Budget up. You can't hope for me to go through 5,000 pages and tell you each item. I only ask anyone to read the statement I made before, and on the basis of that statement, with those reductions in public works, in farm appropriations, in relief, in every Government department, that $2,000,000,000 can be saved.

Senator BYRNES. May I call attention to the fact that in the Budget the item of interest on the public debt is a billion dollars. Would he cut that 25 percent? The amount paid to veterans is approximately a billion. Is he going to cut that 25 percent? The national defense is almost $2,000,000,000.

Senator TAFT. Yes; I would cut national defense 25 percent. I think the increase of $460,000,000 in national defense is wholly unjustified.

Senator BYRNES. While the world is on fire, you would take one-fourth of the Navy from the sea and one-fourth of the men out of uniform! The American people will not do it.

Senator TAFT. Mr. Senator, at the present time we are spending at the rate of $1,425,000,000 for the Army and Navy. In 1934, 5 years ago, we were spending $550,000,000. We have increased it two and a half times, and this Budget includes a further increase of over $400,000,000, which I think is wholly unjustified by present conditions. Four hundred million of my saving can well be taken out of the proposed appropriation for the Army and Navy.

Representative RICH. I would like to ask my good friend Senator LEE this question: If from 1789 to 1920, 131 years, the Government spent only $66,000,000,000, and we had five great wars, and that included the World War, how he can justify the present administration from 1933 to 1941, in 8 years, spending $65,721,000,000. Where have you restored the confidence of the American people, and how are you going to get business on its feet in this country and put people back to work and take them off the relief rolls of this country if you are going to squander and spend money in that ridiculous fashion?

Senator LEE. It took that much money to regain the confidence of the American people in the Government after the Republicans had had it a while.

The essence, it seems to me, of Senator TAFT's proposal is if everybody will grit their teeth and do without long enough, we can balance this Budget, if we will stop spending everywhere except in Cleveland, Ohio; and that if you just cut off and do without, why, we can balance the Budget. It reminds me of the Dutchman who was trying to teach his mule to live on briars and effect a great saving. After the experiment was over the Dutchman said: "He died before he got used to it, but he would have been all right if he had ever got used to it."

Mr. ANGELL. I think this problem of the rise of the taxes, gentlemen, is one of the most serious ones which you have to consider, and I say "you"—those of you who defend spending at this present level and say, in effect, never mind because once we get the national income up to eighty or eighty-five billion dollars, then we can balance the budget. But you haven't a Chinaman's chance, as far as I see, of getting the national income up to eighty or eighty-five billion dollars because you have idle money in the banks, taxes rising every year, and the burden is becoming so bad that you can't find additional money for taxes. Every serious student of the problem, I think, is agreed that you can't raise now any substantial additional amount of money by taxes unless you lay it on the goods of wide general use where the incidence is upon the small man, and the burden is going to be increasingly terrific upon him. Your taxes have increased from sixty or seventy dollars per person about 10 years ago until they are about $113 for every American in this country.

Senator LEE. Mr. Angell, wouldn't the revenues decrease if you cut 25 percent off all Government expenditures now?

Senator TAFT. Senator LEE, it seems to me that the idea of trying to build up the national income by going out and trying to borrow money and pouring it out in order to prime the pump has been so disapproved by actual results that I am surprised that any responsible official would advocate that theory today.

Senator LEE. Senator TAFT, following that program, the increase in value, in paper value, on the stock market alone would have paid the cost of Government spending. Now add to that the national income of $68,000,000,000 as against forty-two billion which it was when we took over——

Representative RICH (interposing). Senator LEE, don't you know the Bureau of Engraving and Printing has been running for 24 hours a day printing money, and I would like to know from you what we have got to back it up when the President has all the gold buried down in Kentucky; it is no good to anybody and they are now buying up silver and we are giving the advantage to all the foreign countries in this gold and silver we are purchasing, and what is this paper money worth? It won't be able to buy anything in a very short time. It will probably be as worthless as anything you can get hold of.

Mr. LINDLEY. So far as I might note, Congressman RICH, it buys more than the dollar did even in 1929. We are still below the price level of 1929, so I don't think we need to worry about that superinflation quite yet.

Senator BYRNES. This morning's newspapers carrying the figures of the 250 corporations first reporting upon net earnings for the last quarter of the fiscal year showed a tremendous increase. Every day the business page of the newspapers brings the same story. From these increased net profits there will come increased revenues, expected by this administration.

Senator TAFT. Senator BYRNES, don't you know if it were increased 25 percent, you would only get $520,000,000 instead of the three billion needed to balance the Budget.

Mr. LINDLEY. May I point out that on March 3, 1933, when the Republican Administration went out of office, the cost of carrying the national debt took 1.77 of every cent out of each dollar of the national income, and in 1939 the income had expanded so that the interest on the national debt took only 1.45 percent of the national income, so the national debt actually was lighter in relation to our ability to pay last year and this year.

Senator BYRNES. I agree with my friends only as to this point. We should do everything possible to balance the Budget. We should do everything possible to reduce expenditures of the Government. But we should do it in such a way that we will not destroy those activities essential for the welfare and happiness of the people.

Representative RICH. I say that is all right, too, but I am telling you this administration is making no efforts to balance the Budget, and it is going to mean the ruination of this country unless they do; I am telling you, you will see the greatest wreck this Nation has ever seen unless we can get down to sound fundamentals and begin to save the dollars; and if you save the dollars you will find the billions will take care of themselves.

Senator LEE. How are those on relief going to save any dollars?

Representative RICH. We will take care of them.

Mr. ANGELL. Well, Senator LEE, when you push the total Government debt for the fiscal year 1930, the last big year, as you call it, of Republican financial success, from thirty-four billion of Federal, State, and local debt, up to sixty-six billions, and after 7 years you still have eight or nine million unemployed on the streets, I think the system of spending your way back to prosperity has been proven a great failure.

Senator LEE. Is there less wealth in the United States today than there was when we took over the Government after the Republicans had it, or more wealth?

Representative RICH. There is less happiness, I can say that.

Senator BYRNES. Less happiness among the Republican politicians, but not among the people.

Representative RICH. Don't worry about the Republicans. They will be back here next year to save this Nation.

Chairman GRANIK. Thank you, gentlemen. You have been listening to the American Forum of the Air presenting a discussion on How to Balance the Federal Budget.

Our opening speakers were Senator ROBERT A. TAFT, of Ohio, and Senator JAMES F. BYRNES, of South Carolina. Immediately following was an informal panel discussion. Our panel members were Senator Josh Lee, of Oklahoma; Congressman Robert F. Rich, of Pennsylvania; Ernest Lindley, newspaper columnist; and Ernest Angell, chairman of the National Economy League.

And now for a final word from Mr. McCormick.

Announcer MCCORMICK. Thank you, Mr. Granik.

Another broadcast in this season's series of the American Forum of the Air comes to a close. These programs emanate from the studios of the new Department of the Interior Building in the Nation's Capital.

The facilities of these studios have been extended by the Secretary of the Interior, Harold L. Ickes, in the interest of promoting educational broadcasts which present national problems, discussed under nonpartisan and nonpolitical auspices.

This program was arranged by Theodore Granik, who presided as chairman.

Next Sunday at this same time Mutual will bring you another forum which you are invited to attend. Address your comments to Mr. Granik in care of radio station WOL, Washington, D. C.

Stephen McCormick speaking.

This is the Mutual Broadcasting System.

Looking Forward

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, March 11 (legislative day of Monday, March 4), 1940

ADDRESS BY HON. ROBERT R. REYNOLDS, OF NORTH CAROLINA, TO BETA CLUBS OF NORTH CAROLINA

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an address which I delivered at Raleigh, N. C., last Saturday night, March 9, at the annual banquet of the members of the North Carolina Beta Clubs entitled "Looking Forward," at which time there were more than 1,100 boys and girls of high-school age in attendance. This was the largest banquet ever held in North Carolina and my address was broadcast over radio station WPTF, Raleigh, N. C.

The Beta Clubs are made up of high-school boys and girls who have been successful in obtaining honor grades, and every one of the 100 counties of North Carolina was represented at this annual meeting of the Carolina Beta Clubs at the Sir Walter Hotel at Raleigh, N. C.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, members of the Beta Clubs, ladies and gentlemen, when some weeks ago your State director and my friend, William Watkins, wrote me inviting me to address you on this occasion, I became very much interested and immediately expressed a willingness to be with you because I recognized an opportunity to talk to an intelligent group of our high-school students; the young men and women upon whom the responsibility of continuing our present democratic form of government and preserving our institutions will rest in the years to come.

I might say in the beginning that I have had an opportunity to look over the purposes and methods of the national Beta Clubs. I want to congratulate your State and National officers for the wonderful job they are doing in the matter of the development of these clubs because their purpose is of the highest order, and unquestionably they are aiding thousands upon thousands of young boys and girls throughout the country to see the real value of an education.

Any organization which has as its object the encouragement of effort, the promotion of character, and the stimulating of achievement among its members is certainly worth while. I am sincerely glad to learn that the work of the Beta Clubs is now in its sixth year in North Carolina and has been extended into more than 300 high schools and into literally every part of the State. I am likewise proud of the fact that in North Carolina the Beta Clubs' work in all probability has progressed further than in any other State. Your members and your officers should be justly proud of the fine progress you are making, and I wish now to publicly congratulate each and every one of you.

For a few minutes let's discuss two of the objectives of your clubs, namely, effort and character. It is an old axiom that nothing worth while is accomplished without effort on the part of the individual. There never was a more truthful saying. You young men and women are living in a wonderful age; an age where everything is highly specialized and where competition is greater than it has ever been before. For that reason unless you are prepared educationally and physically to meet successfully this competition you are surely going to fail. Without an education your task will be almost insurmountable. Every opportunity possible is being given you by your State and your respective counties in the matter of your obtaining the best education possible. Your fathers and mothers daily are now, and will later to a larger degree, make great sacrifices so that you may be able to equip yourselves to go forward in a busy, busy world. You owe it to them and to yourself not to fail. It is up to you. No one can help you unless you put your shoulder to the wheel.

There are some who will tell you that you can live by the sweat of someone else's brow. That cannot happen permanently. You should make up your minds now that you will live by the sweat of your own brow and by your own fortitude and perseverance. There are those who will promise that they will give you economic security and save you from work and study. They cannot do it. There are those preachers of despair who will tell you that you are "underprivileged" and that you should rely on others to create jobs and opportunity for you. They are preaching false doctrines and giving you false promises and are closing from your vision the broad and beautiful view of the countless opportunities in every field that American liberty, American equality of opportunity, American justice, American kindliness, American courage, and unrivaled American resources hold out to those of you who say, "I will study, I will give my best, I will succeed." So much for effort.

Now a few words about the greatest attribute of all—character. This is a word which has a great many meanings and on which many different constructions are placed. Webster tells us that character is the sum of qualities or features by which a person or thing is distinguished from others, or is the aggregate of distinctive mental or moral qualities belonging to an individual or a race as a whole. Character is fundamentally that which a person or thing really is as distinguished from reputation.

It is interesting to note that one of the primary objects of your National Beta clubs is to "promote character." Why does this organization make this one of its most important principles? Because its officers know that if it can develop character in the youth of our Nation that the future of the Nation will be secure because then they will have the moral fiber to proceed down the turbulent road of youth and be able to resist the evil temptations that will beset them on every side. If our present youth fail in their great responsibility then our country must of necessity fail.

Your Beta clubs are also interested in strengthening character in our youth because the organization knows only too well what a strong deterrent to crime good character is. The files of the Federal Bureau of Investigation give us some very interesting statistics relative to the part youth plays in the crime of our Nation. It seems that more persons 19 years of age are arrested yearly than any other age, followed by the ages 18, 22, 21, and 23. Also that approximately 19 percent of all persons arrested in the year 1939 were under 21 years of age, in other words, one out of every five arrested were minors.

The seriousness of the youth problem in crime is reflected by the fact that while only 19 percent are under 21, this figure constitutes 12 percent of all persons arrested for homicide, 29 percent for robbery, 45 percent for burglary, 32 percent for larceny, and 52 percent for auto theft. During 1939, 155,416 persons of all ages were arrested and fingerprinted for robbery, burglary, larceny, auto theft, embezzlement, fraud, receiving stolen property, and arson. Of these, 51,186, or 32 percent, were less than 21 years of age. The Bureau's figures, I am sorry to tell you, also show that crime among the youth of our Nation is on the increase, because while in 1939, 32 percent of the violators were under 21, in 1938 the figure was 31 percent, while in 1936 it represented only 28 percent. These figures show only too clearly that these youngsters did not possess the strength of character to prevent them from committing crime. In other words, they could not resist temptation.

I do not know what your dreams are, and it probably will not be for me to experience the unmeasured lengths of your adventures. In any case, I am quite certain that I believe in your right to have your dreams and your adventures.

While I try to be unconscious of the passing years, I am still vaguely aware of the mortality tables. They tell men of my age that, on the average, you will be here long after we are gone. That means that our work, our capital, our institutions, and even our reputations will be left in your hands. You will unquestionably inherit a good deal of difficulty and confusion, but you will also be the inheritors of things which have cost blood and sacrifice to win and which you will find still worth preserving. Unfortunately, there are thousands of persons living in our country today, enjoying every protection of law that you here in North Carolina enjoy, who neither respect our institutions nor are interested in their preservation.

The time is rapidly approaching when you as the future custodians of our Government must give some thought to these groups, and we must devise ways and means to hold them in check. To my way of thinking, these dispensers of these foreign idealogies present our greatest national menace today. They are in our midst, many times unseen, but, like termites, are boring in—constantly boring, you might say, to the very foundations of our Government with the avowed purpose of destroying it in its present form.

Recently there was held in Washington a convention of the American Youth Congress, and as I stand before you this evening I cannot but reflect in my own mind the vast difference in the type of individuals who are now facing me, and some of those young men and women who came to Washington with the Youth Congress making various demands on Congress, some of which were ridiculous in their inception. I know it will interest you to learn that a number of the affiliated organizations of the American Youth Congress are definitely and publicly communistic in their undertakings. Can you conceive of an audience of North Carolina youth booing the Chief Executive of our Nation, because he dared tell them to proceed with caution in their demands

and in the adoption of resolutions and petitions, about which, as he said, they knew very little. No, my friends, we are a proud people in North Carolina, we are proud of the fact that in our veins courses the purest American blood of any people of any State in the Union, and for the reason that it is the purest we must zealously guard it to see that it does not become diluted by infiltration.

The ranks of the "isms" in this country are growing; some of them are becoming bolder in their public utterances and with their violent castigations of our Government and its institutions. The irony of the whole scheme is that they are protected under our Constitution and by the law of the very Government they are denouncing and advocating its destruction. Mind you, however, it would be well for them to take heed of the day of reckoning as was so aptly put by the distinguished Speaker of the House of Representatives, Hon. WILLIAM B. BANKHEAD, on the occasion of the celebration of the one hundred and fiftieth anniversary of our first Congress when he said, "There are evidences of certain sinister influences and minorities now seeking to sap and mine the pillars of this temple of freedom. We may have been too generous in our hospitality to them. We may have been too tolerant of some of their recent manifestations of subversive treachery. We have sought with rather grim patience to respect the guaranty of freedom of speech, but it may be only fair to admonish all such groups that they take counsel of their prudence lest by going one step too far it will be too late to escape the wrath and indignation of all real Americans." I say, my friends, they had better take counsel now.

I urge upon you patient and most careful evaluation of the economic and political changes now confronting us. Avoid snap judgment and quick conclusions. Of course, the wisdom that usually comes with age cannot replace the impetuosity of youth. At least hesitate before casting aside age-worn forms. The way of democracy may be long and arduous. It is, however, the only safe way. There is no short cut either by way of dictatorship, autocracy, communism, or fascism. The Bill of Rights, our Constitution—our democracy is still worth preserving—the democracy of Washington, Jefferson, Jackson, Lincoln, Cleveland, and Franklin D. Roosevelt must be saved.

Ladies and gentlemen, at this very hour our beloved country is passing through a very very grave period of history. We need only to pick up our daily newspapers and glance at the glaring headlines which appear, to realize the gravity of the situation. At any moment Europe may be catapulted into a catastrophe the like of which the world has never known and the danger insofar as we are concerned is that we may inevitably be enmeshed and drawn into it. This I fervently hope and pray will never be the case, because as I have many times stated both on the floor of the United States Senate and elsewhere, the quarrels and wars of the old world are not our quarrels, and while we cannot believe in the principles of Hitlerism and Stalinism I do firmly believe, as I am certain you do, if we want to do what is best for our people, for the present generation, and for all posterity in the years to come, we will stand squarely and firmly on the ancient doctrine of keeping America out of Europe and Europe out of the western hemisphere. I never felt as strongly about anything in my life as I do on this subject, and I am happy to be able to discuss with you, the present flower of our youth and the future fathers and mothers of our great State, this momentous question. The reason I am taking this stand and the reason I am fighting for a hands-off policy in Europe and a program of America for Americans is because I am interested in each and every one of you, your brothers and sisters, and the boys and girls in every State of this Union. Don't think it's an easy matter. If you could only know of the abuse and unfair criticism that is being heaped on my shoulders daily on account of my outspoken stand on these great questions you would realize what I mean when I say it is not an easy matter.

I realize only too well that if we become embroiled in another world conflict that the very lifeblood of our Nation, our young men, will be destroyed for an entire generation. I know in addition to that great sacrifice that our present economic system will be so badly shaken that there is no way of foretelling what the ultimate result along that line will be. Europe is heading for the bloodiest of all wars and there are some in this country who are determined that we shall take our place on the firing line with one side or the other. This I am determined shall not happen because I want to protect you and to save our present form of democracy, and to preserve our ideals and our institutions which our forefathers fought and died for, so that we would have a republic that would be the envy of the whole world. I have stated publicly before and I again now pledge you that I will never as long as I am a Member of the United States Senate cast my vote to send a single son of an American mother across the waters of the Atlantic to any foreign shore to fight for any European country regardless of who that nation shall be, or what the excuse. I say to you that we should read and reread the messages of Washington and Jefferson with respect to entangling foreign alliances and we should follow in their footsteps if our Nation is to be preserved. Now is not the time to turn our backs on their doctrines and warnings. There has never been a time in our Nation's history which was more fraught with national danger than is the present. This is no time for sentimentalists. We should weigh with the greatest care every step we take insofar as our dealings with foreign nations are concerned if we are to avoid embroilment and all the resultant suffering and hell.

Has it ever occurred to you that as the result of our very brief participation in the last World War in addition to offering up to the god of war over 100,000 of our young men, who paid the supreme sacrifice, that it has cost us in dollars and cents up to the present time nearly $70,000,000,000, and this figure is growing annually? In addition to this, thousands and thousands of our veterans are forced into hospitals yearly for treatment for wounds and diseases received as the result of their service. The United States Veterans' Administration is constantly building at tremendous expense to the Government, enormous hospitals to provide care for these veterans. And still there are those who daily tell us that there is no way we can stay out of another world war, and that we ought to take sides and go to war—for what?—a repetition of what I have just cited above, only many times worse. Let's be wise. Let's profit by experience. Let's make up our minds now that we are not going to permit ourselves to become involved in another European catastrophe regardless of who wants us to do so.

Now, just a few words with respect to my program of America for Americans. As you perhaps have no doubt noted from the columns of the press, from time to time, I am referred to as an "isolationist." In plain everyday North Carolina language that merely means that I believe that we should mind our own business and let other countries mind theirs. It also means that I feel just a little more kindly toward our own good North Carolina boys and girls than I do toward the boys and girls of Germany, England, France, or Russia. It means that I believe that our Government's first consideration should be toward the education and welfare of our own good people here in North Carolina and the other States of the Union than toward the masses of the entire world. Because I see fit to have very deep-rooted convictions on such important subjects, I am referred to by certain groups and individuals, from time to time, as one of the most dangerous men in American public life, and only recently have been labeled an arch enemy of democracy. Now, these indirect stigmas and intended insults do not personally disturb me because, as you know, I can take it.

However, there is one thing which does disturb me and that is this question of democracy that I am reported to be attempting to destroy. I believe I have a pretty clear conception of just what American democracy is, and I am confident that my understanding of that word is acceptable to the majority of our people. Of course my interpretation does not permit of my agreeing to the proposition as put forth by some, namely, wholesale admission of foreigners to our country at a time when we have approximately 12,000,000 of American citizens out of employment.

In addition to the aforementioned unemployed there is the problem of the student; the young boy and girl finishing high school or college. Statistics disclose that every year approximately 750,000 young men and women are completing their education and then are faced with the problem of securing employment. We are also told that the economic situation has become so grave now that only one out of every three of these youngsters who start down that long trail of "seeking a job" will be successful in the next several years. This problem presents one of the strongest arguments as to why we should not permit the continued influx of foreign-born to our country to further handicap the breadwinners of our American families, and also to add to your own difficult problem. This is not a proposition of one being heartless, as some would have you believe is the case in my position. My convictions in favor of our own citizens, our own boys and girls, are so strong that I have been forced to put aside every vestige of sentiment and treat the whole matter very forcibly.

You must remember, my young friends, that there are those in this country who would bring every refugee of the world into our country regardless of what the result would be insofar as you and all the rest of the American youth are concerned. They would lead you to believe that our country is big enough to absorb the masses of the world and that when these hundreds of thousands come here that their mere being here will aid us in our fight for a complete recovery from our economic ills. I cannot just see the logic of such argument, and because I have seen fit to disagree with these parties they are now calling me, as I said a few minutes ago, "the arch enemy of democracy." Well, regardless of what these critics think of me, I intend to pursue my well-known policy of deportation of all criminal aliens now in our midst, fingerprinting and registering of all aliens, and the restriction of all immigration for a period of 10 years or until such time as our American citizens have secured employment and have been taken from the relief rolls. That's my case. I submit it to you as a jury of American youth. Do you think I am an "arch enemy of democracy" because I want to make it easier for you to secure a job when you finish your education?

There never has been a time in the Nation's history when the Government itself has been more keenly alive to its responsibility of educated youth. Franklin D. Roosevelt is interested in our youngsters, and under his able guidance and leadership he has fostered legislation to help them. Unquestionably, he has done as much, if not more, for the youth of our land than any man who ever occupied the White House. I refer, of course, to the part the administration's agency, the National Youth Admin-

istration, is playing throughout the country in extending a helping hand to thousands upon thousands of youngsters who are endeavoring to secure an education, who otherwise would be deprived of that opportunity. It is indeed a revelation to turn back the pages for a few years and take stock of the great strides which have been made in our own State in erasing illiteracy. We have a fine school system in North Carolina. One of the best, and its success is due largely to the fine administration of my kinsman, Clyde Erwin, superintendent of public instruction, as well as my good friend and our distinguished Governor, Hon. Clyde R. Hoey, and the thousands of sincere and conscientious teachers in the State.

My young friends, the whole problem rests in your hands. If you want an education the means are available. Seek and you shall find. It is your responsibility. No one can make you get it. Yours will be the reward. You should be proud in the knowledge that you are living in a wonderful period of the history of our State and Nation. You, and each of you, have an important part to play in the destiny of our country. You are an integral part. Yours is truly a great responsibility. There is no one who can foretell what the future holds in store for us as individuals or as a Nation. You must do your part to see that our Constitution and our Government is preserved so that the sacrifices of those who have gone before us were not made in vain.

In conclusion, I want to say to you, the members of the various Beta clubs, that it has been a real pleasure and an honor to speak to such a fine group of upstanding young men and women. I am confident that if all our youth had the courage, the understanding, and the determination that you do, that our future would be to the highest degree secure. I beg of you in the words of that sacred commandment, "Honor thy mother and thy father, that thy days may be long upon the earth which the Lord thy God has given thee," never forget the teachings of your youth; be true to the great trust that your parents have placed in you, and grow into strong, honorable men and women, and take your respective places in a turbulent world where your mere presence will be an inspiration to others who follow in your footsteps.

I thank you.

The Farm and City Partnership

EXTENSION OF REMARKS

OF

HON. JAMES M. MEAD

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 11 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY HON. JAMES A. FARLEY

Mr. MEAD. Mr. President, I ask unanimous consent to have printed in the RECORD an interesting and timely address on the subject, The Farm and City Partnership, delivered by Postmaster General Farley on the occasion of the anniversary farm dinners, held in several hundred counties of the United States and broadcast by the National Broadcasting Co., the Columbia Broadcasting System, and the Mutual Broadcasting System.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

I consider it a privilege and an honor to be invited to speak to you tonight on the occasion of this farmers' anniversary celebration. Let us hope that the occasion may become an annual one, and that it may grow into a national holiday worthy of the dignity of agriculture. The first Monday in September is always set aside as Labor Day. Why should we not set aside the first Saturday or Monday in March as farmers' day?

Secretary Wallace has talked to you about the farm program. My job has been to supervise the carrying of the mails. But I know, from the experience of our Post Office Department, that something has been happening out on the farms in the years since 1933. The amount of mail addressed to, and sent by, persons on rural routes has increased substantially during that period. I would judge from the increase in the farmers' mail, and especially the number of parcels received by farmers, that they have more money to spend than they used to have. And so I am not surprised when Secretary Wallace tells me that cash farm income for the Nation as a whole has increased from $4,700,000,000 in 1932 to $8,500,000,000 in 1939—almost double what it was.

Those are significant figures. When agriculture in any State is prosperous, that whole State is prosperous. The farmers' income from corn and hogs and beef and grain and dairy products soon finds its way into town and the entire State hums with life and activity. That activity is transmitted to the industrial centers and the financial centers. Even the stock market is affected by it, and investors all over the country share in the benefit.

Because of the close relationship between farm prosperity and city prosperity, the cities have every reason to support an effective farm program. Unfortunately, some urban interests—journalistic and political and financial—have been blind to this close relationship and have opposed nearly everything the farmers have tried to do. But, on the other hand, many people in the cities have understandingly supported the farmers in their efforts for economic security and economic justice. I believe the farmers have special reason to feel kindly toward those urban Representatives in Congress who have consistently voted for farm laws. After all, farmers constitute only 25 percent of the total population, and no farm program depending on Government authority or Government funds can last long without the consent of at least some of the people in the cities and towns. I myself have felt that the farm program is in the long-time interests of the cities themselves, and I have done what I could to spread an understanding of that fact among my city friends, in Congress and elsewhere.

I believe that one of the reasons why the farm program has commanded such strong and nearly universal support from the farmers is the fact that its administration has been kept out of politics.

When the program was launched, back in 1933, a fundamental decision had to be made. The President, the Secretary of Agriculture, and the majority in Congress had to choose whether to follow the old political tradition of using such a program for partisan advantage. The decision was made—and I believe it was made right—to keep the program out of politics. No farmer, regardless of his political affiliation, is barred from serving on the community and county committees which run the program. Years ago the articles of the farmers' associations were so drawn as to prevent these associations from being used by committeemen or others for political purposes.

We are proud of this record, which is a precedent in unselfish public service for either political party.

Nevertheless, such public-spirited policies carry the danger that farmers may take the continuance of this program for granted, that they may pay little attention to the votes in Congress which keep it going, or to the views of the men and parties seeking office.

These farm policies form one of the great developing issues of the Nation. In this country we hammer out such new ideas on the anvil of politics. It is the way of democracy. This farm program which you are fashioning will be the object of political attack and counter attack for many years. If it can outlive the onslaughts, the program will survive and become a part of our American way of doing things.

The best evidence that farmers are on the alert to guard their program is found in these dinners tonight. This anniversary celebration of 7 years of achievement gives the Nation hope that the national farm program can and will be carried forward, in the useful service of all the people.

The Late Henry W. Grady

EXTENSION OF REMARKS

OF

HON. JOHN H. BANKHEAD, 2D

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Monday, March 11 (legislative day of Monday, March 4), 1940

ADDRESS BY JOHN TEMPLE GRAVES 2D

Mr. BANKHEAD. Mr. President, I request unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD an address delivered to the Atlanta Historical Society at Atlanta, Ga., on October 28, 1939, by Hon. John Temple Graves 2d, on the fiftieth anniversary of the death of Henry W. Grady. Mr. Graves is an outstanding, unusually well informed and able columnist for a number of newspapers. Mr. Graves has developed in a clear way that while Henry Grady preached the doctrine of love between the North and South, he did not abandon his right or his disposition to defend the South as a section when circumstances called for that treatment.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Without the Atlanta Constitution this occasion could never have been complete. I salute Mr. Jones as the present-day architect of a

page upon which once were gathered Joel Chandler Harris; my uncle, Bill Arp; Betsy Hamilton; Frank Stanton; Clark Howell; and Henry W. Grady. I salute him, too, as a representative of the profession Henry Grady enlivened and loved and never forsook.

For me to come before the Atlanta Historical Society with history of an immortal Atlantan is to bring a very small coal to a very great Newcastle. There is nothing I can tell you about Henry Grady which you don't know better than I do, and I shall not try. I shall attempt only to remember him a little in your company, and subject to your correction. And for my text—if a printer's devil may take one—I shall choose the words graven in the stone that honors him here: "And when he died he was literally loving a nation into peace." That they are words spoken by my father makes them dear to me and no less relevant to my thought tonight.

"Loving a nation into peace." We think of Grady as the great peacemaker, and so he was; but some of us have thought of him as a subordinator to peace of the regional differences, the regional problems, needs, opportunities, history, and way which marked and still mark the South—and that he was not. We think of him as reversing the path which John C. Calhoun trod, of leading the South back into a Union from which Calhoun had let it out, and so he did, but some of us have thought of him as proving with his own health a certain unhealth in Calhoun, of dissipating with his buoyant nationalism a sectionalism which had been unnecessary and unwise, and that he did not. He died loving a nation into peace, yes; but he was seeing more and more and he was saying more and more that it must be a peace based upon appreciation of America in all its parts, upon justice and generosity and understanding for a part called the South. "There is sectionalism in loyalty (to the Republic) as in estrangement," he said in his last word to New England.

In the difference between Henry Grady's first speech to New England—the one in 1886—and his second in 1889 just before he died, there is evidence that he was undergoing a change like the one which came to Calhoun, a change from a nationalism which cried down regional differences to a nationalism which demanded recognition of regional differences. We think of Calhoun as the great nullificationist, the secessionist, the spinner of fine-spun theories for the South, the champion of southern rights against national rule. But in the beginning there was no more Nation-minded man in the whole country than John C. Calhoun. When he came to Congress from South Carolina in 1810 and was made chairman of the Committee on Foreign Affairs, he was a sort of superpatriot, an American of Americans. He it was who introduced the resolution for war on England in 1812. He it was who made himself so invaluable in conduct of that war that he was called "the young Hercules who carries the war on his shoulders." Then and thereafter, for many years, he was a big navy man, a friend of the national bank, a champion of Federal internal improvements. He was for the protective tariff. He spoke over and over again of national unity, deprecating sectionalism and what he of all people called "refined arguments on the Constitution." He was Monroe's Secretary of War, Vice President under John Adams and Andrew Jackson—and Adams said of him in those days: "He is above all sectional prejudice more than any other statesman of the Union with whom I have acted." He was no professional southerner, provincialist, secessionist. It was not his natural bent or thought, but the excesses of the North in rivalry with the South, of industry serving itself at agriculture's expense, that turned him finally in Jackson's term from nationalism to regionalism, from America as a whole to the South in particular, from scorn of fine-spun theories about the Constitution to theories spun masterfully fine in the interests of South Carolina and the defense of the South. It was these things that produced his eventual nullification doctrine, his theory of secession, his call for southern blocs to defend southern rights. He opposed tariff and other excesses as "making geographic divisions of a nation," "making two of one nation," and it was only when he saw the division made and the two created that he gave his genius and his heart to his own half. It was 90 years ago last January that John Calhoun called southern Senators and Representatives into a meeting at Washington and begged them to hold southern rights paramount over party allegiance. He predicted with uncanny prescience a tragic era for this section if the North had its way, but his fellow southerners were unconvinced and only a minority of them would sign his manifesto. A political stand which might have saved the bloody stand at arms 12 years later was not taken. When Calhoun died in 1850 his last words were, "The South, the poor South."

That was on March 31, 1850. Fifty-four days later, in Athens, Ga., Henry W. Grady was born. And 39 years later Grady was to die with words of that same South upon his own lips: "Tell her (his mother) if I die, that I die while trying to serve the South, that land that I love so well." He was only 39 years old, and "loving a nation into peace." Calhoun was 39 when Adams said of him that "he is above all sectional prejudice more than any other statesman with whom I have acted." Would Henry W. Grady, if he had lived, have gone the way of John C. Calhoun? I believe that he would—and that he would have succeeded in regionalism as Calhoun had to fail. I believe he would have gone that way and that his speeches prove it. I believe he was already going that way, and that the proof is in the difference between his speech to the New England Society of New York on December 22, 1886, and his speech to the Boston Merchants Association in December 1889, the speech that made him famous and the speech that killed him.

"It was writ of all his living that the noble fires of his genius were lighted in his boyhood from the gleam that died upon his father's sword." My father said that of him, too. Gallant, dramatic, with a healthy and high-hearted sense of the war as a thing as decisive of the South's economic and social destiny as it had been of his father's mortal one, he came before the New Englanders and told them the South would come back in whole heart to the Union of States. It was the speech of a man totally freed of all bitterness, all prejudice, all antagonism. It was the speech of a nationalist who could name Abraham Lincoln the typical American—"came he who stands as the first typical American, the first who comprehended within himself all the strength and gentleness, all the majesty and grace of this Republic—Abraham Lincoln." It was the speech of an Atlantan willing even to break bread with William Tecumseh Sherman—"I want to say to General Sherman, who is considered an able man in our parts though some of our people think he is kind of careless about fire, that from the ashes he left us in 1864 we have raised a brave and beautiful city." It was the speech of one who renounced Negro slavery and southern theorizing, who welcomed the North to the South, who wiped out the Mason and Dixon's line, who believed that the South was about to make a profit of defeat: "We have found out that in general summary the free Negro counts more than he did as a slave. * * * We have sowed towns and cities in the place of theories, and put business above politics. * * * We have learned that one northern immigrant is worth 50 foreigners. * * * We have wiped out the place where the Mason and Dixon's line used to be. * * * The South found her jewel in the toad's head of defeat."

It was Calhoun again, putting his youth against "geographic divisions of a nation," against "making two of one nation," and believing the division would not be. It was Calhoun again, too, with something in his soul ready to stand for his own half of the Nation if division should persist or come. The last words of that New England society speech were significant: "Now, what answer has New England to this message? Will she permit the prejudice of war to remain in the hearts of the conquerors when it has died in the hearts of the conquered? Will she transmit this prejudice to the next generation, that in their hearts, which never felt the generous ardor of conflict, it may perpetuate itself? Will she withhold, save in strained courtesy, the hand which, straight from his soldier's heart, Grant offered to Lee at Appomattox? Will she make the vision of a restored and happy people, which gathered above the couch of our dying captain, filling his heart with grace, touching his lips with praise and glorifying his path to the grave? Will she make this vision on which the last sigh of his expiring soul breathed a benediction, a cheat and a delusion? If she does, the South, never abject in asking for comradeship, must accept with dignity its refusal."

But for these final words of warning, the Grady speech sounded no sectional or regional note. Its nationalism was so perfect and complete that some of Mr. Grady's critics in the South interrupted the country-wide acclaim with sour talk of a sell-out. But in their hearts they knew that it was the soul of a man who loved both America and the South and who believed the one capable of including the other in amity and love that had spoken.

Did something come over Henry Grady in the 3 remaining years he was to be permitted to live, something to tell him that the South was as much in need of his championing as the Nation was of his love? I believe it did, and that it was not disillusion, for his was too buoyant and optimistic a nature for that, but an increasing conviction that if the South was to contribute as it should to the Nation it must be free to express itself and its special circumstance and that this freedom needed championing against the North. "If then it be provincialism that holds the South together," we find him saying at Dallas on October 27, 1888, less than 2 years after the New England dinner, "let us outgrow it; if it be sectionalism, let us root it out of our hearts; but if it be something deeper than these and essential to our system, let us declare it with frankness, consider it with respect, defend it with firmness, and in dignity abide its consequence."

And a year later, when he came once more before a great New England audience for the speech he said was to be his greatest and may have known would be his last (he was ill already), the note of national love was still there, but there, too, was another note, not to be found in his first speech, a note of challenge, a suggestion that the South would take its stand: "We wrested our State government from Negro supremacy when the Federal drumbeat rolled closer to the ballot box and Federal bayonets hedged it deeper about than will ever again be permitted in this free Government. But, sir, though the cannon of this Republic thundered in every voting district of the South, we still should find in the mercy of God the means and the courage to prevent its reestablishment." "Meantime," he went on, "we treat the Negro fairly, measuring to him justice in the fullness the strong should give to the weak, and leading him in

the steadfast ways of citizenship that he may no longer be the prey of the unscrupulous and the sport of the thoughtless." And then he challenged the North's understanding of the South's way with the black man even as your own Margaret Mitchell was destined to do it in immortal fiction nearly half a century later: "The love we feel for that race you cannot measure nor comprehend."

We need not comment here on the race problem or any other southern problems as Mr. Grady saw them, on whether he saw them rightly, on whether they are today what they were then. The comment is only on the fact that in his last speech, delivered so shortly before his death that the North had not time to digest it before it was absorbed in eulogy of a great man dead, he was a challenging, aggressive, stand-taking man of the South—a southern regionalist, if you will, still loving a nation into peace, but instructing that love in the regional condition, problem, and task it must serve.

If this is true, if this was his trend as it had been Calhoun's, and if he had lived on, we may believe that he would have anticipated with a more shining leadership and imbued with a more buoyant and optimistic spirit the southern regional effort of today. We may imagine him invoking the South as he did at Dallas to science and self-help, to the liberal way and the progressive day. And we may picture him come back to Boston and pleading with the Nation, in an eloquence still unmatched, for justice, generosity, and restraint in policies toward the South—for No. 1 tenderness from tariff makers, No. 1 fairness from makers of freight rates, No. 1 delicacy in administration of the wage-hour law lest it destroy more southern wages than it increases, No. 1 restraint as the South goes still about its business of solving a race problem more difficult and extensive than any other people anywhere have known. We may even guess what he would say to his southern people and put it into our own lame words: "Here at your feet," he might say, "is your new South, your promised land, if you till it and have the benefit of the tilling. This is your promised land if you supplement what God and history have given it with what you can give it; if you walk upon it in ways of science; if you balance its agriculture with industry and its cotton with food. This will be a new South indeed, a promised land for a Nation entire, if you educate your children in grace to inherit it; if you trust it enough to put your own gold into it; if you do justice in it among yourselves; if you hold its laborer worthy of his hire, its farmer of his crop, its merchant of his fee; if you honor its laws and make a meeting among yourselves for its tasks. Here your new South is a promise to North, East, and West if they are persuaded to be generous and just, if you take your stand for your entitlements against other lands, if your goods go as freely as others to the markets of the land, if no distant tax burdens you when you buy and limits you when you sell, if the rent of gold is no more for you than for your fellows, and if the fruit of your possessions is permitted to fall into your own laps.

"He died loving a nation into peace." Whatever time might have done to his nationalism, it would never have turned his heart from the Nation; not have altered the essential Americanism of his spirit. He was such a happy man, so full of sentiment, so golden-hearted at home and with his friends, so out-of-door minded, so red of blood, so aggressive and kind, full of such confidence in his country, his South, his own powers. In him was the spirit of America at its healthiest, bravest, and best, and beyond all the limitations of regional competition that might have come over him, we may believe that this spirit would have been tonic to us today against the sickness of democracies, talisman in the task of proving and holding America against hateful philosophies across the sea. In Grady the inexhaustible soul of man that comes from God and goes to God, that survives because it will not die, had its specimen. "The German bombs have no effect on us," cried Warsaw's immortal mayor in the midst of the siege last month. "They have no more effect on us; we are accustomed to them." It was a whistle in the awful dark, a shout of defiance as death closed in. The supernatural refused to be summoned. Mind did not conquer matter, nor the spirit of Poland the iron and steel of Adolf Hitler. But in that spirit, in that cry was the hope of the world, and the secret of its success. The spirit of man may not yet overcome matter in hand-to-hand fighting, but it persists in belief that it can, in shouting that it will. Defeated infinitely through infinite years, it lives on, and in its living is the source of all we associate with civilization and all we know as God. It will survive the fall of Warsaw. It will survive all the murder and destruction yet to come. Guns cannot shatter it, or submarines sink it, or dictators order it down. Take away a thousand years of its progress, and it begins at the taking-off place. Rob it of nine-tenths of its world, and it goes to work on the remaining tithe. And, in the end, it conquers because it cannot be defeated, because it can no more be destroyed than machine guns can "wound the loud winds" or torpedoes "kill the still-closing waters."

America needs Henry Grady at this hour not for unity alone but for recovery of its immortal soul, of its sense of life abounding, of the spirit that set it on its way 163 years ago. Let us salute, then, the great heart that was loving a nation to peace. And let us salute in memory as dear the buoyant spirit that was living a nation into health.

Farm Benefit Payments, and Farm Operation by Bankers and Insurance Companies

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Monday, March 11 (legislative day of Monday, March 4), 1940

ARTICLES FROM THE NEW YORK TIMES, THE WASHINGTON POST, AND THE WASHINGTON DAILY NEWS

Mr. LEE. Mr. President, I have several times called attention of the Senate to Government benefit payments made under our farm program. Here is an article from the Tuesday, March 5, New York Times, headed:

The Life Companies Get Most A. A. A. Gains.
Chief 1937 beneficiary reported as Metropolitan Life, with $257,095 payment.
$231,158 paid Prudential.

It is stated in the article that the average payment to 3,750,000 farmers was $75. How does that compare with the payment to one life-insurance company of $231,158 and to another insurance company of $257,095?

Mr. President, I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times of March 5, 1940]

BIG LIFE COMPANIES GET MOST A. A. A. GAINS—CHIEF 1937 BENEFICIARY REPORTED AS METROPOLITAN LIFE, WITH $257,095 PAYMENT—$231,158 PAID PRUDENTIAL—TOTAL DISBURSEMENTS FOR YEAR PUT AT $325,856,887—AVERAGE OF $75 TO 3,750,000 FARMERS

WASHINGTON, March 4.—The biggest single beneficiary of the New Deal's farm program in 1937 was the Metropolitan Life Insurance Co. An Agriculture Department report to Congress revealed today that it received $257,095 in A. A. A. benefits on farms which it owns.

Nearly all the top payments went to life-insurance companies and banks, which have become large-scale owners of farms through mortgage foreclosures.

More than 20,000 farmers and corporations received A. A. A. benefit payments of $1,000 or more for complying with the 1937 program. Most of the checks were sent out in 1938 and 1939, since payments usually lag more than a year.

The report disclosed that 272 farmers and corporations received more than $10,000 each and 594 received $5,000 or more. Total payments for 1937 were $325,856,887.

The payments were obligated before Congress amended the Agricultural Adjustment Administration Act in 1938 prohibiting the payment of more than $10,000 to any person or corporation. The limitation became effective last year.

Agriculture Department officials said that "very few" of the large corporations had ceased cooperating in the farm program because of the limitation. It has resulted, they said, in larger payments to small farmers.

A. A. A. officials said that the average check sent 3,750,000 farmers who participated in the 1937 program was $75. Since then the average has increased, partly because nearly $500,000,000 was provided by Congress for such payments in both 1938 and 1939.

There were 11 payments of more than $100,000 each, and 12 of $50,000 to $100,000. After the Metropolitan Life Insurance Co., the next largest payments went to the Prudential Insurance Co. of America, $231,158, and the Equitable Life Assurance Society of the United States, $206,962.

Other payments of more than $100,000 were:

Travelers Insurance Co. of Connecticut, $211,521; Union Central Life Insurance Co. of Ohio, $166,280; Mutual Benefit Life Insurance Co. of New Jersey, $161,110; Northwestern Mutual Life Insurance Co. of Wisconsin, $156,444; John Hancock Mutual Life Insurance Co. of Massachusetts, $147,647; Federal Land Bank of Omaha, Nebr., $134,139; King Ranch of Texas, $122,140; and the Federal Land Bank of St. Paul, Minn., $103,925.

Mr. LEE. Mr. President, I also ask unanimous consent to have printed in the Appendix of the RECORD two articles, one from the Washington Post of Sunday, March 10, and the other from the Washington News of Saturday, February 17.

The one from the Washington News bears the headline "Life Insurance Firm Biggest United States Farmer," and the article from the Washington Post has the headline "Banker Beats Pen Into Plowshare—Loan Organizations Farm 29,000,000 Acres, Employing Agriculture Experts."

These two articles show the tendency of foreclosure which is forcing the family farmers off the land and replacing them with large-scale operations. We are responsible for this tendency by making payments to big-scale farmers as high as $257,095, while the average payment to 3,750,000 little farmers is only $75 each.

I ask unanimous consent that the two articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington Post of March 10, 1940]

BANKER BEATS PEN INTO PLOWSHARE—LOAN ORGANIZATIONS FARM 29,000,000 ACRES, EMPLOYING AGRICULTURE EXPERTS

(By William Pinkerton)

Bankers and insurance men are farming 29,000,000 acres.

Watching want ads for every chance to sell at a paying price, both Government and private lenders have been forced by necessity to learn the farming business.

Altogether they have $1,000,000,000 worth of farms on their hands, and a farm lying fallow is a costly asset.

Scientific book farmers from the agricultural colleges have been thrown into the breech to supervise tenants who sow and reap on defaulted farms. Some signs show that the farm-management experts are making these unwanted lands pay their way in the portfolios of investment houses.

Both the Government and private business were thrown into "institutional farming" by the depression's deep corrosion on agricultural credit.

LOAN FIRMS OWN NEARLY 3 PERCENT OF FARMS

Government figures show that, as of 1 year ago, the farm-loan outfits who became big-time farmers overnight shared ownership of somewhat less than 3 percent of the Nation's farm land as follows:

Federal land banks, $139,440,000.

Life-insurance companies, $702,861,000.

Joint-stock land banks (in liquidation), $53,885,000.

Commercial banks, $49,143,000.

State credit agencies (North Dakota, South Dakota, Minnesota), $73,301,000.

Economists say the situation changed little during 1939. The totals above represent farms actually owned—lock, stock, and barrel—by the banks and insurance companies. Aside from this there were more than $7,000,000,000 of farm-mortgage loans outstanding in the United States.

The new job of running farms on a wholesale scale took a special type of man. As Glen E. Rogers, farm-loan manager of the Metropolitan Life Insurance Co., remarked:

"A man to be competent to lend money must have more or less of a banking instinct. A man to manage farms must have an intricate knowledge of agriculture."

Mr. Rogers might be called the biggest farmer in the United States. He runs $79,800,000 worth of farms, although this represents only 1.7 percent of his company's assets.

TENANT ENCOURAGED TO HUSBAND LAND

Rogers said only 12½ percent of their sales put farms in the hands of persons whose business is not farming.

Although the land banks try to get tenants who eventually will qualify as owners, every lease has a clause ending the tenant's rights if the farm is sold.

To encourage the tenant to husband his land carefully despite the danger of being dispossessed, land-bank leases now carry a promise to compensate the farmer for soil improvements made during his stay on the farm.

The lenders who have become big farm owners because of the depression maintain that their policy has been to foreclose only when a farmer was beyond hope of paying off his debts or when he showed bad faith in his dealings with the lender.

[From the Washington (D. C.) News of February 17, 1940]

LIFE INSURANCE FIRM BIGGEST UNITED STATES FARMER

Federal Monopoly Committee evidence indicated today that "active competition" among insurance companies for farm mortgages during the period following the World War made those companies "the largest farmers in the United States."

Records of the 26 largest life insurance companies revealed that, through ownership and mortgages, they control vast areas of farm land, especially in the Middle West. A year ago those 26 companies held mortgages totaling $755,447,000. Nearly 70 percent of that—$508,019,000—represents mortgages in Illinois, Indiana, Iowa, Kansas, Minnesota, Missouri, and Nebraska.

Securities and Exchange Commissioner Leon Henderson argued with officials of the Metropolitan Life Insurance Co. late yesterday that the boom in farm mortgages held by insurance companies was a result of "active competition" among them during the years from 1918 until 1929.

During that period, he said, money was borrowed on farms which had been greatly overvalued by insurance agents eager for commissions. During the wave of foreclosures that followed 1929 the Government was forced to step in, he said, and the only solution now to the mortgage problem is to raise the level of farm prices.

Glenn D. Rogers, manager of Metropolitan's farm-loan division, denied the company had any general problem of overvalued mortgages. He scoffed at suggestions that it might have difficulty in getting rid of poor land which had been foreclosed because of too high a valuation.

Mr. Rogers told the committee that his company is the "largest farmer in the United States." He said, "We own more farm land than anyone else."

He said Metropolitan owned approximately 1,430,000 acres of farm land, which represents an investment of $79,800,000. This land is in 7,531 farms which average about 200 acres each. In addition, he said, the company holds mortgages on 13,000 farms, representing an investment of $74,000,000.

According to the Census Bureau there were 6,812,350 farms in the United States in 1935. Metropolitan's holdings through ownership and mortgages would amount to about three-tenths of 1 percent.

According to records before the committee, the 26 largest insurance companies owned $529,392,000 of farm real estate a year ago. That figure was admitted asset value. The Census Bureau reported in 1935 that the total value of all farms in the United States was close to $33,000,000,000, which would give these 26 companies ownership of nearly 1½ percent of all farm land in the country.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. THEODORE G. BILBO

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, March 11 (legislative day of Monday, March 4), 1940

LETTER FROM HON. E. P. THOMAS, PRESIDENT OF THE NATIONAL FOREIGN TRADE COUNCIL

Mr. BILBO. Mr. President, I was hopeful that the deficiency bill would not be finally acted upon until tomorrow. I have been ill and have not had an opportunity to read it. It has been before the Senate only a short time.

I ask unanimous consent to place in the Appendix of the RECORD a letter to the chairman of the Finance Committee, Mr. HARRISON, who has given his consent to have the letter printed in the RECORD. It is a letter from Hon. E. P. Thomas, president of the National Foreign Trade Council. He has some very valuable information in support of the reciprocal trade agreements program.

There being no objection, the letter was ordered to be printed in the RECORD, as follows.

Hon. PAT HARRISON,
Chairman, Senate Finance Committee,
Washington, D. C.

DEAR SIR: On behalf of the National Foreign Trade Council I respectfully submit for consideration by your committee the grounds on which the council supports the Joint Resolution 407 for the renewal of the Reciprocal Trade Agreements Act.

The National Foreign Trade Council was formed in 1914 for the purpose of coordinating national activities directed toward the promotion of American foreign trade. Its membership is Nation-wide and comprises manufacturers, merchants, exporters and importers, railroad, shipping, and airline services, banking, insurance, education, etc., representing the diverse interests concerned directly or indirectly in the promotion of the Nation's foreign commerce.

Since its formation, the council has organized annually the National Foreign Trade Convention, with an average attendance of 1,200 delegates from all sections of the country. The final declaration of these conventions constitutes the approved policy of the delegates in respect to questions relating to foreign trade.

At the close of the Great War the convention unanimously advocated a bargaining tariff, as opposed to unilateral tariff making by the Congress. Attached are copies of the declarations of successive conventions of the council, in support of the present foreign commercial policy initiated in 1934 by the Reciprocal Trade Agreements Act.

Although opinion in the United States had been gradually forming in favor of reciprocal-tariff bargaining, it required an emergency of exceptional proportions—the world-wide depression that followed the crash in 1929—to turn the attention of the Congress to the enactment of measures which would give greater flexibility

to tariff-making procedure and more scientific adjustment of our external economy to the realities of a changed world economy.

A study was made by the United States Tariff Commission in 1933, in response to Senate Resolution 325 of January 28, 1933, followed by a report containing a list of more than a thousand dutiable items more or less noncompetitive or unsuited for domestic production, and including also those imports which represented less than 5 percent of our total domestic production. This gave promise at the time that without detriment to any domestic product, numerous noninjurious import concessions could be made by the United States in the interest of an expanded production in our export industries.

The council, accordingly, supported the act of 1934 and, based on the favorable results shown, supported its renewal in March 1937. The council now supports the proposal in the Senate for a further time extension.

It is too great a strain on human credulity to be told that the favorable results shown by the operations of the act—as in the case practically of all existing agreements—are a mere coincidence, especially when the lower rates of trade increases in relation to our trade with nonagreement countries are reported with a similar coincidental regularity.

In 1933, according to the statistics of the Department of Commerce, the total foreign trade of the United States amounted to slightly over $3,000,000,000, compared with over nine and one-half billion dollars in 1929. In 1937, at which the Reciprocal Trade Agreements Act had been in operation for 3 years, our total foreign trade amounted to nearly six and one-half billion dollars. During this period, also, our exports to trade-agreement countries showed an increase of 61 percent, as compared with the value in 1934–35, and our exports to nonagreement countries showed an increase of 38 percent. Our national income during this period rose by more than one-third, factory pay rolls by about one-half, and a rise in farm income of about one-half.

The Secretary of State and other Government officials have appeared at these hearings and presented figures showing the advantages that have been derived, both by American industry and American agriculture, from the agreements entered into with 21 countries. As a result of these hearings it should be possible to establish clearly all the facts in the case so that your committee may arrive at sound conclusions based upon these facts. The proposal to allow the present act to expire and to revert to congressional unilateral tariff making, displays a significant unwillingness to be bound by the official record of the benefits obtained by the country from the operations of the present act.

If conditions in 1933 were found to be of the nature of an emergency that called for decisive steps in securing enactment of the Reciprocal Trade Agreements Act, it is certain that the situation at present is not one for less concern as to the adverse effects upon our slowly recovering foreign trade of a reversal of our tariff policy, at a time when international relations are so highly complicated by another European war.

It is the firm conviction of American businessmen engaged in foreign trade that under continued emergency conditions Congress should not now reverse its own tariff policy. Whatever may be done at the close of the war to review the entire situation, in the fuller light of world-trade conditions then existing, the Congress of the United States should refrain at this time from making any changes in tariff policy.

Self-interest alone makes it incumbent on the United States to participate actively in the leadership that will be required when peace comes, in formulating plans for the reconstruction of the shattered world economy, by which all countries may liquidate the losses incurred by another war and find their way back to a well-ordered system of peacetime exchange of goods and services. With this end in view, it is of the highest importance that we maintain the principles and practices embodied in the Reciprocal Trade Agreements Act—to which the League of Nations, the International Chamber of Commerce, and 21 countries representing 60 percent of the world's total trade, have already subscribed as giving highest promise of success as an alternative to economic nationalism and its numerous discriminatory restrictions on freedom of international commerce.

In view of the changes that already have taken place in the pattern of world trade, as a result of the wide chasm existing between the foreign-trade policies of totalitarian nations and those of democratic countries, and in view of the changes that are likely to arise as a result of the proposals for a system of economic federation of European nations after the war, it is essential that the United States present a united front in support of its foreign-trade policy. In view of these possible changes in economic relationships throughout the world, we should avoid further experimentation at this stage in American tariff-making which would expose America's foreign trade to the uncertainties bound to arise by reversion to congressional unilateral action.

The argument that Congress alone has the right to make tariff changes is not in question, seeing that the present procedure had the sanction of Congress and that it retains the power of review by the time limit applied by it to the act. After a severe depression which still is in course of liquidation, industrial and agricultural interests of this country are wholly unprepared for any disturbing changes relating to tariff-making powers which would distract the minds of those engaged in meeting and surmounting wartime foreign-trade problems. This applies particularly to Latin American trade, which at the present time is engaging the serious thought and attention of both Government and business. Having won these countries at successive Pan American conferences to the support of the principles and practices of our reciprocal trade agreements program, we should not, by abandonment of the present trade-agreement system, weaken the economic ties between the other Americas and the United States and again leave them exposed to the economic domination of European totalitarian nations after the war has ceased and when competition again becomes acute.

In submitting this statement for your consideration, I quote from the unanimous declaration of the 1939 convention, attended by 1,207 delegates, as follows:

"This convention continues its support of the reciprocal trade agreements program as the most logical and effective method of permanently strengthening America's trade relations. The Convention urges the negotiation of further agreements, especially with Latin-American countries, as a practical contribution to intercontinental economic solidarity. It is axiomatic that we can increase exports to Latin America only if we buy more of its products. We believe this can be accomplished without injury to our domestic production.

"The results to date of existing trade agreements have been encouraging. The value of American trade with the countries with which reciprocal agreements have been concluded has shown a greater rate of growth than that with the nonagreement countries. We look forward with confidence to the maintenance of the trade-agreement principles during the present conflict in Europe and after its conclusion."

The attitude of the National Foreign Trade Council on the question of renewing the Reciprocal Trade Agreements Act in its present form has been summarized by our chairman, Mr. James A. Farrell, in the following words:

"The great problem before the United States is the character of international trade after this war. Our foreign-trade policy has been devised with the object of counteracting the totalitarian trend toward bilateralization of trade. It seems to me most unwise at this stage to weaken American efforts in this direction by a reversal of our tariff-making policy, when it is so necessary to avoid unnecessary changes which would add to the difficulties created by the war. It should be our aim to consolidate our position in world trade and to postpone to the close of the war review of our trade-agreement policy in the light of conditions then prevailing."

Respectfully submitted for consideration by your committee, I am,

Yours very truly,

E. P. THOMAS,
President.

Railroad Land Grants

EXTENSION OF REMARKS

OF

HON. MORRIS SHEPPARD

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, March 11 (legislative day of Monday, March 4), 1940

LETTER FROM T. C. ELLIOTT

Mr. SHEPPARD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written to me by Mr. T. C. Elliott, of 3032 Porter Street NW., Washington, D. C., on the subject of railroad land grants.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

WASHINGTON, D. C., *March 10, 1940.*

Hon. MORRIS SHEPPARD,
United States Senate, Washington, D. C.

MY DEAR SENATOR: As you perhaps know, I have been interested in the subject of railroad land grants for a great many years. I am particularly interested in the current legislation pending before the Congress in bills S. 2009 and S. 2294.

Bill S. 209 has for its principal purpose the placing of the water carriers under more adequate Federal supervision and control and was passed by the Senate with such purpose primarily in mind. However, when the bill reached the House it was considerably modified and amended. Among some of the amendments placed in that bill by the House was a provision which eliminates or destroys the Federal Government's right to have reduced rates and fares on the transportation of its property and troops.

Owing to an equity loss of over $400,000,000 being involved in the amendment added by the House with respect to eliminating the present rights accruing to the Government because of the assistance it rendered in the building of certain railroads, it is believed you should be fully advised before the Congress permits such a grave injustice to be done.

It has been my privilege to know of and observe what has been taking place in a legislative way between the Federal Government

and the railroad interests for the past several years with regard to this railroad land grant question. The whole history of such legislation and the dealings between the Government and the railroads has, apparently, been a one-way proposition from 1850 to 1940, in that the Government has been required to give and make concessions beneficial to the railroads and the railroad interests continually coming back to the Government for more favors and concessions until it has reached the present status of their asking that all Federal rights be foregone and withdrawn.

If the contentions and statements set up by the railroads and their interests, and which the House of Representatives must have relied upon for its action, were based upon fact, then there would be some excuse or reason for the Government to make the sacrifice of its equity rights, but such is not the case. It is correct to say that the data submitted by the railroad interests is not and cannot be sustained by historical facts.

The principal factors upon which the railroads are basing their claims to have the Government withdraw its land-grant rights are as follows:

1. They are contending that the lands granted to them were of little and insignificant value.

Answering the contention of the railroads with respect to the value of the lands which were granted by the Federal Government toward the building of certain railroad lines, it is quite correct to say that such contentions are erroneous and cannot be substantiated.

The facts are that such lands were allotted to the railroads without the price, value, or cost being set, established, or even estimated. It was just a simple matter of the Government setting aside so many sections of the public lands on either side of the railroad to be later established by survey. It is, therefore, easy to see what happened, for, in following the natural human practices, such surveys and railroads were run through the most valuable lands.

Under such circumstances and conditions, the only reasonable way in which the value of said lands may be determined is by ascertaining the amounts received by the railroads—this figure has been stated by representatives of both the railroads and the Interstate Commerce Commission as $3.05 per acre. This figure produces a value to the railroads of over $400,000,000.

It is believed that this $3.05 per acre more nearly represents the actual facts than the prices alleged to have been stated by such eminent statesmen as Stephen A. Douglas and Thomas H. Benton, and of the 94½ cents per acre alleged by the railroad interests as being the proper figure to use. These values and differences have considerable bearing upon the question as to whether or not the Government is justified in surrendering its present rights.

2. Contention is being made that the purpose for which the lands were originally granted has long since been met, in that the Government has been reimbursed over and over many times their value from the reductions in transportation costs it has received from the railroads.

In answer to this contention it must be said that under no stretch of the imagination, mentally, physically, politically, or otherwise, can such statement be sustained by facts.

The data and facts in contradiction to the above contention of the railroads are as follows:

The 130,000,000 acres already deeded (patented) with some ten or twelve more millions to be claimed from the Government by the railroads have a value of over $400,000,000 which has accrued to the railroads. This amount or sum placed at a very low minimum of 4 percent interest would show an income due the Federal Government of $16,000,000 annually. This amount running for a period of 80 years (without considering compound interest) would produce a sum of $1,280,000,000, plus the principal of $400,000,000, equals $1,680,000,000. From this deduct the amount of benefits received by the Federal Government from 1850 to 1940 of $168,000,000 and it leaves a balance due the Government of one and one-half billion dollars.

3. Contention is being made that because of the adequacy of the national defense, it should be used as a factor by the Government in eliminating its land-grant rights.

This contention must be considered from different sides. The availability of rail transportation during war periods is, no doubt, of considerable value to the Government. However, it is not the only thing useful and necessary to the Government in time of war, for it is quite essential that the farms, factories, highways, and commerce of most every kind and description operate and function during such times.

With particular respect to the position or status of the railroads in case of war, the fact should be kept clearly in mind that the properties of the railroads must be protected by the Government. This has been the actual conditions experienced during the long period of time when it was necessary to maintain the armed forces of the Government in the sections of the country ravaged by the Indians and the desperadoes, and it no doubt cost the Federal Government many millions of dollars to give such protection during that time.

4. Contention is being made that because of the settlement of the country and the increase in population and taxes through the building of the railroads, it justifies consideration being given toward giving up its land-grant equities.

This contention can be adequately answered by showing just what the railroads contributed toward their actual building of these so-called land-grant lines and what part of such costs was supplied by the Federal Government.

In this connection it is proper to quote from a speech made in the House of Representatives on May 23, 1872, by Congressman Jackson Orr, of Iowa, in which he stated that the price at which lands granted by the Federal Government were being sold, i. e., $7.04 per acre, the railroads will have severally received, per mile, as follows:

Burlington & Missouri	$15,067.90
Chicago, Rock Island & Pacific	12,307.19
Iowa Falls & Iowa City	24,550.00
Cedar Rapids & Missouri River	24,828.00
Dubuque & Iowa City	25,268.00
St. Paul & Sioux City	53,768.78

What has been stated above by Congressman Orr substantially applies to the contributions made by the Federal Government with respect to that portion of the land-grant mileages on the lines of the great systems of the Northern Pacific, Union Pacific, Southern Pacific, and the Santa Fe; and there should be no doubt in anybody's mind that such liberal sums were sufficient to build such lines lock, stock, and barrel—conplete.

5. Contention is being made that these Government land-grant rates are a confusing element in the rate structure of the United States.

The question of contractors bidding on contracts and in the furnishing of supplies to the Government is somewhat mixed up; however, inasmuch as the Federal Government has complete ownership in these particular land-grant lines insofar as investment and the privilege of transporting its property and troops at reduced rates are concerned, there is no reason or justification for its not claiming the benefits of such investment and rights.

It might be well to bring out in connection with this part of the question the fact that quite a large percentage of the complaints of bidders for sale of supplies to the Government is based wholly on the matter of their being unable to determine what their competitors are likely to bid. This particular factor is one of the best means available to prevent collusion in bidding.

6. Contention is being made that because of great distress and the inability of the railroads to properly meet their obligations and to function the Government should surrender its further claims to reduced land-grant rates.

It is only fair that the Representatives in Congress should know the facts as to this particular contention. The lines of the Northern Pacific, Union Pacific, Southern Pacific, Santa Fe, and the Illinois Central received about 80 percent of all the lands granted by the Government for the purpose of building railroads; therefore, it would most certainly not be correct nor proper to contend or say that any of these lines were in receivership.

Even though the financially able lines just mentioned, together with all the other railroads (including some high class along with the weak ones), constitute only 14,410 land-grant miles in a total of 240,000 miles for the whole United States, or just 1 land-grant mile to 16 miles that are not land grant. In this connection the fact should not be overlooked that under present or existing laws the Government is entitled to receive reduced rates on its traffic only on the land-grant mileages.

7. Contention is being made that, because of land-grant rates, the Government takes advantage of the railroads by applying rates over unreasonable and unusual routes.

The answer to this contention is that the governmental authorities are not applying nor attempting to apply rates for Government transportation over or via any route or routes not specifically authorized by the carriers themselves. It is correct to further state that to apply a rate or fare over any route or routes not authorized by the railroads would meet with an abrupt reversal upon appeal to the Court of Claims.

It is quite true to say, however, that rates in numerous instances are being applied and claimed by both commercial shippers and the Federal Government over routes which are unreasonably long and apparently unprofitable, when compared with shorter distances between the same points; this condition is brought about because of the manner in which the railroads publish their rate tariffs and leave available to the shipping public such unreasonably long and roundabout routings. The remedy to this situation is for the carriers to restrict their routings or to compel such restrictions by legislative enactment.

A SOLUTION

A just and reasonable solution to the confusion into which the railroads have seemingly thrown the Members of Congress concerning this land-grant question would be not to take the action contemplated in the present House amendment but to approach the subject in a more consistent and orderly way. It seems, therefore, that a more consistent and rational way is along the lines laid down in the bill introduced by you, i. e., S. 2294. That bill provides that data and information be secured by the General Land Office concerning the values, disposition of lands, etc., covering this whole land-grant matter. Not until Congress is in possession of such information will it be able to reasonably and consistently wipe out a governmental equity of over $400,000,000.

With respect to your particular bill, S. 2294, which appears to provide a safe path for the Congress to follow, it is also correct to say that substantially the same provisions contained in your bill have actually been twice passed by the House of Representatives, namely, H. R. 10641, Seventy-fourth Congress, and H. R. 1530, Seventy-fifth Congress.

I have tried to state the facts as they actually exist, but the provisions of your bill, S. 2294, make it possible to verify the truthfulness or falsity of every sentence and word contained herein. It is because of our long years of friendship and with the thought in mind that you might be able in some way to use this information to protect the interest of the Government that has prompted the submission of this communication.

Yours very sincerely,

T. C. ELLIOTT.

Loans to Wyoming Farmers and Ranchers by Farm Security Administration

EXTENSION OF REMARKS

OF

HON. H. H. SCHWARTZ

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, March 11 (legislative day of Monday, March 4), 1940

LETTER FROM C. B. BALDWIN

Mr. SCHWARTZ. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD a communication dated February 16, 1940, from Mr. C. B. Baldwin, Acting Administrator of the Farm Security Administration, giving in some detail the number, amount, and present status of loans made to farmers and ranchers in Wyoming by the Farm Security Administration. Significant features of this report show that repayments are being made in a satisfactory manner; that longer-term written leases are being secured by tenant farmers in place of oral yearly terms, thus giving the tenants inducement to practice better soil conservation; also, that diversified farming is displacing the one-crop system to an increasing extent.

There being no objection, the communication was ordered to be printed in the RECORD, as follows:

FEBRUARY 16, 1940.

Hon. H. H. SCHWARTZ,
United States Senate.

DEAR SENATOR SCHWARTZ: We have just completed a Nation-wide survey of the progress being made by Farm Security Administration borrowers, and I felt that you might be interested in the figures for the State of Wyoming.

We are proud to report that F. S. A. borrowers not only have increased their net worth and annual income, but also are making satisfactory progress in the repayment of their loans.

The survey showed that the 2,942 standard rehabilitation borrowers in your State had an average net income last year of $810.82 per family, as compared with $493.52 in the year before they came to F. S. A. for help. This represents an increase of 64 percent.

Moreover, these families increased their average net worth—over and above all debts—from $1,726.70 before they came into the F. S. A. program, to $2,322.61 at the end of the 1939 crop year, a gain of 35 percent.

In other words, these families not only have added $1,753,167 to the wealth of their communities, but they also have increased their annual incomes by a total of $933,493. This expanding purchasing power has, of course, been a considerable benefit to the merchants and other businessmen of the State.

At the same time, the survey showed that the borrowers in your State already have repaid $1,866,052 into the Federal Treasury as installments on loans totaling $7,450,644. The typical rehabilitation family in Wyoming has borrowed $2,532.51, and already has repaid $634.28. Since much of the money loaned does not fall due for 4 or 5 years, there is every reason to expect that the great bulk of it will be repaid.

We feel that this collection record is particularly significant, because, according to normal business standards, our borrowers would certainly not be considered good credit risks. Rehabilitation loans are made only to families which cannot get adequate credit anywhere else; and nearly all of them either had been on relief or were approaching the relief level.

Although the rehabilitation program is intended to meet long-range problems, which have been growing steadily worse for more than a generation, it is financed out of relief appropriations; and it takes the place of direct relief in rural areas. It is designed to help needy farm families to become permanently self-supporting, instead of remaining indefinitely dependent on relief.

It has succeeded largely because every loan is accompanied by advice and guidance in sound farming methods, to make sure that the money is put to the best possible use. There is ample evidence that this guidance and technical training is the most important part of the rehabilitation program. Without it few of the families would have been able to make much progress or to repay their loans.

In a limited number of cases, in order to get the family off to a sound start, small grants have been made to supplement the loan. Usually these grants were just large enough to tide the family over until it could make its first crop. They have averaged $114.96 per family, or a total of $338,212, over a 4-year period.

Often it has been necessary to work out an adjustment of the family's old debts before rehabilitation could be successful. Local farm-debt adjustment committees have been set up for this purpose. They have no legal authority to compel adjustments, but by bringing the farmer and his creditors together for a friendly discussion they usually are able to arrange a scale-down of the obligations, reduced interest rates, or extension of the payment period. Such adjustments frequently save the farmer from foreclosure, and at the same time enable the creditors to get substantial payments on what might otherwise have been bad debts. This service is available to all farmers, whether or not they are rehabilitation borrowers. Altogether, debt reductions totaling $1,753,430 have been negotiated for the farmers in Wyoming. This represents a scale-down of 34.8 percent. As a direct result of these adjustments, $50,600 in back taxes has been paid to local governmental agencies.

In helping rehabilitation borrowers to plan their farm operations, we always urge them to get away from one-crop farming, and to raise as much as possible of their food and feed supplies. The progress they are making is indicated by the fact that the borrowers in your State produced $712,788 worth of goods for home consumption last year, as compared with only $467,307 worth before they came into F. S. A. program.

These families canned 605,758 quarts of fruits and vegetables last year, or an average of 206 quarts per family. They also produced 1,314,839 gallons of milk for home consumption, an average of 447 gallons; and 131,066 tons of forage, an average of 44½. This kind of diversified farming has meant a higher standard of living, a better diet, and usually a marked improvement in health.

One of the most common reasons for past failure among the families which come to F. S. A. for help was that they had not farmed enough acreage to make a living. In helping our borrowers to get a new start we have made every effort to assist them in getting adequate size farms. Consequently, the borrowers in Wyoming are now operating an average of 986 acres, or an increase of 219 acres since they came on the program.

Another main objective of F. S. A. is to help tenants and sharecroppers get more secure land-tenure arrangements so they can plan ahead for crop rotations, soil conservation, and other sound farming practices. The survey indicated that 1,558 tenants in your State have obtained written leases in place of verbal agreements.

In making the survey our field workers found that there are 1,919 families in Wyoming which are eligible and in need of rehabilitation loans, but have been unable to get them because of our limited funds.

Aside from the rehabilitation program the Farm Security Administration's most important job is to make loans under the Bankhead-Jones Farm Tenant Act to tenants, sharecroppers, and farm laborers to enable them to purchase family-size farms of their own.

While it has been necessary to confine loans to certain counties, because of the limited funds available, we had made eight such loans in Wyoming, totaling $71,000, up to the end of the last fiscal year. This year we are expecting to make about five Bankhead-Jones loans in your State, totaling approximately $48,000.

This has been a rather detailed report, but I felt that the information might be useful to you. If you would like to have any further details about our program, I hope you will let me know.

Sincerely,

C. B. BALDWIN,
Acting Administrator.

Revenue and Governmental Costs in West Virginia

EXTENSION OF REMARKS

OF

HON. RUSH D. HOLT

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, March 11 (legislative day of Monday, March 4), 1940

LETTER BY HON. RUSH D. HOLT, OF WEST VIRGINIA

Mr. HOLT. Mr. President, I ask unanimous consent to have printed in the RECORD a letter written by me relative to the revenue received by and amounts expended for governmental purposes by West Virginia.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

DEAR FRIEND: I was sent a copy of a Federal Government publication entitled "Financial Statistics of States." This publication of

the Census Bureau covers the cost of government in 1932 and in 1937 for the 48 States.

As has been my custom, I desire to bring to the people of West Virginia facts about government, particularly data about our State.

In 1932 West Virginia ranked thirty-eighth in the per capita revenue collected. By 1937 our State had risen to a tie for twenty-first. In 1932, 37 States collected more from the people than our State, while in 1937 only 20 States collected more.

In 1932 the average for the United States was $17.27, while the West Virginia figure was only $13.73. By 1937 the United States average had increased to $31.69 while West Virginia increased to $32.70. Reducing this to percentage, the increase for the entire country was 84 percent, while the increase for West Virginia was 138 percent. Another table shows the per capita net debt of the 48 States. The average for the United States in 1937 was $18.90, while the average for West Virginia was $41.11.

The cost payments for government in the United States in 1932 was $13.40 and for West Virginia $10.20. In 1937 the United States figure was $21.23 and the West Virginia figure $21.65. The increase for the United States was 58 percent and the West Virginia increase 112 percent.

Here is the per capital expenditure for West Virginia State government for the past 20 years as shown by our own State audit:

1920	$5.10
1921	7.42
1922	9.61
1923	15.66
1924	16.92
1925	18.67
1926	18.43
1927	18.44
1928	21.41
1929	17.12
1930	21.70
1931	23.21
1932	20.41
1933	16.28
1934	21.32
1935	25.89
1936	26.97
1937	30.62
1938	33.65
1939	34.90

The increase from 1920 to 1929 was $12.02; from 1930 to 1939, $13.20; and the increase in 1930, $4.58 for a total increase of $29.80 in 20 years. Some individuals feel that taxes have been reduced, but figures dispute this. The difference is that the burden has been shifted to indirect and hidden taxation.

Sincerely,

RUSH D. HOLT.

The Clapper-Weir Controversy

EXTENSION OF REMARKS

OF

HON. JAMES J. DAVIS

OF PENNSYLVANIA

IN THE SENATE OF THE UNITED STATES

Monday, March 11 (legislative day of Monday, March 4), 1940

ARTICLES BY RAYMOND CLAPPER AND STATEMENTS BY ERNEST T. WEIR

Mr. DAVIS. Mr. President, I ask unanimous consent to have printed in the RECORD an article by Mr. Raymond Clapper which appeared in the Scripps-Howard newspapers of February 27; a statement made by Mr. Ernest T. Weir in reply to it on February 29; a second article by Mr. Clapper on March 2; and the reply made to it by Mr. Weir on March 4.

I am making this request because a number of my constituents have asked for a complete statement of the discussion of Mr. Clapper and Mr. Weir. I am seeking to make available to them and others who may be interested an exact record of what has been said.

There being no objection, the articles and statements were ordered to be printed in the RECORD, as follows:

[From the Washington Daily News of February 27, 1940]

REPUBLICAN ANGELS ABOUT TO MISS BOAT—WEIR, OTHER FUND RAISERS MAY WALK PLANK, FOR THEY AIM ONLY AT ROOSEVELT

(By Raymond Clapper)

MIAMI, FLA.—Actions speak louder than words, particularly in politics. Therefore, it is well to note, not what Republicans say, but what they do, as the more revealing guide to what is coming.

Dr. Glenn Frank sounded many long and beautiful words about the Republican program in his recent report. He offered the party a nobly phrased, broad-minded course, which recognized that times have changed.

He urged the Republican Party to move up into the procession and accept most of the basic reforms of the Roosevelt Administration, with the addition of more efficient administration and modifications to remove some of their irritating and obstructive features.

That was all very well—if the words meant anything, if they were to be taken seriously by the Republicans. There was a noticeable lack of enthusiasm for the Frank report among Republican spokesmen, most of whom lapsed into silence.

NAME NEW DEAL FOE

Then came the first significant action. It was the appointment of the hard-bitten, tough foe of New Deal reforms, Ernest T. Weir, head of the National Steel Co., as chairman of the Republican finance committee.

He and his friends are to raise money to run the Republican Party, at least through the nominating convention. They already have raised about $600,000 toward taking the party out of hock from the 1936 campaign.

Mr. Weir and his fellow millionaires are digging into their pockets to pay the piper. Unless they suddenly have gone soft, they are going to call the tune. And the tune won't be one that President Roosevelt or any of his sympathizers like.

Recently Mr. Weir denounced the New Deal as something that came "out of the same box as nazi-ism, communism, fascism, and all of the other foreign 'isms.'" His tune will be the tune of good old rugged individualism, and none of this new dealish nonsense in the Glenn Frank report that would pamper our citizens and make them too lazy even to try to become millionaires.

KEEPS DEAD ECHO

I don't want to pick on Mr. Weir or to seem to be making a personal devil out of him. In the class which he represents he stands as one of the ablest and one of the most successful, a man who is honest and courageous about the things in which he believes, one not inclined to sacrifice principles for expediency.

I'm just sorry that a man like Mr. Weir doesn't get behind the Glenn Frank report and make the Republican Party into a live, going concern again instead of trying to keep it a dead echo of other days. All these millionaires around here, crying about how Mr. Roosevelt has ruined the country, their salty tears dripping on the polished decks of their yachts, living mighty well for people who have been ruined—they would listen to a man like Mr. Weir.

But he and they see in what has occurred in the last 7 years only an attack upon themselves, an attempt to take something away from them.

COMPLAINS ABOUT F. H. A.

One man here was complaining about F. H. A. I notice that residential construction, much of it financed through F. H. A.-guaranteed mortgages, rose 40 percent last year above 1938.

But my friend said that in this activity the Government was compelling owners of real estate to pay taxes to subsidize, or guarantee mortgages on, new housing which would compete with his apartment houses and undermine his rents.

"I have to help pay the Government to finance my competition," he said. Of course, he would prefer to have fewer houses and apartments built.

Men who are financing the Republican Party see only Mr. Roosevelt and not the conditions of which he is the creature, not the creator. They couldn't see it in 1932 nor again in 1936, and it looks as if they are going to miss the boat again.

Certainly they are having trouble finding the gangplank. And if they don't watch out they'll wind up again by walking that other plank, which has nothing at the end except deep water.

FEBRUARY 28, 1940.

Mr. RAYMOND CLAPPER,

Care of Scripps-Howard Newspaper Alliance, Washington, D. C.

DEAR MR. CLAPPER: I have just seen your February 27 dispatch, written from Miami, Fla., in which you use my name as a springboard for an attack on the Republican Party. Since your article is in the same vein as some other statements that have appeared in sufficient numbers to indicate the beginning of a sniping campaign against the Republican Party, I cannot permit your observations to go unanswered.

The point of your contention seems to be that my appointment as chairman of the Republican national finance committee demonstrates that the Republican Party is insincere and hypocritical in promulgating the report of the Republican program committee. You contend this report proposed to the Republican Party a "nobly phrased, broad-minded course which recognized that times have changed." But, you assert, this means nothing, because men of my "class" are in control of the party and will have "none of this new dealish nonsense in the Glenn Frank report." Finally, you make this statement:

"I'm just sorry that a man like Mr. Weir doesn't get behind the Glenn Frank report and make the Republican Party into a live, going concern again instead of trying to keep it a dead echo of other days."

Now, the truth of the matter is, Mr. Clapper, that you made no effort whatever to ascertain my views regarding the Glenn Frank

report. As a matter of fact, I not only fully approve the Glenn Frank report but I did all I could many months ago to encourage the adoption of exactly that kind of a report. Had you taken the trouble, Mr. Clapper, to ascertain my attitude in this matter, I would have given you from my files a copy of a letter which I wrote to Glenn Frank on September 22, 1938, in which I said:

"I received your favor of the 16th with which you enclosed copy of your statement made recently to the Republican program committee. I have gone over this with the most careful consideration because, frankly, I believe the ultimate product of the work of your committee is vital to the Republican Party and to the matter of again securing good government in the United States.

"You are just as aware as I am that millions of people came to believe that the Republican Party was reactionary, strictly controlled by small groups of the rich and the important, and that it had entirely grown away from proper understanding of the necessities of the rank and file of people. Mr. Roosevelt and his new dealers have, of course, preached this doctrine continuously and it is today, in these fall campaigns, their main point of attack.

"Therefore, we must tell the people what the party stands for; and the party must become more understanding about the aims and ambitions and thoughts of the people. It must again be a party of the people and not of any special interests.

"I am convinced from reading your statement that you have a clear understanding of all of this, and I am more hopeful now than ever that you will eventually bring out a document that will be a foundation on which the rejuvenated Republican Party can stand and that will meet with the approval of the great mass of voters."

This letter shows not only that I am behind the Glenn Frank report but that I have supported the principles which the report enunciates from the days when the work first started.

In your Miami, Fla., article and previously you hold me up to scorn for asserting, as you phrased it, that the New Deal is something that came "out of the same box as nazi-ism, communism, fascism, and all the other foreign 'isms.'" This phrase is torn from the context of a speech I made recently and I would like your readers to see the phrase in its proper setting. For that reason I quote the paragraph in which this phrase appears, as follows:

"What has happened here has been part of a world trend. Americans, too, have succumbed to the false notion that a sick economy could be cured by surrendering to one man and his small group of hangers-on, the power to impose their will on an entire nation. And just the same as its European counterparts, the New Deal has resorted to the methods of collectivism—has built its power at the expense of individual freedom. Make no mistake about it, fascism, communism, nazi-ism, and New Dealism all came out of the same box."

When my words are read against the background of the entire speech I do not believe they are far removed from your recent contention in criticizing the movement for a third term that: "If you preserve democratic processes, you preserve everything; you save the tools. Sacrifice them to any specific end and you may find that the price was disastrously high," and your other recent contention that "we are seeing exactly how power entrenched in the White House operates through gang politics to perpetuate itself."

I do not condemn everything that this administration has done but I do believe that the New Deal, in your words, has made too many "sacrifices to specific ends" and that the price for what is good in the New Deal has been disastrously high. Moreover, I am convinced that if the New Deal is continued for 4 more years nothing can stop it from consolidating these specific sacrifices into the one big sacrifice that will be the end of American freedom and of the hope of American progress and prosperity.

I pass over your indictment of me as a millionaire. By American standards for 150 years it has not been an evil thing for a man to accumulate wealth by honest industry which contributes to building our Nation and increasing our standard of living. Neither you nor anyone else can point to a single penny that I have gained dishonestly or by any other method than through my labor. Furthermore, the Republican Party has no monopoly on wealthy men. The New Deal's Astors, Biddles, Cromwells, Davies, Drexels, Earles, and Roosevelts, thanks to the fortunate circumstance of aristocratic birth, have never had to worry about where the next meal was coming from. Incidentally, there was a time in my life when I did have this worry.

Sincerely yours,

ERNEST T. WEIR.

[From the Washington Daily News of March 2, 1940]

ATTENTION MR. WEIR

(By Raymond Clapper)

DEAR MR. WEIR: I find that your letter to me of February 28 has been distributed as a general press release by the Republican National Committee. Therefore, the controversy must be of more public interest than I had assumed.

Nothing is more important, in a system of private enterprise, than that government and business have reasonable working relations with each other. Our system rests fundamentally upon private enterprise. But sometimes conditions reach a point where government must do certain things to cushion the effects of maladjustments. In response to public demand, and I think to real public need, we have adopted Federal guarantees for collective bargaining, for wage and hour protection in the bottom levels, for old-age and unemployment insurance, for stock-market regulation and supervision of those who handle the invested funds of the public.

But many businessmen fought most of these and did everything possible to prevent their enactment. I believe you fought Government efforts to protect collective bargaining. Only 2 months ago you said "Fascism, communism, nazi-ism, and new dealism all came out of the same box."

Hence, when the Glenn Frank report was issued, accepting most of these reforms in principle, I said it would be fine if you got behind this report and pushed it. But I doubted if you would in view of your recent speech linking the New Deal as of common origin with communism and nazi-ism.

I am happy to have you say that I am wrong, because a leading and highly respected industrialist like yourself can do much. As you go about in your capacity as chairman of the Republican Finance Committee, collecting funds, you can induce your business friends to see the light also. For I suspect that some of them are still loyal to the Mr. Weir of old, when you were fighting collective-bargaining legislation and before you saw the great light.

The La Follette Civil Liberties Committee report asserts that you were prominent among antiunion forces and that your Weirton Steel Co. "purchased large quantities of munitions in 1933 during a strike and, in 1934, when there was a threat of a general strike on the issue of union recognition. Weirton Steel Co., it will be remembered, was instrumental in incapacitating the National Labor Board and the N. I. R. A. when it refused to comply with the Board's order for an election to determine employee representation, and obtained an injunction against the Board."

You were singled out as an unfortunate example of an antiunion employer by William Green, president of the A. F. of L., in his recent book, Labor and Democracy.

Mr. Green says: "Among the employers whose cases were heard by the Labor Board (the first Board under N. I. R. A.) were men like Ernest T. Weir, of the Weirton Steel Co., who met labor with everything to take and nothing to give. These men were determined from the outset to prevent at all costs any and all forms of workers' exercise of their rights. Their decisions were made and their minds were made up not to yield an inch of power or privilege to which they clung. It was interesting and significant that there were relatively few employers with practical direct experience in management who were so recalcitrant and unbending."

So when you say you fully approve of the Glenn Frank report, I assume that the past is to be forgotten and you now subscribe to the report, including this passage: "The right of the American worker to organize under leadership of their own choosing and to bargain collectively with management is essential to protect the interests of the workers. It is proper that a right so basic should be guaranteed by law."

It is encouraging that you have come to a more broad-minded attitude about these questions because nothing could be more salutary than revival of the Republican Party on a basis that would inspire public confidence. The country as well as the party has suffered from the stupidities of the opposition in recent years.

NOTE.—I hope you will induce the Republican National Committee to grant me the courtesy of giving this reply the same circulation which it gave your letter to me.

Sincerely yours,

RAYMOND CLAPPER.

MARCH 3, 1940.

MR. RAYMOND CLAPPER,
Scripps-Howard Newspaper Alliance, Washington, D. C.

DEAR MR. CLAPPER: I have received the letter addressed to me which you published as your column in various newspapers on Saturday, March 2. In any debate, I realize that a newspaper columnist always can have the last word if he wants it and, so far as I am concerned, this reply to your letter is my final word on the episode.

In your first column on this subject you cast doubt on the sincerity of the Republican Party's promulgation of the Glenn Frank report because, you said, the words of this great progressive document were offset by the Republican Party's action in making me its finance chairman. You further said you hoped I would get behind the Glenn Frank report. I then submitted to you and the public documentary evidence that I not only fully endorsed this report but that, almost a year and a half ago, I urged that exactly this kind of a report be formulated.

Now, in your most recent column, you come back and say, in effect, that if I now favor the report, my present attitude must represent a great change of heart from the past. You charge me with having been opposed to the principle of collective bargaining. To support this charge you resort to quotations from the La Follette committee report and from William Green, president of the American Federation of Labor.

From your experience in Washington, Mr. Clapper, you must know that the proceedings of the La Follette committee were biased and unfair, and that it heard only one side of the question.

And the quotation you use from the La Follette report is grossly and provably inaccurate.

You quote a statement that you could easily have ascertained to be untrue, namely, that the Weirton Steel Co. obtained an injunction against the original Labor Board. Your newspaper files show the fact to be that the Government sought an injunction against the company, that the company resisted and was upheld in the courts. Your newspaper files also show that this whole matter was subsequently fully tried in the courts, that the company was vindicated in every respect by the final decision and that the Government did not appeal this decision.

It is because of this action in opposing the original Labor Board in the courts that William Green says that I was "recalcitrant and unbending" in the quotation you published in your column.

As a newspaperman who aims to be objective, Mr. Clapper, do you consider it fair to present opinions from partial sources without at least presenting at the same time the actual facts as they appeared several years ago in the very newspapers for which you write? The full circumstances of the Weirton case are in the files of those newspapers as well as statements published later by Gen. Hugh Johnson, who was head of the N. R. A. and active in opposition to the company at the time, that in this case the Labor Board gave the Weirton Steel Co. one of the "dirtiest" deals of any company in the country.

I have never been opposed to collective bargaining. On the contrary, I have publicly stated many times that I am a thorough believer in the principle of collective bargaining. For instance, on February 12, 1934, speaking before the Catholic Conference on Industrial Problems, at Pittsburgh, I said, "I heartily approve of the provision for collective bargaining guaranteed to employees in section 7 (a) of the National Industrial Recovery Act." In this same address I also said:

"The expression of the rights of collective bargaining in an act of Congress puts a new responsibility upon the Government as well. If collective bargaining and rights of employees are to be regulated by the law of the land, then governmental agencies must be created to enforce such rights. For my part I have no objection to the creation of such agencies provided they are fair and impartial."

I invite the most careful examination of the relations of my companies with their employees who, incidentally, have an effective collective bargaining organization of their own choosing. I believe that most employees—who after all are more vitally affected by labor relations than labor professionals and labor theorists—would say that those labor relations are best which produce most for the men who work for a living. In this connection I would like to point out that National Steel Corporation employees have always been paid the highest wages prevailing in the steel industry. Furthermore, through the entire depression there was not another steel company in which employees worked more hours or received more dollars in their pay envelopes.

No, Mr. Clapper, my record is clear. I have not opposed collective bargaining. I did oppose from the beginning and now oppose the way the Labor Board attempts to force employees into national unions, irrespective of their wishes. I am opposed to the Labor Board and the Wagner Act in its present form and as it is being administered. I am happy to say that as a result of the shocking revelations of the Labor Board investigation a great many others are now beginning to see the Labor Board and the Wagner Act in the same light in which I had reason to see it when our companies were attacked some time ago.

My crime has been to oppose on principle a badly constructed, evilly administered law which I believe harmful to employees, employers, and the country at large. Naturally all those in and out of Government who were seeking to turn that law to their own advantage have tried to impute to me every possible bad motive in order to bolster their own case and in order to arouse and direct against me the force of public opinion. As I say, it is natural to expect this from them, but from you, Mr. Clapper, I believe I have the right to expect something more than the presentation of statements from professional labor leaders and anti-business elements in government as uncontroverted facts.

Finally, so that the record may be clear, I will say that for years I have fully subscribed to the principle of the statement in the Glenn Frank report to which you call attention in your column as follows:

"The right of the American workers to organize under leadership of their own choosing and to bargain collectively with management is essential to protect the interests of the workers. It is proper that a right so basic should be guaranteed by law."

I understand that you did not think it right for the Republican National Committee to issue my first letter for publication. You will recall that in the period between the middle of December and last Tuesday, you gave me the dubious honor of mention in your column on about six occasions. I made no answer to any of these because I considered them personal attacks and was willing to take the gaff. Your columns of last Tuesday, Thursday, and yesterday, however, I considered harmful and unjustified reflections on the Republican Party, which I could not allow to go unanswered.

Very truly yours,

ERNEST T. WEIR.

Intercoastal Freight Rates

EXTENSION OF REMARKS

OF

HON. HOMER D. ANGELL

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

STATEMENT BY PACIFIC WOOL GROWERS

Mr. ANGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following statement by R. A. Ward, general manager, Pacific Wool Growers, before the port commissioners of the port of Portland, Oreg., March 5, 1940.

The producers of wool residing within that area, which can ship by water via the Panama Canal to Boston cheaper than they can ship all rail, are vitally interested in the maintenance of an adequate intercoastal freight service which will enable them to ship wool to the Atlantic seaboard.

In 1939, 74,025,280 pounds of wool moved through the Panama Canal via intercoastal carriers. That amounts to 58.94 percent of the total shorn wool produced by the eight States involved. These States, with their production of wool, are as follows:

	Pounds
Arizona	4,853,000
California	28,933,000
Idaho	16,426,000
Montana	26,600,000
Nevada	6,192,000
Oregon	17,072,000
Utah	19,444,000
Washington	6,074,000

The intercoastal carriers, by schedule filed and becoming effective March 16, 1940, propose a uniform increase of 25 cents per hundredweight on wool and mohair. Through proper organizations we have petitioned for suspension of this increase. However, we are vitally interested in the maintenance of sufficient intercoastal ships to serve the needs of the agricultural producers of the eight States involved. We are informed that one reason for the increase is that the intercoastal carriers have sold or time-chartered so many ships that there are an insufficient number remaining to take care of the normal intercoastal traffic. We understand that at least 23 intercoastal ships, with a net tonnage of 83,275 tons, have been sold; that the sale of 6 more are pending, which will remove an additional 21,278 tons capacity; and that at least 4 boats have been diverted from Pacific-coast service to other runs. We also understand that other boats have been time-chartered, but we cannot give statistics on this point.

We believe it is very possible, with the continuation of the war, the destruction of foreign shipping, and the sale or time charter of additional boats, that the condition may become so acute that there will not be sufficient ships available for the intercoastal service to carry our agricultural and forest products, and that, as a result, producers may be forced to ship wool and other commodities all rail at a greatly increased cost to producers.

We understand that one of the main objectives of the Merchant Marine Shipping Act, 1936, is "the maintenance of a merchant marine (a) sufficient to carry its domestic water-borne commerce. * * *" The increasing shortage of ships and space in the intercoastal trade, and the attempted increase of intercoastal domestic rates, have created a national emergency.

As we understand it, documentation of United States ships for intercoastal trade provides the intercoastal carriers with certain privileges such as prohibiting the carrying of intercoastal commerce by any foreign ships. To us it seems that this places a certain responsibility upon the American flag intercoastal carriers in that if they have these certain privileges they should not be permitted to take advantage of the war situation to deprive the domestic producers of an adequate intercoastal service.

It seems neither equitable nor legal for the United States Maritime Commission to allow steamship operators to take advantage of the emergency condition. However if it is legal for them to do so, it would seem that it is the duty of the Maritime Commission to provide sufficient ships to take care of the domestic intercoastal commerce to the end that domestic producers and others may not be deprived of this method of transportation and be forced to accept lower prices for their commodities as a result of having to pay much higher transportation costs.

Therefore, this organization urges all agencies affected by the shortage of ships to join in a petition to the Maritime Commission urging that sufficient ships be made available. In the event that the present law does not permit of this, we urge that all agencies affected join in having a bill passed by Congress which

will provide the necessary amendment to the present law which will enable the Maritime Commission to make available ships to take care of the reasonable needs of all intercoastal commerce.

Respectfully submitted.

PACIFIC WOOL GROWERS,
R. A. WARD,
General Manager.

Foreign Silver Purchases by United States Government

EXTENSION OF REMARKS
OF
HON. JOHN TABER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1940

RESOLUTION AND REPORT BY THE EXECUTIVE COMMITTEE OF THE CHAMBER OF COMMERCE OF THE STATE OF NEW YORK

Mr. TABER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following report of the executive committee of the Chamber of Commerce of the State of New York:

FOREIGN SILVER PURCHASES BY UNITED STATES GOVERNMENT

To the Chamber of Commerce:

The executive committee offers the following resolution:

"*Resolved*, That the Chamber of Commerce of the State of New York reaffirms its opposition to the purchase of foreign silver by the United States Government, as expressed in its resolution adopted November 3, 1938, and urges upon Congress and the President the prompt enactment of the Townsend bill, which would end the authority of the Secretary of the Treasury to purchase silver which was not of domestic origin."

A bill (S. 785) to end purchases of foreign silver by the United State Government, introduced by Senator JOHN G. TOWNSEND, Jr. of Delaware, is now before the Senate Banking and Currency Committee. The measure, which amends the Silver Purchase Act of 1934, does not affect the continued buying of domestic silver. It has been approved by a subcommittee, but the full committee has withheld action on the ground that the proposed legislation involves foreign policy.

At the end of last year the United States Treasury held approximately 2,930,000,000 ounces of silver, according to the annual silver bullion report of Handy & Harman. Mose of this silver was acquired under the act of 1934. More than four-fifths of it came from abroad. The foreign silver in the Treasury stocks had a cost value of $941,100,000, or an average of 52 cents an ounce.

The Silver Purchase Act, which was renewed last year, directs the Treasury to purchase both foreign and domestic silver until the Government's silver holdings equal one-fourth of the total monetary stocks of both gold and silver, or until the market price of silver reaches the statutory price of $1.29 an ounce.

On December 31 last the Government's gold stocks totaled $17,643,400,000 and its silver stocks $3,779,500,000, making the silver holdings only 17.6 percent of the combined gold and silver stocks. In other words, the Treasury's silver stocks, at the statutory value of $1.29 an ounce, were still $1,576,200,000 short of the goal set by the act of 1934. The alternate goal of the world price of silver reaching $1.29 an ounce is equally far away. While the Government is paying domestic producers 77.11 cents an ounce, the New York open market price is 34.75 cents an ounce.

The present price the Government pays for American-mined silver was fixed by an act of Congress approved on July 6, 1939. For the first time since 1873, the mints by this law were opened to the unlimited coinage of domestic silver at a fixed price. It assured American producers of a permanent stable market for their silver at a price more than double the present open market price here. This act still left on the statutes legislation compelling the Treasury to purchase foreign silver. Since last July the Treasury has been paying 35 cents an ounce for foreign silver.

The chief arguments advanced in 1934 to justify purchases of foreign silver can be put forth no longer. China, who was to have been one of the chief beneficiaries of the American silver policy but instead became a victim, has been drained of silver. Even the most ardent silverites now admit the failure of the attempt to raise the price of the white metal to $1.29 an ounce and, with gold continuing to flow into the United States in such volume as it has in the last few years, the objective of silver reaching the 1 to 4 ratio of the combined monetary stocks of gold and silver seems presently to be impossible.

More recently there has been a tendency to defend the purchases of foreign silver on the ground that it was a "good neighbor" policy of particular benefit to Pan America. That it has been of direct economic benefit to Mexico, which is the world's largest producer, there can be no question, but there is no evidence that it has helped to promote Mexico's good-neighbor relations with the United States.

Senator TOWNSEND is authority for the statement that "barely one-fifth of the silver bought by this country since the end of 1933 has come from Latin American countries. * * * Of the $237,000 we have paid for Latin American silver since 1933, $217,000,000 has been paid to Mexico. Only 2 percent of this country's expenditures for foreign silver have gone where they could in some roundabout way promote pan-Americanism outside of Mexico since the Treasury's purchase of foreign silver began."

On February 20 last the Federal Advisory Council of the Federal Reserve Board voted unanimously in favor of discontinuance forthwith of foreign silver buying by the Treasury, "particularly in view of the fact that silver purchases increase the already excessively large bank reserves."

Every ounce of foreign silver the Government purchases adds to the inflation possibilities of the Treasury's holdings, because of the so-called profit of seigniorage which the Treasury puts aside for itself when it pays out silver certificates to foreigners. On February 19 last, for example, this amounted to 1,230,000,000 ounces of silver against which, at the statutory value of $1.29 per ounce, the Treasury had the authority, if it desired to do so, to issue nearly $1,600,000,000 of American currency.

Further purchases of foreign silver by the Treasury cannot be justified on any ground, in the opinion of your committee. The American mines produce silver considerably in excess of domestic requirements. Even if all domestic and foreign sources of silver should be depleted, the Treasury with close to 3,000,000,000 ounces in its vaults could meet the present consumptive demands of the arts and industries in this country for the next 100 years.

Chairman Marriner S. Eccles of the Federal Reserve System has testified that he did not know of anything "that tends to destroy ultimately the domestic silver industry as thoroughly" as the purchase of foreign silver. There was nothing to justify our continued buying of such silver from a monetary or credit standpoint and it was almost useless as an international reserve, in his opinion.

The huge quantity of the white metal now held by the Government is both a white elephant on its hands and a potential menace to the stability of the world's economic structure. The present price of silver is maintained only by purchases of the American Government. If the Treasury attempted to dispose of any sizable part of its holdings, it was pointed out in a survey made by the chamber in October 1938 there would be a price collapse of world-wide proportions.

RICHARD W. LAWRENCE,
President.
CHARLES T. GWYNNE,
Executive Vice President.

Attest:
B. COLWELL DAVIS, JR.,
Secretary.
NEW YORK, March 7, 1940.

Opera for the Masses

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1940

Mr. CELLER. Mr. Speaker, to countless millions, through the centuries since its first development, an aura of magic has always surrounded the word "opera." To the imaginative it conjures heroic episodes, magnificent spectacles, great tragedies of love, the artful comedy of buffoons—accompanied by glorious orchestral effects. Even the protagonists of these musical dramas have grown legendary with the years. There are few living today who have not heard of the remarkable talents of such artists as Jenny Lind, Adelina Patti, Lillian Nordica, Nellie Melba, the immortal Caruso, and the great Chaliapin.

In attempting to trace the history of opera Hendrik W. Van Loon has concluded that this form of musical entertainment grew out of a combination of minstrelsy, oratorio, and masks, which flourished during the fourteenth and fifteenth centuries.

While a few historians may differ, sufficient authorities agree that we have to thank a certain Jacopo Peri, a Florentine composer, and Ottavio Rinuccini, another member of the Camerata, for the earliest known opera—Dafne. Because such a production was costly—and we have this same

complaint today, but under different circumstances—the enjoyment of the new musical form was confined chiefly to the upper classes and royalty.

Perhaps the first opera to receive public attention was the musical setting of the story of Orpheus and Eurydice. The libretto was written by Rinuccini and was scored by Perio and Caccini. Composed for the marriage of Henry IV of France to Maria de Medici, this work, under the title of "Eurydice," was performed in Florence in 1600.

Public approbation was instantaneous and continuous. Thereafter, nearly all Italian composers strove for recognition in this field. The popularity of the lyric drama soon spread to Germany, France, and England. An intense rivalry developed among the various royal houses in order that their courts might be regarded as sponsoring the most celebrated singers and composers.

Opera has served mankind well. It has aroused, even in the humblest, a music consciousness which would otherwise be latent. Longfellow expressed a recognized truth in seven words: "Music is the universal language of mankind."

Music meets a deep-rooted spiritual and cultural need in man. The opera has been influential in serving these needs and recognition thereof is expressed in America today by the growing public demand and interest.

I have been an opera fan since childhood and I have regularly attended the Saturday evening performances for two decades. I have been enthralled by the splendid work performed by the Metropolitan Opera Co. I know of no greater respite, no greater surcease from the trials and tribulations of life than listening to and witnessing the delightful operas of Puccini, Verdi, and Wagner. At this particular time, I am attending the Ring cycle. I cannot adequately express how thoroughly I enjoy Das Rheingold, Die Walküre, Siegfried, and Die Götterdämmerung. To me, they are always stimulating and provocative of a new and deeper interest. In fact, I have never yet been able to plumb the depths of Wagnerian opera. For sheer joy, I know of nothing that surpasses Tristan und Isolde. I could sit for hours and listen to the music of Madame Butterfly, Tosca, and Rigoletto.

There are so many fine artists on the roster of the Metropolitan singers it would seem unjust to indicate a preference. They are all preeminent. Mr. Edward Johnson, the director, deserves unreserved praise for his admirable efforts.

The Metropolitan Opera in New York has announced that more than 10,000,000 persons listen to the opera broadcasts each Saturday during the season. This is a truly impressive audience. These broadcasts have been given during the past nine seasons.

In commenting on the financial crisis now facing the Metropolitan, Mr. David Sarnoff of the National Broadcasting Co. said:

> Over this same period of 9 years the National Broadcasting Co. has paid directly to the Metropolitan Opera Association $1,000,000 for the privilege of bringing grand opera to its radio audience. This has been an important and necessary source of income to the Metropolitan. The National Broadcasting Co. will continue to pay the Metropolitan Opera for the opportunity to broadcast these programs.

While 3,500 school children sit and listen to a junior performance in the Metropolitan Opera House in New York, it is broadcast to 80,000 schools throughout the country, with some seven million children listening in.

When one considers the musical benefits that these children are securing by this method of education, it is impossible to concede that Americans will permit such a cultural advantage to wither and die from lack of adequate financial aid. It is safe to assume that not more than 10 percent of these youngsters will ever be fortunate enough to attend an opera in New York. These broadcasts will remain their only contact with the glamorous world of great operatic tradition. Enjoyment of the best in music and musical talent available has been brought to every section of the country, including farm homes and the isolated rural communities.

The campaign to make opera a civic enterprise should gain the instant support of every citizen. We should welcome the opportunity to carry on a splendid institution, particularly since the program for its continued maintenance has been broadened to include a more democratic operation. Funds are now being gathered for this purpose. Contributions are in order.

Although opera in America is more than a century old, the Metropolitan, with more than 50 years of continuous history, is this country's only major operatic enterprise. It is the world's greatest opera today, with the finest orchestra. It has experience and a roster of great artists. Its leadership should be effective in any broad extension of operatic service to the country. To date, however, the opera has had no permanent home of its own, but has been dependent upon private sponsorship.

As I understand it, the first step in this present campaign is to transfer the opera from private sponsorship. In order to do so, the opera-producing organization must pick up an option to buy the Metropolitan Opera House for $1,970,000, of which $500,000 will be payable in cash by May 31, 1940. This alone will simplify a complicated situation which has existed through the years, due to the fact that use of parterre boxes was reserved exclusively for individuals and estates owning an interest in the realty, per se, of the house. It is planned to eliminate such boxes and thus an increase in revenue will ensue.

It is hoped that contributions will come in in goodly numbers to permit the Metropolitan Opera House to buy the opera house from its socialite landlords, and to the further end that the so-called "diamond horseshoe" will be given over to the public. But the music lovers must do their share. Within a month of the drive there was netted over $300,000, including $70,000 from the Juilliard Foundation. Small contributions have been reported, in the sum of a dollar and upward, from miners, sailors, truck drivers, waiters, and music critics. A $10,000 gift came from Switzerland. Ex-King Alfonso of Spain has agreed to send a substantial check. He probably is not unmindful of the time when $50,000 was raised at the Metropolitan Opera House for the benefit of the University of Madrid.

With an adequate opera house of its own, and with opera production in recent seasons on an increasingly self-sustaining basis, the Metropolitan Opera Association will be in an excellent position to go forward as an undertaking on a national scale.

I am informed that the program of development is as follows:

To acquire and modernize the present opera house and hold it as in public trust.

To strengthen the financial position of the operating company.

To increase the educational work of the opera, both in the teaching of music and in widening the field of music appreciation.

To insure the fullest possible use of radio and television, when the latter becomes practicable.

To broaden the opportunities for young American talent.

To bring the opera to the largest possible audiences, both in and out of New York City.

To encourage and stimulate the preservation of world opera by continuing in this country the musical development which has been checked abroad by the war.

Needless to say, such a program should have a widespread appeal to the public. This campaign must succeed. As a devotee of the opera, I cannot concede the remote possibility of failure. I cannot envisage a highly developed culture without the Metropolitan Opera. I urge each and every one who has found enjoyment in the opera broadcasts or who has attended the performances at the Metropolitan in New York, to give heed to the urgency of immediate financial assistance to this great American institution.

Trade Agreements

EXTENSION OF REMARKS

OF

HON. ROY O. WOODRUFF

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

RADIO ADDRESS BY HON. ROY O. WOODRUFF, OF MICHIGAN

Mr. WOODRUFF of Michigan. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following radio address which I delivered the other evening:

First, I wish to thank the Columbia Broadcasting Co. for this 15 minutes on the air. Columbia is most generous and I appreciate the courtesy.

Ten million American men and women are still unemployed and the greatest need in the country today is for jobs. This is a problem of economic recovery. Uppermost in our minds is achieving a permanent and complete recovery without further unnecessary delay, and upon this foundation building a renewed faith in the permanency of our economic and political liberalism. We think of little else. To accomplish this, every avenue that promises to contribute to this end must be explored, and by those who envision a restored America—not those who blindly see a future in which unemployment and relief become a permanent condition with our people.

The New Deal's insistence, on the one hand, that it has promoted recovery, and its insistence, on the other hand, that it will need another 4 years to do what it has failed to accomplish in twice that time, and then preaches the doctrine that W. P. A. and relief will always be with us, indicates its incapacity properly to meet the responsibility now resting upon it.

The specfic aspect I have in mind for discussion tonight is the New Deal's so-called "reciprocal trade agreements program. I emphasize the word reciprocal, because reciprocity was an accepted feature of American foreign-trade policy before the turn of the present century, but has completely disappeared under the administration of the present law.

The one major issue presented, to which I shall address myself at this time, concerns the discriminations against our foreign commerce by nations with which we have negotiated trade agreements, and also discriminations by nonagreement nations to which we extend all benefits we grant to the nation with which we enter into agreement.

Every one of these nations are supposed to give to us reciprocal treatment by extending to us every benefit they give to any other nation through bilateral agreements or otherwise. In this connection it should be stated that when we sign with another nation an agreement wherein each extends to the other certain concessions and benefits we immediately extend to every other nation in the world, except Germany, and without exacting anything in return, all the benefits or concessions we have given the nation with which we have agreed. We are the only nation in the world which consistently follows this foolish policy.

The major purpose of the Trade Agreements Act passed in 1934 was to increase the volume and area of multilateral trade through the elimination of trade barriers. Multilateral agreements are those entered into by more than two nations. Bilateral agreements are those entered into and beneficial to two nations only. Under conditions of multilateral trade nations buy and sell on the basis of competitive price. Nations buy in those markets where they can obtain the best terms and the best goods. They sell wherever they have a price advantage. Thus, to increase multilateral trade would mean increasing the share of world trade carried on without benefit of government schemes designed to gain an artificial advantage over a competitor.

The New Deal hoped to increase the area given over to multilateral trade by encouraging foreign nations to remove the various obstacles to competitive trade and to refrain from entering into additional bilateral trade agreements. The United States stood to gain from such a program.

Theoretically we and every nation in the world, were it possible to bring it about, stand to gain by freeing world trade from such controls as import quota and license schemes, exchange restrictions, purchase agreements, import monopolies, and other devices which tend to encourage bilateral trade. There is no question but that we would benefit from any program which successfully opens foreign markets to our commerce and removes existing discrimination against our trade.

Unfortunately, the New Deal trade-agreements program has not achieved its objectives. After 5 years of this program, foreign nations, including both agreement and nonagreement, are negotiating bilateral agreements in constantly increasing numbers. This is indicated by the fact that, while only 290 existed in June 1935, more than 1,400 such bilateral agreements have been entered into since that time, according to a report made to me by the United States Tariff Commission within the past month. A great many of these discriminate against our trade.

While the New Deal claims a slight advantage here and there as a result of its program, it has not been able to disprove my contention that foreign countries are moving faster than ever toward complete bilateral trade or barter and away from the Hull program, and that American commerce is discriminated against on every hand in the markets of the world. In fact, evidence presented during 3 weeks of hearings substantiated my position, and among other things, showed that countries with which we have negotiated agreements are among the worst offenders. Only partial data are available, but such data are sufficient to show that 11 trade-agreement countries had 33 clearing agreements, 49 clearing and payments agreements, and 26 payments agreements in force as of March 1, 1939. In addition, 7 Latin American countries with which we have agreements practice some form of exchange restriction. Thus, a veritable network of exclusive agreements or barriers has grown up around the very markets in which the United States was guaranteed equal treatment. The seriousness of the situation is well summarized by a study of the Tariff Commission report published in 1937. Therein it is stated, and I quote:

"The increased use * * * of quota restrictions on imports, of governmental control over the distribution of foreign exchange, and of clearing and compensation agreements between various pairs of countries has tended to reduce the value of equal tariff treatment and of the most-favored-nation guaranty."

I further find that the Department of Commerce has also concerned itself with this problem. And it is about time it did if it really wishes to protect American commercial interests. In the Annual Report of the Secretary of Commerce for 1939, he pointed out that obstacles to foreign trade became even more numerous and more complex during the past year than in preceding years. Rather belatedly he noted that various forms of exchange restrictions imposed by foreign governments have created a problem of obtaining effective payments in dollars quite apart from ordinary difficulties of securing and holding foreign markets for American products. He further observed that restrictions were not only placed upon the free conversion of foreign currencies into dollars but also the requirement that exchange allotments must be obtained before goods are passed through customs or even before goods are ordered. I now quote from the Annual Report of the Secretary of Commerce:

"Imports from the United States are frequently on a different footing from shipments originating in other countries, notably in instances in which clearing and compensation agreements are in effect, or in which bilateral trade results in an excess of exports from this country, and special regulations are sometimes applied to the importation of particular commodities. * * * The situation has been rendered the more confusing during recent times by political dislocations in central Europe and Asia and by the formation of trade areas and currency blocs to which access from outside areas is completely or partially closed by the use of extraordinary control devices."

This condition is to be deplored. It postpones the day when we can hope to regain markets that are so sorely needed if the American farmer and laborer are to prosper. As every farmer in this country knows, the major thing lacking in 1932 was finding increased outlets for surplus American farm products and regaining, in part at least, our place in world agricultural trade, a place that we had lost largely as a result of Europe's movement toward self-sufficiency and totalitarianism.

But the situation grows progressively worse. Farm exports totaled $683,000,000 during the fiscal year 1939, compared with $752,000,000 in 1932, or a drop of 10 percent in the total value of our farm exports. In terms of volume, farm exports declined 35 percent between 1932 and 1939. Cotton exports dropped 50 percent; wheat exports, 15 percent; cured pork products, 22 percent; and lard exports, 56 percent. These, it might be noted, are the very farm products markets for which were promised the farmers from its very inception by the advocates of the New Deal trade-agreements program.

Three years ago, when Secretary Hull appeared before the Ways and Means Committee of the House of Representatives and asked that we approve an extension of the act for another period of 3 years, he regaled the members of the committee with claims of great benefits we had received as a result of two and a half years' operation of the act. However, it was only after being repeatedly and insistently pressed for a bill of particulars of these benefits that the Secretary finally stated that the law had resulted in "softening the mind of the world toward peace." He mentioned no concrete benefits accruing to us.

Of course, everyone must realize that, because of the wars which had already begun since the inception of the trade-agreements program, and because of those that have developed since 1937, that if there is anything this program has utterly failed to do it is to soften the mind of the world toward peace or to influence in the slightest degree the bringing of peace to this troubled world. The act under discussion not only has completely failed in this respect, but it holds no hope whatever for future success.

I have pointed out that the major reason for the failure of this New Deal program lies within the New Deal itself. It negotiates trade agreements in an atmosphere of sweetness, heretofore unknown generosity, wishful thinking, and foolish disregard of the immediate and crying needs of our own people. It assumes that foreign nations are looking to our interest before protecting their own interest. It, in fact, holds out to the world the hand of

brotherly love, at the same time permitting foreign nations to discriminate against our trade, while we hold in our hands, unused, the power with which to end this discrimination.

By the act itself the President is authorized to withhold from all nations which discriminate against our commerce every benefit or concession granted to other nations in these agreements. In only one instance has he exercised this authority. He secured prompt results in that instance. Why has he discontinued the exercise of this authority, when by using it he could secure for us new markets for our products and greater respect from other nations?

Why has the administration refused to use as trading stock with other nations the American market for the things we need but which we do not produce in this country? During the past year we have imported such products to the value of approximately $1,400,000,000, all of which came into the country free of duty. We give this great market free of charge—and we do our bargaining by opening our gates to those products of which we produce enough or more than we need.

So far as I know, the United States is the only nation in the world which pursues this unwise policy.

Trade is competitive, and I know of no merchant on any main street in this country who attempts to increase his volume of trade by encouraging his competitors to gain and to keep an unfair advantage.

Nations, in trade, are more or less like individuals. When they depart from common sense and common fairness, they depart also from success. This Nation must sooner or later return to the common-sense method of conducting its foreign trade if this country is to prosper.

United We Stand

EXTENSION OF REMARKS

OF

HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

ADDRESS BY HON. LOUIS JOHNSON, THE ASSISTANT SECRETARY OF WAR

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. Louis Johnson, the Assistant Secretary of War, on the occasion of the ninety-sixth George Washington anniversary celebration of B'nai B'rith, New York City, February 25, 1940, broadcast over Station WOR and Mutual Broadcasting System.

Sons of the Covenant, you have fought by my side on the battlefields of France. You have marched with me, shoulder to shoulder, in the ranks of the American Legion. You are standing behind me in my efforts toward a strong America. I therefore welcome the opportunity to be with you on this occasion when you do honor to George Washington—the Father of his Country.

He was, indeed, an ideal father. He understood the heart and the mind of his children. He knew that the Jewish citizens of his day, who had found in this country a refuge from Old World persecutions, had fought, bled, and died in the American Revolution. He was familiar with the military services of David Franks, of Manuel Mordecai Noah, of Mordecai Sheftall, and others who had served honorably in the Army. He never forgot the contributions of Robert Morris, Haym Salomon, and others of the Jewish faith, who had pawned and mortgaged their worldly possessions to obtain needed munitions in a struggle for spiritual freedom. He was determined that the benefits of the new Nation would be distributed equitably among all of its citizens without any regard to race or creed.

How beautifully, how tenderly, and how fully he expressed his views on this subject in his letter to the Hebrew congregation of Newport, R. I. Although written in August 1790 it may still be taken as an epitome in religious and racial tolerance. Let us read just a few sentences:

"All possess alike liberty of conscience and immunities of citizenship. It is now no more that toleration is spoken of as if it was by indulgence of one class of people that another enjoyed the exercise of their inherent natural rights, for happily the Government of the United States which gives to bigotry no sanction, to persecution no assistance, requires only that they who live under its protection should demean themselves as good citizens in giving it on all occasions their effectual support."

How fortunate are we in America to have had a character of the strength and the nobility of George Washington to guide our Republic through the trying days of its infancy. Of his significance to the world too many eloquent eulogies have been pronounced for me to try one of my own. May I repeat what I regard as the highest tribute that has yet been paid to him?

"Though separated from this world, he lives in the center of our hearts; his name is a talisman of power, the watchword of freedom, the emblem of patriotism, the shout of victory. It casts around us a halo of glory, for it continues to receive the homage of mankind. There have been many figures, there have been many heroes, there have been many legislators—there is but one Washington."

Thanks to George Washington and his loyal compatriots, we have a glorious heritage in which your forefathers and my forefathers—Catholics, Jews, and Protestants—have played a vital role. We are indeed a melting pot and we are proud of the mixed blood of Europe that flows in our American veins. We may differ in opinions, in beliefs, and in theories, but on the fundamentals of free speech, of freedom of religion, of tolerance, and of the other principles of the Bill of Rights we are overwhelmingly agreed, in fact, almost unanimous in our views.

When the American ideals that we have held dear have been assailed, we have marched forward as one—not as Jews nor as gentiles, not as Republicans nor as Democrats, not as artisans nor as farmers, but simply as Americans. Such unity, not imposed by edict from above but manifested from the heart and from the spirit within, is our greatest asset in a world torn by internecine struggles.

Providence, the one universal God that all of us worship, indeed has been kind to us. He has surrounded us with wide and deep oceans to help us keep aggressors at long arm's length. He has provided us on our continent with an abundance of natural resources. He has placed unlimited opportunities at our disposal. To be an American in 1940 is, indeed, a rare privilege. Consider for a moment our good fortune.

Here we are gathered together in a great metropolitan hotel. No antiaircraft guns are mounted on its roof, no barricades of sandbags are set up at its door. It is Sunday today. Some of you attended Jewish services in a temple this morning, some of us went to a Protestant church, or perhaps to a Catholic cathedral. Others, perhaps, merely sat by the radio and heard the broadcast of a sermon. Each of us, in short, worshiped God on this day in the way that he chose and there was none to deny us that right. There are not many countries left in this world where such freedom of conscience exists. In America freedom of conscience is not merely tolerated. It is encouraged.

These remarks of mine are broadcast over a Nation-wide hook-up, but, aside from restrictions of libel and good taste, I may say anything I please. Can you imagine a radio talk anywhere in Europe today "without the aid of censor"?

On our way home this evening we will move along streets which are well lighted. We will face no threat of a black-out; we will eat what we want, and even to excess, if we so desire. Our food is not rationed. Our fuel supply is not regulated. Our gasoline is not allocated by higher authority.

We have blessings without number; but unless we stand on guard to protect our rights, our possessions, and our way of life, the America that George Washington and his generation bequeathed us may not be passed down to posterity. There is no use fooling ourselves. A pack of vicious wolves has been loosed upon the civilized world. War, accompanied by pestilence, hate, greed, and intolerance, has spread over a large part of the universe. It must not reach us. It will not reach us if united we stand on the true and tried principles of Americanism. It will not come to plague us if we carry on our duties as citizens of this great Republic.

The first solemn duty of a good American citizen is to uphold the Constitution. It is the one assurance of the security and the perpetuation of the free institutions of America. It protects our lives and our property. It guarantees us freedom of the press, freedom of conscience, and freedom of speech. It encourages tolerance and understanding. It promotes happiness and prosperity. Above all, it aims to establish justice.

What is that quality of justice which all civilization seeks yet never seems to attain? It is above all the rule of reason. We find justice in the man who conducts his life on a rational basis, who is not dominated by his ambitions, who has no prejudices, who keeps his passions under control, who is healthy and strong, but never uses his power to bully the weak. We find justice in that state where the law courts "do not respect the person of the poor nor honor the person of the mighty," where "they hear the small as well as the great." The just state is governed by no dictator nor by any oligarchic clique. It keeps itself strong but it does not use its army or its navy for aggressive purposes.

Nowhere in the world is the ideal of the just state more closely approximated than in our own country, and it is up to you and to me and to all men and women to keep faith with the American tradition of justice.

The second important duty of an American citizen is to obey and respect the law of the land. We have in our country orderly processes of legislation, administration, and repeal. So long as a law is on our statute books we must abide by it and we must enforce it. Failure to live up to a particular law because it may prove distasteful to you as an individual merely leads in the long run to disregard of all laws. "The highest test of good citizenship is obedience to all laws."

The views of the Father of his Country on this subject are worthy of the thought and the consideration of every American citizen. In his farewell address, George Washington said:

"Respect for its authority, compliance with its laws, acquiesence in its measures, are duties imposed by the fundamental maxim of true liberty. The basis of our political system is the right of the people to make and alter their Constitution and Government, but the Constitution which, at any time, exists till changed by an explicit and authentic act of the whole people is sacredly obligatory

upon all. The very idea of the power and the right of the people to establish government presupposes the duty of every individual to obey the established government."

There are other duties incumbent upon an American citizen. He should respect the rights of others to assure the enjoyment of his own. He should conform his conduct to the best interests of society. Above all, an American citizen should be prepared to place service to his country above service to himself. Well may he adopt the motto Daniel Webster, who said:

"I live an American; I shall die an American; and I intend to perform the duties incumbent upon me in that character to the end of my career. I mean to do this with absolute disregard of personal consequences. What are the personal consequences? What is the individual man with all the good or evil which may betide him in comparison with the good or evil which may befall a great country, and in the midst of great transactions which concern that country's fate? Let the consequences be what they will, I am careless. No man can suffer too much; no man can fall too soon, if he suffer or if he fall in the defense of the liberties and Constitution of his country."

To members of the B'nai B'rith spread throughout the country, many of them fellow veterans of the World War, the importance of patriotism and the duty to place country above self-need hardly be emphasized. Our minds are rich with memories of comrades, not only of Jewish origin, but of all creeds and faiths, who gave their lives during the World War in defense of our liberties and our Constitution.

In 1917–18, we were welded into a united Nation in the face of a common foe and won a glorious victory. Today, by the combined efforts of all clear-thinking and loyal citizens, we can and we will maintain the American way of life. We will defeat the forces of bigotry and intolerance.

"All our strength is in our union,
All our danger is in discord;
Therefore, be at peace henceforward
And as brothers, live together."

In closing, may I repeat to you members of the B'nai B'rith the prayer of the Father of his Country in whose honor we have met today:

"May the same wonder-working Deity who long since delivered the Hebrews from their Egyptian oppressors, and planted them in the promised land, whose providential agency has lately been conspicuous in establishing these United States as an independent nation, still continue to water them with the dews of heaven, and to make the inhabitants of every denomination participate in the temporal and spiritual blessings of that people whose God is Jehovah."

St. Lawrence Seaway Project

EXTENSION OF REMARKS
OF
HON. PIUS L. SCHWERT
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

LETTER AND RESOLUTIONS OF THE CENTRAL COUNCIL OF CITIZENS AND TAXPAYERS ASSOCIATION OF CHEEKTOWAGA, N. Y.

Mr. SCHWERT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the two following resolutions in opposition to the St. Lawrence seaway and power project sent to me by the Central Council of Citizens and Taxpayers Association, of Cheektowaga, N. Y., and the Committee on Niagara Frontier Planning Board of the Board of Supervisors, Niagara County, N. Y.:

CENTRAL COUNCIL OF CITIZENS
AND TAXPAYERS ASSOCIATION,
Cheektowaga, N. Y., March 7, 1940.

Hon. PIUS L. SCHWERT,
Congressman, Congress Chamber, Washington, D. C.

DEAR SIR: At our regular monthly meeting held March 6, a very lengthy debate was held and an agreement was reached to oppose the proposed St. Lawrence seaway project on the grounds:

First. That the funds expended for this purpose will not bring returns.

Second. That it will threaten economic labor, and the transportation situation in this State and the entire United States.

Third. That the power today, and more so years after, can be produced much cheaper with Diesel engines than water.

Fourth. That the tremendous cost of this project would benefit Canada more than the United States: Therefore be it

Resolved, That this council will go on record objecting to such undertaking and ask you to oppose same.

Very truly yours,

CENTRAL COUNCIL,
ISIDORE J. MAZUROWSKI,
Secretary.

The committee on Niagara Frontier Planning Board offered the following report and moved its adoption:

To the Board of Supervisors of Niagara County.

GENTLEMEN: Your committee on Niagara Frontier Planning Board report and offer the following resolution:

"Whereas the administration in Washington is making efforts toward consummation of the St. Lawrence Seaway and Power Treaty between the United States and the Dominion of Canada; and

"Whereas if such treaty is signed by both parties the administration in Washington is expected to submit it to the United States Senate for ratification; and

"Whereas the St. Lawrence seaway and power project threatens the economic security of labor, transportation, and industry in both the State of New York and the United States as a whole; and

"Whereas the tremendous cost of the St. Lawrence seaway and power project would in no way be justified on the part of either the United States or the Dominion of Canada at this time, even if there were any economic soundness in the scheme; and

"Whereas an alliance with the Dominion of Canada, a belligerent country, in this period of war would not be in accordance with the spirit of neutrality, which the United States must maintain; and

"Whereas there is before Congress of the United States a resolution, submitted by Representative MARTIN J. KENNEDY, of New York, which calls for a legislative survey of the St. Lawrence seaway and power project, and a further resolution submitted by Representative J. FRANCIS HARTER, of New York, which calls for the Committee on Foreign Affairs to hold, forthwith, public hearings especially concerning the aspects of the aforementioned project to encroachment on the neutrality of the United States: Be it

"*Resolved*, That both Houses of the United States Congress are herewith respectfully petitioned to immediately adopt the resolutions introduced by the Honorable MARTIN J. KENNEDY and the Honorable J. FRANCIS HARTER of New York; and be it further

"*Resolved*, That duplicate originals of this resolution be forthwith transmitted to the Honorable Franklin Delano Roosevelt, President of the United States, Hon. JOHN H. BANKHEAD, Speaker of the House of Representatives, and the Honorable JOHN NANCE GARNER, Vice President of the United States, and to the Honorable ROBERT F. WAGNER and Hon. JAMES M. MEAD, Senators from New York State, and the three Congressmen representing the Niagara frontier."

Respectfully submitted.

JOHN H. NORTHRUP,
LOUIS M. HAGEMAN,
GEORGE S. GRIMM,
Committee.

The report was adopted.

STATE OF NEW YORK,
County of Niagara, ss:

This is to certify that I, the undersigned, clerk of the Board of Supervisors of the County of Niagara, have compared the foregoing copy of report with the original report now on file in the office, and which was passed by the board of supervisors of said county on the 5th day of March 1940 and that the same is a correct and true transcript of such original report and of the whole thereof.

In witness whereof, I have hereunto set my hand and the official seal of the board of supervisors, this 5th day of March 1940.

[SEAL] M. B. PREISCH,
Clerk, Board of Supervisors.

I Am a Candidate for Reelection

EXTENSION OF REMARKS
OF
HON. JOACHIM O. FERNANDEZ
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

Mr. FERNANDEZ. Mr. Speaker, I beg leave to extend my remarks in answer to thousands of letters and communications I have been currently receiving from my people as to my disposition to again run for Congress, due to the present political situation in Louisiana. First, I want to mention that, although I did not support the candidacy of the Honorable SAM H. JONES for Governor of Louisiana, and my district gave a majority of over 17,000 against him, shortly after it became apparent that on the basis of rural returns Mr. Jones was Louisiana's next Governor I offered my congratulations to our Governor-elect and offered my wholehearted cooperation

for the uplift of our State and its people. Yes, Mr. Speaker, although my district gave a majority against Governor-elect Jones, I am happy to say that I am always inclined to recognize the will of the majority under our democratic form of government.

I have always been identified with the progressive elements in Louisiana, having supported those candidates and administrations in Louisiana that I thought would react to the benefit of the masses in every shape and form.

In 1920 I was elected as a Delegate to the State Constitutional Convention, a body elect, assembled under the regime of Governor Parker to revise our State Constitution. In 1924 I was elected as a State Representative from the Ninth Ward of New Orleans on the Honorable Henry L. Fuqua ticket, endorsed by the Old Regular Organization; and in 1928 I was elected to the Louisiana Senate from the Fifth Senatorial District, comprising the Eighth and Ninth Wards in New Orleans. Then in 1930 I was elected as a Member of the Seventy-second Congress, and have been reelected to the Seventy-third, Seventy-fourth, Seventy-fifth, and Seventy-sixth Congresses. I say in humility, Mr. Speaker, that I hope to be reelected to the Seventy-seventh Congress in the primary election to be held in early September this year, as I am a candidate for reelection to Congress. I base my appeal to the people of my district, which includes the greater part of New Orleans, from Julia Street to the St. Bernard Parish line, and St. Bernard and Plaquemines Parishes, on my past performances as their public servant in all of my political career. I believe I have merited the confidence that my people have so generously and beneficently reposed in me.

Equally I make my appeal for reelection on the policies I have pursued as a public servant in Congress, and on accomplishments which I show below:

POLICIES OF MY OFFICE

Always to give the best in response to all calls, communications, and inquiries, and answering all mail, calls, and inquiries that require such response. Always to see the public mostly every day while in New Orleans, and to see those from my district who may journey to Washington, or who may be living in Washington or nearby due to Federal or other employment there.

Always to vote on measures, as God gives me the light to see the right, for the benefit of the majority of my people.

Always to treat capital and labor fairly and equitably and, in my consideration of legislation, knowing that the harmony of both these American giants is absolutely essential to a successful economic structure in our democracy.

SOME OF MY ACCOMPLISHMENTS

Constructively agitated the new Federal building, which is nearing the stages of completion in New Orleans, having introduced a bill therefor and urged administrative procedure therefor many years ago—since 1931. Also the new post office and Federal building in Arabi, St. Bernard Parish, now completed and occupied.

Successfully sponsored a bill and appropriation for a new lighthouse supply depot on the Industrial Canal at North Robertson Street.

Successfully sponsored a bill in Congress for relinquishment of certain land on the river front owned by the Federal Government, near the New Orleans Federal jail, so as to pave the way for extension of the levee at that point, the shifting of the railroad tracks, and expansion of the old French Market, which has been modernized and which is now a landmark of the Nation.

Obtained many extensions of city mail and rural mail-carrier service in my district, and installation of mail boxes.

Done my part in Congress as a member of the Appropriations Committee to secure funds for the Public Works Administration; and to help finance such structures in New Orleans as the Charity Hospital and many new schools, particularly the Francis T. Nicholls High School, which was just completed this term of school, which is situated on St. Claude Avenue and Alvar Street; new fire engine houses in New Orleans, and a new branch library on Alvar Street, opposite the McCarthy Square.

Always supported the President's recommendation for full appropriations for Work Projects Administration and sought out funds for State and city projects, including such improvements as conditioning of the Florida Avenue Bridge over the Industrial Canal, widening of St. Claude Avenue, paving of North Claiborne Avenue, Franklin Avenue to the lake, Canal Boulevard to the lake, Frenchmen Street to the lake, and many other streets; likewise Marconi Drive to the lake from City Park; and also funds for further development of the New Orleans Airport on our beautiful lake front and for the erection of a beautiful concrete stadium in City Park and the many improvements in City Park and extension of this great park to Lake Pontchartrain shores by W. P. A. labor and funds, including the local government's share; likewise for W. P. A. labor in further development of our lake-front parkways and driveways and for a safety harbor for small shipcraft near the Southern Yacht Club at West End. Helped obtain allocations for playgrounds in New Orleans by W. P. A. labor. In addition I supported legislation to provide jobs under W. P. A. for the white-collared class and supported funds and allocations for such projects in my district and for our State as a whole.

FLOOD-CONTROL AND RIVERS AND HARBORS FUNDS

Always voted maximum funds for flood control of the Mississippi River and Bonnet Carre Spillway.

Sponsored amendments and resolutions in Congress for the improvement of Bayous Yscloskey, St. Malo, and La Loutre; also Bayou Dupre, which meets the Violet Canal; also Bayou Terre-Aux-Boeuf, for the benefit of small fishermen's crafts, which improvements do not interfere with railroads in the least.

NATIONAL YOUTH ADMINISTRATION AND CIVILIAN CONSERVATION CORPS

I supported and voted for maximum funds, as recommended by the President, for the construction and operation of the National Youth Administration to aid the youth of my district, State, and Nation, so as to train these boys for a start in life. Aided the establishment of the present N. Y. A. training center in Algiers. The N. Y. A. also provides work scholarships at colleges and universities.

Supported and voted for the Civilian Conservation Corps, which likewise takes care of a limited number of young men between the ages of 17 and 25, and which Corps conducts and operates very useful work in conserving the soil of our land, its watersheds, and the shrubbery, grass, and trees necessary; in addition to their ability to establish parks, build roadways, and other public improvements work necessary to a people inhabiting such areas.

ALGIERS NAVAL STATION

I have always sought to maintain the United States Navy Yard at Algiers, and will not relent in my efforts therefor.

SECURED AID FOR MUSKRAT TRAPPERS

Obtained aid for all the needy muskrat farmers of my district. Under this project over 300 farmers are obtaining aid and these trapper-farmers are on their way to owning their own land through the cooperation of the Federal Government.

WHAT I STAND FOR AND WILL FIGHT FOR—VETERANS

I supported all veterans' legislation, which was of a worthy nature, and voted for the bonus bill over the President's veto. I stand for liberalizing the present World War Veterans' rating schedule of 1925 and 1933 by 20 percent, at least, and am for restoring disability allowances on non-service-connected cases, when the veteran is disabled at least 25 percent on a liberal rating schedule. I am for paying these non-service-connected disability cases at the rate of 50 cents for each degree of disability, or $12.50 for 25 percent disability; which would change the present pension rate from $30 to $50 for permanent and total disability, non-service-connected, to the World War veteran who is so disabled. I am also for taking care of the widows, minor children, and dependent parents of World War veterans who expire from

life having no service-connected disability, on a moderate basis, as these dependents are not now covered by law. I am for other good amendments to existing veterans' laws.

LABOR

I have supported labor 100 percent, as all measures on labor were reasonable and fair. I am for Federal protection of the right to collective bargaining and will not vote to give an unfair advantage to either side. I reserve the right to measure this fairness by my standard, which is fair to all concerned under American occupational and economic conditions.

RAILROAD LABOR, MOTOR CARRIERS, WATER TRANSPORTATION

I am for railroad labor and will not support transportation legislation that may involve any mergers, except as is already permissible by law, or when one line would have to abandon its operation and cause thousands of men to lose their jobs, whereas, if a merger, would save many of these jobs. I am for no union of terminal facilities unless such union by railroads would safeguard the employment of railroad workers and cause them to be retained in employment. Nor would I take action that would be unfair to water and motor carriers.

SOCIAL SECURITY

I voted for and support social security. I want to see old-age pensions paid at 55 years. Give the man or woman working the right to retire at 55 if they wish; and give the unemployed or disabled person at 55 assistance for old-age security instead of 65.

I am for decentralization of the wealth of the Nation to the extent that it will help the vast mass of underprivileged of our country. I would like to see the employable head of the working family, which averages five persons to the family, earn at least $200 a month, both in city or town, and on the farm. If the vast multitudes of our American families who are undernourished, insufficiently clothed, and ill-housed had such an income, I am sure they would be glad to spend 85 or 90 percent of that income a month so as to insure success of such a plan by keeping the money revolving; provided a safeguard is placed so as to prevent the money from freezing at the top or getting concentrated into the hands of a few by proper income-tax law. With most of the people in our city and other cities earning under $100 a month, and with thousands only earning a couple of dollars a week, or $30, $40, $50, $60, or $75 a month to take care of families of dependents, and the man on the farm only earning $1 or $1.50 a day, is there any wonder why the ills of America are not soothed?

FEDERAL EMPLOYEES

As I have supported all reasonable legislation in the past for the benefit of Federal employees, I will continue to do so in the future. I believe that there are many in various branches of the Federal service who are entitled to a promotion and better classification.

W. P. A. LABOR

I am for repealing the provision of work-relief law that a person who has worked 18 consecutive months must be laid off; and I am for giving preference also to wives or widows of war veterans on projects of the Work Projects Administration, in addition to war veterans.

COMMENDATORY

I have hundreds of letters from people in every walk of life, as well as labor and business people, commendatory to my services as a Member of Congress. I have always strived, although humbly so, to give the best that is in me, fairly and squarely for all concerned.

PRIMARY ELECTION IN SEPTEMBER FOR CONGRESS

Yes, Mr. Speaker, I wish to thank my many friends who are interested in my candidacy for their kind offer of support in the coming September primary.

If any organization in New Orleans brings out a candidate against me, it will be purely upon a factional basis. If the State administration brings out a candidate against me, in view of my independence of action in all of my political career, that faction will not be true to its promises "not to build up another political State machine"; for if the State administration makes a fight against me they can be truthfully charged with trying to build up the machine they so much decried in their candidate's recent campaign for the Governorship. I have offered my good will to the new State regime that will take office in May, and I have offered my good will to the Old Regular Democratic Organization of New Orleans.

I beg leave to say, Mr. Speaker, I thank you.

Reciprocal-Trade Agreements

EXTENSION OF REMARKS

OF

HON. BERTRAND W. GEARHART

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 6, 1940

STATEMENT OF MR. L. J. TABER, MASTER OF THE NATIONAL GRANGE

Mr. GEARHART. Mr. Speaker, continuing his valiant fight against the joint resolution to extend for another 3 years the so-called reciprocal trade agreements program, Mr. Louis J. Taber, master of the National Grange, appeared on March 4 last before the United States Senate Committee on Finance and delivered another devastating denunciation of this legislative move.

Because of the facts and figures he cites, the arguments he advances against the renewal of this much-abused authority, I deem it a privilege to offer for inclusion in the CONGRESSIONAL RECORD the text of Mr. Taber's statement, which is as follows:

In appearing before the Finance Committee, I want to make it clear that the National Grange continues its opposition to the renewal of the Reciprocal Trade Agreements Act for another period of 3 years. Before the Ways and Means Committee, on the 25th of January, the views of the National Grange were presented in an extended brief. To conserve the time of the Committee, we but reemphasize some of the compelling reasons why this act should not be continued.

We oppose the passage of this legislation, in its present form, for six general reasons:

1. Since this act was passed, the exports of agricultural commodities have been reduced and the importation of competitive farm products has been increased.

2. The general effect of reciprocal treaties and the legislation itself has had a depressing effect on the agricultural price level, and reduced farm income.

3. This legislation has reduced import duties and customs receipts. It violates the constitutional provision that revenue legislation should originate in the House of Representatives.

4. It affects both domestic and foreign commerce, a responsibility belonging to the Congress of the United States.

5. These trade agreements are in fact treaties and, as such violate the constitutional requirement which calls for ratification by the United States Senate.

6. With the adoption of acreage limitation for the farmer, and wage and hour restrictions in labor and industry, we should not permit importations from countries where wages are lower or hours are longer, or where the farmers have no limitations on production.

We want to make it clear at the outset that the attitude of the National Grange on this question is not a matter of recent development. Under a former administration the Grange opposed the reciprocal-treaty program between the United States and Canada, because we were convinced that it would be detrimental to the best interests of the American farmer. In 1934, when this legislation was pending before Congress, we registered our opposition, because it was feared that it would work out to the disadvantage of the American producers. In 1937 the Grange registered a protest before both the Ways and Means Committee and the Finance Committee against the extension of the provisions of the act at that time.

For many years the National Grange has continuously and unanimously declared in favor of the American market for the American farmer to the limit of his capacity to efficiently supply the same.

This information is given to emphasize the fact that the Grange has always been nonpartisan in its approach to this question. Our resolutions are adopted at the annual conventions with delegates present from the North, the South, the East, and the West. And our position on this question has always been approved in an overwhelming manner. For more than 50 years the Grange has led the fight for tariff justice. Our fathers demanded tariff for all or tariff for none. When the Farm Board legislation was being enacted, the Grange appealed to this body to include the export debenture or some other method of bringing tariff justice to agriculture. At our last annual session, held at Peoria, Ill., in November, the Grange again went on record in opposition to the extension of the trade-treaty program in its present form. We are glad to note that every farm organization is now opposed to the passage of this act without some type of corrective amendment.

As advocates of the trade-agreements program have placed so much emphasis on the importance of our export market and have minimized the disastrous effects of competitive imports, we feel it necessary to call attention to the fact that the trade-agreements program has not increased the percentage that our farm exports have to the total value of goods shipped abroad. In 1934 the percentage of agricultural to total exports was 32.1. After 6 years of reciprocal treaties, according to the latest data available, our agricultural exports for 1939 were but 21 percent of the total, the lowest in the entire history of the Republic.

On the other hand, agricultural imports remained at approximately 50 percent of the total in value of all goods imported into the United States.

AGGRAVATES FARM SURPLUS PROBLEM

As we are all well aware, the surplus problem has been the most difficult with which American agriculture has been faced since the close of the World War. In our efforts to solve this question, Congress passed the Agricultural Marketing Act of 1929, the Agricultural Adjustment Act of 1933, and the various subsequent acts that were passed in this connection. It stands to reason that this problem cannot be solved, but that it will be aggravated by importing foreign surplus of competitive farm commodities and piling them on top of the American surpluses.

In appraising the workings of the Trade Agreements Act from the standpoint of the farm population, it will be recalled that in 1932 Mr. Roosevelt made an address in Baltimore, during the course of which he declared:

"I know of no effective excessively high tariff duties on farm products. I do not intend that such duties shall be lowered. To do so would be inconsistent with my entire farm program, and every farmer knows it and will not be deceived."

Nevertheless, the tariff has been reduced on approximately 200 items coming under the agricultural schedule. In numerous instances the rates have been reduced on commodities of which we have troublesome surpluses. While the Surplus Commodities Corporation has been buying up these surpluses in an effort to stabilize the price level, the Department of State, in one trade agreement after another, has been lowering the duties on items that the Surplus Commodities Corporation has been buying and distributing among families on relief. With the permission of the chairman, I should like to insert in the record at this time a table, giving a list of 18 selected commodities having a bearing on this question.

Purchase of selected agricultural commodities by the Federal Surplus Commodities Corporation, and imports of those commodities, fiscal years 1938 and 1939

Commodity	Quantity purchased	Amount spent	Imports	
			Quantity	Value
Apples, fresh ..... bushels	6,180,847	$4,978,816	52,000	$90,000
Beets ..... pounds	17,858,256	149,383	1,000	(1)
Cabbage ..... do	152,706,155	1,562,503	339,000	8,000
Carrots ..... do	7,612,950	72,379	270,000	3,000
Cauliflower ..... do	793,576	17,968	39,000	[2] 1,000
Celery ..... do	20,391,300	381,384	96,000	3,000
Cheese ..... do	3,445,500	478,211	110,167,000	23,584,000
Eggs ..... dozen	11,319,300	2,255,659	551,000	106,000
Fish ..... pounds	3,677,398	262,966	658,345,000	60,259,000
Grapefruit ..... do	188,441,360	2,524,313	12,753,000	155,000
Grapes ..... do	15,830,826	319,489	[3] 771,000	1,050,000
Milk, fluid ..... gallons	18,440,847	4,229,949	22,000	5,000
Peas:				
Canned ..... cases	864,192	1,427,780	[4] 1,610,000	165,000
Dried ..... pounds	6,000,000	122,813	4,616,000	183,000
Fresh ..... do	77,940	2,808	4,582,000	223,000
Potatoes, white ..... bushels	6,579,548	4,286,457	[5] 1,697,100	1,444,000
Raisins ..... pounds	50,199,000	2,137,251	825,000	92,000
Rice, milled ..... do	85,948,000	2,861,207	[6] 137,024,000	2,294,000
Tomatoes, fresh ..... do	20,741,815	465,259	120,692,000	2,633,000
Wheat cereal ..... do	106,550,500	1,942,517	(1)	(1)
Total		30,479,112		92,298,000

[1] Not available.
[2] Jan. 1–June 30, 1939; not separately classified previously.
[3] Cubic feet.
[4] Pounds.
[5] Includes seed potatoes.
[6] Broken rice.

Source: Annual reports of the Federal Surplus Commodities Corporation, fiscal years 1938 and 1939; Foreign Crops and Markets, Nov. 17, 1939.

As this table shows, during the fiscal years of 1938 and 1939, the Surplus Commodities Corporation spent $30,479,112 in buying up surpluses of the commodities listed in the table. During the 2 years in question our imports of these same commodities were valued at $92,298,000. It should be understood that these figures apply only to the commodities listed in the table to which I refer. This list, of course, is not all-inclusive and could easily be lengthened.

We all approve of the work that has been done by the Surplus Commodities Corporation under the conditions prevailing during recent years. The Grange has supported the appropriations made by Congress for this work. But who would go so far as to say that the Government should buy up not only our own farm surpluses but foreign surpluses that have been imported and give them away?

It is being continually dinned into our ears that if we want to sell to other nations, we must buy from them, and that trade is a matter of give and take. No sensible person will dispute the soundness of that proposition, which is self-evident. It is well to remember in this connection that the United States has the biggest free list of any nation in the world. During the calendar years of 1938 and 1939, 61 percent of all our imports entered the country duty free. It would seem therefore that with the exercise of a little ingenuity and "Yankee trading" skill, we should be able to find an outlet for some of our own surpluses without pursuing a policy that results in flooding our markets with commodities that we do not need and of which we already have more than enough.

Certainly we should take from other nations the things that we need and do not produce at home. That is exactly what we have always done, but, most emphatically, we should not make it easier for other nations to send us the things we do not need and of which we already have a surplus.

Labored efforts have been made by the supporters of the trade-agreements program to convince the farmers of the country that they are being benefited by it and that our imports of agricultural commodities are so small as to render them inconsequential.

IMPORTS DISPLACE VAST AMERICAN ACREAGE

Nothing could be further from the truth. According to official Government statistics, our imports of competitive farm products for the fiscal years of 1937 and 1938 averaged $537,198,000 annually. Let us now consider the acreage of American farms displaced by those competitive imports. According to the Department of Agriculture, the average acreage under cultivation in the United States for the fiscal years of 1937 and 1938 was 341,475,850. The average value of the crops grown on this total acreage for the 2 years in question was $5,524,015,000 per annum. The average value of crops grown per acre was $16.02. By dividing this figure into the value of our competitive farm imports for the period under consideration, it will be seen that the acreage displaced on American farms was 33,533,000 per year.

The total value of all the farm crops grown in the imperial State of Texas during 1938 was $302,957,000. During the same year the total value of all crops produced in Iowa was $310,166,000. During 1938 the total farm value of all the crops grown in Maine, New Hampshire, Vermont, Massachusetts, Rhode Island, Connecticut, New York, New Jersey, and Pennsylvania was only $393,521,000. The value of all farm crops grown in Missouri, North Dakota, South Dakota, Nebraska, and Kansas during 1938 was $529,668,000, which was $7,530,000 less than the value of the competitive farm products imported during that year. I want to make it plain that the figures quoted in this connection refer solely to crops and do not include the value of livestock and poultry products.

The 33,533,000 acres of cultivated land displaced by competitive farm imports amounts to more than the reduction in acreage that has been brought about since 1933 in connection with the corn- and cotton-control programs. In the case of corn, the reduction amounts to 14,171,000 acres. The reduction in cotton acreage between 1933 and 1938 was 15,230,000, giving us a total reduction of 29,401,000 acres for the two crops.

Thus we have the spectacle of the Government, under the guise of soil conservation, paying the farmers of the country approximately $500,000,000 a year to reduce acreage and production, while permitting and even encouraging competitive imports of farm products valued at the same amount.

It is important to keep in mind the fact that our imports are priced on the basis of foreign costs. The import figures do not include the cost of transportation, insurance, and customs duties. If these items were added, the total import figures would be much higher.

Then, too, it must not be forgotten that competitive imports are always offered at a lower price than that which prevails at home. These imports place a ceiling, so to speak, on our price level, rendering it virtually impossible for domestic producers to secure prices commensurate with our higher costs of production and the American standards of living.

TREMENDOUS DROP IN COTTON EXPORTS

When the trade-agreements legislation was passed 6 years ago, the hope was held out to our farmers that under this program an export market would be found for our unwieldy and price-depressing surpluses. But all the rosy and alluring promises that were made in this connection have not been fulfilled.

In support of this statement, let me cite the fact that during the fiscal year ending July 1, 1934, we exported 8,366,000 bales of cotton. During the fiscal year ending July 1, 1939, our exports

amounted to only 3,605,000 bales, showing a loss of 4,761,000 bales. Roughly speaking, therefore, our cotton exports have been more than cut in half. During the fiscal year ending July 1, 1934, our exports of pork and pork products amounted to 705,981,000 pounds. For the fiscal year ending July 1, 1939, exports of these products totaled 350,372,000.

Our exports of wheat, including flour, increased from 35,000,000 bushels in 1933 to 115,734,000 bushels for the year ending July 1, 1939. However, most of the wheat we have exported has gone out of the country under a subsidy and not under the workings of the reciprocal-trade agreements. The same has been true with reference to cotton during the past year.

Our exports of leaf tobacco showed an increase of 111,700,000 pounds, as between the fiscal year ending June 30, 1934, and June 30, 1939. However, since the outbreak of the new European war, Great Britain, one of the countries with which we made a trade agreement, which formerly took the bulk of our tobacco exports, has made arrangements to buy most of her tobacco in Turkey, so that this export market will be lost to us.

Summing it all up, during the fiscal year ending June 30, 1934, the last year before the reciprocal-tariff program went into effect, our exports of farm commodities totaled $787,343,000. Our agricultural exports for the fiscal year ending June 30, 1939, amounted to $682,962,000. This shows a loss of farm exports amounting to $104,381,000. On the other hand, during the fiscal year ending June 30, 1934, our imports of farm commodities totaled $998,616,000. This shows an increase in imports of $159,664,000.

In the light of all this it is difficult to see how it could rationally be argued that the workings of the trade-agreements program has been beneficial to agriculture.

When the Reciprocal Tariff Act was passed in 1934 it was viewed as an emergency measure and was made self-repealing at the end of 3 years. But it was renewed for another period of 3 years in 1937, and now the proposal is to extend it for still another term of 3 years, on the theory that we are still confronted with an emergency. It seems to us that any situation which persists for a duration of 9 years cannot properly be classified as an emergency, but must be regarded as a settled condition.

AN UNSOUND AND DELUDED POLICY

Among other things, the Grange objects to the unconditional most-favored-nation policy that has been pursued in the making of the reciprocal-trade agreements that are now in effect. The nations that are benefiting by our generosity in this connection are not responding but are making bilateral agreements among themselves. A policy under which we gain concessions from one country while making concessions to virtually all other countries producing and exporting a given commodity places us at a distinct disadvantage. Moreover, each new agreement we make under this policy, generalizing tariff reductions to the rest of the world, leaves us with so much less bargaining power when it comes to making future agreements.

Again, proper steps have not been taken to protect American interests against foreign currency depreciation under the workings of these agreements. This is placing us at a further disadvantage in our foreign trade relations.

Many domestic producers resent the fact that appeal to the courts is barred under this legislation by virtue of the provision that section 516–B of the Tariff Act of 1930 does not apply in matters relating to reciprocal-trade agreements. Nor is it any longer necessary to make fact-finding investigations regarding the difference in the cost of production as between this and other countries before changing tariff rates, as was the case under section 336 of the Tariff Act of 1930.

If this legislation is to be reenacted, it should certainly be amended so as to call for congressional ratification of any future trade agreements that may be made thereunder. Every agreement we make affects the revenues of the Federal Government, and it is expressly provided in the Constitution that all matters relating to taxation must originate in the House.

Since 1934 we have reduced the duty on imports of sugar from Cuba from 2 to 0.9 cents per pound. Between September 3, 1934, and December 31, 1939, the Treasury sustained a loss of revenue in this connection amounting to $133,924,000. In the meantime, the retail price of sugar to the consumer has not been reduced to the extent of a single mill. The chief beneficiaries have been two of the biggest banks of Wall Street, which own the major portion of the Cuban sugar industry. All this was done in violation of the constitutional principle that revenue legislation must originate in the House.

Viewing these agreements as treaties, which they really are, it is interesting to keep in mind the fact that in 16 of the 22 countries with which we have dealt, they were subject to some form of parliamentary ratification. Those who take the position that the United States Senate cannot be trusted to perform its proper functions in this matter not only turn their backs upon the Constitution, but they betray their lack of faith in the processes of popular government.

American Merchant Marine

EXTENSION OF REMARKS

OF

HON. SCHUYLER OTIS BLAND

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

EDITORIAL FROM THE NEW YORK JOURNAL OF COMMERCE

Mr. BLAND. Mr. Speaker, pursuant to leave granted to me to extend my remarks in the RECORD, I include an editorial which appeared in the New York Journal of Commerce for March 6, 1940, with respect to the success which has attended the efforts of the United States Maritime Commission and our American ship operators in adjusting United States shipping to the difficult and abnormal conditions which have resulted from the European war. For a time it appeared that the necessity of withdrawal of our ships from the trades they had developed over a period of years would be a blow from which the lines affected could hardly be expected to recover, and that the business of operating ships under United States registry would not for many years be an attractive occupation.

The sane and far-sighted treatment which has been given to the problem now makes it appear that our merchant marine not only will survive the disaster but will to a great extent rejuvenate itself during the period of restriction. The modern and efficient vessels which are being constructed to replace the obsolete ships which it has been necessary to dispose of should place their operators in excellent position to secure a fair share of the international carrying trade as soon as war conditions cease.

The manner in which the Maritime Commission has handled the difficult problems and the cooperation which has been accorded by the vessel owners has justified the faith of those of us who sponsored and worked for the Merchant Marine Act of 1936. Criticisms have been unfounded, but regardless of unjust criticism, the Maritime Commission has gone ahead with its patriotic and splendid work.

The editorial to which I referred follows:

A PROSPEROUS MERCHANT MARINE

The American merchant marine has completed the very difficult adjustment to wartime conditions with notable success. Whereas, at the time of the enactment of the Neutrality Act, it appeared that a body blow had been struck at our shipping, through a combination of shrewd management and favorable conditions the American merchant marine can now look forward not only to a period of prosperity while the war lasts, but also to regaining without delay its position on the North Atlantic routes, from which it is now barred by the Neutrality Act, as soon as the conflict ends.

Last November, 86 American-flag ships operating on trans-Atlantic routes were forced out of these services by the revised Neutrality Act. All of these ships have now either been put into service on other routes on a charter basis or sold. In either event, because of the tenfold increase in ship values since the outbreak of the European war, the transactions have been consummated on a very remunerative basis. Funds have thus been made available to finance the acquisition of new ships which will be needed after the war, if American shipping is to hold its own under the very keen competitive conditions that will undoubtedly prevail at that time.

The American shipping lines affected by the Neutrality Act have not only completed arrangements to keep all these ships in operation, but they have, for the most part, also taken effective measures to preserve their position on the trans-Atlantic routes, through chartering neutral tonnage or through becoming agents for the foreign buyers of their ships. The United States Lines, for example, has turned over eight vessels to a Belgian corporation for which it acts as agent. This enables it to keep intact its large shore organization in the United States, so that the United States Lines could itself readily reenter the North Atlantic route, from which it is now barred, with new ships now being built by the United States Maritime Commission, once the war is at an end.

The existing prosperity of the American merchant marine is a testimonial to the soundness of the program embodied in the Merchant Marine Act of 1936. At a time when congressional and popular sentiment was dubious about the wisdom of reviving the American merchant shipping through a subsidy program, advocates of this legislation pointed out that it was needed to safeguard American trade in the event of war abroad, as well as to provide a naval auxiliary. There can be no question about the fact that our merchant marine is a boon to American foreign trade at this time. Available freight space is booked almost solid, and this condition promises to continue unchanged for the duration of the war.

Furthermore, the cost of the subsidy program to the Government will probably be reduced, because of the provision of the Merchant Marine Act authorizing the Maritime Commission to recapture earnings above 10 percent on the capital of the lines, up to the amount of the Government subsidy received by them.

Needless to say, with the end of the war a world surplus of shipping and a very sharp decline in rates are to be expected. However, the American merchant marine will be in a strong position to meet all competition offered at that time because of the great ship replacement program now under way, and because of the strengthening of the financial position of American shipping lines made possible by wartime earnings.

The Army Medical Library

EXTENSION OF REMARKS

OF

HON. JAMES A. SHANLEY

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

ARTICLE AND EDITORIAL FROM THE WASHINGTON POST

Mr. SHANLEY. Mr. Speaker, Washington is fast becoming a treasure house of priceless masterpieces of historic documents and unbelievably valuable books, documents, manuscripts, and folios. In this respect the various art galleries are known to all the world, as is the Congressional Library, but latterly there has come into the ken of eclectic scholars the realization that there is another citadel of vast importance in the Army Medical Library. Few have caught the significance of this stronghold of learning with more trenchant analyses than writers in the Washington Post. One is an editorial on February 10, 1940, and the other in a signed article on Sunday, February 11.

I ask unanimous consent to include both in the RECORD in extension of my remarks, as follows:

[From the Washington Post of February 10, 1940]

PRICELESS AND UNIQUE

Few Washingtonians realize that in this city is to be found what experts agree in defining as the most valuable medical library in the world.

The description may sound exaggerated. But it seems to be the unanimous opinion of the physicians from every State and many countries who constantly utilize the facilities of the Army Medical Library at Seventh Street and Independence Avenue SW. And the far-flung reputation of this library was well attested when, at its centennial celebration in 1936, messages of congratulation poured in from over 200 foreign institutions of learning.

Local ignorance as to the importance of the Army Medical Library is not surprising. Its work does not lend itself to general publicity, and its quarters are such as to repel rather than attract attention. Nowhere else in the United States, perhaps, is so priceless a scientific collection so miserably housed. The building is old, ill-equipped, terribly overcrowded, and not even adequately fireproof. It also contains the Army Medical Museum, where inflammable materials are necessarily stored in connection with the preparation of specimens.

In these unworthy surroundings is to be found a collection, gathered over more than a century of continuous effort, which is both priceless and unique. The Army Medical Library possesses, either in original, in reprint, or in photostatic copy, virtually every medical publication produced since the invention of printing.

There are files of unpublished letters from the most distinguished doctors of modern times. Aside from manuscripts and documents, the collection numbers close to a million volumes, all now subject to unnecessary deterioration because of the total absence of modern preservation facilities.

Over and above the books and papers there is, in the great Index Catalog of the Army Medical Library, a world-famous adjunct to medical research. Here, kept constantly up to date by the little staff, is a complete bibliography in five languages on everything pertaining to medicine, surgery, and allied subjects. Practically all of the vast material covered in this recurrent catalog is available at the library.

Within the next month, as part of the hearings on the War Department appropriation bill, a subcommittee of the House Appropriations Committee will consider a modest estimate of $600,000, designed to purchase a site and prepare plans for a new building which will more adequately house the Army Medical Library and Museum. Whatever the needs of other forms of national defense, there is no part of the current Army estimates more worthy of public support than this relatively tiny item.

Nearly two years ago Congress authorized a new building to replace the present antiquated Army Medical Museum, erected in 1887. Economy of a glaringly penny-wise pound-foolish variety has heretofore blocked action under this authorization. In view of the long delays and the urgent need in providing this new building, the least that can be done at this session is to make a start in a matter so patently overdue.

[From the Washington Post of February 11, 1940]

NEGLECTED TREASURES

(By Joseph M. Lalley)

PLIGHT OF THE ARMY MEDICAL LIBRARY

In Independence Avenue, just beyond the old building of the National Museum, is another of those dismal brick facades, which like the bronze brigadiers, fill Washington with so many mournful examples of how the sins of the fathers are visited upon the generations. But this particular facade is also an illustration of how one generation may neglect its most precious heritage from another.

For this ugly, almost squalid, building is the repository of one of America's chief contributions to the well-being of humanity. We have it on the authority of the late Dr. William H. Welsh that the Army Medical Library and its work have been of even greater importance to medical science than discovery of anaesthetic surgery or the conquest of yellow fever. But this is a fact better realized in Paris, or London, or Berlin, or Tokyo, or Rio than in Washington.

There are many great medical libraries in the United States—at Yale and Harvard and Johns Hopkins and Chicago, for example. But neither on this continent nor abroad is there any that is even remotely comparable to the one here in Washington. Within its dingy walls is a congeries of medical information of well-nigh cosmic completeness. Here the student can find either in original or (what will serve his purpose as well) in reprint or photostat copy, virtually anything of importance ever written in any civilized language, living or dead, relating to any phase or division of medicine or surgery.

One function of this library is of such heroic magnitude that Diderot himself would have been aghast at the audacity of it. This is the compilation and publication of the index catalog now in its fifty-first volume and to continue, it is hoped, ad infinitum. It is probably the nearest thing in existence to that "world brain" wistfully envisaged in the daydreams of Mr. H. G. Wells. Together these volumes form an exhaustive bibliography of whatever by any courtesy can be called medical literature.

Since 1880 these volumes have made their appearance at the rate of about one a year, though from time to time publication has been interrupted by epidemics of congressional parsimony. A volume nowadays comprises about 1,000 pages and comprehends only such references as may be grouped under a single initial letter. Sometimes references under a single classification—such as "Blood" for example, in volume B—will occupy between 150 and 200 pages. About 12 years are now required to complete an alphabetical series.

The first series, begun in 1880, covers everything between the invention of printing and the publication of the respective volumes. Each volume of each subsequent series has, therefore, taken up precisely where its predecessor of the same index letter left off. The current series is the fourth.

The hiatus between volumes of the same letter was formerly bridged by the privately subsidized publication of an Index Medicus, but this had to be abandoned after the stoppage of funds. So there are now only the quarterly cumulative indexes published by the Journal of the Ameriacn Medical Association and the library's card catalog of some 4,000,000 cards.

Despite the enormous and ever-enlarging scope of this work, an incredible standard of typographic exactitude is maintained. Successive galley and page proofs are examined almost microscopically for such flaws as wrongly slanted accents, missing umlauts, interloping commas. Titles may appear in English, French, German, Italian, Spanish, or Portuguese, but those from other languages are translated into English. Where necessary—as, for example, from the Russian or Turkish—the names of authors are transliterated as closely as the Roman alphabet permits. Proof-correction costs are sometimes as high as $1,000 a volume.

Besides thousands of medical books, the library collects, classifies, and indexes each year the contents of about 2,000 medical and scientific journals in 18 languages, and steadily augments its piles of hospital, insane asylum, public health reports and its treasuries of clinical statistics.

When a group of index cards has been incorporated into the index catalog and the last proof has been approved, the cards

are destroyed. Otherwise Washington must one of these days find itself as completely buried beneath layers of pasteboard as it was once buried under the pleistocene glaciers.

A thousand copies of each volume of the index catalog are printed and are distributed among all the important medical and general reference libraries of the world. They pass without challenge through blockades and across fortified and guarded frontiers.

But, important as it is to the world and to humanity, the index catalog is only half the story. The library collection is the other. This is not merely the largest collection in the field, it is larger than many great general collections. It amounts now to about a million items, whereas the Yale Library has something like a million and a half. Harvard's something over a million and a quarter, and Princeton's something more than 700,000.

Nor is the Surgeon General's Library merely of scientific interest. It has treasure for the bibliophile, antiquary, the humanistic scholar, the historian, the sculptor and painter, and even, indeed, for the common reader. Of the 600 known medical incunabula (books published between A. D. 1438 and 1500) the library possesses 450, including De Medicinus Universalibus, commonly thought to be the first wholly medical work printed anywhere.

There is a collection of fourteenth century manuscripts, many of which have never been put into modern English. There is an impressive collection of rare sixteenth and seventeenth century books (the germinal age of scientific medicine), including the famous Religio Medici of Sir Thomas Browne. There is a complete file of all the theses published at the University of Paris. There are large files of letters, other biographical morsels relating to such illustrious medicos as Osler, Oliver Wendell Holmes, Lister, Charcot, Reed, and a hundred others, and thousands of portraits. Finally there are the immense actuarial files that formerly belonged to the Prudential Life Insurance Co.

The sum value of all this stuff—some of it irreplaceable—is probably beyond any reckoning. For years it has all been housed in the mean and obsolete edifice that it shares with the Army Medical Museum. The selectmen of almost any fairly prosperous village might look down their noses at such a building were it offered as a home of the local circulating public library. It is certainly not fireproof, the roof frequently leaks, and it is so desperately cramped inside that there are few places where one can extend an elbow without bruising it against a bookshelf.

Twenty years ago the wretched inadequacy of these quarters was apparent to every visitor. Five years ago it appeared that the physical limits of possible shelf expansion had been reached. But the present librarian, Col. Harold W. Jones, by curtailing the already meager space available to readers and by arranging books along corridors and in the basement somehow managed to accommodate the new acquisitions. But now only the roof and the sidewalk remain—and the spaces occupied here and throughout the building by buckets of water.

These buckets, of course, would be of precious little help in the case of a serious fire. That is not their purpose, however. They represent an effort by the librarian to mitigate ravages that an ancient steam-heating system makes upon priceless binding, parchment and paper. Here are no air-conditioned vaults and stack rooms, no such apparatus for the treatment and preservation of books and documents as is available in the Library of Congress and The National Archives. Some of the more valuable bindings are rubbed occasionally with lanolin or some other preparation, but that is about all that is possible in the circumstances.

Six months ago Surgeon General Magee reported to the Secretary of War that the point has at last been reached where "by no stretch of the imagination can any more books be received unless something is done." That is a way of saying that unless the library is provided within a year or two with new quarters it must suspend its most valuable function and resign the high and unique role it occupies in whatever may be left of modern civilization. Ultimately it may mean that the collection must be dispersed.

Two years ago Congress authorized the expenditure of $3,750,000 for the construction of a new building for the Army Medical Library. This benignant gesture was merely an imprimatur. The Secretary of War is now free, within the limits of that sum, to have a new edifice built for the library—whenever and if ever he gets the money. He has not got it yet.

The new War Department budget, however, does contain, among the Surgeon General's estimates, a special item of $600,000 for the acquisition of a site. But with Congress in its present temper, and with the estimates for national defense tremendously swollen, the fate of this item appears precarious.

The Army, of course, is vastly proud of the library and of the world-wide éclat that surrounds it. Throughout the all 103 years of its history it has been an Army enterprise, and it was an Army surgeon, Col. John Shaw Billings, whose genius conceived the index catalog and whose devotion and energy transformed a slender and unimportant collection of books to one which in its field surpassed both the Bibliothèque Nationale and the London Museum.

All the same, it is unlikely that many high officers outside the Medical Corps, give any great attention to the concerns and difficulties of the library. None of them, of course, would dream of parting with it. No military finance expert, probably, would think of interfering with the $61,000 the library receives annually for the wages of its incongruously meager staff, or the funds it obtains for the purchase of its books or with the $30,000 or so that pays for the publication of index catalog. But when, in the course of the hagglings with the congressional committee, it may mean the difference between a few extra tanks or bombing planes there may be a temptation to let the library wait another year for a new home.

But it has already waited too many years, and can wait no longer.

Lower Living Standard Exists Under New Deal Than American People Enjoyed 15 Years Ago

EXTENSION OF REMARKS

OF

HON. HAROLD KNUTSON

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

ARTICLE FROM THE NEW YORK SUN

Mr. KNUTSON. Mr. Speaker, under permission granted I insert an article that recently appeared in the New York Sun which presents a picture of our economic position that is all too often overlooked by the American people.

LOWER LIVING STANDARD EXISTS UNDER NEW DEAL THAN AMERICAN PEOPLE ENJOYED 15 YEARS AGO—FEDERAL JOB HOLDERS AND BANK DEPOSITORS ONLY ONES TO CELEBRATE—GOVERNMENT SCALE LAVISH—CONSUMER, FARMER, AND BUSINESSMAN FIND LITTLE REASON TO JOIN ROOSEVELT ANNIVERSARY PARTY

(By Phelps Adams)

After 7 years of the New Deal, the American people are adjusting themselves to a lower standard of living than they enjoyed 15 years ago, while the American Government is operating on the most lavish scale in peacetime history, a survey made by the Sun revealed today.

As new dealers prepared to celebrate, on Monday next, the seventh anniversary of President Roosevelt's inauguration, and to cheer for a third time, a study of the Nation's economic condition indicated that there are only two major groups in all the land who will have any compelling reason to join that celebration—the bank depositors and the Federal job holders.

The consumer, the farmer, the laborer, the businessman, and old John Public, in general, will have little occasion to participate in the festivities. They have in most cases less money, fewer opportunities, and more burdens than they had in those normal pleasant years of 1925 and 1926 that nestled peacefully between the war hysteria of 1919 and the exploded bubble of 1929.

SHOWS NEW DEAL FAILURE

For those who want the cold, hard, inescapable facts, together with the sources from which they were derived, the table published in adjoining columns will give a comprehensive picture of the way in which the fortunes of the American people have fared under the Roosevelt administration.

That table shows the average economic condition of America during the 7 lean years of the New Deal and during the 7 preceding years, which seem fat by comparison, although they, too, fell far below the standards which the Government's own statistical agencies regard as normal.

On closer study, however, it reveals more than that. It shows the utter failure of one New Deal experiment after another and the complete frustration of the "brain trust's" long-range schemes for a planned economy.

Although committed by the party platform to a sound currency, the first experiment which the New Deal tried was inflation. The table shows the result. The dollar figures in the first column refer to good, old-fashioned 100-cent dollars redeemable in gold. Those in the second column refer to New Deal dollars worth only 59 cents; but even on this basis the unbroken grip of depression is clearly revealed. The various economic groups have fewer 59-cent dollars today than they had 100-cent dollars before.

TURNED TO PUMP PRIMING

Next the New Deal turned to pump priming and deficit spending, piling up debts and taxes in the hope of raising the national income; but, as the table shows, they failed again. The American people have had nine and one-quarter billion dollars less national income to spend each year than they had before the New Deal.

To solve the problem of unemployment, the Roosevelt academicians launched a share-the-work program, decreeing a shorter working week. No luck. Throughout the 7 New Deal years there has been an average of ten and one-half million unemployed workers, and today there are still ten and one-third million.

To increase consumer purchasing power the administration strove desperately to raise wages, but today the wage earners and the salaried workers get $9,300,000,000 a year less in their pay envelopes than they did in the 7 years before Roosevelt.

STRIKES HAVE INCREASED

Beyond that he has been plunged by the Wagner Act into an industrial war unparalleled in American history. The number of strikes has increased 215 percent in the Roosevelt era, while the number of workers who have suffered from these strikes has almost trebled.

Under its social-welfare program the New Deal has spent, on the average, a pitiful $36,000,000 a year for better housing for the submerged third; but private residential building has declined 60 percent in the same period.

Today private sources spend $4,000,000,000 less on the construction of homes, factories, and similar buildings than they did each year prior to 1933.

And as for business and industry, theirs, indeed, has been a sad estate under the Roosevelt administration. Unfortunately, the Federal Reserve Board has no figures which will afford a contrast of the 7-year periods in the number of business and commercial failures.

The only statistics available on this subject included all real estate and financial failures up until the advent of the New Deal, but ignored bankruptcies in these fields thereafter.

FAILED TO SURVIVE NEW DEAL

The reports of Dun and Bradstreet, however, show that 83,533 firms which had apparently survived the depression were unable to weather the New Deal failed for a total of nearly $2,000,000,000.

Dividends paid by corporations shrank to the tune of one and one-third billions, while new capital invested in productive enterprise dwindled from a pre-New Deal average nearly four billions a year to an infinitesimal three hundred and seventy-one millions in 1939, under the pressure of hostile Government competition, punitive tax legislation, and the Securities and Exchange Act.

And throughout this period the Government at Washington extended its long arm further and further into territory that had previously lain beyond the scope of its operations, seizing new powers, and exercising new controls until today it takes almost twice as many Federal employees to perform the task of Government as it did in 1933 when President Roosevelt assumed office.

BANKS ARE SAFER NOW

In one field only has the President achieved real and substantial success, for although Americans have less money today than they had under other administrations at least they have a safer bank in which to put it.

During the 7 years before the Roosevelt inauguration an average of more than 1,100 banks failed annually. In 1933, of course, the toll was enormous. Some 4,000 banks closed during the Roosevelt bank holiday in March had not reopened their doors by the end of the following June, but since that year the average number of bank failures has been below 50, and because of the Government insurance provided the loss to depositors has been negligible.

This then is the record of the New Deal in domestic affairs as it celebrates its seventh anniversary. No new program is in the making, and no new legislation, aimed at the fundamental problems it has failed to solve, has been placed before Congress. So far as it ever will be completed under the President's present term of office the New Deal stands in its finished form today.

CONTROVERSY HAS RAGED

For at least 5 of these 7 years, controversy has raged over the question of whether such recovery as has been experienced since the nadir of 1932 has been due to, or in spite of, the panaceas advanced by President Roosevelt and his brain trusters.

On this question the monthly statistical bulletin published by the League of Nations sheds significant light. In the December issue is a table showing the degree of industrial recovery experienced by each of 21 nations up to the close of year 1938.

In 17 of those countries the wheels of industry were humming much more rapidly and more profitably than they were in the peak year of 1929.

The list, published below, shows the percentage by which industrial production in each nation rose or fell from the level of 1929:

NATION	*Percent change*
Latvia	+74
Japan	+73
Greece	+65
Finland	+56
Bulgaria	+55
Sweden	+46
Estonia	+45
Chile	+37
Denmark	+36
Rumania	+32
Norway	+27
Hungary	+26
Germany	+26
Poland	+18
United Kingdom	+16
Netherlands	+ 4
Italy	− 2
Canada	−10
France	−24
United States	−28
Belgium	−30

Neighboring Canada had enjoyed 25 percent more recovery than had the United States, while Great Britain chalked up 62 percent more. And among 21 nations of the world, the United States stood twentieth.

SEVEN PRE-ROOSEVELT YEARS CONTRASTED WITH THE 7 UNDER THE NEW DEAL

WASHINGTON, *March 2.*

The following table shows what the New Deal has done during its 7 years in power for the American Nation as a whole and for the major economic groups which it comprises.

Recently at Hyde Park the President presented a series of figures showing the progress of recovery since 1932. Of course, a comparison with the boom year of 1929 would have yielded an extremely depressing picture.

Since neither of these methods affords a fair and helpful gage, there is presented in the table below a comparison of the 7 pre-New Deal years—4 of prosperity and 3 of stark depression—and the 7 New Deal years of recovery.

The comparison covers every field that the President mentioned in his statement, together with a number of other economic fields which he ignored, including that in which the New Deal scored its greatest achievement—the curtailment of bank failures:

	Average of 7 pre-New Deal years, 1926 to 1932, inclusive	Average of 7 New Deal years, 1933 to 1939, inclusive	Percent change
General:			
National income (1–A)	$69,062,000,000	$59,783,000,000	−13
Number unemployed workers (2)	4,820,000	10,617,000	+120
Federal tax burden (3–B)	$3,647,000,000	$4,331,000,000	+19
Cost of Federal Government (3–B)	$3,944,000,000	$7,570,000,000	+92
Change in public debt in 7 years (3–B)	−$1,029,000,000	+$20,985,000,000	
Change in per capita public debt (3–B)	−$21.98	+$152.41	
Number of bank failures (6–C)	1,128	613	−46
For labor:			
Weekly pay roll of factory workers (5)	$169,252,000	$148,334,000	−12
Total nonagricultural employment (5–J)	33,822,000	32,135,000	−5
Number of strikes (5)	795	2,505	+215
Numbers of workers affected (5)	301,600	1,176,500	+291
For business and industry:			
Index of industrial production (6–E)	98	93	−5
Average of 60 bond prices (7–G)	93.8	85.4	−9
For the consumer:			
Wages and salaries (1)	$46,700,000,000	$37,300,000,000	−20
Interest received by individuals (1)	$5,200,000,000	$4,900,000,000	−6
Dividends received by individuals (1)	$4,860,000,000	$3,740,000,000	−23
For the farmer:			
Cash income from sales (4)	$9,043,000,000	$7,255,000,000	−20
Benefit payments from Federal Government (4)	0	$442,000,000	
Total farm income (4)	$9,043,000,000	$7,697,000,000	−15
Cost of running Department of Agriculture (4)	$161,738,000	$831,455,000	+414
Value of agricultural exports (1)	$1,420,000,000	$738,000,000	−48
Value of agricultural imports (4)	$1,729,000,000	$1,074,000,000	−38
Commodity price index (5–D)	$87.3	$77.7	−11
Index of 420 common stocks (7–D)	122	87	−29
Amount of new capital issues (8)	$3,520,000,000	$629,000,000	−82
All exports, dollar value (1)	$3,990,000,000	$2,597,000,000	−35
All imports, dollar value (1)	$3,369,000,000	$2,134,000,000	−37
Dividends paid by corporations (10–F)	$7,277,000,000	$5,961,000,000	−18
Residential building, index (6–E)	79	32	−60
Private construction (1)	$6,410,000,000	$2,322,000,000	−64
Government construction, Federal, State, local (1–H)	$2,357,000,000	$1,890,000,000	−20
Department-store sales (1)	$3,931,494,000	$3,256,389,000	−17
Cars of revenue freight loaded (9)	45,766,000	32,844,000	−28
For the Federal job holder: Number employed in executive departments (11)	558,300	771,830	+38

NOTE.—(A) Figures for 1926, 1927, and 1928, unavailable at Department of Commerce, supplied by National Bureau of Economic Research. (B) Fiscal years. (C) Technically, bank suspensions. (D) 1926 average equals 100. (E) 1923–25 average equals 100. (F) Figures for 7-year periods unavailable, comparison is for 5-year periods. (G) Priced from average yields. (H) Excludes W. P. A. (J) Excludes all work relief.

Sauce for the Goose But Not for the Gander

EXTENSION OF REMARKS

OF

HON. CLARE E. HOFFMAN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

COMMUNIST SUPPORTERS LODGED AND TRANSPORTED AT WASHINGTON AT GOVERNMENT EXPENSE—MEMBERS OF UNITED BOYS' BRIGADES OF AMERICA DENIED SHELTER AT BALTIMORE

Mr. HOFFMAN. Mr. Speaker, the House today voted to table Resolution 402, through which I sought information as to the authority under which members of the American Youth Congress, which permits Communists among its adherents, were transported and lodged at Fort Myer at Government expense.

The War Department reported that the request for this entertainment by the War Department came from the White House and that the shelter was given because there was an emergency; that is, that the young delegates did not have shelter.

The fact is that two hotels, the Ebbitt and the Grafton, had been asked and had agreed to take care of 500 of these delegates, but that the accommodations were not used, evidently because some of the young folks were later quartered, at Mrs. Roosevelt's request, at the Shoreham, some at the Industrial Home, and some, if the Washington Post be correct, at Fort Myer.

The amount involved is trifling. The principle involved is vital. It is this: Can a member of the White House family order or request accommodations and transportation for the members of any and all organizations which come to Washington?

As bearing upon that question, I read from certain correspondence having to do with the request of the United Boys' Brigades of America for like accommodations. First is a copy of a letter written to Walter A. Koerber, national commander of the United Boys' Brigades of America, dated May 13, 1939, and signed by Maj. Gen. E. S. Adams, The Adjutant General, which states, in substance, that the War Department is without authority to donate, loan, or sell Federal property for any purpose, except as may be specifically provided by Congress. This was in answer to the request, for the use of the United Boys' Brigades of America, of Army cots and blankets to be used in Baltimore on the 20th and 21st of May, 1939.

I also insert a letter of February 15, 1940, written to a Member of the House of Representatives on this same subject. Among other things, this letter states that the writer cannot understand why members of the American Youth Congress, an organization which harbors Communists, received at Fort Myer accommodations which were denied to a patriotic and religious organization.

The correspondence forwarded to me by Mr. Walter A. Koerber includes a letter purporting to have been written by the First Lady of the Land, Mrs. Eleanor Roosevelt, in which she states that the Fort Myer accommodations were granted "as an emergency for 150 boys who had no place to sleep."

No one would suggest that the boys should not be taken care of, but certainly in Washington, where ample funds are available for relief, it is not necessary to run counter to either the statutes of the Federal Government or the instructions given the War Department.

Other letters referring to the same matter are here inserted and these letters are as follows:

UNITED BOYS' BRIGADES OF AMERICA,
Baltimore, Md., March 9, 1940.

The Honorable CLARE E. HOFFMAN,
House of Representatives, Washington, D. C.

DEAR MR. HOFFMAN: I enclose herewith copies of letters which I am sure will be of interest to you in connection with the House Resolution No. 402, which you recently submitted, and which I understand has been referred to the Committee on Military Affairs.

Respectfully yours,

W. A. KOERBER,
National Commander.

Enclosures.

MARCH 9, 1940.

Hon. ANDREW J. MAY,
Chairman, Committee on Military Affairs,
House of Representatives, Washington, D. C.

DEAR MR. MAY: I understand from Congressman COLE that Congressman CLARE E. HOFFMAN, of Michigan, introduced House Resolution No. 402, which has been referred to your committee.

Enclosed is a copy of a letter which I wrote to Congressman COLE on February 15, 1940, together with a copy of a letter which I have received from Mrs. Eleanor Roosevelt.

You will also find enclosed several pages which I have taken from the Life magazine dated February 26, 1940. I thought this information might be useful to you. I didn't want to bother Congressman COLE after he has been so kind to us, therefore, I am taking the liberty of sending these items direct to you.

I would appreciate your letting me know just what the outcome of this investigation is so that I can in turn report to the members of my organization.

Thanking you in advance, I am,

Respectfully yours,

W. A. KOERBER,
National Commander.

[WAKoerber*smh]
cc/Congressman Clare E. Hoffman.
Enclosures.

[Copy]

FEBRUARY 15, 1940.

The Honorable WILLIAM P. COLE, Jr.,
House of Representatives, Washington, D. C.

DEAR MR. COLE: On May 15, 1939, I forwarded you a letter requesting your assistance in borrowing 200 cots and blankets to provide sleeping accommodations for members of our organization, who are boys ranging in age from 12 to 18 years, coming from various cities in the eastern part of the country. I informed you at that time that we had permission to use the Richmond Market Armory for sleeping quarters for the boys, but that they had informed us that they could not lend us the cots. Before I wrote to you I wrote to President Roosevelt and he referred my letter to Maj. Gen. E. S. Adams of The Adjutant General's office. I am enclosing a copy of Major General Adams' reply.

As outlined to you previously, our organization has trained thousands of boys during the past 50 years, teaching these boys to be loyal to their church and to be patriotic citizens. We have never asked the Government for any assistance financially or otherwise, nor do we receive or have we applied to the local community funds for assistance. No one connected with our organization receives any compensation for his service. We are entirely self-supporting. We do not organize into a body and proceed to Washington, like the American Youth Congress has, to demand subsidies from the Government.

My reason for again writing you on this subject is that I have received information to the effect that members of the American Youth Congress through Mrs. Roosevelt were given sleeping accommodations at Fort Myer, and that the organization was allowed to use the cots and blankets. This has puzzled me considerably, for I understood from the various sources that these cots and blankets could not be used unless the permission of Congress is received. Just what the American Youth Congress received at Fort Myer is what we were trying to secure here in Baltimore. I made it clear that we would not move any of the cots or blankets out of the armory and that they would be used right in the armory. As national commander of our organization, I wish to protest the favoritism that has apparently been shown the American Youth Congress through the influence of Mrs. Roosevelt.

I thought you might be interested in receiving this information. If you have ever handled a group of boys you can well realize what the reactions are when the boys in our organization find that members of the American Youth Congress, in which there are a number of Communists, receive help from the Government, yet our organization, which is a patriotic and religious organization, is denied the same request.

Thank you again for your cooperation in attempting to secure the cots and blankets for us. I realize that the time was very short, and that it would have been impossible as stated in your letter, to put this before Congress and get action on the bill within 5 days.

With kindest regards, I am

Sincerely yours,

WALTER A. KOERBER,
National Commander.

MAY 13, 1939.

Mr. W. A. KOERBER,
National Commander, United Boys' Brigades of America,
512 Overbrook Road, Baltimore, Md.

DEAR SIR: I am requested by the Secretary of War to acknowledge the receipt of your letter of the 11th instant addressed to the President, which was transmitted to the War Department, relative to Army cots and blankets desired for use at the national convention of the United Boys' Brigades of America, being planned to be held in Baltimore, May 20 and 21 next.

The War Department is without authority to donate, loan, or sell Federal property for any purpose, except as may be specifically provided by Congress, and it is therefore regretted, in the absence of legal authority applicable to this purpose, that the Department is unable to accede to your request.

Very truly yours,

E. S. ADAMS,
Major General, The Adjutant General.

FEBRUARY 26, 1940.

MY DEAR MR. KOERBER: The use of the Fort Myer riding hall was granted as an emergency for 150 boys who had no place to sleep. I was told they could probably not have cots, but tanbark is soft.

I do not know what was done eventually, but I am sure regulations were strictly adhered to.

Very sincerely yours,

ELEANOR ROOSEVELT.

Handling of Prisoners by Federal Bureau of Investigation

EXTENSION OF REMARKS
OF
HON. AARON LANE FORD
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1940

Mr. FORD of Mississippi. Mr. Speaker, recently charges have been made that the F. B. I. has mishandled certain prisoners during the course of an arrest in Detroit, Mich. I have it on the best of authority that all investigations conducted of the alleged violations were made with the full consent and approval of the Department of Justice and upon the instruction of officials of that Department. Based upon the facts obtained, the testimony of witnesses before the grand jury resulted in the return of an indictment. The court issued secret warrants of arrests for three reasons: First, some of the prisoners accused, it was indicated, used different names at different times; second, all of the accused were not permanently residing in a particular place; third, it was necessary that the arrests be made simultaneously in order for all of them to be made effectively and to save money and expenses looking for those who might escape arrest.

I have been informed that the arrests occurred in the forenoon at about 5 a. m. The arrested persons were carried to a temporary place of detention and there given food and, in fact, they were examined by a competent physician as to their welfare. The prisoners were arraigned on the same day, as soon as it was possible for a commissioner to be available to conduct the hearings. They were then delivered, following this hearing, on the same day into the custody of the United States marshal, and from that time on they were out of the custody and control of the F. B. I. At no time was there any request by the prisoners, according to my reliable source of information, for an attorney. An attorney did call at the place of temporary detention and request permission to see certain of the prisoners and he was promptly given that permission.

The facts recited clearly indicate a commendable type of action which might well be followed by all law-enforcing officers. There was no indication and no basis for any charge of third-degree activity, of duress, of improper action, or any interference with civil liberties. Everything was done, and even more than the law requires, for the safety and the comfort of the prisoners while making sure that they were taken into custody and properly restrained in accordance with legal authority.

The Federal Bureau of Investigation does not make use of third degree. They recognize duress and brutality in the handling of prisoners as a relic of the days of barbarism. They teach the highest standards of ethical principles and practices. They believe in these high standards, and they practice them. The F. B. I. has, in fact, set a standard for the world in efficient, honest, capable, legal, and ethical law enforcement. Representatives of Scotland Yard and the Royal Canadian Mounted Police have come to Washington and studied at this center and clearing house which sets the standards for law enforcement. It is my firm opinion and conviction that the citizens of the United States and of the civilized world are indebted to Director John Edgar Hoover, of the Federal Bureau of Investigation, for the high standards of efficiency and propriety which he has established and maintained in the conduct of the Federal Bureau of Investigation.

Have We Helped the Wheat Farmer?

EXTENSION OF REMARKS
OF
HON. THOMAS D. WINTER
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1940

Mr. WINTER. Mr. Speaker, the immediate effect of the outbreak of the war in Europe was to lift wheat prices above previous levels. The weighted average cash price of wheat at Kansas City jumped in 1 week's time from 67.5 cents for the week ending September 2, 1939, to 87 cents for the week ending September 9, an increase of 28.9 percent. The United States farm price of wheat increased from 54.5 cents in August to 72.7 cents in September, or 33.4 percent. In view of this and in view of the uncertainty of the future effect of the war on the American wheat farmer, it is time we studied the relative merits of the A. A. A. restriction program to discover whether that program has materially benefited the American wheat farmer and whether it is the best possible approach to our peacetime problem.

The original A. A. A. Act was passed on May 12, 1933. The farm price of wheat on May 15, 1933, was 59 cents a bushel. This compares with 54.5 cents a bushel on August 15, 1939, the last price available before the outbreak of the war. Thus, the price of wheat was 4½ cents less after six years of the A. A. A., a decline of 8 percent. This does not take into consideration slightly higher prices resulting from the wheat loans. Nor does this take into consideration increased prices paid by farmers. Prices paid by farmers increased 17 percent between May 1933 and August 1939. Thus the purchasing power of a bushel of wheat in August 1939 was 21 percent less than in May 1933.

While the first Agricultural Adjustment Act was passed on May 12, 1933, the first wheat program was not announced until June 16, 1933. On June 15, 1933, the farm price was 58.7 cents a bushel. On August 15, 1939, 6 years later, the farm price was only 54.5 cents a bushel, or 7.2 percent less.

The same is true of market prices. The Chicago price on June 16, 1933, the date on which the program was announced was 73⅞ cents a bushel. The price of wheat on the same market for August 15, 1939, was 65 cents a bushel, a drop of 12 percent.

The major objective of the first A. A. A. was to raise wheat prices to parity. In May 1933 the farm price of wheat was 41 percent below parity. In August 1939 the farm price was 50.7 percent below parity.

Another New Deal objective was to increase wheat exports. Wheat exports, including flour, during the fiscal year ended June 30, 1932, amounted to 136,000,000 bushels

compared with 116,000,000 bushels in 1939. Thus, wheat exports decreased 15 percent in spite of the taxpayers' subsidies which averaged 30 cents a bushel to force wheat into foreign trade.

Another objective of the New Deal was to raise farmers' income from wheat. As heretofore stated, the original Agricultural Adjustment Act was passed on May 12, 1933, and the first program for wheat was announced on June 16, 1933. The first adjustment program for wheat, however, applied to the 1934 crop, and the first commodity loan for wheat was not announced until 1938. Farm income from wheat increased from $304,630,000 in 1933 to $396,677,000 in 1939, an increase of 30 percent. Prices paid by farmers, however, increased 12 percent between 1933 and 1939. If this is taken into account, the purchasing power of the farmers' wheat income increased only 16 percent, including gains resulting from the wheat loans.

Another objective of the New Deal was to reduce the 1932 wheat surpluses. As already noted no wheat-adjustment scheme was effective during 1933. Total supplies of wheat on July 1, 1932, were 1,132,410,000 bushels; on July 1, 1933, 929,778,000 bushels, compared with 1,026,924,000 bushels on July 1, 1939. Total United States wheat stocks were 375,000,000 bushels on July 1, 1932, compared with 295,000,000 bushels on July 1, 1939. Stocks of wheat on United States farms totaled 93,769,000 bushels on July 1, 1932; 82,882,000 bushels on July 1, 1933, compared with 90,838,000 bushels on July 1, 1939.

This last-mentioned objective was to be achieved by ordering a reduction in crop acreage, thereby limiting production. Acreage seeded to wheat in 1932 totaled 65,913,000 acres, compared with 64,595,000 acres in 1939, a decrease of 2 percent. Production in 1932 totaled 756,927,000 bushels, compared with 754,971,000 bushels in 1939, a reduction of only 0.3 percent.

H. R. 8264—Revised Townsend Old-Age Pension and National Recovery Bill, to be Financed by Gross Income Tax

EXTENSION OF REMARKS

OF

HON. MARTIN F. SMITH

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

RADIO ADDRESS BY HON. MARTIN F. SMITH, OF WASHINGTON, DELIVERED BY ELECTRICAL TRANSCRIPTION AT WASHINGTON, D. C., MARCH 7, 1940

Mr. SMITH of Washington. Mr. Speaker, under leave to extend my remarks, I insert the address delivered by me by electrical transcription at the invitation of Dr. Francis E. Townsend, at Washington, D. C., March 7, 1940.

The address is as follows:

Friends and fellow citizens, as one of the very first Members of Congress to become interested in the Townsend old-age pension and national-recovery plan, I can speak with some knowledge of the progress which has been made in advancing this legislation. We have traveled a long distance on the road toward our ultimate goal since I placed in the CONGRESSIONAL RECORD on April 4, 1934, the first statement and explanation of the Townsend plan.

Last year 101 Members of the House of Representatives supported it on a roll-call vote as compared with the 4 Members of the House and myself who met with Dr. Townsend in my office when he first came to Washington, D. C., in 1934, less than 6 years ago. On this record vote, the bill received the support of all the Representatives from Washington, Oregon, Montana, North and South Dakota, of 16 out of 20 from California, of 7 out of 9 from Wisconsin, of 4 out of 5 from Florida.

It is my privilege now, as during the past 6 years, to serve on the steering committee. I addressed the great Townsend conventions at Chicago, Cleveland, and Indianapolis, and am looking forward to being at St. Louis this year, which will undoubtedly be the greatest convention we have ever held.

My friends, in the case of the Townsend plan as with all major legislation, changes in its terms and provisions have been made from time to time to improve the legislation and render it more practicable and workable and less objectionable. I believe that the pending revised bill, H. R. 8264 and S. 3255, are the most meritorious which we have as yet sponsored. It represents the results of 6 years' experience with this legislation. It is a bill with which no well-informed, fair-minded student of this subject can find any serious fault.

The revised bill now provides for a 2-percent tax upon all gross incomes, except wages and salaries of workers, up to $250 per month, which are exempt, and also gross incomes of business and agriculture up to $3,000 annually, which are also exempt. Consequently the wage earners, small farmers, and small-business men will not have to pay any tax or even file a return. This exemption of the low-income group completely overcomes the alleged objection urged against previous bills that those least able to pay were being taxed. We do not propose to tax that group at all under the current bill.

There is very little if any real difference between a gross-income tax as now contemplated, and a transactions tax, which has been the tax formula heretofore. A gross-income tax is a term more generally understood and has been legally defined and sustained by the decisions of the courts. A gross income tax can also be computed more readily. A gross income tax also approximates more closely the Hawaiian tax system, which has been cited as proof of the soundness and feasibility of the revenue feature of the Townsend plan. In fact, the Hawaiian tax is an out-and-out absolute gross income tax, also payable monthly.

The gross income tax is also very similar to a gross sales tax, for all practical purposes the two are the same. We already have such taxes operating successfully in 27 States and in New York City. The State of Indiana during the past 6 years has made the most notable success of this form of taxation. France, Hungary, Germany, and Russia have also demonstrated abroad the success of this type of tax as a revenue-producing measure. The gasoline tax is undoubtedly the most successful and satisfactory tax in existence and has proven such a prolific source of revenue that this tax is generally considered to have made possible the construction of our modern highway system in this country.

Nobody knows to a certainty what the present total gross income amounts to, but based upon figures compiled by the Federal Reserve System and the Bureau of Foreign and Domestic Commerce a reasonable estimate would be about $360,000,000,000. If we deduct $60,000,000,000 to cover the exemptions, which would be a liberal deduction for that purpose, it would leave approximately $300,000,000,000 subject to the gross income tax of 2 percent and yield $500,000,000 the first month. This would be sufficient revenue to pay 10,000,000 of our senior citizens of the age of 60 and past the sum of $50 per month, or $100 per month per couple. The required spending of $500,000,000 per month for the necessaries of life would multiply and turn over during the month at least half a dozen times, and cause the expenditure of several billion dollars and increase the monthly gross income of the Nation, and the 2-percent tax yield thereon accordingly. The gradual increase would continue to occur each month, and as the volume of business turn-over and gross income increases, the amount of tax revenue collected and available for pensions would increase proportionately, until the maximum sum of $200 per month is attained.

These facts suggest, it seems to me, another sound argument in favor of the Townsend plan. One of our most pressing problems today arises from idle capital, idle dollars, as well as idle labor. We have too large an accumulation—ever growing larger—of earnings and savings from earnings—capital formation, which is remaining unspent, being withdrawn from circulation. Through the collection monthly of a gross income tax of 2 percent, as proposed, and its repayment in the form of pensions, we would draw off or divert at the source and immediately cause to go back into circulation for the purchase of necessaries of life $500,000,000 the very first month and a steadily increasing sum each month thereafter. Students of the velocity of money consider, as we have already noted, a turn-over of six times a month to be very conservative and that it would probably turn over much more often than that. In the course of a year the increase in gross business turn-over could easily amount to twenty to thirty billion dollars and act as a tremendous stimulus and impetus to business, industry, and agriculture. These idle dollars put to work would put idle men to work.

My friends, according to every poll of public opinion, the vast majority of the American people favor a Federal old-age pension, uniform in every State. We do not and cannot have that under the present Social Security Act, which is a Federal-State contributory system. According to the latest official records, the average old-age assistance payments being made in the various States range from $6.15 in Arkansas, $6.92 in Mississippi, $7.40 in South Carolina, etc., to $22.10 in Washington, $28.56 in Massachusetts, and $32.43 in California, etc., and the average for the 48 States of the Union is $19.55. This disparity and discrimination between our senior citizens resulting from place of residence cannot be justified on any grounds.

The Townsend Plan, on the other hand, is Federal in scope, would provide liberal uniform pensions to our senior citizens in every State without any discrimination and would exempt those

least able to pay from contributing to the cost. It would require no borrowing or going into debt and would operate upon a strictly cash pay-as-you-go basis. At the end of every month the money would be collected and forthwith disbursed to our senior citizens who would immediately turn it right back into the channels of trade and business and thereby augment and increase our domestic market for the products of the farm, the factory, the mine, and the forest. There is not a single sound, valid argument that can be urged against it and it will become the law of the land.

Messages to the Fourth Annual Conference for the American Committee for Protection of Foreign Born

EXTENSION OF REMARKS

OF

HON. LEE E. GEYER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

MESSAGES FROM VARIOUS SOURCES

Mr. GEYER of California. Mr. Speaker, under leave to extend my remarks, I wish to have printed in the Appendix the different messages that were received by the annual conference for the American Committee for the Protection of Foreign Born.

The messages follow:

THE WHITE HOUSE,
Washington, January 9, 1940.

DR. WILLIAM ALLAN NEILSON,
Cochairman, Committee of Sponsors, Fourth Annual Conference of the American Committee for Protection of Foreign Born, Suite 1505, 79 Fifth Avenue, New York, N. Y.

MY DEAR DR. NEILSON: On the occasion of its fourth annual conference, I am glad to greet the American Committee for Protection of Foreign Born. It has undertaken the task of assuring fair play to the foreign-born within the United States. Every American wishes it success.

Every American takes pride in our tradition of hospitality to men of all races and of all creeds. One of the great achievements of the American Commonwealth has been the fact that race groups which were divided abroad are united here. Enmities and antagonisms were forgotten; former opponents met here as friends. Groups which had fought each other overseas here work together; their children intermarry; they have all made contributions to democracy and peace.

Because of the very greatness of this achievement, we must be constantly vigilant against the attacks of intolerance and injustice. We must scrupulously guard the civil rights and civil liberties of all citizens, whatever their background. We must remember that any oppression, any injustice, any hatred, is a wedge designed to attack our civilization. If reason is to prevail against intolerance, we must always be on guard. We welcome, therefore, the work to maintain the rights of the foreign-born.

Very sincerely yours,

FRANKLIN D. ROOSEVELT.

MESSAGE OF THE HONORABLE CORDELL HULL, UNITED STATES SECRETARY OF STATE, TO THE FOURTH ANNUAL CONFERENCE OF THE AMERICAN COMMITTEE FOR PROTECTION OF FOREIGN-BORN

I am glad to extend my greetings to the Fourth Annual Conference of the American Committee for Protection of Foreign Born and to wish the committee full success in the achievement of its purposes.

Equality before the law and equality of opportunity are among the most cherished traditions of our Nation. They are an essential part of the foundation of our democratic institutions. They cannot survive if they are to be denied to some groups of our citizens merely because of the fact of birth outside the country's frontiers.

Our Nation has grown strong, spiritually and materially, because it has been founded upon the great moral principles of tolerance, justice, and fair play to all. Our national existence is a successful vindication of the idea that, in an asylum of freedom, barriers of race, of religion, of language, and of other differences which breed antagonism and conflict elsewhere, disappear in an effort for the common good. If our Nation is not to decline and decay, we must not permit these barriers to reappear in our national life.

THE SECRETARY OF THE INTERIOR,
Washington, December 21, 1939.

DR. WILLIAM ALLAN NEILSON,
Cochairman, Committee of Sponsors, American Committee for Protection of Foreign Born, 79 Fifth Avenue, New York City.

MY DEAR DR. NEILSON: The efforts of the American Committee for Protection of Foreign Born in defense of the best American traditions deserve the support of all men of good will. It seems to me to be self-evident that any attack on the foreign-born is, in the last analysis, an assault on the liberties of all American citizens. For, as President Roosevelt has said recently, all of us are immigrants or the descendants of immigrants.

I wish the fourth annual conference every success in the realization of its enlightened program.

Sincerely yours,

HAROLD L. ICKES,
Secretary of the Interior.

DEPARTMENT OF AGRICULTURE,
Washington, January 23, 1940.

DR. WILLIAM ALLAN NEILSON,
Cochairman, Committee of Sponsors, American Committee for Protection of Foreign Born, Suite 1505, 79 Fifth Avenue, New York, N. Y.

DEAR DR. NEILSON: I wish to thank you for calling to my attention the call for your fourth annual conference of the American Committee for Protection of Foreign Born. Open discussion of the problem of protection of foreign-born I consider both timely and necessary. As we strive to keep out of the European war now in progress, we shall have many difficult economic and social problems to deal with. They will call for new ways and new vision, but they need not at all call for undemocratic proceedings by Government or private agencies. In our civilization there can be no place for hatreds, for intolerance, for cruelties. Ever since the days of Columbus, the foreign-born have been making a new civilization in America and all of us are made of foreign blood and come with foreign inheritance of some form or other. You may add my voice to that of your conference in saying that we must have none of the mad demagogic sport of hunting down foreigners merely because they are foreigners.

Sincerely yours,

HENRY A. WALLACE, *Secretary.*

THE ATTORNEY GENERAL,
Washington, December 20, 1939.

DR. WILLIAM ALLAN NEILSON,
Suite 1505, 79 Fifth Avenue, New York City.

DEAR DR. NEILSON; It is an unfortunate fact that in times like the present there is an increasing tendency to look with suspicion upon individuals of alien birth. I am glad that your group is continuing to remind Americans that the democratic way is to judge a man not on the basis of events in other lands or the accident of birth, but by his own qualities and worth as a member of the human family.

Sincerely,

FRANK MURPHY.

NATIONAL YOUTH ADMINISTRATION,
Washington, D. C., December 14, 1939.

DR. WILLIAM ALLAN NEILSON,
Cochairman, Committee of Sponsors, Fourth Annual Conference, Hotel Annapolis, Washington, D. C.

DEAR DR. NEILSON: I am very glad to indicate my support for the purposes of the Fourth Annual Conference of the American Committee for Protection of Foreign Born.

As a country founded on the principle of social and economic opportunity for immigrants from the Old World, I think we would relinquish a fundamental aspect of our tradition of freedom and opportunity for all were we to accept the principle of discriminatory legislation directed toward the foreign-born. It seems to me axiomatic that the civil liberties of all of us are in danger when it is possible to single out any one group and deprive them of the rights which are now guaranteed to all.

Sincerely yours,

AUBREY WILLIAMS,
Administrator.

CITY OF SAN ANTONIO,
February 20, 1940.

HON. ERNEST HEMINGWAY,
Cochairman, American Committee for Protection of Foreign Born, 79 Fifth Avenue, New York, N. Y.

DEAR MR. HEMINGWAY: Please convey to those attending the Fourth Annual Conference of the American Committee for Protection of Foreign Born my regret at being unable to be present.

Any movement which seeks to insure the rights of minorities, racial, national, religious, social, or political, has my unqualified support and approval.

I join you in the hope that our constitutional democracies may never be disgraced. The United States is now almost the last remaining Nation where the foreign-born may live in safety and in peace. We shall never establish concentration camps here nor encourage the persecution of the foreign-born.

Very truly yours,

MAURY MAVERICK, *Mayor.*

CITY OF NEW YORK,
OFFICE OF THE MAYOR,
February 27, 1940.

DR. WILLIAM ALLAN NEILSON,
American Committee for Protection of Foreign Born, Fourth Annual Conference, March 2 and 3, 1940, Hotel Annapolis, Washington, D. C.

MY DEAR MR. NEILSON: I take pleasure both personally and as mayor of the city of New York in extending sincere greetings to the Fourth Annual Conference of the American Committee for Protection of Foreign Born.

I feel that it is most appropriate that New York City should voice its greetings to this conference, which deserves the support of every sincere American. The United States of America, founded by aliens and built up through the passage of years equally by the generations of American children of the first aliens and the continued influx of hopeful and ambitious immigrants, is richer in every sense of what these various stocks in its midst have contributed to the rich and varied pattern of American life.

It is to the courage of the first pilgrims and the faith and labor of the immigrants who followed them that we Americans owe the security of our democracy. It is only by proclaiming and living up to a creed of harmony on the common basis of American citizenship that we can preserve this democracy.

Very sincerely yours,

FIORELLO LAGUARDIA,
Mayor.

UNITED STATES DEPARTMENT OF LABOR,
IMMIGRATION AND NATURALIZATION SERVICE,
Washington, March 2, 1940.

Fourth Annual Conference, American Committee for Protection of Foreign Born, Hotel Annapolis, Washington, D. C.

MEMBERS OF THE CONFERENCE: Your discussions are being held at a time when there is much confusion of thought in the minds of many persons concerning what is commonly called our immigration problem. Therefore I am happy that such an ably led and sponsored group of citizens is meeting in the Nation's Capital today to consider the true facts with regard to immigration.

Many people seem to think that this country is being overrun by alien hordes, some admitted legally and others illegally; they think in terms of the era of unrestricted immigration which came to an end in 1921.

It is an interesting fact, and one which may have a bearing on your deliberations, that during the 9 fiscal years between July 1, 1930, and June 30, 1939, the excess of immigrants legally admitted to this country for permanent residence over similar immigrants departing permanently for foreign countries was only 19,398. During that same period an actuarial calculation of the number of deaths which must have occurred among the unnaturalized population of this country amounts to 901,334 individual deaths. In other words, the unnaturalized immigrant population of this country saw a net increase of only 19,000 individuals but was during the same period reduced through deaths by over 900,000 individuals. During that period we naturalized 1,282,604 eligible applicants for citizenship, while an estimated number of 237,100 alien children derived citizenship from the naturalization of their parents.

As far as concerns aliens legally admitted to the United States, therefore, the problem of the alien in our midst is obviously a decreasing one. You hear many sensational stories about the number of aliens illegally in this country, and on that point I can only comment that the Immigration and Naturalization Service of the Federal Government is a highly trained career service doing what many eye-witnesses are glad to vouch for as a highly creditable performance of law enforcement, both at our ports of entry and along our borders between such ports. We cannot pretend that there is no illegal entry into this country, but we confidently believe that it is strictly limited and ably combatted and does not represent a serious population problem.

In welcoming you to Washington, I give you these facts as unquestionably having an important bearing on the subject of your deliberations.

With best wishes for the success of your conference,

Yours sincerely,

JAMES L. HOUGHTELING,
Commissioner.

War Department Civil Functions Appropriation Bill

EXTENSION OF REMARKS
OF
HON. SCHUYLER OTIS BLAND
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1940

Mr. BLAND. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following supplemental statement relative to labor restrictions in the Canal Zone, with particular reference to the appropriation for the maintenance and operation of the Panama Canal in H. R. 8668.

When bill H. R. 5129, providing for additional facilities for the Panama Canal, was under consideration in the House during the first session of the present Congress, I reviewed at length the employment policy of the Panama Canal, which was established by President Theodore Roosevelt and has been controlled by his successors in accordance with laws enacted by Congress. Congress has been kept fully informed as to the policy which has been evolved from long experience to meet the particular needs of the highly specialized organization established for maintaining and operating the Panama Canal, in a territory far removed from the United States and set down in the midst of the Republic of Panama in the Torrid Zone.

The provision in question involves objections far more serious than if it were to be applied only to a temporary construction force. A change of policy of the nature of this proposal should not be made without full hearings by the appropriate legislative committee, working out each problem in connection with it, in order that the Congress may be fully informed as to its far-reaching effects.

The contract referred to by the gentleman from Missouri [Mr. WOOD] involved N. R. A. funds allotted to the Army and the wage scales established by P. W. A. I have no knowledge of the labor policies pursued by the particular contractor, but the Panama Canal Administration was not involved in any manner. We are now dealing with funds for the maintenance and operation of the Panama Canal, and dealing with men who have been in the Canal organization since construction days, more than a quarter of a century ago, and dealing with an employment policy evolved from the necessities of the situation and our international obligations.

Exception is taken to the statement that the inspection made by P. W. A. investigators found that "the normal productivity of these men is not more than 33 percent of that of a skilled American workman." The Governor of the Panama Canal made an investigation of this question, and the following is quoted from his statement relative thereto:

In this investigation each department head was required to carefully analyze his organization to see how many Americans would be required if a specified group of native workers amounting to about 3,600 were replaced by Americans. These department heads have had long experience with the Panama Canal and the work to be done, and the result of this investigation shows that the number of Americans would be only about 10 percent less than the number of native workers replaced. It is the considered judgment of the Panama Canal Administration that a saving of 10 percent is the very maximum, and the actual number saved depends entirely on the positions which are replaced. Another detailed survey made of another list of positions showed that a saving of only 3 percent in numbers could be secured. This matter is very important, because the proponents of the proposed amendment to our appropriation bill use absurd figures and thereby reduce the estimated cost of replacement.

I requested Panama Canal officials to advise me as to the probable effects of the application of the labor restriction in question to the War Department civil functions appropriation bill. The following is quoted from a statement by the Governor of the Panama Canal:

The number of employees who would be affected by this amendment cannot be determined within a reasonable approximation without a detailed occupational survey and analysis. If 500 are found to be the number to be displaced, it would require 500 new American employees to replace them, and the initial capital outlay to accomplish this would amount to $3,500,000, with a continuing cost of $850,000 per annum, exclusive of interest on the capital cost. If the number is considerably larger than 500 there would be additional costs for the development of new town sites, utilities, etc. Congressman LANHAM, who proposed the amendment, stated that, based upon authority he considered entirely reliable, the amendment would permit the employment of from 3,500 to 5,000 Americans to take the places of the 3,500 to 5,000 natives of the Tropics who would be displaced.

In connection with legislation pending in 1935, Governor Schley made a very careful survey and analysis of the matter on the basis of which he estimated that it would require 3,144 Americans to replace 3,245 natives and that this would involve an initial capital expenditure of $26,525,000, or $8,400 for each new American employee. The continuing cost has been estimated at $5,000,000 per annum. Such increased cost would require a large increase in

tolls if the Canal is to continue on a self-sustaining basis. If the estimates made by Mr. LANHAM as to the number to be replaced are even approximately correct, it will be impossible to carry out the legislation within the time specified in the amendment.

Most of the native employees who might be affected have served the Canal faithfully for a period of from 10 to 35 years and at the low rates of pay generally prevailing in the Tropics. These employees and their dependents would be thrown on the Republic of Panama without means of support. Studies indicate that there are about 4 dependents for each native employee so that if 3,500, the minimum number estimated by Mr. LANHAM, would be displaced, approximately 17,500 persons would be thrown on the Republic of Panama in practically destitute circumstances.

The Panamanian newspapers are bitter in their comments upon the amendment, which they regard as a deliberate infringement of rights guaranteed by the recent treaty. Responsible Panamanian officials are also at a loss to understand the violation of this obligation and fully expect that the situation will be corrected promptly.

Legislation for the maintenance and operation of the Panama Canal containing this labor restriction does not conform with the treaty obligations of the United States. This is emphasized in the following letter which I received from the Acting Secretary of War February 29, 1940:

WAR DEPARTMENT,
Washington, February 29, 1940.

Hon. S. O. BLAND,
Chairman, Committee on Merchant Marine and Fisheries,
House of Representatives, Washington, D. C.

DEAR MR. BLAND: I have been advised that efforts will be made to amend the War Department civil functions appropriations bill to include a labor restriction similar to section 7 of bill H. R. 8438, making appropriations for the Navy Department for the fiscal year 1941.

Section 7 of bill H. R. 8438, as it passed the House February 16, 1940, provides:

"No part of any appropriation contained in this act shall be used, directly or indirectly, after January 1, 1941, for the payment of any civilian for services rendered by them on the Canal Zone while occupying a skilled, technical, clerical, administrative, or supervisory position, unless such person is a citizen of the United States of America."

The application of such an amendment to the War Department civil functions appropriations bill would violate the treaty concluded with the Republic of Panama March 2, 1936, which was proclaimed by the President July 27, 1939. The Government of the United States stands committed to the Government of the Republic of Panama to maintain as its public policy the principle of equality of opportunity for employment on the Panama Canal all Panamanian citizens with those of the United States, and to favor such measures as may be necessary to put this policy into effect.

This question was thoroughly discussed during the negotiations which resulted in the general treaty between the United States and Panama on March 2, 1936. At the time the general treaty was signed, and as an accompaniment thereof, the Secretary of State addressed a note to the Panamanian negotiators in which he stated:

"The Government of the United States of America, in recognition of the special relationship between the United States of America and the Republic of Panama with respect to the Panama Canal and the Panama Railroad Co., maintains and will maintain as its public policy the principle of equality of opportunity and treatment set down in the order of December 23, 1908, of the Secretary of War, and in the Executive orders of February 2, 1914, and February 20, 1920, and will favor the maintenance, enforcement, or enactment of such provisions, consistent with the efficient operation and maintenance of the Canal and its auxiliary works and their effective protection and sanitation, as will assure to Panamanian citizens employed by the Canal or the railroad equality of treatment with employees who are citizens of the United States of America."

This note was before the United States Senate when the treaty was ratified July 27, 1939.

The pertinent parts of the Executive orders referred to in the Secretary of State's note read as follows:

Executive order of the Secretary of War, dated December 23, 1908:

"By authority of the President, it is ordered:

"That the Executive order of February 8, 1908, restricting the personnel of gold employees to American citizens be amended to read as follows:

" 'On and after this date the employment by the Isthmian Canal Commission of skilled laborers, clerks, and all others who have heretofore been known as gold employees of the Commission shall be restricted to American citizens and citizens of Panama, except where American or Panamanian labor or services of the character required is not available.

" 'Foreign employees now upon the pay roll of the Commission shall not be affected by this order, save in the event of any reduction of force preference shall be accorded to American citizens and citizens of Panama.'

"Executive order dated February 2, 1914:

"6. All employees who receive over $75 per month or over 40 cents per hour must be citizens of the United States or the Republic of Panama, and such citizens will be given preference for employment in all grades. Aliens may not be employed in such grades unless—

"(a) They have occupied similar positions during the construction of the Canal for 2 years or more; or

"(b) In case of emergency, in which latter case they must be replaced by citizens of the United States or Republic of Panama as early as practicable.

"Executive order dated February 20, 1920:

"I. That the Executive order of February 2, 1914, be so amended that paragraphs 6 and 20 thereof shall read as follows:

" 'PARAGRAPH 6

" 'All employees who receive compensation at the rate of more than $960 a year or 40 cents an hour must be citizens of the United States or the Republic of Panama, and such citizens will be given preference for employment in all grades. Aliens may not be employed in such grades unless (a) they have occupied similar positions during the construction of the Canal for 2 years or more, or (b) in case of emergency, in which latter case they must be replaced by citizens of the United States or Republic of Panama as early as practicable.'

"In a radiogram just received the Governor of the Panama Canal states that such restrictions in the War Department civil functions appropriations bill 'would directly conflict with the commitments of our Government with respect to employment of Panamanians. The adoption of such an amendment would necessitate the discharge on January 1, 1941, of a number of persons on the pay roll of the Canal who are Panamanians and many of whom have been employed for a number of years.' He further states: 'The restrictions in the Third Locks Act which would exclude Panamanians from a large number of positions and the provisions of other bills now under consideration which would impose restrictions against the employment of Panamanians have been very severely attacked in the local press for many weeks, although the Panamanian Government and the press are assuming that, by reason of President Roosevelt's assurances to the Panamanian Government, steps will be taken to secure adoption of an amendment which will remove application of these restrictions against Panamanians and to bring this legislation into line with the commitments of our Government in the 1936 treaty with respect to the employment of Panamanians.'

"The Governor also states: 'In view of the President's commitments as to the eligibility of Panamanians to obtain employment in any capacity with the Canal, the community of interests which exists between the Governments of the United States and Panama, and in view of the fact that the enactment of this legislation would most seriously retard the measures now under way for safeguarding the locks and other vital structures of the Canal, it is considered that the utmost endeavor should be made to secure the elimination of these amendments from all appropriation bills for expenditures within the Canal Zone, and more particularly from the civil functions bill."

The President, in a statement made August 11, 1939, on approving bill H. R. 5129, authorizing construction of additional locks, called attention to a somewhat similar labor restriction which was applicable to new personnel only and did not require the discharge of persons then employed. He stated that the provision included in that bill was a violation of the treaty with Panama and that he proposed to request the Congress to amend the law so as to bring it into conformity with the commitments entered into with Panama.

The Governor of the Panama Canal has called my attention to the fact that if the labor restriction in section 7 of bill H. R. 8438 were incorporated in the War Department civil functions appropriations bill, it would require the discharge of many employees who have served the United States faithfully for many years, and that to discharge them and eject them from the Canal Zone in practically destitute circumstances would be inhumane and unjustifiable. He pointed out that their status as aliens is generally due to their inability to acquire citizenship by virtue of their residence in the Canal Zone, since the naturalization laws do not apply there.

A restriction of this nature would, in effect, make an important change in the Government's policy of maintaining and operating the Panama Canal, which has been in effect successfully for more than 25 years. Such a change in policy should not be made without full hearings, in order that the Congress may be fully informed as to its far-reaching effects. It would affect the regular operating force of the Panama Canal, and therefore is much more objectionable than if applied only to a temporary construction force.

Sincerely yours,

L. D. GASSER,
Acting Secretary of War.

The statement of the President of August 11, 1939, accompanying his approval of bill H. R. 5129, which became Public, No. 391, Seventy-sixth Congress, authorizing the construction of additional locks is, in part, as follows:

In view of the special relationship which exists between the United States and Panama on account of the Panama Canal, the Canal administration and the Panama Railroad Co. have for many years granted facilities for employment to Panamanian citizens which were not generally extended to the citizens of other countries.

* * * * * * *

A provision of H. R. 5129 authorizing and providing for the construction of additional facilities on the Canal Zone, etc., pro-

vides "that all new personnel in such construction work occupying skilled, technical, clerical, administrative, and supervisory positions shall be citizens of the United States." It is my opinion that this provision is at variance with the policy to which this Government pledged itself in its note to the Government of Panama of March 2, 1936, the date of the signing of the general treaty, since the order and Executive orders specifically provided equal opportunities for employment of Panamanian citizens in the very categories in which employment would be denied them under the quoted provision of H. R. 5129.

* * * * * * *

I am giving my approval to this important bill which, by authorizing the construction of a third set of locks, will enhance not only our own security but that of this hemisphere. I propose, however, to request the Congress at its next session to amend the present law so as to bring it into conformity with the commitments entered into with Panama which pledge to the citizens of Panama opportunity and treatment in employment in the Canal administration and the Panama Railroad Co. equal to that offered to citizens of the United States.

Cooperation by Wyoming Ranchers and Farmers With Farm Program

EXTENSION OF REMARKS

OF

HON. H. H. SCHWARTZ

OF WYOMING

IN THE SENATE OF THE UNITED STATES

Monday, March 11 (legislative day of Monday, March 4), 1940

LETTER FROM LEROY MOORE, OF ROSS, WYO.

Mr. SCHWARTZ. Mr. President, I ask unanimous consent to have inserted in the Appendix of the RECORD a letter and an attached table from Mr. Leroy Moore, of Ross, Wyo., chairman, Wyoming A. A. A. State committee, showing the extent and result of cooperation by Wyoming ranchers and farmers with the general farm program in 1939, and in some activities during the years 1936–39.

There being no objection, the letter and table were ordered to be printed in the RECORD, as follows:

UNITED STATES DEPARTMENT OF AGRICULTURE,
AGRICULTURAL ADJUSTMENT ADMINISTRATION,
Ross, Wyo., January 2, 1940.

Hon. HARRY H. SCHWARTZ,
Senate Office Building, Washington, D. C.

MY DEAR SENATOR: I tried to contact you while here but felt you were busy on other important affairs, so did not run you down and am taking this opportunity of reporting on the benefits of the Triple A program in Wyoming and the cooperation we are receiving.

In our State we have an area of 62,460,160 acres, and only 28,000,000 acres are private or State lands and subject to participation. These acres are divided into 17,400 farms and ranches, peopled by some 74,000 of our population. These farms and ranches are divided roughly into 26,000,000 acres of range lands and 2,000,000 acres of croplands.

In our 1939 program we have 11,000 farmers cooperating on 4,300,000 acres of crop and noncrop pasture land and 2,200 ranchers cooperating on 15,300,000 acres of strictly range land or 83 percent of our farmers and farm lands and 68 percent of our ranchers and range lands are distinctly in the program.

From the beginning of 1936 to and including payments to be made for the 1939 program there has been expended in Wyoming the total sum of $10,527,148 to cooperators, State and county employees, divided into 43,700 payments, totaling $9,872,700 to cooperators and salary and per diem $654,465 to State and county 680 employees.

To the following extent our farmers are cooperating under the programs:

BEETS

Beets, which come under the Sugar Act of 1937 rather than under the Triple A, were grown by 1,800 farmers on 53,000 acres of lands, who have earned by their cooperation in the years 1936 to and including 1939 approximately $3,672,995.

WHEAT

We have a State allotment of 330,000 acres; some 5,000 cooperating wheat farmers have been allotted 185,000 acres. They planted 150,000 acres for the 1939 crop, and by their cooperation earned a conservation payment of $374,000 and a parity payment of $240,000. They also took out 320 insurance policies on their crops, insuring 24,951 acres at a cost of 29,961 bushels of wheat and developed losses on 218 of these farms, and they received 87,080 bushels in indemnities. Also, 323 loans were made on the 1938 crop for $276,500, which saved our farmers fully $50,000 by enabling them to carry over the wheat until 1939 and a higher market. We now have 319 loans on 1939 wheat for $231,632 and have written 900 policies under the Federal Crops Insurance Corporation plan on our 1940 crops, insuring 70,727 acres at a cost of 108,094 bushels for anticipated production of 432,300 bushels.

AGRICULTURAL CONSERVATION PROGRAM

This phase of the program has been participated in to the extent of 35,815 cooperators during the program years of 1938–39, inclusive, and this year we have over 11,000 farmers cooperating on 1,800,000 acres of cropland, and they have earned during this time $3,672,995 by planting and maintaining perennial legumes and grasses, planting and maintaining forest trees, reseeding run-down pasture lands, and other soil-conserving practices.

RANGE CONSERVATION PROGRAM

Under the range section of the conservation program we have had very satisfactory cooperation. The present program got off to a late start in 1936 and our participation was not large except for a few eastern Wyoming counties; since then we have steadily worked to make it fit Wyoming and now have more than 68 percent of our ranchmen and our range lands enrolled. Under still further improvements written into the 1940 program, am sure will have better than 80 percent of our ranchers cooperating.

In the years 1936–39, inclusive, we have had 7,848 ranchers participate and earn $1,985,314 by constructing 6,915 reservoirs for stock-water purposes on 4,250 ranches, drilling 952 wells on 838 ranches. Developing 2,416 springs and seeps on 1,486 ranches and other conservation practices.

On the whole the Soil Conservation and Domestic Allotment Act of April 27, 1935, and as since amended by the acts of February 29, 1936, and the Agricultural Adjustment Act of February 1, 1938, have worked for the betterment of conditions on Wyoming farms and ranches and have met Wyoming conditions unusually well. The program fits the eastern half of our State much better than the western half, especially on range, and fully 90 percent of the farmers and ranchmen in that area are in cooperation.

The present program is not perfect by any means but has enabled the farmers and stockmen to do things they could not on a whole hope to do under present economic conditions. Improved our ranges immensely, made living conditions better for farm and ranch families, and vastly improved their economical position.

I feel I am speaking for the majority of Wyoming agriculturists when I state they welcome an agricultural program. They feel this is by far the best yet offered and almost unanimously wish to relieve the National Treasury of future costs as much as possible by putting each commodity that we produce in surplus on a self-sustaining basis by some form of processing tax.

For more detailed information am enclosing a more complete report, which I recommend for your consideration, and any further information on any special phase of the program you may require will be gladly furnished.

Very truly yours,

LEROY MOORE,
Chairman, Wyoming A. A. A., State Committee.

[Enclosure]

WYOMING

I. Number of farms participating

1936	6,245
1937	9,183
1938	9,374
1939 (estimated)	11,013
Number of census farms[1] (1935)	17,487

II. Number of ranches participating

1936	1,392
1937	2,158
1938	2,115
1939 (estimated)	2,183

[1] Includes farms and ranches.

III. Practices carried out by farms participating in the 1936, 1937, 1938, and 1939 agricultural conservation programs[1]

Practice	Years				Total
	1936	1937	1938	1939	
Seeding legumes and grasses..acres..	115,247	123,749	128,139	140,000	507,135
Protecting summer fallow.....do....	17,488	71,453	74,980	85,000	248,921
Planting and maintaining forest trees.....acres..	94	379	374	400	1,247
Control of noxious weeds.....do....	.....	356	1,727	2,200	4,283

V. Cropland on participating farms (agricultural conservation program)

Years	Acres	Percent of total cropland
1936	971,056	45
1937	1,454,947	67
1938	1,499,059	69
1939	1,803,800	83

2,173,000 acres estimated total cropland in the State.

VI. Range land on participating ranches and farms

Year	Acres	Percent of total range land
1936	5,819,512	26
1937	12,243,618	51
1938	14,911,865	64
1939	15,303,500	68

VII. Payments made to operators in Wyoming under the Agricultural Adjustment Administration

	Years				
	1936	1937	1938	1939	Total
Farm	$900,371	$1,030,158	$892,845	$1,150,000	$3,973,374
Range	199,059	405,328	632,927	748,000	1,985,314
Sugar beet	.....	1,157,714	1,315,281	1,200,000	3,672,995
Parity payments	.....	.....	.....	241,000	241,000
Amount paid employees: Whole and part-time employees and committeemen, May 1936, to and including November 1939	.....	.....	.....	.....	654,465
Total	1,099,430	2,593,200	2,841,053	3,339,000	10,527,148

VIII. Crop insurance

	1938	[1] 1940
Number policies	321	905
Premiums in bushels	29,961	108,094
Insured acres	24,951	70,727
Insured production.....bushels..	209,339	440,734
Indemnities paid.....do....	87,080	.....
Do.....number..	558	.....

[1] Includes only applications obtained during winter wheat campaign.

IX. Wheat loans

	1938	1939
Farm-storage loans	126	106
Warehouse-storage loans	197	213
Total loans	323	319
Farm storage.....bushels..	143,319	109,734
Warehouse storage.....do....	288,103	213,642
Total.....do....	431,422	323,376
Total loans	$276,499	$231,832

X. Personnel (as of Dec. 1, 1939)

State office employees	55
County office employees	133
County committeemen	69
Community committeemen	426
Total committeemen and employees	683

A Few Men Controlling a Few Banks Control the Corporate Wealth of the Nation

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

Mr. PATMAN. Mr. Speaker, a majority of the money-making businesses of this Nation are now controlled by a few men who own and control a few banks. I made this same statement on the floor of the House in the early part of the year 1938, and the Honorable Bertrand Snell, who was then the minority leader in the House, attempted to criticize me for the statement. On February 17, 1938, he attempted to show in a speech on the floor that my statement was misleading; that while a few large concerns own much of the business and industry of the country, they are corporations—according to his contention—and the stock is owned by people all over the country. In other words, that the stock was not concentrated into the hands of a few but it was widely owned by people in every nook and corner of the Nation. He listed a number of companies of the greatest wealth and gave them as examples of companies that were owned by such a large number of people throughout the country. I took it upon myself to contact these corporations and ask them for further information. In compliance with my request, I was furnished the information as to the number of shares of stock held by people in each State and the number of people who owned this stock in each State, as well as the par value. The information was obtained for the following-named corporations, as of the dates mentioned and assets after the names of the corporations:

	Assets
American Telephone & Telegraph Co., Dec. 15, 1937	$2,978,500,000
General Motors Corporation, Dec. 31, 1937	1,598,000,000
Pennsylvania Railroad, Dec. 31, 1937	2,322,400,000
United Gas Improvement Corporation, Feb. 1, 1938	837,600,000
Standard Oil Co. of New Jersey, Dec. 31, 1937	2,044,600,000
North American Co., Mar. 2, 1938	931,600,000
Packard Motor Car Co	49,400,000
Socony-Vacuum Oil Co., Inc., Feb. 21, 1938	923,400,000
Pacific Gas & Electric Co., Jan. 31, 1938	764,300,000
Standard Oil Co. of Indiana, Feb. 15, 1938	724,600,000
Armour & Co., Illinois, Dec. 31, 1937	307,200,000
Du Pont de Nemours & Co., June-August 1936	810,500,000
National Dairy Products Corporation, Nov. 29, 1937	199,700,000
Commonwealth Edison Co., Nov. 10, 1937	824,300,000
American Waterworks & Electric Co., Inc., Mar. 15, 1938	399,500,000
New York Central Railroad, Dec. 31, 1936	1,822,000,000
American Tobacco Co., Dec. 10, 1937–Feb. 10, 1938	276,700,000
Swift & Co	306,500,000
Total	18,120,600,000

The above figure of $18,120,600,000 is 15.1 percent of the estimate of $120,000,000,000, which was the estimate of the wealth of all nonfinancial corporations as of December 31, 1936.

ONLY INFORMATION OF ITS KIND AVAILABLE

Volume 83, part 6, of the CONGRESSIONAL RECORD, contains the tables which I inserted at that time. At page 6415 of this RECORD will be found a list of the 24 major American companies, showing stockholders, employees, and directors with banking connections, which were referred to by Mr. Snell in his criticism. Following this statement will be found the distribution of stockholders and shares of Ameri-

can Telephone & Telegraph Co. and the other 17 companies that furnished me the information about the number of stockholders and the number of shares in each State and the par value. I will not reproduce it here. It is too long. It is unusual information, and I believe it is the only information of its kind available.

However, I have had prepared one statement which shows the total number of shares of all these corporations that were held by citizens of each State. The statement also discloses the per capita shares of stock in each State and the percent held in each State. The table for the 18 large corporations by States is as follows:

Capital stock distribution of 18 large corporations, by States

State[1]	Population[2]	Shares of stock		Percent held[4]
		Total[3]	Per capita	
Delaware	261,000	21,264,553	81.50	8.67
New York	12,959,000	89,827,550	6.93	36.59
Pennsylvania	10,176,000	31,571,223	3.10	12.86
Massachusetts	4,426,000	13,477,123	3.05	5.49
New Jersey	4,343,000	11,204,161	2.58	4.56
Michigan	4,830,000	11,149,203	2.31	4.54
Connecticut	1,741,000	3,986,366	2.29	1.62
Illinois	7,878,000	17,159,901	2.18	6.99
Rhode Island	681,000	1,418,023	2.08	.58
California	6,154,000	11,611,011	1.89	4.74
New Hampshire	510,000	887,061	1.74	.36
Florida	1,670,000	1,786,982	1.07	.73
Vermont	383,000	400,678	1.04	.16
Maryland	1,679,000	1,662,076	.99	.68
Maine	856,000	800,590	.94	.33
Ohio	6,733,000	5,637,914	.84	2.30
Nevada	101,000	79,893	.79	.03
Missouri	3,989,000	3,055,103	.76	1.25
Colorado	1,071,000	817,310	.75	.33
Wyoming	235,000	170,560	.73	.07
Wisconsin	2,926,000	1,793,082	.61	.73
Virginia	2,706,000	1,607,791	.59	.66
Oklahoma	2,548,000	1,334,527	.52	.54
Indiana	3,474,000	1,745,367	.50	.71
West Virginia	1,865,000	827,901	.44	.34
Texas	6,172,000	2,358,906	.38	.96
Arizona	412,000	152,536	.37	.06
Kentucky	2,920,000	1,026,381	.35	.41
Minnesota	2,652,000	923,654	.35	.38

[1] Arranged in order of per capita holdings.
[2] 1937 midyear census estimate, U. S. Statistical Abstract 1938 (p. 9).
[3] Obtained by consolidating State reports of 18 large corporations inserted in CONGRESSIONAL RECORD, (vol. 83, pt. 6, p. 6415–22).
[4] Percentage of total shares of these corporations held in the 48 States, excluding the District of Columbia.

(Thomas R. Baldwin, Mar. 4, 1940.)

The following table discloses the number of shareholders in each State and the number of shares held by each holder in these 18 large corporations:

	Number of shareholders	Shares per holder
Delaware	18,166	1,171
New York	465,314	193
Oklahoma	8,355	160
Michigan	74,496	150
Florida	15,589	115
Texas	22,277	106
Pennsylvania	352,044	90
New Jersey	143,627	78
Illinois	229,507	75
Virginia	22,842	70
Ohio	80,591	70
Rhode Island	21,407	66
Connecticut	61,868	64
California	171,747	63
Missouri	48,610	63
Massachusetts	229,868	59
West Virginia	14,546	57
New Mexico	1,867	56
North Carolina	11,699	54
Kentucky	19,238	53

South Carolina	5,196	33
North Dakota	2,295	32
Idaho	1,994	29

In Dr. Prescott Webb's book on Divided We Stand, the United States is divided up into three sections—North, South, and West—for the purpose of showing that most of the wealth is owned in the North. I will use the regional lines used by Dr. Webb in his book and insert herewith a table, which shows how this stock is distributed between the North, South, and West. The table is as follows:

Capital stock distribution of 18 large corporations, by regions

Region[1]	Population (thousands)	Number of shareholders	Shares			Percent held
			Total	Per capita	Per holder	
North	73,049	1,935,723	218,736,080	2.99	113	89.1
South	35,776	157,575	10,334,066	.29	66	4.2
West	19,805	263,376	16,397,582	.83	62	6.7
Total	128,630	2,356,674	245,467,728	1.91	104	100.0

[1] This manuscript supplements one entitled "Capital Stock Distribution of 18 Large Corporations, by States."
North: Maine, New Hampshire, Vermont, Massachusetts, Connecticut, Rhode Island, New York, New Jersey, Delaware, Maryland, Pennsylvania, Ohio, Indiana, Illinois, Michigan, Wisconsin, Minnesota, Iowa, Missouri. South: Virginia, West Virginia, North Carolina, South Carolina, Georgia, Florida, Kentucky, Tennessee, Alabama, Mississippi, Arkansas, Louisiana, Texas. West: North Dakota, South Dakota, Nebraska, Kansas, Oklahoma, Montana, Idaho, Wyoming, Colorado, Utah, New Mexico, Arizona, Nevada, Washington, Oregon, California.

Since California holds 4.74 percent of the stock, the other Western States hold less than 2 percent of the stock of these 18 companies, which is considered typical of all large corporations.

DR. WEBB'S BOOK

Dr. Walter Prescott Webb is a professor of American history at the University of Texas, Austin, Tex. He is the author of the book Divided We Stand—the Crises of a Frontierless Democracy. This book was published in 1937 and has attracted a great deal of attention. It should be read and studied by every person in America who is interested in economic justice and freedom of opportunity for all the people.

In Dr. Webb's book he was able to use but one example of sectional distribution of stockholders, and that was the example of the American Sugar Refining stock, as of December 5, 1935. That distribution, shown by Dr. Webb in his book on page 43, follows very closely the distribution that I have prepared of the 18 large corporations. I repeat, this type of information is very scarce and difficult to obtain.

NOT INTENDED TO CRITICIZE NORTHERN OWNERSHIP OF BUSINESSES THAT CANNOT BE OWNED LOCALLY

This information is given, not for the purpose of criticizing northern ownership, except to point out that local privileges and local opportunities should be retained by the people in the South and West. Further, it is in the interest of the North that these opportunities and privileges be maintained by the people in the local communities. An effort is now being made by a few men who own a few banks in New York to acquire control over retail distribution in all the counties of the United States.

EVILS WILL RESULT IN INJURY TO NORTH

Very few of us have a thoroughgoing idea of the vast extent of empire controlled by the North, nor need I add here, parenthetically, that I am not indulging in carping criticism of the North, for that is idle occupation. But I am most diligently directing my effort and attention to curing the North of monopolistic evils that threaten the complete and final ruin of many southern and western sections and which will result in great injury to the North.

We gain a comprehensive picture of northern influence and power upon examination of the following brief facts:

Railroads: Construction of railroads, as far back as 1860, was based on plans to make the West tributary to the North. From that time until the present practically all railroads were built to feed the North and incidentally to kill the flourishing river traffic that had so long nourished the South.

Tariff: Daniel Webster said of the Tariff Act of 1828:

> This bill, if adopted as amended, will keep the South and West in debt to New England for the next hundred years.

We could now accuse Mr. Webster, Dr. Webb says, of being short-sighted. He might well have said "for the next 200 years."

Pensions: Following the War between the States, of a total amount of slightly less than $8,000,000,000, approximately $7,000,000,000 went to the North and $1,000,000,000 to the South and West combined. It was pension money that caused the rise in manufacturing and industry in the North.

Patents: Still another subsidy received by the North came in the form of patent benefits, because practically all machinery and patents are owned by northerners. Patents protect the owners from domestic competition as tariff protects owners from foreign competition.

Dr. Walter Prescott Webb estimates that 90 percent of the effective money-producing patents are held in the North. Much of the statistical information used in this statement is obtained from Dr. Webb's book.

Corporations: Approximately 200 corporations of the United States own 25 percent of the national wealth and over 50 percent of the entire corporate wealth of the Nation. Of the 200 corporations, 180 are in the North, 9 are in the South, and 11 in the West.

Insurance: Citizens of the United States have about $105,000,000,000 worth of life insurance on the books. Of this amount 95 percent is in the hands of northern companies. There are 14 companies, all located in the North, with over a billion dollars' worth of business. Seventy-five companies have over $200,000,000 each of insurance and together hold $93,000,000,000 of the $105,000,000,000 in force. Fifty-five of these companies are in the North, 14 are in the South, and 6 are in the West. The North has $27 of insurance for each dollar held in the South, and $65 for each dollar held in the West, and it has 19 times as much insurance as the other 2 sections combined. The life-insurance budget is approximately $5,000,000,000 annually. Out of each $100 of this income the North received $96.10, the South only $2.50, and the West a paltry $1.40. The South and West furnish 30 percent of the total insurance in America. They hold only 5 percent. This means that they send $5 of their insurance money North for each $1 they keep at home.

Since this information regarding insurance was compiled by Dr. Webb, the Temporary National Economic Committee has disclosed in part 4 of its report, which is on life insurance, that the 16 largest life-insurance companies have 80.6 percent of the assets of the 308 life-insurance companies reporting. This information is contained on page 1514 of this report. On the same page it is disclosed that 6 large life-insurance companies in New York City and in Newark, N. J.—which is just across the river from New York City—have assets amounting to 56.9 percent of the total assets of 308 life-insurance companies in the United States reporting.

Income: The North's percentage of excess of income over disbursements, of the 75 leading insurance companies, is greater than its proportion of income. Out of each $100 the North gets $97.50, the South gets $1.84, and the West trails with but 76 cents. Where the South made a gain of $1, the North gained $53; where the West made a gain of $1, the North gained $128.50.

LARGE CORPORATIONS

Out of every $100 paid in dividends to stockholders of the large corporations, $90.97 is paid to the North, $4.55 to the South, and $4.46 to the West.

MOST OF NATURAL WEALTH IN SOUTH AND WEST

Dr. Webb's book discloses that the South and West have within their boundaries most of the natural wealth of America. Leaving aside the fact that they comprise nearly 80 percent of the area, they produce all the gold and silver, 95 percent of the oil, 45 percent of the coal, 90 percent of the lumber, and 63 percent of the agricultural dollars. In the face of all this they hold at the most liberal estimate less than 20 percent of the money, and probably less than 5.

Ancient feudalism was based on the ownership or acquisition of land, but contemporary feudalism is based on finance and capitalism. A glance at the roster of large-scale corporations will show that in almost every line of business, from sugar to petroleum products and from telephony to 10-cent stores, the home office stands grandly on granite pillars somewhere in the North.

And so we view a picture of nearly one-way traffic, with American dollars rolling across country, from the sunny orange groves and succulent apple orchards of the long Pacific coast and from the cotton and oil fields of the South, to the cashier cages in the Northern States.

IN INTEREST OF NORTH FOR PRIVILEGES TO BE DISTRIBUTED

I have no desire, and I repeat for emphasis, to criticize northern ownership except in point of robbing the South and West of local privilege and local opportunity, for it is only by giving the South and West these opportunities and privileges—and maintaining them—that all sections, including the North, can and will prosper.

Figures from the statistical abstract of the United States show that of nearly $14,000,000,000 of insurance written in 1931, a total of 69.4 percent went to the northern companies, whereas the southern companies had only 15.9 and western companies a shade less with 14.7 percent of the business.

I have shown you the figures for life insurance and I can add, without further discussion, that the same sort of story is to be found in scores of other lines of business, including a very close parallel in the fire- and casualty-insurance field.

MUST RESTORE LOCAL PRIVILEGES

It is utterly obvious that, unless local privilege and opportunity are restored to the South and West, we cannot continue to support the Wall Street interests that are so typical of the North and its octopus tentacles of monopoly.

IT IS IN INTEREST OF NORTH FOR SOUTH AND WEST TO LIVE

Finally let me put the picture up for your inspection in the extreme light: In an emergency, and estimated on the basis of $30 a month for each individual, every person in the North could live for 14 months, and here, for the first time, the West supersedes our Southern area, for the western people could live for 7½ months, whereas the southerners could only go for 2 months and 18 days on their savings. I quote these figures from Webb—page 41. Nor can I refrain from a direct reference to the closing words in his volume Divided We Stand. The case is stated most succinctly:

> That the North has the advantage we all admit. But when it faces the effects of its increasing drive for profits, the North

will realize that the desire of the South and the West to live and share in the national prosperity is not only natural and legitimate for them, but is essential to its own continued prosperity.

ABSENTEE OWNERSHIP OF LOCAL BUSINESS BAD

Absentee ownership of any business that can be conducted and owned by local people is a dangerous thing for the country. H. R. 1, the Federal chain-store tax bill, which will seriously affect about 20 New York interstate chains, out of 7,000 chain-store companies in all, will be considered by a subcommittee of the Ways and Means Committee of the House, commencing March 27. The object of this bill is to give local people an opportunity to own and control local business and to prevent a few men, who own and control a few banks in New York, to carry out their conspiracy to get control of the retail distribution of this country. It is not in the interest of New York or the North for retail business to be owned and controlled by a few men in New York City or any other city.

STANDARD OF LIVING IN ANY STATE DETERMINED BY AVAILABLE MONEY AND CREDIT

I call your attention particularly to the excess reserves of banks. Where are these excess reserves? The answer is, They are located in a few banks, mostly in New York City. A few banks in New York City have more than $3,000,000,000 of the $5,640,000,000 excess reserves in all member national banks. These large banks will not make loans to small business; they make loans only to large business concerns; they will make loans to interstate chain-store companies, but they will not make loans to their competitors.

Imagine the disproportion when you consider that out of every $100 in excess reserves, $85.55 is in the North, $6.84 in the South, and $7.61 in the West. Notice, too, where the combined savings of the country are held.

Do not fail to consider the fact that demand deposits represent our money. All purchases of food, wearing apparel, durable goods such as lumber and hardware, and even luxuries such as jewelry have a direct relationship to the per capita demand deposit in banks, because demand deposits represent our money. In other words, in States where the per capita demand deposits are high, the people buy more comforts, necessities, and luxuries of life than they do in a State where the per capita demand deposits are low. The standard of living in a State is determined by the available credit and money in that State.

With the assistance of the Comptroller of the Currency and using the same regions for the North, South, and West that are used in Dr. Webb's book, tables have been prepared showing the deposits in banks in the different regions.

The following tables are self-explanatory:

TABLE 1.—*Time and savings deposits in all classes of active banks in the United States, by regions, June 30, 1939* [1]

Region	Population [2] (in thousands)	Time and savings deposits (in thousands)	Per capita	Percent of total time and savings deposits
North	73,975	$21,005,209	$283.95	81.16
South	36,151	1,637,246	45.29	6.33
West	19,959	3,238,120	162.24	12.51
Total	130,085	25,880,575	198.95	100.00

[1] Exclusive of possessions. [2] As of June 30, 1938.

TABLE 2.—*Demand deposits in all classes of active banks in the United States, by regions, June 30, 1939* [1]

Region	Population [2] (in thousands)	Demand deposits (in thousands)	Per capita	Percent of total demand deposits
North	73,975	$30,041,161	$406.10	78.35
South	36,151	4,292,040	118.73	11.19
West	19,959	4,012,073	201.02	10.46
Total	130,085	38,345,274	294.77	100.00

[1] Exclusive of possessions. [2] As of June 30, 1938.

TABLE 3.—*Reserves of member national banks in the United States, by regions, June 30, 1939*

Region	Reserves (in thousands)			Percent of total		
	Held	Required	Excess	Held	Required	Excess
North	$4,511,543	$2,629,944	$1,881,599	79.99	76.44	85.55
South	489,143	338,596	150,547	8.67	9.84	6.84
West	639,381	472,057	167,324	11.34	13.72	7.61
Total	5,640,067	3,440,597	2,199,470	100.00	100.00	100.00

Joe Martin and the People

EXTENSION OF REMARKS

OF

HON. RICHARD B. WIGGLESWORTH

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

ARTICLE BY HUBERT KAY

Mr. WIGGLESWORTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Hubert Kay, appearing in the March edition of the Reader's Digest condensed from Life, in reference to the accomplishments of our distinguished minority leader, Congressman MARTIN:

[From the Reader's Digest for March 1940]

JOE MARTIN AND THE PEOPLE

(Condensed from Life)

(By Hubert Kay)

JOSEPH WILLIAM MARTIN, Jr., minority leader of the House of Representatives, is a blacksmith's son who never got to college. Middle-sized and middle-aged, with a Yankee-Irish tongue which slips occasionally into folk errors of grammar, there is nothing of the messiah about him. If you met him walking down the street in North Attleboro, Mass., being first-named by everybody he meets, you could hardly mistake him for anything but what, at base, he is—a plain, hard-working, popular businessman-politician. Yet at this moment America has no more significant citizen.

It is one thing to believe ardently in the glorious idea of democracy. It is quite another to put up with the processes of democratic government, which, based on compromise of many conflicting wills, are often exasperatingly slow and inefficient. JOE MARTIN exemplifies the democratic belief that it is better for the people, by slow debate and compromise in Congress, to make their own decisions than to have decisions made for them by Executive decree.

Elected to Congress in 1924, after six terms in the Massachusetts Legislature, JOE MARTIN was a rear-row private in the army of smug Republican elders who marched invincibly through the 1920's. Then came depression. In 1932 he saw his party lose control of Congress and the Presidency. He heard a confused and frightened people hail the new President as the Nation's savior, saw Congress surrender its powers to the Executive. From White House to Capitol Hill came a steady procession of deep-changing bills written by closest advisers and labeled "Must." The Republican press shouted "rubber stamp" at Congress, but it was no use. The people wanted action, and they were getting it.

MARTIN made himself useful to Minority Leader Bert Snell, tried to rally his colleagues into effective opposition. But that was no use, either. In the massacre of 1936 the House Republicans dwindled to a corporal's guard of 89, too puny and demoralized to do anything but gloom about "dictatorship," "bankruptcy," and "the American way of life."

Then things began to happen. First came the Supreme Court packing bill of 1937, then recession, increased unemployment, politics in relief. The "purge" of the 1938 primaries split Democrats wide. Our citizens began to feel uneasy about the soaring national debt.

Two other influences worked deeply to turn United States political winds—the hated example of one-party governments abroad and the historic tendency of the American people to swing back to their normal calm conservatism after a bellyful of jitters and reform. In 1938 the voters elected 80 new Republican Representatives, 8 new Republican Senators, 12 new Republican Governors.

As chairman of the Republican congressional campaign committee, JOE MARTIN had done much to encourage the swing of public opinion toward his party. Shrewdly and tirelessly he combed the field for able new candidates, concentrated his fire and funds in districts where Republicans had at least a fighting chance to win, swung

around the country and kept in touch with candidates by long-distance telephone. When Congress convened in January 1939 JOE MARTIN, now ripe in congressional experience, was promptly chosen leader of the sizable Republican minority.

The way JOE MARTIN performed his job made the biggest United States political news of 1939. Crying a pox on carping generalities, Leader MARTIN appointed committees of Republican Congressmen to go out and consult the experts and the country, bring back fact-filled reports on such major issues as national debt, extraordinary powers of the President, national defense, agriculture. From these the party conference decided its stand and party spokesmen drew their arguments. Result: When Republican debaters took the floor last year they knew all the questions and most of the answers.

The party whip, HARRY ENGLEBRIGHT, of California, saw to it that Republicans were always on hand when needed. Once, as a vote drew near, Speaker BANKHEAD looked out on row on row of alert Republicans, saw Democratic benches near empty, cried in despair: "We cant's vote. We haven't got the Democrats on the floor."

When Republicans lacked votes to win, Leader MARTIN did not hesitate to line his team up in working partnership with like-minded Democrats. Senator Minority Leader MCNARY followed the same coalition strategy on his side of the Capitol. The result was to give the New Deal, for the first time in its career, that indispensable checkrein of democratic government—a vigorous, intelligent opposition.

MARTIN does not drive. He leads. He is not boss, but the captain of a team. Even the greenest Republican Congressman is encouraged to air his views in party councils. No one of them is ever told how he must vote on any bill. If a man's convictions stand in the way of his going along with the party, no discipline is threatened. Leader MARTIN may try to persuade, but he will not command. In return he wins loyalty and a willingness to compromise individual viewpoints whenever possible. "They give me the borderline decisions," says JOE.

No spotlight-grabber, JOE MARTIN is still not so well known to the public as he will be, but he is enormously liked and respected in Washington, is known as the man without a single congressional enemy. Fifty-three leading Washington correspondents, grading Senators and Representatives on the basis of industry, integrity, intelligence, and influence, rated MARTIN ablest, with a mark higher than the No. 1 Senator, Nebraska's NORRIS. When he made his first speech of the 1939 congressional session—an undramatic request that some of the Government's surplus cotton be stored in New England warehouses—he received loud and long applause from both sides of the House.

Campaigning and consulting with other Congressmen have given MARTIN a wide familiarity with the Nation's problems. His political views—on the need for business encouragement, economy, keeping out of war—are those of most middle-of-the-road Republicans. Never in debt in his life, he took 5 years to save the first $1,000 with which he bought into the North Attleboro Evening Chronicle. Boosting the Chronicle's circulation from 800 to 2,800, he has made it pay regular 10-percent dividends. He believes wholeheartedly in the system which gave him his chance, and thinks the country's greatest need is a government which businessmen can be sure also believes in that system.

JOE MARTIN'S father was a $15-a-week hired hand in the village smithy of North Attleboro. JOE was the eldest boy of eight children. After high school he was offered a scholarship at Dartmouth but decided to work a year first and got a job as a $10-a-week reporter on the Attleboro Sun. He never went back to school.

At 24 he chipped in with friends to buy the Chronicle, became editor and publisher, sent his two youngest brothers through Dartmouth. In time he became majority stockholder.

Starting in politics as manager of a friend's campaign for the Massachusetts Legislature, Joe ran for it himself in 1911, went to the lower house at 27, moved up to the senate for three terms, then back to his paper.

If a photographer could have been on hand at the high moments of JOE MARTIN'S life these are two pictures he would have taken:

Scene 1. Office of the president of the Massachusetts Senate; time, 1915. The sharp-featured, poker-faced Republican President has summoned the new Republican senator to discuss a pending bill. "Could you vote for this bill for me?" he asks. "I could, Mr. President," says JOE MARTIN to Calvin Coolidge, "but I won't."

Scene 2. Office of the President of the United States; time, December 1939. Minority Leader MARTIN has dropped in to discuss the coming session of Congress. "Joe," says the President, "don't you think we ought to have a short session?" "No, Mr. President, I don't," says JOE MARTIN to Franklin Roosevelt. "Why not?" "I want action," says JOE MARTIN. Both men laugh.

Eetween sessions of Congress Joe drops in every day at his newspaper office to chew the rag with cronies and callers. Almost every afternoon he drives around his district to find out what his constituents are thinking about. He has had no patronage to distribute for 8 years, but at election time he always runs well ahead of his ticket, with many a Democratic vote.

In 1938 the New Deal tried to "purge" him. "They sent an extra $50,000 of relief money into my district," MARTIN relates with relish, "and they got the W. P. A. workers to wear buttons and sign pledges to vote for the Democratic candidate, who was State employment director of W. P. A. Well, I'd speak at a meeting where there were a lot of those fellows and I'd look at their buttons and say: 'To think that they would do that to you here in America; that they would brand you like cattle.' Then I'd see them look mad and start taking off their buttons."

At 55 JOE MARTIN is still black-haired, bright-eyed, quick moving. A bachelor, he lives at North Attleboro with his invalid mother, widowed sister, and a brother; at Washington, in a modest two-room apartment. Politics, involving endless meetings and talk with constituents, colleagues, and reporters, is almost his whole life.

JOE MARTIN, whose favorite word is "confidence," faces the future with plenty of it. He thinks there is an excellent chance that the people will elect a Republican President in November; is sure they will elect a Republican House. "Even if Roosevelt runs," says JOE MARTIN, "I think a good many people who vote for him will want to take out a little insurance by voting for a Republican Congressman."

If enough do, JOE MARTIN, the blacksmith's son, is practically a sure bet for what has been and can be again the No. 2 post of power and influence in the United States Government, the Speakership of the House. There is even considerable talk that if the leading Presidential candidates should deadlock at the Republican convention this summer, JOE MARTIN may be nominated for the No. 1 job.

That prospect startles some of MARTIN'S warmest friends. Put JOE on a pedestal and he inspires no awe. Measured by a Wilson or Hoover in intellectual depth or by a Franklin Roosevelt in intellectual flexibility and personal magnetism, he looks small. Where he belongs is in the center of a group picture. There he presents with complete clarity the issue of government of and by, as well as for, the people, as opposed to the dominance, however benevolent, of a great man. That is JOE MARTIN'S significance for America in 1940.

Jobs the Prime Problem

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

REVIEW OF SPEECH OF MILO PERKINS BY CHARLES G. ROSS

Mr. VOORHIS of California. Mr. Speaker, under leave to extend my remarks, I include below a summary by Mr. Charles G. Ross of a most challenging speech delivered in Des Moines, Iowa, by Hon. Milo Perkins, in which Mr. Perkins discusses the problems of unemployment, the farmers' income, and the importance of enabling our people to consume the abundant production of our country. I hope every Member will read this:

JOBS CALLED THE PRIME PROBLEM—FARM SURPLUSES A PART OF MOST VITAL ELECTION ISSUE

(By Charles G. Ross)

The problem of what's the matter with the country, from whatever angle you view it, gets down in the end to the matter of unemployment. Along with the new ideas and the new tools of Government that this administration will hand along to the next, there will go this terrible legacy—barring an economic miracle—of some 10,000,000 unemployed. Till the deep-seated ailment represented by these figures is cured, or at least greatly alleviated, there can be no real health in our economy. If the evil of unemployment can be ended, we shall have no trouble in taking care of the lesser of our ills.

These are truisms, and precisely because they are, there is danger that their significance will be overlooked or forgotten in our preoccupation with the sideshows of the political campaign and at the moment with foreign affairs. No national candidate seeking the favor of the people should be allowed to dodge the great underlying domestic issue of unemployment.

IS RELATED TO FARM ILLS

What has brought this problem of unemployment to the top of the writer's mind is a speech which Milo Perkins, president of the Federal Surplus Commodities Corporation, made recently to a farm institute at Des Moines. We are accustomed to think of the farm problem as one thing and the problem of getting men back to work in industry as something entirely different. Mr. Perkins shows vividly how interrelated are the two.

He approaches the subject from the angle of the farmer. The farmer's troubles stem from his production of more than he can sell in the present market at a profit. There are three reasons behind this condition. One is the fact that scientific methods have enabled the farmer, without extra labor, to make two blades of grass grow where one grew before. He doesn't know where to sell that additional blade.

AND FOREIGN TRADE LOSSES

The second reason pointed out by Mr. Perkins is the dislocation of our foreign trade. Incidentally, he says that the present war is certain to hurt our agricultural exports in the long run,

and he fears that after the war things will be even worse. This is the unhappy prospect because the allied nations, fighting fire with fire, are going more and more on a totalitarian basis and adopting centralized controls of their foreign trade. After the war, Mr. Perkins thinks, we are likely to find ourselves in a world reluctant to give up its barter economics.

The third great cause of farm surpluses has to do with the 10,000,000 unemployed. Here is where the plight of the farmer and the plight of the jobless industrial worker are seen to be integral parts of the same problem. For the term "surpluses," as Mr. Perkins says, is simply a "smug, polite name for a shocking amount of underconsumption."

THE CASE IS STATED

He states the case very simply and very graphically. Notwithstanding the fact that industrial production rose last December to the 1929 level, we continued to have an army of unemployed not much smaller than that of the bleak days of 1932–33. The reason for this was twofold: The growth of population and the increased output per worker—something like 20 percent in the last 10 years. We have been smart enough to make amazing mechanical improvements. Are we going to be smart enough to provide jobs for the jobless? Mr. Perkins does not exaggerate when he says that "On our answer to that question—not in words but in jobs—hangs the future of our industrial democracy. In other lands it has lost its race against time; if we have the courage to make it work here, then we shall be in truth a chosen people."

We can produce almost anything. The problem is to learn how to distribute what we produce so that we can wipe out this "black plague of the twentieth century"—underconsumption. Ahead of us is a job of "national pioneering" which has barely been started.

HULL'S POLICY HELPS

The trade-agreements policy of Mr. Hull is excellent; we need all the foreign outlets we can get, both for our farm and our industrial products. But there's a tremendous potential market here at home beside which the foreign market at its best shrinks into insignificance. Mr. Perkins tells some of the possibilities from the viewpoint of the farmer with the miscalled surplus. A few of his figures will illustrate the point.

In 1935–36 nearly two-thirds of all the families in the United States had incomes of less than $1,500. The average for this group was $826 a year—$69 a month for the whole family. "That," says Mr. Perkins, "is the story of underconsumption in one figure."

Some utopian figures could be given, but let's see what would happen if all the families getting less than $100 a month in 1935 had been able to raise their incomes to that level. The increase in expenditures for food would have been $1,900,000,000. The national food bill would have been increased over 14 percent, farmers would have received directly nearly a billion more in income, the extra demand would have increased their income by a large additional amount, the improvement in the farmers' status would have contributed to the general well-being, industrial unemployment would have been decreased.

To provide jobs for the jobless in private industry and so end underconsumption—that's the crux of the great economic problem that bedevils us, and none of those holding or seeking national power should be allowed to forget it.

Resolutions of United States Livestock Association

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

RESOLUTIONS OF THE SEVENTH ANNUAL MEETING

Mr. REES of Kansas. Mr. Speaker, under leave given me by unanimous consent of the House to extend my remarks, I am including herein the resolutions adopted by the United States Livestock Association, at its seventh annual meeting, held in Springfield, Ill., recently:

1. Whereas after careful consideration it is believed by this assemblage that the direct buying of slaughter livestock by packers is detrimental to the general welfare of the entire population of these great United States, and is particularly detrimental to the growers and feeders of livestock, therefore in an effort to correct this condition in fairness to terminal market packers, interior packers, and the growers and feeders of livestock alike: Be it

Resolved, That the directors, officers, governing board, and each individual member of the United States Live Stock Association be and are hereby urged to join with others in sponsoring an effort or movement, the object of which is to establish, or cause to be established, where not already established, Government-posted, supervised livestock markets, at which, or through one or more of which newly established markets or already established markets all slaughter livestock shall be offered for sale; and where all slaughter livestock acquired by packers who do an interstate business shall be purchased through open, competitive bidding. Said new markets to be established only at or within livestock driving distance of any packing or slaughter plant having no such market, where livestock slaughtered has, or products from them may, enter into interstate commerce: Be it further

Resolved, That this resolution be spread on the records of the United States Live Stock Association and a copy of it be forwarded to other organizations, requesting similar action, and a coordination of effort to bring about the desired objective.

2. We recommend that so long as disparity of prices of livestock and livestock products and industrial products in the United States exists, that full and adequate tariff protection be accorded our domestic producers; that Congress continue its vigilant guard against imports of livestock and its products from Argentina or other countries infected with disease; further that no changes be made in tariffs or trade agreements involving livestock and livestock products without a full hearing before a tariff commission on which the United States livestock producer interests are represented.

3. Should it become necessary to tax agricultural commodities for the purpose of financing a farm program we oppose the imposition of any special taxes on livestock or its products which would give competitive products an advantage in the market.

4. We oppose the practice of packers in acquiring their livestock away from competitive bidding, and we condemn their feeding operations in livestock, as these depress basic values.

5. If Congress is unable to equitably amend the Packers and Stockyards Act so as to make its provisions applicable to and binding on all parties concerned in the marketing, processing, and distribution of livestock and its products, then we favor the repeal of the act itself, as well as the packers-consent decree.

6. We urge passage of a national animal theft bill designed to curb the interstate traffic in stolen livestock, and the cooperation by the various States in the policing and regulation of community auction sales for the adequate protection of patrons and the livestock industry in general against unsanitary practices or other conditions detrimental or harmful to the livestock industry.

7. We recommend the passage of the truth-in-fabrics bill.

8. We recommend that handling and processing of livestock be exempted from wage-hour provisions of the Fair Labor Standards Act.

9. We oppose any part of the Wheeler-Lea transportation bill, S. 2009, which would extend the rate-making powers of the Interstate Commerce Commission to motortrucks, and to coastal and inland-waterways carriers; and we urge that action upon any conference committee report be delayed for a period of at least 30 days in order that producers, shippers, and Members of Congress may have full opportunity to study the far-reaching effects of this proposed measure.

10. We believe that railroads should continue as private enterprises; that all transportation agencies be allowed to develop their natural, inherent advantages; and that efforts should be made to coordinate facilities and services under conditions of competition designed to preserve the public interest.

11. We urge the adjustment of transportation rates on livestock and its products, to give free and equitable access to all markets of the country.

12. We recommend that revenue from taxes on motor vehicles and motor fuels be used only for the purpose of building, maintaining, and policing of public highways.

13. We oppose all such trade barriers as ports-of-entry laws and nonuniform motor-vehicle laws. We urge all States to adopt the uniform code for regulation of traffic.

14. We oppose any motor-vehicle tax or law which is aimed to increase the cost or restrict the use of highway transportation in order to equalize competition between it and other forms of transportation.

15. Regulation of transportation should be in the interest of the shipping public and not for the purpose of benefiting one transportation agency or restricting another. All types of transportation should be permitted to develop fully so that the public may have more, better, and less expensive transportation to choose from. We would prefer elimination of some railroad regulation instead of adding more regulation on water and motor transportation.

16. We condemn the growing tendency of Federal authorities to promulgate orders in star-chamber fashion having the force of law without adequate hearing and impartial consideration of evidence, Therefore, we urge immediate enactment by Congress of legislation designed to correct this evil already approved in committee of House of Representatives.

17. Inasmuch as the Secretary of Agriculture has frankly advised Congress he is unable for lack of time to adequately perform all duties cast upon him by such important legislation as the Packers and Stockyards Act, we recommend that the act be amended to provide for the appointment of a livestock commission of five experienced stockmen who shall exercise the important functions conferred upon the Secretary under said act. We vigorously condemn pending legislation authorizing the Secretary to delegate his quasi-judicial powers under said act to assistant secretaries or other subordinates.

18. We request the Bureau of Animal Industry to cooperate with other active interests in determining the causes, methods of prevention, and treatment of shipping fever.

19. We commend the great work being done by the National Live Stock and Meat Board in increasing consumption of meats in the United States and urge that stronger financial support be given the Board.

20. We approve the efforts of the National Live Stock Loss Prevention Board to reduce bruising and crippling of livestock.

21. In view of the ruinously low prices of hogs, the disparity between their price on the hoof and over the block, and the apparent inability of the Department of Agriculture to discover any relationship between these conditions and present packer methods of purchasing the major portion of the hog supply in noncompetitive channels, we urge a thorough and complete congressional investigation of the meat-packing industry.

22. We take this occasion to lament the passing during the past year of a loyal member of our organization—Sherman Houston. He was a great leader in the industry and of outstanding integrity. We regret the loss of his counsel and help. The executive secretary is directed to furnish his family with a copy of this resolution.

23. We thank the Springfield Chamber of Commerce and the mayor and city officials of Springfield for the courtesies and hospitalities extended during this convention. We also express the appreciation of this body to President Dan Hildebrand, Executive Secretary Glenn Stebbins, and the executive committee for their untiring efforts on behalf of the association during the year.

Accomplishments of the Roosevelt Administration

EXTENSION OF REMARKS

OF

HON. ROBERT F. WAGNER

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Monday, March 11 (legislative day of Monday, March 4), 1940

RADIO ADDRESS BY HON. ALBEN W. BARKLEY, OF KENTUCKY

Mr. WAGNER. Mr. President, I ask unanimous consent to have inserted in the RECORD an interesting and instructive address delivered by the senior Senator from Kentucky [Mr. BARKLEY] on the American Forum of the Air, at the National Press Club Auditorium, on March 3, 1940, his subject being the accomplishments and victories of the Roosevelt administration.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Mr. Chairman, it is manifest that in the brief time at my disposal I cannot attempt a detailed recital or discussion of all the momentous things which have transpired in the Nation or the world since March 4, 1933.

These have been crucial years in the history of our country, and the wisdom or folly of those who have guided our affairs through these years will be measured not alone by temporary results but even to a greater degree by the long-range, far-sighted, and permanent effect of these events and activities upon the future course and welfare of our country.

In attempting to catalog and appraise the achievements of these 7 years under President Roosevelt, it is necessary to distinguish between two kinds of results.

Into one category fall those concrete, visible, material activities which enter into our daily life and are at once recognizable by the acute senses.

Into the other category fall those things which gradually and almost unconsciously affect our mental and spiritual attitude toward the problems of humanity.

Among all the immense and gratifying accomplishments and victories of the Roosevelt administration, those registered in the latter field are calculated to be far more important and permanent in their effect than even the incalculable and indispensable material improvements which have been wrought in every section of the country.

Due largely, if not entirely, to the New Deal, there has been a fundamental and lasting evolution, or, if the word does not offend you, revolution in the social and political thinking of the American people.

No longer do they regard their government as a sort of unapproachable Olympus where dwell the Jupiters of political power, unmindful of, or indifferent to, the lives or welfare of those beneath them, which in his Odyssey has described as follows:

"Olympus the reputed seat
Eternal of the gods, which never storms
Disturb, rains rench, or snow invades, but calm
The expanse and cloudless shines with purest day.
There the inhabitants divine rejoice forever."

No longer do they regard their government as an abstract, and yet sometimes very concrete, agency for collecting taxes and holding office.

The people had become so accustomed to being told that they were rugged individualists that many of them believed that in order to preserve rugged individualism they must become ragged individualists.

During the 7 years of the Roosevelt administrations they have come to realize that their government is their servant, their agent, their organized and collective instrument, and that in order to justify itself it must place its experience, its prestige, and its power at their disposal and their service in solving their daily problems insofar as government can or ought to do it.

How has this Government justified itself in the past 7 years?

At the very outset, on the very day of his inauguration, the President was confronted with the most desperate financial situation that ever confronted the Nation. On that day one could almost realize that his voice and the applause of the multitude who listened were almost muffled by the sound of crashing banks all over the Nation.

In the 4 years preceding that inauguration 6,035 banks had suspended in the United States. This does not include 3,413 banks which could not qualify for reopening after the bank holiday. When the President, in order to arrest this banking panic, ordered a bank holiday, the whole country applauded. As rapidly as possible following the bank holiday banks were reopened when their strength justified it; the Federal deposit insurance law was enacted guaranteeing the deposits of all depositors up to $5,000. The guaranty of bank deposits is now accepted as a permanent policy of our Government, and no man in his right mind would recommend its repeal.

We now have the strongest and safest banking system in our history or in the world, and our bank deposits are today the largest in the history of American banking.

When Roosevelt was inaugurated there were between thirteen and fifteen million workers out of employment in the United States. In addition in the past 7 years a net increase of 5,000,000 workers has been added to those unemployed in 1933. It is estimated that there are now between 7,000,000 and 9,000,000 unemployed in the United States. If you subtract the 5,000,000 new workers from this number, you have a net of 4,000,000 whose reemployment the New Deal might be said not to have reemployed; and if you subtract from this number the 1,500,000 fewer workers required in 1939 to produce the same quantities of products produced in 1929, you get a net of 2,500,000 unemployed workers today whose reemployment has not been brought about by the New Deal. Many of these, by reason of age or physical condition, are not employable.

By any method of calculation, it cannot be denied that we have made tremendous strides in the solution of the question of unemployment, though I confess that neither we nor anybody who criticizes us has found the final solution or answer to the question of unemployment.

During the past 7 years through our work programs, through the Civilian Conservation Corps, Farm Security, National Youth Administration, the Reconstruction Finance Corporation, and other agencies and activities such as the Rural Electrification Administration, Soil Conservation, Flood Control, Public Health, and others, the New Deal has brought to every community of the Nation physical improvements of a permanent character which have vastly elevated the social, moral, and intellectual opportunities of the people which they could not have obtained in any manner without the aid of the Federal Government.

Seven years ago the farmers of America were selling their products far below the cost of production, and their farms were being sold from under them at a rate never before witnessed. During these 7 years the Roosevelt administration has revived the Farm Credit Administration for the service of American farmers, has saved their homes, reduced their rates of interest, increased their markets, increased the price of their products, and raised their cash income from $4,682,000,000 in 1932 to $7,712,000,000 in 1939 without benefit payments, and with benefit payments to $8,519,000,000, an increase of 82 percent.

Prior to 1933 the American investor had no reliable source to which he might repair for accurate information concerning the securities in which he might invest his savings, and because of this, and because of high-pressure methods and official encouragement from high places in the Government of the United States billions of dollars were sunk in spurious and worthless stocks and bonds by the people of the United States.

During the past 7 years the Roosevelt administration, through those policies which have come to be known as the New Deal, has established the Securities and Exchange Commission, where securities are to be registered with full information concerning them and the companies issuing them for the information of the American people. It is being said by our critics that fewer securities have been issued since the Commission was established than at some periods before. But it is also true that fewer Americans have been defrauded of their lifetime's savings since the Commission was established.

Seven years ago industry was flat on its back. Factories were paralyzed, credit had vanished, pay rolls were the lowest in two decades, and businessmen and industrialists came to the Government, like everybody else, to obtain relief.

In the last 7 years the Reconstruction Finance Corporation has loaned to business more than $7,000,000,000. During the same period the Government has loaned and expended for the benefit of business and those who work for business and industry an

equal amount, which has been reflected in the increased output and profits of business, as recorded on the financial pages of every newspaper in the United States.

Seven years ago the wages and salaries received by the people of this country amounted to $2,403,000,000 for the month December (1932). In December 1939 they received $3,888,000,000, an increase of 62 percent.

Seven years ago weekly factory pay rolls were $80,384,000 for December (1932). Last December they were $197,000,000, an increase of 145 percent.

Seven years ago (1932) the dividends received by individuals in the United States amounted to $2,745,000,000. In 1939 they received $4,253,000,000, an increase of 55 percent.

In December 1932 total nonagricultural employment in this country amounted to 27,245,000; in December 1939 it was 34,940,000, an increase of 28 percent, and this latter figure does not include the 2,727,000 persons employed on W. P. A., N. Y. A., and C. C. C. projects.

In 1932 the Federal Reserve Board index of production was 64 percent of normal, while in 1939 it was 105, an increase of 64 percent.

In 1932 the total income of the American people was $40,039,000,000, while for 1939, according to the Department of Commerce, it was $68,500,000,000, and according to the Alexander Hamilton Institute, which, if names count for anything, ought to be a good Republican source, it was $71,700,000,000, which, in purchasing power, was equal to the $82,000,000,000 of 1929.

During the 7 years of the New Deal we have shortened the hours of labor, increased its unit of compensation, given it a forum for the exercise of the right of collective bargaining, regulated and reduced the abuses of child labor, and have seen to it that no man, nor his wife nor his children, should go without food or clothing or shelter in these United States.

During these 7 years the New Deal, under the leadership of the President, has inaugurated the reorganization of the overlapping bureaus and agencies of the Government, which other Presidents had sought for 40 years.

During these 7 years it has, in cooperation with States and local communities, made possible the construction and improvement of hundreds of thousands of homes throughout the Nation, as well as their preservation from the chant of the auctioneer, through the Farm Credit Administration, the Home Owners' Loan Corporation, the Federal Housing Administration, the United States Housing Authority, the Farm Security Administration, and other agencies and activities which may have been thought of prior to the New Deal, but which never reached the statute books or the records of any other administration.

Seven years ago we were operating under an outrageous and prohibitive tariff system which it took 19 months of logrolling to enact through the Congress, under which our export trade had dwindled from more than $5,000,000,000 to little more than $1,000,000,000. Under the New Deal we now proceed under an enlightened policy of reciprocal cooperation, which was being advocated by the great McKinley on the very day of his tragic assassination, and under which we have found increased markets for American products and increased employment for American labor.

Seven years ago, this Republic was viewed with fear and suspicion by our sister republics in the Western Hemisphere. Today there exists a more universal confidence, respect, and genuine understanding and cooperation throughout the western world than has ever existed before. And while, in wide areas of the earth in Europe and Asia, military conflicts are in progress and the subjugation of innocent peoples is on the march, and the democratic ideals of popular government are under attack by autocracy and brutality, we have preserved the peace of America, and we have preserved the respect of mankind, and we have not only preserved the democracy for which our forefathers fought and died, but we have made it the handmaid and the servant of 130,000,000 free American citizens, without the assistance and sympathetic cooperation of whose Government they can no more battle or overcome the economic forces which besiege them than can they hold back the tides of the ocean with a broom.

These are some of the things which the New Deal has accomplished in 7 years. No other similar period, and no other administration, regardless of political persuasion, has accomplished so much; and in my opinion none will.

America—Spent or Saved?

EXTENSION OF REMARKS

OF

HON. ROBERT B. CHIPERFIELD

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. CHIPERFIELD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Hon. STYLES BRIDGES, of New Hampshire, at a dinner meeting of the Lincoln Club, of Phoenix, Ariz., Wednesday, February 21, 1940:

It is a pleasure to be in Arizona. Yours is a man-made State in the desert. Through ingenuity, hard work, and cooperation, you in Arizona have made the desert bloom. You have developed agricultural industries that would otherwise have been impossible. Perhaps nowhere in the United States is there a State that stands as a greater monument to the triumph of human genius and labor. It is a tribute, too, to the spirit with which Americans have always surged forward to the conquest of new frontiers, overcoming the obstacles that faced them, and making fruitful a land that had been barren before. It is a symbol of the American way of progress.

Tonight I am going to ask you nine questions. They are questions which you and Arizona and the American people should ask yourselves before you go to the polls this fall. They are questions that go to the very heart of Americanism. They will be answered by the vote of the people next November, and upon that answer largely depends the future of this Nation.

Do you believe that we have reached the peak of individual attainment in this country?

Do you believe that the American people, now that our population numbers some one hundred and thirty million, are incapable of voluntary cooperation for mutual advancement, and that they must therefore be brought into line by the Government and made to pull together?

Do you believe that our economy has reached its maximum development in individual hands?

Do you believe that our economic system which was privately built, has now grown too complicated; that it must now be gradually taken over and administered by the Government?

Do you believe that our economic system has reached a point at which it can no longer provide work for all of our people, and that they must therefore look increasingly to Government relief and subsidy for support?

Do you believe that any people can long spend more than they create?

Do you believe that as our population grows and our lives are drawn closer together, that we must gradually abandon more and more of the liberties so closely identified with the American citizen in the interests of others?

Do you believe that the demands of life tomorrow will require the ever-increasing surrender of private power to public hands of the rights of local and State governments to the Federal Government, thus centralizing more and more control in Washington?

Do you believe that the constant growth of boards and bureaus, commissions and agencies to plan and direct our lives is inevitable?

Such a philosophy means the ultimate abandonment of the American way of life. It means the gradual abdication of the powers which our forefathers paid with their lives and fought to pass down to future generations as a priceless heritage. It means the eventual repudiation of all those human qualities which men have always honored in one another—industry, initiative, thrift, and self-reliance. It means the rejection of the way in which your forefathers and mine built up the greatest nation on earth. It means the adoption of the philosophy that America is spent, that we can no longer expect to advance in the way of past progress. It means the adoption of values and standards that are not only alien to America but have always been repulsive to her people in the past.

The American people do not accept this philosophy today. They do not believe that America is spent, and they are determined to preserve their tradition of a free government and a free economy. And yet this is the philosophy that has guided their Government for 7 years. It is the underlying philosophy of New Deal legislation.

The New Deal has adopted a slogan to justify its spending policies. They call it "spending to save"—presumably our free institutions. They talk about "balancing the human budget," as though they were doing so in the same proportion that they are throwing the financial Budget of the Nation further and further into the red.

According to the Treasury statement of February 15, the national debt is approximately forty-two billion two hundred and sixty-five million. That is over two and a half billion more than it was a year ago. Since the beginning of the fiscal year 1940, which began last July 1, we have accumulated well over four hundred and four million more in deficits so far this year than we did for the corresponding period in 1939.

For the fiscal year 1933, during which Mr. Roosevelt became President, Federal receipts were $16.54 for each person. For 1939, the last complete fiscal year, they had risen to $43.21 a person. For the fiscal year 1933 Federal expenses were $41 a person. For the fiscal year 1939 this has risen to $70.65 per capita. In other words, great as expenses have been—the increase of 1939 over 1933 was one of nearly 73 percent. The proportional increase in receipts—and this means the burden of taxation—has been even greater, for it amounted to nearly 148 percent. Yet during the same period the Federal debt for each person has risen from a little over $179 per capita to approximately $325 today.

In 1933 Phoenix had an estimated population of nearly 51,000. In 1933 your share of the public debt was a little over nine million. Today your share of the national debt is over sixteen and one-half million, and that does not allow for the increase of your population during the last 7 years.

New dealers would like to have you think that the taxes you have paid and the debt that has been accumulated for you within

the last 7 years has been spent to relieve human suffering. But listen to a few figures released by the Civil Service Commission concerning the number of Government employees and their pay roll on January 1 of this year:

On January 1, 1939 there were less than 920,000 executive department employees. On January 1, 1940, there was an all-time high of over 987,500 employees. That was an increase of over 68,000 in a year. The monthly pay roll went up more than $10,250,000. On a yearly basis, this would be an increase of nearly $2,000,000,000 a year.

When the President introduced the reorganization bill, the plea was that the consolidation of various departments he proposed to make would be in the interests of economy. That bill went into effect on July 1, 1939. The economy that had been effected by January 1 of this year was the addition of more than 61,500 employees in the space of 6 months. In other words, nearly 90 percent of the increase of the past year has come since the President began reorganizing the various departments of the Government in the interest of economy.

And so we have gone on year after year, going into debt almost half of the billions we were spending and adding to the number of bureaucrats who were to solve our problems for us. And today we have nearly 10,000,000 unemployed, or approximately 1 out of every 13 of our people. England, in its darkest days during the depression, had 1 out of 16 of her people unemployed. When Hitler took over Germany, 1 out of 11 of the population was out of work. The United States has been constantly slipping as compared with other nations in recovering their position of 1929. Last summer, according to the estimate of the League of Nations, we ranked eighteenth among the nations of the world. In the latest estimate, the United States ranks twenty-first, trailing all of the nations included in the League study, except France. Instead of solving the problems of industry, agriculture, or labor by our extravagance, we have only placed upon them the burden of crushing taxation and mortgaged them with debt—and been slipping backward.

But our wealth and the wealth of future generations is not all that we have spent. The New Deal policies have also been justified in the name of saving democracy. Yet, instead of saving democracy, have we not been spending it in recent years? Principles and spiritual values can be spent as well as money. Democracy can be dissipated no less than savings and wealth.

Is democracy not being spent when we have surrendered to the President and to countless irresponsible boards and bureaus powers which heretofore have rested solely in the people, and have vested in its members the arbitrary power to write legislation and by decree? Are not our civil liberties being spent when these bureaucrats have the power to try the citizen in any way that they see fit and to deny him the very rights which have always been the American's proudest boast, at the same time depriving him of the right of appeal?

If this seems an exaggeration, consider with me a few of the rulings of the National Labor Relations Board. Today, according to the decision in the Standard Hat Co. case, an employer would be unwise to risk telling his employees that they have the right to join a union or to withdraw at any time they choose unless he protects himself by adding that they may also join any union they wish. From the ruling in the Adams Bros. Sales Book Co. case, an employer is apparently responsible not only for any antiunion statement that he or one of his supervisory officials might make, but for any antiunion remark made by any one of his employees who for any reason may be said to be associated with him in the minds of his workers. Judging from the Yale & Towne case, any statement, whether written or oral, which, although containing no threats of discrimination, even dares to suggest the insincerity of an outside union or the absence of its need, may be considered an unfair labor practice. According to the Board's decision in the Vincennes Steel Corporation case, an employer would do better actually to discourage the formation of a company union rather than run the risk of the accusation that the union is company dominated. If such a union should be formed entirely on the initiative of his employees, it is to his interest to disavow any connection with it publicly. Under such conditions, freedom of speech and press for the employer and the assurance of genuine opportunity of collective bargaining for the employee simply does not exist.

The Board proceeds as it pleases and decides what evidence it will or will not accept. And it is becoming increasingly clear that unless Congress curbs the powers of such agencies the citizen will have even less opportunity for redress in the future than in the past. According to the Labor Relations Act, the findings of the Board are to be final only when supported by evidence. However, a decision handed down on February 12 by Justice Black in the Waterman Steamship case would seem to nullify this provision. A circuit court of appeals had reversed the decision of the Board on the grounds that its verdict had been based not on evidence but merely on suspicion. In his decision Justice Black admits that there is reason to question the facts as presented by the Board, and yet he rebuked the lower court for presuming to judge the facts of the case.

"It is of paramount importance," he declared, "that courts not encroach upon the exclusive power of the Board. As it did in setting up other administrative bodies, Congress has left the questions of law which arise before the Board—but not more—to the traditional review of the judiciary."

Judging from this decision, governmental boards and bureaus such as the N. L. R. B., which act as judge, jury, and prosecutor, are to have the exclusive right to select the facts upon which they wish to have any decision test. No matter how flimsy the evidence, no matter what human rights may be involved, the lower courts are apparently instructed to accept the facts thus presented without question and to confine themselves solely to questions of law. The citizen is apparently to be denied the protection of the courts in such a case. The threat to his constitutional rights and to his liberties is clear. The need for congressional reform of these agencies to assure fair rules of procedure and of evidence is more than ever necessary if the citizen can no longer appeal to the courts against injustice. The Frankenstein of dictatorial bureaucracy must be controlled if government is to remain responsible to the people, if the civil liberties essential to freemen are not to be dissipated.

Are we not spending our system of free economy when Government extravagance drains from it in taxes the money that might have gone into expanding business and providing greater employment and increased wages? Are we not spending it when the money squeezed from it in taxation is put into competition with it, replacing private investment with public investment, private loans with public loans, and private employment with public employment? Are we not spending our private economy when regulations of the Securities and Exchange Commission choke off flow of investment into legitimate enterprise? Are we not spending it when enterprise is placed in a strait jacket of repressive regulations by bureaucratic decree, when it lives in uncertainty as to what new ruling will be handed down tomorrow that may put it out of business?

I was talking recently to an old friend whom I had not seen in some time. When I asked him how his business was going, he replied:

"Well, I used to take pleasure in each day's work. It was something of an adventure, and I had at least a 50-50 chance of success. Today, all the joy of working has gone. I have all the headaches and the losses, and if by any chance I should happen to make a few cents' profit, I know the Government will get it."

Today men and women all over the country are feeling that same way. In destroying all incentive, all hope for success, are we not spending the very spirit of initiative and energy that has built America?

Then, too, are we not dissipating our wealth by the policy of buying all the silver and gold the world will sell to us at prices so high above the world level? Our Treasury vaults are bulging with some 3,000,000,000 ounces of silver and over 515,000,000 ounces of gold, only a small fraction of it mined in America. We now hold two-thirds of the world's gold, valued at more than $18,000,000,000. Year after year we have more than subsidized our exports to other nations by our purchase of these metals. No one knows what to do with the hoard. Every dollar of the American taxpayer that is spent to buy more of these metals decreases the true value of the hoard that we already have. Every dollar that we spend to stabilize the rest of the world now increases the amount of these metals that the President can use for inflation whenever he decides to exercise this power. And every dollar that we go into debt increases the danger of this, so long as he retains complete control over the Nation's currency. We are expending our wealth—more than three billions of it during the past year—to subsidize other nations today but impoverish them tomorrow; to decrease the true value of our own silver and gold mines in our Western States; and to invite disaster if our present monetary and fiscal policies are continued. Unless the soundness of our currency is safeguarded by the gradual reduction of this foreign purchase program and the setting of our financial house in order, we in America will indeed have dissipated our wealth.

Then, again, are we not spending our standard of living when we adopt policies designed to make it increasingly difficult for our American farmer and worker to compete for the markets of the world, and at the same time open the doors to the importation of cheap competitive goods that displace American farmers and workers and American farms and factories? That has been the net result of the administration policy of restriction at home, particularly of agriculture, combined with its reciprocal trade program.

The United States is now the greatest free-market country in the world. Two-thirds of the products we import are on the free list. Of the remaining one-third on which duty is charged, we have reduced the tariff on 42 percent. And, despite administration assurances that no general downward revision of the tariff schedules was contemplated, we have reduced them by an average of 38 percent. One third of the reductions or more than 11 percent of all goods, free and dutiable, have been reduced by the full 50 percent allowed by the act.

The Raw Materials National Council has estimated that agricultural imports from other nations displaced nearly $2,000,000,000 worth of American agricultural products in 1939 alone. To have raised these products in the United States would have taken nearly 44,000,000 acres of farm land. By contrast, only 35,000,000 American acres were used to produce farm products for exportation to other nations. And these exports were valued at only $655,500,000.

Administration officials will tell you that the American farmer enjoys 92 percent, or 95 percent, or 97 percent of the domestic market for a given commodity. What they do not tell you is that, due to cheap labor abroad, the value of these products would have been as much as three times greater had they been produced in the United States. What they do not tell you is that, because domestic trade represents approximately 93 percent of our total production, if you cut that by so much as 2 percent through

the importation of competitive goods, you would have to increase your exports by approximately 30 percent to make up the difference. Instead, under the reciprocal-trade program, exports of agricultural products have been falling even faster than the importation of competitive farm products has risen.

You in Arizona are directly affected by the importation of cattle. In 1939 we imported 754,000 head of live cattle. Not only was this an increase of 330,000 over the year before, but it represented almost 10 percent of the inspected slaughter in this country. The duty on cattle had been reduced in the treaty with Canada; but because these concessions apply to all the world, it permitted the inflow of cattle from other nations at the same rate, although they had given no concession to us. You in Arizona have developed a fruit industry. The duties on innumerable types of fruits have been reduced. The tariff on dates, for example, was lowered by nearly 27 percent in the treaty with Canada.

We can preserve the American standard of living only if we safeguard it against the competition of cheap foreign goods below the American cost of production. We can preserve it only if we return to the spirit of true reciprocity, as set forth by President McKinley. It was he who declared:

"The end in view is always to be the opening up of new markets for the products of our country by granting concessions to the products of other lands that we need and cannot produce ourselves and which do not involve any loss of labor to our own people but tend to increase their employment."

Under such a policy the reciprocal-trade program can be used to stimulate exports and at the same time encourage the importation of foreign products which do not displace American labor and American land. Under such a policy, the benefits can be reciprocal without injuring either.

A program of trade treaties should be continued, but it must be done in the democratic way. The citizen must be provided the opportunity for more adequate hearings than he is now afforded before a "buffer" committee which has nothing to do with the negotiations. He must have restored to him his right to appeal which was denied to him by the Reciprocal Trade Act. And he must have restored to him the same right that he has to pass on other legislation and other treaties through his representatives in Congress.

We can no more save democracy and our system of free economy by dissipating them than we can save our wealth or our natural resources by destroying them. We can save our civil liberties only by guaranteeing them to every citizen alike. We can save democratic government only through a return to a limited government of laws responsible only to the people. We can save the national credit and the savings of our people only by sound fiscal policies on the part of the Government. We can preserve a free economy only by preserving the freedom and opportunity of the individual to exercise his energy and his genius, not only for his own advantage but to contribute to the enrichment of life for all. We can go forward only by encouraging the human qualities that have always made for success—industry, initiative, and thrift. Simple as it seems, we need to remember that we can only save by saving. If it be conservative to conserve all of these things, upon which the liberties and the prosperity and the progress of the American people depend, then America has need of a conservative Government today.

The Republican Party proposes to conserve our democratic form of government by removing the power of those in office—according to the President himself—to provide shackles for the liberties of the people. It will conserve the principle of self-government by returning to the people those powers which can and should be administered in their respective States and communities. It will conserve the democratic conception that a public official is a public servant by nominating men whose purpose is not the regulation nor the reformation of the lives of our people, but the fair and impartial administration of the law, not for the benefit of any one group but in the interests of all.

The Republican Party proposes to conserve our system of free economy by freeing business from the shackles that now bind it—punitive taxation, restriction for reform, and the fear of what those in public office will decide to do next. It will remove every obstacle to private spending, private investment, and private employment as the trinity of a private economy. It will conserve the right of the worker to work and to rise as high as he is able; the right of the unemployed to work for themselves and their families instead of for the Government; the right of the farmer to fair prices and a prosperous domestic market in the only way that they can be conserved—through the revival of an expanding economy of plenty. It will enable our people to achieve the more abundant life, not destruction and scarcity, not by distributing as bounty of the Government a portion of what has been taken from them in taxes, but by enabling them to create more wealth and earn the highest standard of living of which they are capable. It will promote the partnership of capital and labor by assuring the right of genuine collective bargaining and equal justice and equal rights of both. It will promote the unity of all of our people—the farmer, the worker, and the businessman alike—in the democratic spirit of mutual tolerance and respect, sympathetic understanding and voluntary cooperation.

A conservative program? Yes. But it is a program for conserving the human rights and the free institutions which the American people have always prized most dearly. It is a program for conserving the way of life which has brought the greatest progress and the greatest human happiness the world has ever known. But it is more. It is a program for conserving the moral values and the spiritual ideals toward which men have struggled through the ages. It is a program based upon the faith that the American people are not spent, but will go forward, as they have in the past, to give light and inspiration to the rest of the world.

Report of Frank Republican Program Committee

EXTENSION OF REMARKS

OF

HON. THOMAS F. FORD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

EDITORIAL FROM THE NATION OF MARCH 9, 1940

Mr. THOMAS F. FORD. Mr. Speaker, if the Frank Republican Program Committee's report is to be the basis for the Republican platform of 1940 it is my fixed conviction that the Democrats have nothing to fear. If "imitation is the sincerest flattery," we have here a brilliant example.

It is my understanding that this group of "best minds," this imitation "brain trust," spent in excess of a year preparing this report.

If original thinking was the objective, it seems to have completely failed.

To me it looks as though the mountain labored and brought forth a very timid and frightened little mouse.

The best analysis I have seen of this herculean effort is an editorial which appeared in The Nation for March 9, 1940, which I am placing in the RECORD.

[From The Nation of March 9, 1940]

FRANK BUT NOT CANDID

The easiest way to summarize the report of Glenn Frank's Republican program committee is to say that it comes out for the New Deal with ifs and buts. The report was intended to serve as an arsenal for the 1940 campaign, but the weapons supplied seem chiefly boomerangs. The Democrats could find no more graphic testimonial to the permanent character and historical importance of the changes associated with Mr. Roosevelt's Presidency. Read in the light of the "rugged individualism" campaign of 1932, the report shows the extent to which the Republican Party has been forced to accept the leadership, not of Mr. Hoover or of Mr. Landon but of Mr. Roosevelt. The intent to sabotage his reforms is clear enough to one who reads this program carefully—and between the lines—but the report is nevertheless forced to pay him the tribute of endorsing the principle of virtually everything he has done. Mr. Hoover still belongs to the Republican Party, but the Republican Party no longer seems to belong to Mr. Hoover. It accepts collective bargaining, relief for the unemployed, social security, soil conservation, subsidies for agriculture, reciprocal-trade agreements, regulation of stock markets, Government "yardstick" competition where necessary, minimum-wage and maximum-hour legislation, and even the impossibility of returning to the gold standard at this time. In what, then, does it differ from the policies of Mr. Roosevelt?

IMITATION SINCEREST FLATTERY

It differs only as the plugged nickel does from the genuine. This program is no doubt honest in its implied pledge to keep New Deal legislation on the statute books, but there are more ways than one to skin a statute. The Republican administrations which followed Wilson's repealed neither the Clayton Act nor the Federal Trade Commission Act. The Federal Trade Commission continued in existence, but it soon became a means not of policing industry but of extending old-age assistance to some of the Grand Old Party's deserving poor. New Deal reforms are susceptible to the same treatment. It may be that we are oversuspicious. It may be that Ernest T. Weir, who has just been appointed chairman of the Republican national finance committee, is preparing to pass the hat among his Wall Street friends on the basis of a frank pledge to carry on the New Deal. We have too high an opinion of Mr. Weir's astuteness to believe it. The program shows that the contributors will get their money's worth if the Republicans win. Its position on the Securities Act is an example. The Glenn Frank "brain trust"—another Democratic imitation incidentally—thinks "full disclosure" on security sales "as vital as protecting consumers against adulterated or poisonous foods." But they believe sellers of securities are being asked to disclose too much. The reference to protecting consumers against adulterated foods is itself a wink that potential contributors will not be slow to understand.

A PROGRAM OF IFS AND BUTS

Similarly, the ifs and buts on collective bargaining and the Wagner Act are sufficient to give business all the amendments it has been asking. Without saying so, the report implies repeal of the Wage and Hour Act, for it proposes wage and hour protection only

where collective bargaining is not possible. The program committee does not object to Government "yardsticks" in the power industry, but its proposals on accounting methods and delimitation of territory will not antagonize Mr. Willkie.

It approves reciprocal-trade agreements, but recognizes with equanimity that "the present trend toward national self-sufficiency" may require another and bigger dose of Hawley-Smootism. It agrees that the unemployed must be fed, but wants "local forces" to determine relief allowances and methods. It is for social security but objects that pay-roll taxes do not represent taxation on the basis of ability to pay. It is for taxation on the basis of ability to pay, but wants lower taxes on higher incomes. It wants a balanced Budget, but it proposes reduction in the higher individual surtax rates, repeal of the capital-stock and excess-profits taxes, and abolition of the normal tax on dividends. It is true that these tax proposals are coupled with elimination of tax exemption on future issues of Government bonds, but this reform would have its compensation in the higher interest rate. Mr. Weir should not find it difficult to raise money for the campaign on the basis of this program. Contributions might well represent a self-liquidating investment.

HALF TRUTH, JUGGLED FIGURES, STACKED CARDS

There are more half truths, juggled figures, and stacked cards in this report than we can attempt to set straight in this editorial. There are proposals of the purest throttle-bottom variety, such as the suggestion that corporations make annual reports to their workers as well as their stockholders. There are passages of unconscious humor Max Beerbohm could hardly surpass. The 200 experts, after 2 years of work, have reached some profound conclusions. "Expenditures," they decide solemnly in one passage, "are at the heart of most fiscal problems." This is, indeed, a discovery. There are analyses which one would ponder respectfully if they came from Norman Thomas but which are pure non sequitur in the context of republicanism. Of such are the discovery that the farm problem would be solved of itself if every American family enjoyed a decent diet and the discovery that there would be a boom in building and in household accessories if every American family had a decent home. But how are we to enable every American family to afford a decent diet and a decent home? On this new version of the full dinner pail and two cars in every garage the experts are silent. And in that silence, now as in 1932 and 1936, lies the New Deal's opportunity.

W. P. A. Workers Appeal Through Paid Advertisements to Private Industry for Jobs

EXTENSION OF REMARKS

OF

HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

Mr. COCHRAN. Mr. Speaker, I read with a great deal of interest in the Washington News last Thursday an editorial entitled "Message to Industry." This is a message from W. P. A. workers of New York City to private industry. It was in the form of an advertisement in a New York paper paid for by W. P. A. employees, who forcibly pointed out their desire to secure private employment.

Much has been said about the W. P. A. worker being satisfied. Anyone who knows what confronts a man with a family employed by W. P. A. is fully aware that 95 percent of them are anxious and willing to accept private employment. W. P. A. is only a headache to these workers, but when private industry offers no inducement to them they are by necessity forced to appeal for work to W. P. A.

Mr. Speaker, this is a most interesting editorial and I include it as part of my remarks. The editorial follows:

[From the Washington Daily News]

MESSAGE TO INDUSTRY

Three hundred W. P. A. workers in New York City bought newspaper advertising space the other day to address "A Message to Private Industry."

"Our salaries are paid by your taxes, but we would prefer employment direct by you," the message said. "Unfortunately, there seems to be some misunderstanding about this. Most of us have found, through bitter experience in seeking private work, that a record of employment with the W. P. A. is often construed to indicate lack of character, ability, initiative, or intelligence.

"We believe it is time something was done to dispel this belief. * * * We are unanimously willing and anxious to secure private employment. We believe that among us you can find the man or woman to fill, to your complete satisfaction, any job which you may have to offer. All we ask is that you give us a chance."

Certainly that statement indicates presence of character, ability, intiative, and intelligence among the men and women who made it. It should, and it probably will, bring many offers of private jobs to their unofficial "W. P. A. Employees Placement Association." We hope it will help to overcome the widespread prejudice against hiring persons who have been on W. P. A.

There is bitter irony in the fact that W. P. A., dedicated to keeping the unemployed fit and ready to return to private industry, so often closes the door it is meant to prop open. Part of the blame can be laid to the management of W. P. A., part to the cruel jokes about shovel-leaners, part to the presence on the rolls of many who are content to regard work relief as a career. But there are many more who are as eager to get off W. P. A. as any taxpayer can be to get them off, and their plea for a chance deserves the active, sympathetic attention of private industry.

Democratic Senators on Record as Being Opposed to Tariff Making by the Executive

EXTENSION OF REMARKS

OF

HON. FRANK CROWTHER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

JOINT STATEMENT ISSUED ON SEPTEMBER 29, 1929, BY DEMOCRATIC MEMBERS OF SENATE FINANCE COMMITTEE ATTACKING PRINCIPLE OF PERMITTING PRESIDENT TO PASS UPON TARIFF RATES

Mr. CROWTHER. Mr. Speaker, under leave to extend my remarks, I include the following public statement issued on September 29, 1929, by the Democratic members of the Senate Finance Committee, many of whom are still members of that body. The statement was originally published in the CONGRESSIONAL RECORD of October 2, 1929, and is of particular interest at this time, when the question of tariff making by the Executive is again an issue. With but one exception, all of the signers are still Members of the Senate.

It should, of course, be kept in mind that the following statement is directed at the so-called flexible tariff, which is a very mild delegation of authority compared to that under the present Trade Treaty Act. Under the flexible tariff the President is bound by a congressional rate-making formula, and, as the Supreme Court said in the Hampton case upholding its validity, he merely exercises an administrative authority in applying the legislative rate-making formula to the facts, as found by the Tariff Commission. Under the Trade Treaty Act, however, the President exercises complete discretionary authority in rate making, being bound by no such formula as is contained in the flexible tariff.

The joint statement follows:

JOINT STATEMENT ISSUED BY DEMOCRATIC MEMBERS OF SENATE FINANCE COMMITTEE ATTACKING PRINCIPLE OF PERMITTING PRESIDENT TO PASS UPON TARIFF RATES

September 29, 1929, the eight Democratic members of the Senate Finance Committee issued a public statement in which they attacked the principle of permitting the President to pass upon tariff rates as being unconstitutional and a menace to the democratic form of government. The statement follows:

"A question of far-reaching consequence transcending considerations of party prompts us to issue a public statement in relation to the so-called flexible provisions of the tariff bill now pending before the Senate.

"The question involved is one that in our opinion strikes at the very roots of constitutional government. It concerns the preservation unimpaired or the abandonment of the power of levying taxes by that branch of the Government which the forefathers agreed should alone be charged with that duty and responsibility.

"Whatever argument could be advanced during the war and immediately following for delegation to a degree of the taxing power to the Executive unquestionably no longer exists. To incorporate now in the law any recognition of a right of the Executive to impose taxes without the concurrence of the legislative branch is without justification.

"Authority in the Executive to make the laws that govern the course of commerce through taxation is especially objectionable. It is an entering wedge toward the destruction of a basic principle of representative government, for which the independence of the country was attained and which was secured permanently in the Constitution.

"There is no issue here as to the integrity of any Executive who has had or may have extended to him the exercise of this power. The issue is one of taxation by one official, be he President or monarch, in contrast to taxation by the representatives of the people elected, entrusted exclusively with the power to seize the property of the citizen through taxation. If proof were needed that the danger which the forefathers foresaw is inherent in this issue, a mere casual inquiry into the methods employed, selfish influences used, sinister schemes and contrivances brought to bear, one need but examine the record.

"The principle is: Are taxation laws and their application to be made virtually in secret, whatever may be said about a limiting rule, or are they to be enacted by the responsible representatives of the people in the Congress, where public debate is held and a public record made of each official's conduct?

"The arbitrary exercise of the taxing power, all the more dangerous if disguised and not obvious, in its basic character is tyranny. Resistance to the impairment of this popular right has largely occasioned many of the wars and revolutions of the past.

"An issue of this importance should not be associated with the opinions or necessities of those interests, States, or sections that directly profit by some rate schedule in the body of the tariff act. With respect to the principle here at stake, any trading or log-rolling is especially unjustifiable and indefensible. Neither should we be unduly influenced by the attempt to divert attention from this momentous issue by condemnation of and emphasis upon the dilatory and unsatisfactory results of congressional procedure.

"No one seeks to prevent or in any way to interfere with the investigations and reports of the Tariff Commission in connection with emergency tariff legislation. The point is, we emphatically insist that final action and responsibility based on Tariff Commission reports shall be taken by the Congress.

"For the purpose of preventing apprehended congressional delay an amendment has been made providing for the submission of the reports to the Congress by the President, and, furthermore, an amendment will be presented strictly limiting action by the Congress to matters germane to the particular subject matter or rates recommended by the President after investigation by the Tariff Commission.

"We do not hesitate to say that if this extraordinary and what we believe to be unconstitutional authority passes now from the Congress, it is questionable if there will ever again be a tariff bill originated and enacted by the Congress.

"It is our solemn judgment that hereafter all taxation through the tariff, and regulation of commerce thereby, will be made by the Executive. It is the inherent tendency of this tariff-changing device and the apparently conscious purpose of its proponents to use it to keep the tariff out of Congress where it is such an embarrassing business, as everyone knows, to the party that profits politically by it. So also it will be of distinct advantage to the interests that are the direct beneficiaries of the tariff.

"In an age where there has been a steady tendency to rob the individual citizen of his power and influence in his Government through bureaucracy, we deem it our duty to vigorously protest any further encroachments in this direction, and especially with respect to taxation.

"In the hope of arousing the people, regardless of party, to take a broad, public view of this important public question, we make this appeal.

"FURNIFOLD M. SIMMONS, of North Carolina.
"PAT HARRISON, of Mississippi.
"WILLIAM H. KING, of Utah.
"WALTER F. GEORGE, of Georgia.
"DAVID I. WALSH, of Massachusetts.
"ALBEN W. BARKLEY, of Kentucky.
"ELMER THOMAS, of Oklahoma.
"TOM CONNALLY, of Texas."

New C. C. C. Head Measures Up

EXTENSION OF REMARKS
OF
HON. MARY T. NORTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1940

EDITORIAL FROM THE BOSTON HERALD TRAVELER OF FEBRUARY 29, 1940

Mrs. NORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Boston Herald Traveler of February 29, 1940:

[From the Boston Herald Traveler of February 29, 1940]

NEW C. C. C. HEAD MEASURES UP

A good man from New Jersey has succeeded a good man from Massachusetts as director of the C. C. C. James J. McEntee has succeeded the late Robert Fechner. McEntee was Fechner's executive assistant.

The importance of this information lies in the fact that McEntee becomes the head of a Nation-wide activity which maintains 1,500 camps and an average enrollment of 300,000 young men. Continuous outside pressure is brought to bear on C. C. C. to militarize the outfit. From the outset, President Roosevelt and Director Fechner opposed every move to militarize the corps. The new director, McEntee, is equally opposed.

The American public should give full support to the policy of a nonmilitary civilian conservation corps. To militarize the C. C. C. would be to betray those hundreds of thousands of young men who in good faith entered the corps. No government with an ounce of respect for itself would take advantage of the financial need of some of its people and transform these particular young men into cannon fodder.

Director McEntee and the late Robert Fechner were close friends as well as official associates. McEntee is made of the same kind of fighting stuff that marked the brilliant career of Fechner. McEntee is a good organizer, is easy-going and good-natured, and has little use for red tape. In short, the new head of the C. C. C. appears to merit the confidence of the American people.

United America—Part 6

EXTENSION OF REMARKS
OF
HON. J. THORKELSON
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1940

Mr. THORKELSON. Mr. Speaker, article II, section 1, states:

The executive power shall be vested in a President of the United States of America. He shall hold his office during the term of 4 years, and, together with the Vice President, chosen for the same term, be elected, as follows:

The remainder of section 1 describes the procedure, giving rules and regulations, under which the President and Vice President are to be elected and conducted into office. From this section I shall quote two paragraphs, the first of which pertains to qualifications for President:

No person except a natural-born citizen, or a citizen of the United States at the time of the adoption of this Constitution, shall be eligible to the office of President; neither shall any person be eligible to that office who shall not have attained to the age of 35 years and been 14 years a resident within the United States.

I have taken the liberty of quoting this paragraph in order to show the danger of amending the Constitution. No one can deny that it was a wise provision to exclude all but a natural-born citizen to fill the chair as President of the United States, and no one can deny that it was extremely unwise to destroy this provision, as was done when the seventeenth amendment was adopted. We are, however, faced with this unfortunate situation today, for we are indeed a "democracy" instead of a democratic republic, as set forth in the Constitution of the United States.

Fifty-one percent of the voters now elects all officials and the same 51 percent determines who shall be President of the United States, for the majority now rules. This has already been explained in previous remarks on "A United America," and was also mentioned last year when I introduced House Joint Resolution 331, for the repeal of the seventeenth amendment.

I am fully convinced that we are heading for internal strife, disintegration, and complete destruction of the Government unless we repeal the seventeenth amendment, and so restore State representation in the Senate of the United States. The resolution for repeal of the seventeenth amendment is now in the Judiciary Committee of the House, and I hope someone will introduce it in the Senate. It would be very interesting to have this resolution reported out, so that it might be discussed in open debate on the floor of both Houses.

The people who are interested in restoring sound government should insist that this resolution be passed in both Houses, so that it may be presented for consideration to

the various States. It is only in this manner that constitutional government can again be established in this Republic of the United States of America. It is extremely important to the people of every State that their State be represented in the Senate of the United States.

I am one of those who believe in strict discipline and faithful execution of all orders by the highest as well as the lowest, not only in the military establishments but also in civilian government. I also maintain that no leniency should be extended to anyone who violates his oath of obligation "to preserve, to protect, and defend" the people's rights and the Government of the United States. I believe he or they should be held strictly accountable for all violations and infractions of obligated duty to the people of our Nation.

I maintain that the President of the United States occupies a much more important position than other public officials, for he should set an example for others to follow. This is clear as we read article II, for he has obligated himself not only "to preserve, to protect, and defend the Constitution," but also to see that the Constitution is faithfully obeyed. I shall now quote the second paragraph, to which I have already referred:

Before he enter on the execution of his office, he shall take the following oath or affirmation: "I do solemnly swear [or affirm] that I will faithfully execute the office of President of the United States, and will, to the best of my ability, preserve, protect, and defend the Constitution of the United States."

The President, after subscribing to this oath, is obligated to carry out sections 2, 3, and 4 of article II, which I shall now quote:

SEC. 2. The President shall be Commander in Chief of the Army and Navy of the United States, and of the militia in the several States, when called into the actual service of the United States; he may require the opinion, in writing, of the principal officer in each of the executive departments, upon any subject relating to the duties of their respective offices, and he shall have power to grant reprieves and pardons for offenses against the United States, except in cases of impeachment.

He shall have power, by and with the advice and consent of the Senate, to make treaties, provided two-thirds of the Senators present concur; and he shall nominate and, by and with the advice and consent of the Senate, shall appoint Ambassadors, other public ministers and consuls, judges of the Supreme Court, and all other officers of the United States, whose appointments are not herein otherwise provided for, and which shall be established by law, but the Congress may by law vest the appointment of such inferior officers, as they think proper, in the President alone, in the courts of law, or in the heads of departments.

The President shall have power to fill up all vacancies that may happen during the recess of the Senate, by granting commissions which shall expire at the end of their next session.

No one should fail to note that the only power granted to the President in article II, exclusive of Senate approval, is the "power to grant reprieves and pardons for offenses against the United States, except in cases of impeachment," and please be reminded that this is the only power granted to the President by the Constitution without Senate approval. It follows, therefore, that all power now vested in the President by Congress is unconstitutional, and a power that Congress had no constitutional right to transfer to him or to the executive department. This should be clear to even the most obtuse Member of Congress.

The President is, of course, Commander in Chief of the Army and Navy and of the State militia when called into active service, and to this no one can object. The President, however, must bear in mind that he and the Army and Navy are subservient to the Congress of the United States, a fact that is clearly set forth in article I, section 8. It may be enlightening for some of the Members in Congress when I state at this point that Congress, the President, the Army and Navy, including the other Federal branches and all Federal departments, are subservient to the people of this Nation and must not interfere with the people's rights or jeopardize national security.

SEC. 3. He shall from time to time give to the Congress information of the state of the Union and recommend to their consideration such measures as he shall judge necessary and expedient; he may, on extraordinary occasions, convene both Houses, or either of them, and in case of disagreement between them, with respect to the time of adjournment, he may adjourn them to such time as he shall think proper; he shall receive ambassadors and other public ministers; he shall take care that the laws be faithfully executed and shall commission all officers of the United States.

Section 3 provides that the President may "give Congress information of the state of the Union and recommend to their consideration such measures as he shall judge necessary," and I believe Members of Congress look forward to this information with keen interest, hoping that his recommendation will be in accord with the Constitution of the United States. This is no more than what may be expected, for we find in the same paragraph a command to the President, that "he shall take care that the laws be faithfully executed"; and what law is more important than the Constitution of the United States?

This question now arises, Has the President taken care that the Constitution is faithfully executed? Has the President advised Congress not to enact, and has he refused to approve and sign, unconstitutional legislation? The answer is "No." It is, therefore, clear that he, as well as some Members in Congress, have violated their obligation "to preserve, to protect, and defend the Constitution."

The people should make it their business to inform themselves of what is happening to their liberties and rights when Congress enacts unconstitutional legislation. Industry, as well as labor, should awaken and rub their eyes so that they may be able to read the new formula—war and regimentation—which is rising over the international horizon. Our business people should know by this time that there is no rhyme or reason for the condition in which we find our business structure today. They should know that all is being deliberately planned by the internationalist, so that he and his sympathizers may acquire ownership of all valuable sources of national income. Labor should understand that when the internationalist takes charge, as he hopes to do, there will be no collective bargaining or freedom of labor, for he, having control of business, no doubt hopes to wield policing power as well as a weapon of enforcement, and it is such price we will pay for neglecting our own Government.

More than 50 Government-owned and operated corporations destructive to business and labor have been set up by special legislation and approved by the President of the United States. Congress also has enacted the Gold Reserve Act, the stabilization fund, the Social Security Act, Reorganization Act, emergency acts, emergency legislation, international banks and banking acts, taxation of public officers and employees, the Hatch Act, and many others, all of them unconstitutional.

The fact that Congress has blindly enacted unconstitutional legislation is in no sense an excuse for the President to sign or approve such acts, for he too has obligated himself to respect the Constitution of the United States. I have raised this issue to show how important it is for the people to watch the actions of Congress and insist that the Senate and the House honor their obligation, which is "to preserve, to protect, and defend the Constitution of the United States." It is only in this manner that our Nation can survive.

There is one law which the President has obligated himself faithfully to observe and to enforce, and that is the Constitution of the United States. I often wonder if, when he is signing unconstitutional legislation, section 4 ever comes to his mind:

The President, Vice President, and all civil officers of the United States shall be removed from office on impeachment for, and conviction of, treason, bribery, or other high crimes and misdemeanors.

I have often wondered in the past year what would actually happen to many officials now employed in the Federal Government if the majority in Congress were composed of real patriotic statesmen instead of international dupes. It would just be too bad for these international racketeers, who are now waxing fat on the taxpayers' money.

I understand about 3,000 attorneys are employed by the Federal Government in the District, and I presume that many of them spend their time drafting much of the queer

legislation that reaches the floor of the House. This legislation is packed into pages and pages of pamphlets and must be considered by the House in 8 or 10 hours, when for understanding it should actually require a week of study. This "must" legislation is supposed to be passed as is, for the rules of the House permit no intelligent separation of these pathological brain babies of "hot dog" attorneys.

Members of Congress, instead of being cowed by this stuffed legislation and worried over what the people think back home, should hurl it back into the teeth of those who wrote it, and ask that each measure be presented in separate form so that it could be rejected at the usual congressional leisure. The idea of using sound legislation and appropriations as a vehicle to carry unsound laws and wasteful squandering of money cannot be condemned too severely.

I realize that some of these experts may wish to take issue with my statements, and let it be understood that I welcome such action. I shall only ask that arguments on the constitutionality of legislation be based on the Constitution itself, and not upon some flimsy flight of imagination, which at some time in the past may have infiltrated the cerebral cells in the cranium of some Justice of the Supreme Court. It is a foregone conclusion that when interpretation of constitutionality is based upon decisions rendered by previous interpretations, the last opinion is so far removed from the original document that all relationship is lost, and bears, therefore, about the same resemblance to the Constitution as the smallest twig of a branch bears to the trunk of a tree.

All unconstitutional laws which now have become a burden to industry, business, and labor are written into the statutes either because of legal ignorance or willful evasion of the Constitution of the United States. Such laws should be repealed, for they have become a nuisance and are in many instances employed to persecute the people. In addition to all other inconveniences, the cost of administration of these unwarrantable laws is actually closing many business enterprises, which results in increased unemployment.

The mess we are in today stinks to high heaven, for we, the people, are not only exploited by a putrid national political machine but we are, in addition to that, the victims of an international political machine, which will, if not eliminated, destroy this Nation and enslave our people. We must get rid of both monsters, for do not forget that it is minorities, working through political parties, that have destroyed all sound governments.

I cannot imagine anything more incompatible and destructive than having an internationalist or an international sympathizer as President of the United States and as head of a political party at the same time. It is like trying to mix oil and water. Dual allegiance can only end as it is now doing—in utter disintegration of the Government.

LET US NOT BE FOOLED

Our Nation is now undermined with communism in all branches and departments of the Federal Government. We find communism well infiltrated in colleges—in private and public high schools. These international destroyers meet in public places, protected by the watchful eyes of the law, while patriotic organizations are denied the same privilege.

I have quoted in previous issues of the RECORD the principles of Leninism, which are nothing more nor less than sabotage of our industries and destruction of our Government. All this is sold on practically every newsstand, and may be bought even by agents of the F. B. I. Let me now quote the oath and objectives of the new sprouts of communism—those who are members of the Young Communist League:

[From the Appendix of the CONGRESSIONAL RECORD, p. 1257]

I pledge, upon joining the Young Communist League, to be a loyal fighter for the everyday interests of the working class and the toiling youth. To further do all in my power to learn and become a conscious leader amongst the young workers, wherever I may be, in the struggle against the boss class and for the establishment of a workers' and farmers' government—a soviet America.

COMMUNISM'S OBJECTIVES

1. Abolition of orderly government.
2. Abolition of private property.
3. Abolition of inheritance.
4. Abolition of patriotism.
5. Abolition of the family.
6. Abolition of all religion.

YOUNG COMMUNIST LEAGUE

Program: We favor the nationalization of the munitions industry. We stand for the abolition of the R. O. T. C. We pledge our aid to the annual student peace strike. We recognize the greater hope and vision of tomorrow—a new social order—socialism. This will mean the building of a new America in which the factories, mines, and natural resources will belong to the people. The Young Communist League has always looked upon the American Student Union as a rallying point of all progressive students, no matter what their political beliefs.

As I said, the young as well as the old Communist platform can be bought at every newsstand, and I advise the Department of Justice to read all this subversive literature and compare it with the principles set forth in the document they obligated themselves "to preserve, to protect, and defend."

I now ask the Attorney General, Mr. Jackson, to state in a letter why his department has not investigated and prosecuted the Communist Party and its affiliates in the United States, particularly in view of the fact that the Communist Party admits it is subversive, anti-American, and destructive not only to our industries but even to the Government itself.

I ask the Chief of the F. B. I. to state in a letter why he is investigating innocent patriotic American citizens, instead of the Communists who admit in their own books that they intend to sabotage industry and destroy our Government. I am sure Members of Congress would like to be informed about this, and I am sure it would be enlightening to the taxpayers of this Nation, who are paying the expenses of the Department of Justice and the salaries of the gentlemen in question.

The Department of Justice and the Federal Bureau of Investigation should understand that the various organizations that object to communism and to those who spread communistic philosophies are composed of patriotic American citizens, who have elected to perform a duty which the Department of Justice is neglecting.

Constitutional government is in a precarious position when the international Communists wield such power in the administration that they control the Department of Justice to the point where they can direct investigation of law-abiding citizens, in order to shield their own subversive activities, where the power is so great over the courts that they can set bail so high that it is tantamount to persecution. I hope that Congress and the Department of Justice will recognize the true state of affairs and correct this evil, before the people take the law into their own hands. Judges of the courts should be of the majority instead of the minority.

To those who may try to read partisan leanings in these remarks, let me say that I am neither a politician nor apologist for political parties. It is true that I advocate and advise the people to elect no one to office except those who faithfully promise to adhere to the fundamental principles of this Republic as set forth in the Constitution of the United States. No one with true interest of his people at heart should object to that, for it is only upon that document the people can protect themselves against their own Government and preying politicians. I furthermore believe that officials who deviate from constitutional principles should be removed from office for the general welfare of the people.

There is, however, one topic much discussed today and about which I am uncertain, and that is whether we should have a Republican or a Democratic President. I am, if nothing else, neutral on that score, because I realize if the incoming President is wishy-washy and tied to the same interest as the others, it matters not whether he be a Republican or a Democrat, for the end will be the same.

As I look into the future I can visualize much that may happen in the next 4 years unless drastic measures are employed to bring about rehabilitation of industries and full employment by economy in the Government.

It is quite likely that our national debt will become larger and larger and terminate in uncontrolled inflation and collapse of our monetary system, and this is particularly true as gold begins to leave the United States.

We must not forget that the seven or eight billion dollars now in circulation is not secured upon gold or silver in the Treasury, but is instead a purely inflated dollar. If we now add to the national debt nine or ten billion dollars more of contingent liabilities, the debt will reach the staggering sum of about $60,000,000,000.

I look for the currency structure to break within the next 4 years, and with unsecured money in circulation, such collapse will be complete, with nothing left but wrecked investments. This is a situation we have never had before, and I am wondering how it will be accepted by the people, particularly since they have been led to believe that the gold in the Treasury belongs to the United States.

I am not a pessimist, but as I try to separate the chaff from the wheat, I find nothing wholesome in the future. Our people are in debt, and we are importing farm and ranch products which, if we had the interest of the people at heart, should be furnished by our own producers. Our foreign trade is based upon loans that we have made to export nations, which, of course, is unsound, for do we not loan them the money they spend with us? Permanent markets cannot be acquired in such manner.

We are destroying production at home, and subsidizing production abroad. We are putting our own people on relief while we furnish employment to people in foreign countries. We are kowtowing to England, and losing the respect of neutral nations. We are fools, but we do not seem to be aware of it. No one should be blamed for this condition but the present administration, for it alone is responsible. The administration has not lived up to its obligation and should for that reason sit in the chair of responsibility, so that it may be buried in the wreckage of its own structure.

What Should America Do for the Joads?

EXTENSION OF REMARKS

OF

HON. JOHN Z. ANDERSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

ADDRESS BY PHILIP BANCROFT

Mr. ANDERSON of California. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following address by Philip Bancroft, of California:

In discussing this evening's subject, What Should America Do for the Joads?, I assume that the question means: "What should America do for the people from the farms and towns of such States as Oklahoma, Arkansas, and Texas, and that small and much overemphasized district known as the Dust Bowl, who are migrating in such large numbers to California?"; for the Joads, as pictured in Mr. Steinbeck's highly sensational and utterly inaccurate work of fiction, are in no sense representative of the average thoroughly American family coming from Oklahoma or any other State.

This migration and the conditions leading up to it present one of the greatest tragedies in American farm life, and unless something constructive is done to cure its causes we shall find that the migration has barely started. The problem, which is primarily an economic one, will never be solved by name calling or by attempts to stir up class hatreds.

The people who might have helped settle this problem are, first, the representatives of the Federal Government; second, those of the several States involved; and, third, the California farmers and their communities—and of these three only the California farmers and their communities have done their part. Both the Federal Government and the States have woefully fallen down on their jobs.

In 1935 there began arriving in California alarmingly large numbers of destitute families, lured into our State chiefly by our extremely generous relief payments, and also by the fact that our farm wages are two or three times as high as those of their home States. Our California farmers had no need of any additional laborers; they had not asked these visitors to come into their communities; and they had no housing or school facilities for them or their children. The farmers are in very much the same position as any of you city people would be if you should wake up some morning and find ten or a dozen families camped on your lawn or on the sidewalk in front of your home—all asking for jobs you didn't have, or for relief you couldn't afford to give.

Just what would you do? Well, I'll tell you what the California farmers and farm communities did. The people of Kern, Kings, Madera, Fresno, and Tulare Counties, who have been bearing the brunt of this migration, found that their fine local schools and their county hospitals, which they had built up at heavy cost, were suddenly swamped by these uninvited guests, who appeared on their doorsteps, hungry, homeless, and destitute. These farming communities built additions to their schools and hospitals; they hired additional teachers, nurses, and doctors. In the counties of the great San Joaquin Valley, the local taxes have consequently soared to unbelievable heights.

In Kern (the county in which the Joads finished their imaginary pilgrimage and in which they were supposed to have been treated so barbarously by the farmers) the local taxes for health, sanitation, charities, and corrections have more than doubled and the school taxes have almost trebled in the last 5 years, while in Kings and Tulare Counties they have almost quadrupled. Please remember that these taxes are paid by the farmers and other property owners, while their farms are worth either no more or actually less than they were worth 5 years ago.

These figures are enough to show you that the farmers of California have done all in their power to help these victims of pitifully low incomes in their home States; but, in spite of this, the problem is no nearer solution today than it was at the beginning, for even if every migrant in California should be provided tomorrow with a house, 5 acres of land, and a mule, next month we'd have 7,000 new migrants asking for relief and before a year had passed we'd have 100,000 more.

Next let us consider the States involved. We find that the home States of the migrants have done practically nothing to help out their citizens, except, perhaps, to encourage them to start migrating to California, while our own State has endangered the relief of our own deserving and needy citizens by throwing our doors wide open to the destitute of the other 47 States and inviting them to enter.

With monthly relief doles averaging $3.50 in Oklahoma and $4.68 in Arkansas, our State offers an average of $31.10 per month to those same families if they will only come to California and stay a year, although we know that by doing so we are driving our State directly toward bankruptcy.

With a direct offer to millions of people of more real money for doing nothing in California than they could hope to make for working back home, and with over a milion of our California voters promising them $30 every Thursday as soon as they reach the age of 50, the only wonder to me is that there are any farmers or small-town people left, back in Oklahoma or Arkansas. I should think that common horsesense and a desire to protect California's own would result in a residence requirement of at least 3, but preferably of 5, years before a newcomer would be allowed to draw State relief.

I cannot too often repeat that this is a national problem and that either the Resettlement Administration, or some other alphabetical national agency should have helped these distressed people to earn their livings back in their home States, as we California farmers begged them to do years ago. The Government can support families much cheaper and better in their home States than after they have started to migrate; but instead of resettling them there it has unsettled them, by encouraging them to come to California, where we have no work for them.

Now, in order to discourage indigents from coming out to California and immediately going on relief we have a regulation requiring them to reside in our State 1 year before they can qualify for State aid, but the National Resettlement Administration has largely nullified the protection afforded through this regulation by giving the migrants Federal relief for this first year until they could be shunted onto the California taxpayers. You know its always easier to shovel out the Federal tax money than to work out a constructive solution. It's no wonder that after a few years of failure the Government changed the name of the Resettlement Administration to the F. S. A., or Farm Security Administration; but I suggest it would have been far more appropriate if it had changed its name to the M. P. A., the Migrant Promotion Administration.

In conclusion I want to point out that the California farmers have done their very best to provide, out of their own meager resources, houses, schools, hospitals, nurses, and doctors for these unfortunates; that they have resisted the opportunity of capitalizing on the presence of over two men for every farm job and, instead of reducing wages, have actually raised them during this period of oversupply of labor and depressed farm prices; that, in fact, California farmers have through the years been paying the highest farm wages of any State in the Union, including incidentally your own State of New York. Under those circumstances I submit that it is about time for the well-paid economists, professors, governmental jobholders, and other politicians, as well as our sensational authors, to give up their favorite indoor sport of abusing and sniping at our California farmers and to do some constructive work to remedy what is, after all, a national economic problem.

The Milk Prices

EXTENSION OF REMARKS
OF
HON. REID F. MURRAY
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1940

Mr. MURRAY. Mr. Speaker, the prices of fluid milk may be fixed for the consumer and farmer by delegation of power to the Secretary of Agriculture, but the ultimate price to the consumer, and also to the producer of fluid milk, is influenced by the price of the manufactured product—butter, cheese, condensed whole milk, condensed skim milk, and casein.

I have never felt that one should make any effort to lower the prices obtained by the farmer for fluid milk and break this market down. However, I have many times pointed out that the large percentage of the total milk production which goes into the manufactured product cannot always be used as the shock absorber for the industry. For example, Washington milk at 14 cents per quart has equaled the 14 cents per pound retail price of cheese in Washington stores, although it takes about 5 quarts of milk to make 1 pound of cheese.

Any program or situation which is harmful to the income of the farmer who produces milk for butter, cheese, condensed milk, and other manufactured dairy products is also harmful to farmers who are producing fluid milk.

The following is an article from the Milwaukee (Wis.) Sentinel of March 6, 1940:

SHARP DROP IN PRICE PAID MILK PRODUCERS

A sharp drop in the wholesale prices of butter and skimmed milk was reflected last month in a reduction in the composite price paid milk producers of the Milwaukee area, Charles Dineen, secretary of the Milwaukee Cooperative Milk Producers' Association, reported Tuesday. It marked the end of a fairly steady rise in average prices which began last fall.

Following their election of officers, directors of the new board of the cooperative met with Milwaukee distributors Tuesday afternoon to discuss market conditions.

SKIMMED MILK DOWN, TOO

The price of 92 score butter is now about 28 cents a pound, compared to an average of 30.71 cents for January on the Chicago market, Dineen said. Skimmed milk also dropped considerably, he said.

As a result the average price for manufactured milk, which comprises nearly half of the dairymen's production, fell from $1.40 per hundred pounds for January to $1.26 for February. The average price paid for cream dropped from $1.65 to $1.51.

PRICE ABOUT $1.90

This brought the composite price for all milk produced down to about $1.90, compared to the $2 average in January.

A year ago the composite price was $1.95. That was when manufactured milk was averaging 93 cents and cream $1.18, while the minimum for fluid milk still was at $2.71. The minimum now is $2.40.

These declines in milk prices bring home to all the dairymen the effects of increased production and other factors which have caused the decline.

In Wisconsin it is interesting, though painful, to note that according to the Farm Credit Administration there has been an increase in the percent of delinquencies of farm mortgages of 37½ percent in the Federal Land Bank loans in Wisconsin from January 1, 1936, to January 1, 1940, and an increase of 74 percent in the percentage of delinquencies of the Commissioner loans during this same period. Milk is the lifeblood of the State. Sixty percent more agricultural products were imported than exported between January 1, 1936, and January 1, 1940. The agricultural exports were the lowest in 1939 that they had been for over a quarter of a century, even lower than in 1932 when we had a world-wide depression. With butter and cheese bringing 25 to 30 percent less in New Deal years than they did in pre-New Deal years, it is time the dairy farmers began to study the fundamental problems of their industry.

The reduction in the tariff on cheese of 42 percent has had a tendency to lower these prices. The fact that the tariff was again reduced in 1938 when cheese averaged only 12.6 cents per pound for the year, or less than two-thirds of parity, has given the dairy industry a blow, from which it will take time to recover. No Member of Congress, no member of the State Department, or no member of the Agricultural Department has yet tried to justify the reduction of the tariff on cheese in 1938. Evidently no one can do so, or else they would have attempted to make an answer by this time. I have never been able to find out who the "experts" were that recommended the reduction of this tariff on cheese.

Ninety-five percent of the milk of my district goes into manufactured dairy products. The average price of butter on the farms of the United States was 36 cents per pound the last 7 Republican years, and 32 cents per pound the last 4 Republican years, while the price of butter has been only 26 cents per pound the 7 New Deal years, and only 25.8 cents per pound in 1939, after 6 years of the "more abundant life."

Cheese was 17.5 cents per pound for the last 7 Republican years, 14.7 cents per pound the last 4 Republican years, and only 13.2 cents per pound the 7 New Deal years. The average price of cheese was 12.6 cents per pound in 1938 and 12.8 cents per pound in 1939.

The last 7 Republican years milk averaged $2.12 per hundredweight in the United States and only $1.68 per hundredweight the 7 New Deal years.

This has resulted in the following situation in the Seventh District of Wisconsin, December 31, 1939:

1. Total amount of F. C. A. loans	$19,515,200
2. Total number of F. C. A. loans	8,089
3. Total number of delinquent F. C. A. loans	4,061
4. Percentage of loans delinquent	50.2
5. Number of farms owned in district by F. C. A.	711
6. Percentage of investment recovered from farms sold	61.9

We must all work for a consolidation and a correlation of all agricultural agencies which must "mesh" if we are ever going to get our agricultural house in order. We cannot continue to fix prices for one part of the dairy industry and let the other part of the industry be the "shock absorber" for the protected part of the dairy industry.

Royal C. Johnson

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1940

Mr. McCORMACK. Mr. Speaker, on August 2, 1939, as I entered the Chamber, I heard of the death of our beloved friend and former colleague, Hon. Royal C. Johnson. At that time my grief was too poignant for me to attempt to describe many of those noble traits of character which made Royal Johnson great in the best and truest meaning of the word.

Royal was a man of rugged, instinctive honesty, moral and intellectual. His capacity for friendship knew no limits. His friendships knew no party lines. He abhorred hypocrisy in all its forms. He had deep religious convictions which marked him as a Christian gentleman in every sense. He could not look upon an object of pity that his heart did not go out in the fullness of sympathy. He never encountered one needing help that his hand did not go to his pocket. No one ever came in close contact with Royal Johnson who was not the better for having done so.

His soul, which made him great, can never perish. He leaves a reputation to his devoted family and to his country worthy of emulation of all mankind.

I never have known nor do I ever expect to meet a truer friend than Royal Johnson.

Resolution of Pomona Grange, Tioga County, Pa.

EXTENSION OF REMARKS
OF
HON. ROBERT F. RICH
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1940

Mr. RICH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution by Pomona Grange of Tioga County, Pa., assembled at Nelson on March 8, 1940.

This resolution certainly shows that the farmers of Pennsylvania are thinking, and thinking deeply, of the things that are for the best interests not only of those who are engaged in agriculture, but those who are engaged in industry and the great mass of people of this country who want employment—the working class who have a right to a job and who expect the Government to pass such laws and regulations that will aid and assist in securing work for them. I think this resolution is one which should be carried to all the people of this country, and for that reason I ask unanimous consent that it be inserted in the CONGRESSIONAL RECORD.

The resolution is as follows:

1. *Resolved, by Pomona, No. 30, in regular session assembled, at Nelson, Pa., March 8 and 9, 1940,* That we are opposed to all legislation now pending, or hereinafter introduced, for the purpose of creating a Department of Education at Washington, or any legislation that denies the parents the right to educate their children in accordance with existing laws and customs.

2. *Resolved,* That we favor the incentive payment plan, used intelligently, to encourage farmers.

(a) In growing crops for industrial or nonfood purposes, thus extending our agricultural market beyond food requirements.

(b) In producing products that are now imported and for which our soils and climate are adapted.

(c) By Federal payments for that type of farming which prevents further soil losses.

(d) By Federal payments for fertility-building and soil-holding practices.

Why should the American people buy from the foreign farmer millions of dollars' worth of oil, fibers, sugar, starches, and other products while the Federal Government is paying American farmers millions of dollars to keep their acres out of cultivation?

If the American farmers were given incentive payments for producing these products they would not only make idle acres productive, but would prevent their being used to grow crops that are not needed. Relief rolls would be decreased as labor would be needed to grow and market these products.

The present program limits production on all kinds of land, without regard to adaption for certain crops. The incentive plan would permit production to center wherever it would be the most efficient and profitable. Here is a plan that will rebuild farm income on a permanent basis and create jobs for unemployed men.

3. *Resolved,* That we oppose the efforts that are being made to have States ratify the child-labor amendment, which, if enacted, would give the Federal Government the control of the child until 16 years of age. It is the sense of this Pomona that the average American home is quite as competent to direct the training and education of the child as any bureau that might be created in Washington.

4. *Resolved,* That we urge all churches, as well as all fraternal organizations, to join the Grange in its fight to protect and preserve American ideals and traditions and prevent the spread of all un-American doctrines. Our slogan is "America First."

5. *Resolved,* That we approve the work that is being done by the Dies committee, and urge Congress to take immediate action in having dismissed all Federal employees who are not in harmony with the Federal Constitution or our American form of government. We further demand that the 7,000,000 or more alien parasites who are living off the American taxpayers be sent back to the countries from which they came, without further delay or ceremony.

6. *Resolved,* That we urge Congress to either repeal the National Labor Relations Act, or else amend it so that it will be both practical and workable. Inasmuch as both labor organizations have denounced the law in no uncertain terms, it would seem that outright repeal would best meet the needs and interests of all the people.

7. *Resolved,* That we oppose the renewal of all pacts and treaties with foreign nations and insist that no more be made without the advice and consent of the Senate as provided in the Constitution.

8. *Resolved,* That we favor a conference between labor, industry, and agriculture for the purpose of having all laws that hinder or retard business repealed and enact such laws as will establish such rules and regulations as will enable legitimate business to function in a normal manner. Such a law should protect the rights of all parties at interest and grant special privilege to none.

9. *Resolved,* That it is the sense of Pomona, No. 30, that vicious labor laws and the dictatorial demands of unscrupulous labor leaders, are largely responsible for unemployment conditions and the slowing down of business in general. These demands not only increase the cost of production, but also increase the number of unemployed and prevent an adequate return to either the laborer or the farmer.

E. B. DORSETT.
H. L. SEELEY.
LOUISE THOMAS.

The W. P. A. and Unemployment Problem

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1940

LETTER FROM KENNETH L. VARDON

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letters:

UNITED DAIRY WORKERS, L. I. U. No. 83,
Detroit, Mich., March 6, 1940.

Hon. JOHN LESINSKI,
Congress of the United States, House of Representatives, Washington, D. C.

DEAR SIR: Enclosed please find copies of a letter received from Hon. CLARE E. HOFFMAN in answer to our request for his sincere consideration of the W. P. A. and unemployment problem, and also our reply.

I believe that these letters are self-explanatory; nevertheless, I might say that it is unfortunate that the good work being done by some of our able representatives must be counteracted by this type of individual.

Thanking you for your past cooperation, I remain,

Very truly yours,

KENNETH L. VARDON, *President.*

FEBRUARY 29, 1940.

Mr. GEORGE MCLEAN,
Recording Secretary, United Dairy Workers, L. I. U. No. 83, 901 Hofmann Building, 2539 Woodward Avenue, Detroit, Mich.

DEAR MR. MCLEAN: Thanks for yours of the 26th, enclosing copy of a resolution adopted by United Dairy Workers, L. I. U. No. 83.

It is regrettable that there is so much unemployment and that the principal cause of unemployment in Detroit is due to the activities of the C. I. O. and some of its communistic friends.

I know of no reason why farmers through Michigan should be required to make good the losses caused by strikes brought about by C. I. O. organizations. If the farmers ever retaliate by like means, many a C. I. O. worker will go hungry. Thank your lucky stars that the farmers are more reasonable, more charitable, more sensible.

Sincerely yours,

CLARE E. HOFFMAN.

MARCH 6, 1940.

Hon. CLARE E. HOFFMAN,
Congress of the United States, House of Representatives, Washington, D. C.

DEAR SIR: The United Dairy Workers is accustomed to receiving polite and sensible answers from public officials whom it addresses. Your answer to our letter of February 26 does not come within that category.

As to your uninformed remarks on the causes of unemployment in Detroit, I suggest that you study carefully the graph and the accompanying article in the issue of the Michigan C. I. O. News which I enclose. May I point out to you that this chart is based on figures of the board of commerce and that the article was prepared, not by the C. I. O., but by the Association of Catholic Trade Unionists, an organization endorsed and approved by the Catholic Church.

It seems to us that public officials in your position have an obligation to study facts and base their judgment on them rather than on emotion or political ambition. If you and others who think and act as you do would adopt the course we suggest, we would have a more intelligent and a more effective national legislative body.

As to your remarks on farmers, let me remind you that farmers benefit from every economic gain made by industrial workers. More than that, the C. I. O. in Michigan and throughout the country has cooperated wholeheartedly in every possible case where farmers,

struggling for a better living, need our assistance. The Farmers Union of Michigan testify to that fact.

Copies of this letter and of your answer of February 26 are being sent to your colleagues in the House of Representatives.

Sincerely yours,

KENNETH L. VARDON,
President.

The Dies Committee

EXTENSION OF REMARKS
OF
HON. JOHN Z. ANDERSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1940

LETTER FROM THE ACADEMIC AND CIVIL RIGHTS COUNCIL OF CALIFORNIA AND REPLY OF HON. JOHN Z. ANDERSON, OF CALIFORNIA

Mr. ANDERSON of California. Mr. Speaker, under leave granted me to extend my remarks in the RECORD, I include the following letter to me from the Academic and Civil Rights Council of California and my reply thereto:

ACADEMIC AND CIVIL RIGHTS COUNCIL OF CALIFORNIA,
San Francisco, February 27, 1940.

Hon. JOHN ANDERSON,
House of Representatives, Washington, D. C.

DEAR SIR: The Academic and Civil Rights Council has strongly condemned the Dies committee for its un-American activities and joined with many other organizations in urging you to vote against a renewed appropriation for it. We are very disappointed that you did not follow the courageous lead of Congressmen HAVENNER, FORD, IZAC, and GEYER in urging that no appropriation be granted.

Your sanction of the continuance of this committee places you in a position where honest progressives must voice the severest condemnation of your action.

Sincerely,

LOUISE BRANSTEN,
Executive Secretary.

MARCH 6, 1940.

Miss LOUISE BRANSTEN,
Executive Secretary, Academic and Civil Rights Council of California, 1132 Greenwich Street, San Francisco, Calif.

DEAR MADAM: This will acknowledge your letter of February 27 with reference to my vote in support of the Dies committee.

You state that the Academic and Civil Rights Council, which organization you serve as executive sercretary, "has strongly condemned the Dies committee for its un-American activities." Frankly, I am not familiar with the background or the objectives of your group, but I am inclined to believe that our ideas on what constitutes true Americanism are very much opposed.

Permit me to quote directly from the report filed by the Dies committee in the House of Representatives on January 3, 1940:

"The purpose of this committee is the task of protecting our constitutional democracy by turning the light of pitiless publicity on the activities of organizations seeking to work the will of foreign dictators in the United States or to destroy our constitutional democracy and set up a totalitarian regime of some sort in its place. The committee's objectives have been advanced to a remarkable degree in a brief 12 months. The Soviet-Nazi pact has helped by making more clear the real nature of all dictatorships and by revealing the similarity between Hitler's nazi-ism and Stalin's communism. The attacks on Poland and Finland have caused a revulsion of feeling in America against the nations which were responsible.

"The work of the committee has unquestionably been an important factor in bringing about the following results:

"(1) Fritz Kuhn, styled 'fuehrer' of the German-American Bund, has been sent to prison as a man unable to be trusted with the custody of the funds of his own organization.

"(2) Earl Browder, general secretary of the Communist Party, and William Weiner, party treasurer, have been indicted on the charge of falsifying American passports, and the Department of Justice is understood to be preparing further cases of a similar sort against other leaders of that organization.

"(3) Nicholas Dozenberg has been charged with counterfeiting of American money on orders from the Communist International.

"(4) William Dudley Pelley, self-styled 'leader of men,' has finally been apprehended and will answer to the law for alleged violation of his probation.

"(5) Officials of Bookniga, Soviet propaganda agency, have pleaded guilty to the charge of failure to register with the State Department as foreign agents and similar cases are in preparation by the Justice Department.

"(6) Arno Rissi and Mrs. Leslie Fry, west coast Nazi and Fascist leaders, have fled the country for good and sufficient reason.

"(7) Many bills of a corrective nature have been introduced and passed by the House as a result of the testimony produced by this committee.

"Speaking more generally, the German-American Bund, the Communist Party, the Silver Shirts, and some other similar organizations have fallen upon the darkest days they have seen yet. They are losing both membership and prestige and the time may speedily come when they will cease to be seriously regarded by anyone in the United States. If this result is to be achieved, however, the earnest effort of all groups of people in the United States will be required, as well as vigorous action to enforce the laws we now have on our statute books."

The accomplishments of the Dies committee, as reported above, thoroughly convinced me of the pressing need for a further investigation of subversive activities in the United States. Had I cast my vote against the continuance of the committee, I feel that I would have been false to the best interests of the citizens whom I have the honor to represent.

You are aware, of course, of the fact that the United States House of Representatives is undoubtedly the most truly representative governing body in the world. Its Members are elected every 2 years and as a cross section of true American opinion, expressed through duly-elected Representatives, its equal would be hard to find. The House of Representatives voted recently to continue the Dies committee by a vote of 345 to 21. This result should furnish conclusive proof to even the most critical observers that Congress will continue to defend our constitutional democracy against the encroachment of subversive ideologies.

Some of the so-called liberal and progressive organizations which have condemned the work of the Dies committee might well be censured themselves for engaging in activities which are not in accord with the real traditions of true Americanism.

I trust that I have made my position clear.

Very truly yours,

J. Z. ANDERSON.

Aid to Poland

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, March 11, 1940

RESOLUTION OF THE POLISH ARMY VETERANS' ASSOCIATION OF AMERICA

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution:

The board of officers and directors of the Polish Army Veterans' Association of America, Inc., and Ladies' Auxiliary, having met at its regular meeting on March 1, 1940, at 56 St. Marks Place, New York, N. Y., adopted and passed the following resolution:

"Whereas in the month of September 1939 Nazi Germany and Soviet Russia, without formal declaration of war, invaded with armed force the boundaries of Poland and in its march over hereditary Polish territory having destroyed and murdered thousands of helpless civilians, and having bombed defenseless hospitals, schools, and churches, and having robbed the homes of a peaceful people, wantonly and deliberately killing escaping refugees; and

"Whereas the said Nazi and Soviet Governments, after occupying Polish territory, having unjustly and unmercifully condemned thousands of priests and nuns, professors, and teachers, professional intelligensia and national leaders, sending them to an untimely death, and having sent other tens of thousands into concentration camps without just cause, there to die of starvation or disease; and

"Whereas the governments of Nazi Germany and Soviet Russia have further denied neutral countries and their humanitarian organizations the right to enter the confines of occupied territory to render aid to the sick and comfort to the aged and women and children: Be it

"Resolved, That the Polish Army Veterans Association of America, comprised of former soldiers of the Polish Army, who in 1917 and 1918, 30,000 strong voluntarily enlisted in the United States by special act of Congress to serve with the Polish Army in France and by the side of the Allied powers, France, Britain, Belgium, and the United States to fight for the independence of the Polish state and the liberation of the Polish people, and as American citizens hereby express their gratitude to the Government of the United States for its stand in refusing to recognize the dismemberment of the Polish Republic and for its condemnation of the atrocities perpetrated by the invading Nazi and Soviet forces; and be it further

"*Resolved*, That the Polish Army Veterans Association of America wishes hereby to express its profound thanks to all American humainitarian agencies and the American people for their efforts to bring succor to the suffering Polish people in occupied Polish territory and the refugees in Rumania, Hungary, France, and Britain; and be it further

"*Resolved*, That the Polish Army Veterans Association of America hereby petitions the President of the United States, the Senate, and House of Representatives of the United States, that pending legislation before Congress be passed to render financial aid to the Republic of Poland, thereby bringing aid and relief to the stricken populace of occupied Poland and which act would be in full accordance with the tradition of this great country of ours and in accordance with the dictates of humanity."

Respectfully submitted,

POLISH ARMY VETERANS ASSOCIATION OF AMERICA, INC.

L. C. KAJKO,
National Commander.

J. DEC,
Senior Vice Commander.

S. F. WOJTUSIK,
Junior Vice Commander.

L. L. KRZYZAK,
Adjutant General.

A. ZAKIEWICZ,
Quartermaster.

Opposition to St. Lawrence Seaway Project Mounting Daily

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

LETTER TO THE SECRETARY OF STATE

Mr. VAN ZANDT. Mr. Speaker, opposition to the St. Lawrence seaway project is mounting daily as the people of the Nation begin to appreciate the fallacy of this project which is bound to displace many American workmen under the guise of supplying cheap electrical power and transportation rates which will ultimately be indirectly paid for by the American taxpayers.

The high cost of these cheap rates is alluded to in the following letter I have sent the Honorable Cordell Hull, Secretary of State, under date of March 1:

HOUSE OF REPRESENTATIVES,
WASHINGTON, D. C., *March 1, 1940.*

The Honorable CORDELL HULL,
Secretary of State, Department of State,
Washington, D. C.

MY DEAR MR. SECRETARY: This will acknowledge your letter of February 15 concerning the projected treaty with Canada concerning the St. Lawrence Seaway project.

I am aware that this project, as you say, has been thoroughly investigated and that in connection with the present efforts of the President and your Department to obtain Canadian acceptance and United States Senate approval of a treaty you rely upon favorable declarations as to the engineering and the economic aspects of this project.

You are, of course, aware that any such reports are widely challenged, both as to their facts and their conclusions, by others of equal knowledge and perception. Surely you do not intend to imply that this is a matter upon which there is any unanimity of favorable opinion.

I have read with care the memorandum which you enclosed with your letter respecting the effect of the project upon the coal industry. You say that it is based on information furnished by the power authority of the State of New York. Your reference to it leaves me in doubt as to whether you concur in this memorandum and adopt its arguments as your own. Permit me to say, with all respect, that the memorandum in its discussion of the question which arises with respect to the St. Lawrence project and the coal industry is a particularly flagrant misrepresentation.

I note your comment in the opening sentence that "the coal industry is ignorant of the benefits that will accrue to it as a result of these developments." The industry is entirely conversant with the benefits claimed by the proponents. The fact of the matter is that the industry emphatically denies the validity of these claims. The assertion that the coal interests are "suggesting that electric consumers subsidize increased sales of coal by continuing to pay high rates for increased electrical consumption" is an outrageous perversion. It assumes that electricity generated from coal is fundamentally high-cost electricity and electricity generated by hydropower is fundamentally low-cost electricity. A detailed consideration of this question is beyond the scope of this letter, but suffice to say such a contention has been disproved over and over again.

May I in this connection call to your attention a statement on this subject by an eminent engineer, ex-President Herbert Hoover, in an address in New York City a few months ago. He endorsed the contention of the coal industry that under present-day conditions the generation of electricity by coal-burning steam plants is more economical than water-power generation. He said:

"According to the politician, falling water is manna free from heaven. He omits to say that somebody has to pay for reservoirs, dynamos, and power lines. It is supposedly grabbed and sold to the people by wicked power corporations.

"But the engineer has come along and reduced the coal consumption needed to make mechanical power from about 3½ pounds a kilowatt-hour to one-half pound a kilowatt-hour. He has thereby turned many hydroelectric powerhouses into rust, and thereby he retires most of the manna back to scenery.

"The politician has not discovered this yet, and still works away at getting elected upon the prospective joy to the electorate from hydroelectric power. I think, if you will look about you, you will find the Government is about the only person who now builds hydroelectric plants. We build them by the impulse of Congress, not by the impulse of low power cost.

"It is all good for a few elections yet, and we will waste a few more billions of taxpayers' money to make this manna into power at places where the engineers could make it cheaper with fuel."

If it be sought to impeach the views expressed by ex-President Hoover on this subject, with the contention that he is a Republican and a partisan and that his criticisms rest on that foundation, let me cite an opinion expressed by the late Thomas A. Edison (father of the present Secretary of the Navy). The quotation which follows, made by this great American genius as recently as 1929, states:

"THE FIRST AND BEST SOURCE OF POWER IS COAL

"We shall steadily require more power, but a great deal more fuss is being made over hydroelectric power than its intrinsic value warrants. The first and best source of power is coal. The amount of coal available is not limitless, but for all practical purposes it is limitless. We can probably use coal at our present rate for a thousand years or so without any danger of exhausing our supply, and it is highly improbable that we really know our supply.

"The development of hydroelectric power is very important, but also it is very expensive and usually requires an auxiliary coal steam plant. Some of the best water power is too far away from our manufacturing centers to make its utilization wholly practical.

"Water power is a political issue, not a business one. It can never at best mean very much to us except as something to talk about. The monopolizing of water power is also just a political idea. There is far more danger in public monopoly than there is in private monopoly, for when the Government goes into business it can always shift its losses to the taxpayers. If it goes into the power business it can pretend to sell cheap power and then cover up its losses.

"The Government never really goes into business, for it never makes ends meet. And that is the first requisite of business. It just mixes a little business with a lot of politics and no one ever gets a chance to find out what is actually going on."

No one disputes that lower electric rates tend toward increased use of electricity, but so far as the St. Lawrence project is concerned, there is no basis for the contention that it is needful in order to bring about lowered costs from which will flow lowered rates.

The memorandum cites the reduced consumption of bituminous coal in 1939 as compared with 1929, both in grand total and in various categories, and then draws certain inferences which are entirely misleading. It ignores the increased efficiency factor in coal utilization, so that for example, in the case of the steam generation of electric power, the drop in coal consumption from 44.9 tons in 1929 to 40.2 tons in 1938 did not in fact represent any decline in the total output of steam-generated electricity. The comparative figures of coal consumption in the category of "all other cases" is referred to as "industrial" when in fact only a part of it is industrial and the concluding comments are generalizations of no probative force with respect to the concrete question which is at issue.

The St. Lawrence hydropower is not cheap, but costly when all factors are taken into account, not overlooking the loss in wages and in purchasing power and the financial and social cost of unemployment relief incident to the displacement of millions of tons of coal.

The displacement of coal by St. Lawrence hydropower, the loss of the Canadian market for American coal, the impairment of our own domestic markets for coal by the inroads of foreign coal, and foreign oil, brought into the lake ports on cargo vessels, all mean less coal for our own railroads to carry, less freight revenues, less train movement, less railway fuel consumption.

Summarizing the foregoing in terms of coal displacement: There is the prospective loss in annual tonnage by the St. Lawrence hydropower ranging from five to thirty-five million tons; the prospective loss of our Canadian market of upward of 10,000,000 tons annually; the further inroads of foreign coal and oil upon our domestic market, impossible of accurate forecast but which might easily amount to another 20,000,000 tons annually; and added to all this the resultant shrinkage in railroad fuel consumption.

To visualize the consequences of any such displacement of coal, the loss of markets, and decline in output, it need only be said—every million tons of coal displaced subtracts nearly $2,000,000 annually from the gross revenues of the coal producers and 60 cents or more out of every dollar received by the producer goes to labor in the form of wages. It subtracts more than $2,000,000 annually from railway freight revenues and 44 cents out of every railway dollar goes to labor in wages. Every million tons of coal lost represents the loss of 1,000,000 man-days in work and wages for those employed in the mining, transportation, and sale of coal somewhere along the line.

I have made this lengthy reply to your letter and its enclosed memorandum in order that my objections to the statements therein contained with respect to the coal industry and the true situation may be a matter of record.

Respectfully,

JAMES E. VAN ZANDT.

The Sedgwick County (Kans.) Plan for Medical Care

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

OUTLINE OF PLAN FOR MEDICAL CARE

Mr. HOUSTON. Mr. Speaker, the national health bill has aroused much discussion, particularly among physicians, and Modern Medicine, a medical journal, reports a referendum on socialized (federalized) medicine has been conducted by that publication which, it is claimed, reaches 125,000 active, practicing United States physicians.

Modern Medicine reports the following results of the referendum: A total of 20,215 ballots were returned in this 1940 referendum, giving the largest direct expression of opinion ever recorded from the medical profession. * * * The referendum shows that 85 percent of United States doctors would refuse to cooperate with a federally controlled and administered legislative program tending toward the drastic curtailment of private practice of medicine. It also reveals that 88 percent of the Nation's doctors see a menace to the public health in federalized medicine. Eighty-five percent of them approve the platform of the American Medical Association and 88 percent are in favor of its key point, namely, local responsibility for medical service.

It is my desire to bring to the attention of Congress and the Public Health Service an outline of the Sedgwick County, Kans., plan for medical care, which, through actual operation, has proven generally satisfactory to clients, the public, the county officials, and the physicians; and under leave to extend my remarks, I would like to insert in the RECORD a brochure prepared by the Sedgwick County Medical Society, as follows:

SEDGWICK COUNTY PLAN FOR MEDICAL CARE

(Wichita, Kans., 120,000 population)

The Sedgwick County plan of medical care is divided into three categories: 1. Indigent; 2. Border-line or low income group; 3. Average and above average citizens.

I. INDIGENT

Determination of status: This group includes those who are dependent upon the county for general assistance or who are declared indigent for medical purposes only.

Determination of eligibility for free medical care is accomplished through the county social-service department, which makes investigations of families applying for general aid or medical aid. This is done by means of personal interviews with applicants by case workers.

Those determined eligible are so listed and given cards which entitle them to admission to the downtown clinic. A 72-bed hospital is maintained by the county and patients first must pass through the downtown clinic before being hospitalized, unless the case is an emergency, in which instance they are admitted to the county hospital.

County staff: A full-time physician is employed by the county as superintendent of the hospital and clinic. Working with him are three full-time resident physicians who assist at the clinic and hospital and in making residence calls. In addition, two interns from the three private hospitals rotate on service at the county hospital. A staff of nurses and technicians also is employed by the county.

Medical society: The Sedgwick County Medical Society provides a rotating staff of some 70 physicians in private practice who attend special clinics at the hospital and clinic. These physicians serve on rotating services of 3-month periods and include specialists in: General surgery; general medicine; orthopedic surgery; eye, ear, nose, and throat; urology; proctology; cardiovascular; dermatology and syphilolgy; pediatrics; neuropsychiatry; obstetrics and gynecology; radiology; and pathology.

These physicians receive no pay for their services, but the county pays a monthly remuneration ($500) to the medical society which is used in maintaining a library and office and for scientific and educational functions of the society.

Case load: The following figures are for the year 1938:

County clinic

Total dental patients	3,798
Miscellaneous patients	47,554
Total clinic patients	[1] 51,352
Dental extractions	2,539
Dental fillings	826
Dental vincents	103
Dental examinations	1,801
Doctor's day calls	1,707
Nurses' calls	2,418
Laboratory examinations	11,773
Prescriptions filled	34,702

County hospital

Operations (major)	262
Operations (minor)	610
Emergency room	3,243
Laboratory examinations	10,196
X-ray plates	3,031
Obstetrical cases	245
Doctors' night calls	566
Number of patients under care	1,793
Hospital days	21,821
Average cost per hospital day	$2.56

[1] This figure indicates the number of cases seen, not the number of individual patients.

II. BORDER-LINE CASES (LOW-INCOME GROUP)

Medical Service Bureau

What it is: The Medical Service Bureau was formed in March 1937 to assist the low-income group to obtain medical care from private physicians. Persons in this group are not eligible for free care at the county clinic as they are not dependent upon the county for public assistance. Forty percent of these persons are dependent upon W. P. A. wages for a livelihood. The income in this group averages $55 to $60 per month. The bureau is maintained by the medical society and the Wichita Community Chest. The medical society furnishes office space, equipment, etc., and the community chest pays the salary of the supervisor, who is an experienced case worker.

How patients are referred: Persons are referred to the bureau by physicians, school nurses, county and welfare agencies, the general public, and many come who know about it personally.

The supervisor of the bureau interviews the applicants and determines their financial status by going over their budgets for food, clothing, shelter, etc., and helps them to arrive at a figure they can afford to pay for medical or surgical service.

The applicant selects the physician of his choice if he already does not have a family physician, and the information obtained by the supervisor is sent to the selected physician. Arrangements for fee, service, etc., remain entirely a matter between the physician and patient.

The bureau, in brief, determines whether the applicant can pay for private medical service at a reduced fee and obtains a true picture of the patient's background for the physician.

If the family happens to be large and the service needed is beyond their ability to pay, the case is then turned to the county, and the applicant is treated as a medical indigent for that purpose, and service rendered free.

In the 3 years of its operation 3,000 applicants have been interviewed by the Medical Service Bureau.

The bureau assists both the border-line patient and the physician in the problem of medical care. The physician is saved much time in obtaining a true financial picture of the patient, and the patient is assisted in budgeting for medical service at a cost compatible with his budget. We believe the bureau aids this group of persons in retaining or regaining a certain amount of individual pride in paying for service rendered according to their ability.

The following types of service were provided during the period January 1 to December 1, 1939:

Glasses	175
Tonsillectomies	87
Dermatology	6
Medicine (examination, etc.)	149
X-ray	158
Examination	119
Venereal	[1] 313
Obstetrics	40
Surgery	33
Dental	37
Orthopedics	6

[1] Venereal patients attending the county clinic must present a signed statement from their family doctor, or if they have none, from the Medical Service Bureau, stating they are unable to pay for treatment. Many of the venereal patients are referred back to the county.

III. AVERAGE AND ABOVE AVERAGE

This class of patient maintains a direct relation with the physician of his choice. Methods and arrangements for medical care are solely a matter of concern to the patient and the physician.

* * * * * * *

Through the trident plan Wichita feels it is offering medical care to all the people. The treatment in effect is the same for all persons, but the methods of obtaining that treatment, of necessity, differ for the three classes of population.

The Polish Relief Situation

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

LETTER FROM THE COUNSELOR OF THE POLISH EMBASSY

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received from the counselor of the Polish Embassy and copy of a letter addressed to the chairman of the House Committee on Foreign Affairs:

POLISH EMBASSY,
Washington, March 8, 1940.

Hon. JOHN LESINSKI,
House Office Building, Washington, D. C.

MY DEAR MR. CONGRESSMAN: Attached please find the copy of a letter addressed on March 2, 1940, by Mr. Stefan Ropp, to the Honorable SOL BLOOM.

Yours very truly,

JAN DROHOJOWSKI,
Counselor of Embassy.

MARCH 2, 1940.

Hon. Congressman SOL BLOOM,
Washington, D. C.

MY DEAR MR. BLOOM: I am writing to you at the suggestion you have expressed in our interview on the day of Mr. Hoover's evidence given before the Commission of the Congress.

Below please find an outline of the facts as at the 27th of December last, date on which I managed to get out of Poland.

For sake of clarity I will give my remarks under several headings:

(a) General policy.
(b) Deportations.
(c) The food problem.
(d) Clothing and fuel problems.
(e) Destruction of homes.
(f) Sanitation.
(g) Help needed from outside.

A. GENERAL POLICY

As long as the German Army was more in evidence in dealing with the problems of the population, the approach to local problems was one capable of solution, by which is meant that the severe handling of the Poles by the Army did not seem to bear the character of a political plan with reference to the Polish Nation as a whole. When the Army's objectives were reached, and the Army was fed, nothing more was done to interfere with the satisfying of the Polish people's own needs by themselves. With the advent of the Nazi party officials, supported by the state police and secret state police, Gestapo, the picture had changed entirely. It was seen immediately that there had been approved beforehand a set policy, which was executed ruthlessly by every member of the civil authorities, Nazi party authorities, and the police. If for some reason of humanitarian feelings a particular member of the party was not so hard in the execution of the policy, he was made responsible for it as if he had committed a crime. Many were the Germans who broke down under the stress of the execution of the pitiless policy applied. I stress this point because it is important to realize that these are not detached happenings of sporadic character, but a concentrated, preorganized, and implemented policy with which the Polish Nation has to contend continuously.

The policy referred to may be outlined as follows:

(1) The Provinces annexed by Germany must be freed from the Polish population with the exception of that required for forced labor, farm, and factory work. Therefore, all the educated middle class, the professions, businessmen, people working in commerce, banks, insurance, all engineers, municipal and state employees, farmers, must be removed.

(2) The boundary between the annexed part of Poland and the rest has been drawn purely on economic grounds to include the most fertile land in western and central Poland and the more important industrial centers like, for example, Lodz (660,000 inhabitants; second largest textile center in Europe). The ethnographic considerations were never taken into account and they could not have been, because the annexed parts of western and central Poland happen to belong to the ethnographically most purely Polish regions and have been the cradle of the nation for the last 10 centuries. This is not denied by the Germans.

(3) Industry which may be useful to Germany must be transplanted from the rest of Poland into the annexed portion.

(4) Ownership of industry, immovable property, commercial undertakings of any kind, and land by Poles is not permitted, and a special technique of confiscation of property has been devised, whereby a so-called German "trustee" takes over the property, paying it off in 40 yearly installments, bearing interest at the rate of one-half of 1 percent. This money is paid to the German Government and the owners have no right to it.

(5) It is expected that in the annexed provinces approximately 30 percent of the Poles will remain, and these must be Germanized. For this purpose all the children are compelled to go to German schools with German program of learning and to constitute auxiliary units of Hitler's Jugend organizations. The use of the Polish language is forbidden in public and Poles who are allowed to remain are asked to use the German language even in their homes, so that the children might sooner learn German.

(6) All positions of any consequence in civil service, sanitation, medical service, engineering, finance, commerce, teaching, agriculture, etc., are filled by imported Germans. The number of Germans imported into the annexed part is placed at over 1,000,000, of whom 230,000 are Germans from the Baltic provinces, about 80,000 from Poland occupied by Russia, and close on 700,000 from Germany proper. No post of importance is given to the Germans from the Baltic provinces, because they cannot be trusted to fulfill the policy to which the Reich occupants have been trained for years past.

(7) All the above has been prepared and organized by the German Government for a period of the last 5 to 6 years which is proved by the fact that many of the people now used in key positions in the annexed part of Poland have been sent to Poland as far back as 1934 and 1935 under a variety of pretexts to study those special problems with which they are now entrusted. Most of them also have been learning Polish for the last 3 or 4 years.

(8) The portion of Poland between the annexed territory and Russian occupation is called the government general, and is ruled as a separate province under a German governor in Cracow. The purpose pursued is to obtain from this part all possible labor for German farm work in the Reich, for road work, the mines, as well as every kind of unskilled labor needed. No effort is made to organize or to rebuild damages of the war, and such efforts on behalf of the Poles have hitherto been frustrated. By the policy outlined the proportion of women, children, and old people to men of working age is kept extremely high. The national ratio has been exceeded at the end of December five-fold.

(9) The government general was to be at first stripped of its Jewish population. This problem, however, is no longer considered, and the Jewish ghetto south of Lublin is considered rather in the light of a reservoir for Jews expelled from Vienna, East Prussia, Berlin, and all the annexed part of Poland. If, however, living conditions in larger towns like Warsaw, would become difficult the plan is to drive the Jews over the roads to the ghetto south of Lublin where for the time being a colony of barracks has been built capable of holding 120,000 persons.

(10) Ultimately a very dense Jewish colony is considered. One of the Nazi leading officials expressed the view in my hearing that the Jewish colony should measure a tract of land 50 kilometers by 50 kilometers (30 miles square) and should hold about 3,000,000, and therefore should be built only as a large town on small plots of land like in China.

The above are the principles governing German policy in Poland. Since relief work can be carried on only in the government general, I will attempt to outline what the results of this policy are with regard to that part of Poland.

The government general is composed of a part of the Province of Warsaw, a very small part of the Province of Lodz, almost the whole of the Province of Kielce, the Province of Cracow, a small part of the Province of Lwow, and almost the whole of the Province of Lublin. Out of 35,000,000 inhabitants in the whole of Poland before the war, it comprised approximately 11,000,000 inhabitants. Its area is about one-third of Poland. Its present population is about 13,500,000.

DEPORTATION

In the execution of their principle policy, the Germans, by the end of December, have deported from the annexed 5 Provinces about 1,200,000 people. For reasons specified above, the proportion of women and children in this number is very high. The deportation was still carried on in January and February, having been, however, disorganized for some time by heavy frost and lack of trucks. Ordinarily anywhere from 4 to 7 trains a day, each carrying about 1,500 deportees, were arriving in the government general. The people were dumped down at wayside stations, at each of which very large groups of them have gathered. At small stations, where the building would be composed of a small

three-roomed house and a small store, several thousand deportees would crowd. In order to give women and children a chance of sleeping inside, men would sleep in rotation every fourth day under cover. There was lack of fuel and lack of alimentation. Many people were ill, and mortality among children was very high. Medical attendance was utterly lacking.

The railway lines along which these crowds would gather were three: between Garwolin and Lublin; between Warka and Radom; between Minsk Mazowiecki and Mordy. On these 3 stations there are about 70 such points of heaping deportees. It was the hope of everyone in these crowds to work their way through to Warsaw. The difficulties of transport, however, especially with small children and snowdrifts, made it very difficult for those farther away to get to Warsaw. The population of Warsaw, which had decreased by 550,000 is rapidly increasing again. Some parts of the town are peopled almost exclusively by deportees. The population of Warsaw by the end of December was evaluated at 1,100,000, of whom 750,000 were original inhabitants of the city. The number of destroyed houses in Warsaw beyond repair is about 3,900, whereas about 4,000 are severely damaged but can be repaired or rebuilt. About 800 houses are in the course of being repaired. The total number of houses is about 19,000 and the pre-war population 1,300,000. From these figures it can be inferred that the crowding of people in Warsaw as a whole is about 25 percent over capacity.

The deportees are allowed to take with them from western Poland only a small suitcase and not more than 200 zlotys. Since banks were not allowed to give out any money to Poles and all accounts were frozen, very few of the deportees had even that amount. Since the purchasing power of money is on an average about 4 times less than before the war, the most fortunate people would have an equivalent of approximately $10 when arriving with their families in the government general. After exhausting this amount they would become paupers. This process is going on at the rate anything up to 10,000 a day and distress all along the railway lines is increasing beyond all description. People become desperate and fight sometimes not to allow new trainloads to be dumped down, where they and their children are already dying of hunger. It must be taken for granted that every deportee, within a month, is a public charge. The German sources themselves are acknowledging that it is their purpose to deport 2,500,000 people. It must be reckoned, therefore, that at least 2,000,000 of them are going to be public charges to be housed, clothed, and nourished entirely at the expense of public institutions. The remaining 500,000 may find work only if the rebuilding program of Warsaw and elsewhere is made possible by liquefaction of bank accounts of privately owned houses, the rebuilding of which would be made thereby possible. Hitherto the Germans did not allow this.

FOOD PROBLEM

The government general is the poorest part of Poland, there being only two districts with fertile soil, namely, southern part of the Province of Lublin and southern part of the Province of Kielce. These districts cover not more than 20 percent of the total area. In spite of the fact that the harvest of 1939 was remarkably good, yet, owing to the destruction of the war, produce stocks are extremely low. Stocks are especially low with regard to fodder, half of which seems to have been destroyed by incendiary bombs and one part of the remaining half was requisitioned by the Germans. It is feared, therefore, that the remaining quantity of fodder will be sufficient to keep only 35 percent of the head of cattle of normal times. This being so, the meat question will soon become a permanent difficulty. The prices of meat are going up, and at the end of December were on the average three to four times over the prewar prices. The same are now about five times prewar prices. With the decrease of the head of cattle the milk position will also become acute. Eighty percent of the sugar mills are in the annexed part of Poland, and sugar is getting more and more scarce. The diet of three-fourths of the population consists of an endless repetition of potato soup three times a day. Such diet lacks in fats, vitamins, and phosphorus, and children especially sink appreciably, becoming prey to disease.

The quantities of people who would have to be fed may be estimated approximately as follows:

(a) Deportees: 2,000,000.

(b) Urban population in Warsaw, 500,000; Radom, 20,000; Lublin, 45,000; Biedloe, 15,000; Kielce, 10,000; Cracow, 10,000; Tarnow, 10,000; Rzeszow, 15,000; all other small towns, 130,000; total, 750,000.

(c) Refugees from burnt villages who crowd around stations and are entirely devoid of means of subsistence, 1,800,000.

(d) Partial feeding of people who are employed and get in lieu of pay one meal a day for themselves; part of this work is forced labor. Only a rough estimate of these can be made. The figures, however, may be placed for all the government general at 600,000.

(e) Children, owing to a different diet which must be supplied to them, have not been included in the above estimate. It can be said without a shadow of exaggeration that there are no children at present in the government general who are adequately fed. They all lack animal proteins, vitamins, and fats. Owing to the artificially upset proportion of women and children, the number of the latter up to the age of 16 must be placed at not less than 2,300,000. Of these, at least 1,000,000 will require immediate and complete assistance. The total number of people thus in need of assistance, complete or partial, in various groups will be in the vicinity of 6,150,000 and will probably increase beyond 7,000,000.

I have not specified some particularly tragic groups, such as university professors, medical practitioners, discharged from all the hospitals, nurses, teachers, scientists, etc. All these people have been driven away from their places of work and have no implements of their profession. They are completely useless as physical workers. Their work has already been taken over by the Germans.

CLOTHING

The greatest necessity for clothing for this winter has already passed; many thousands of people have frozen to death. By the time relief work will be on its way, spring will be upon us and the clothing situation will become less acute. These remarks are rather to the point that adequate provisions must be made for next winter. Another winter coming upon a starved nation may decimate with pneumonia, flu, and epidemic diseases a nation whose power of resistance is broken by insufficient food and fuel. Poland always exported coal, and therefore insufficiency of fuel is only a matter of transport. If transport has broken down in the first winter of war, quite as likely as not it will break down in the second winter, and therefore the clothing problem must be considered from the point of view of another such break-down.

Half of the refugees from villages that have been burnt down during the war, who number about 1,800,000, have not been able to save their warm clothing, as it must be remembered that the fighting at first was during the September heat wave. The deportees in general were allowed to take with them some of their clothes, but most of them in an insufficient quantity. The Poles who fled before the Germans in western Poland took nothing with them. There appears to be a contingent of 1,200,000 people who will want more clothing in the autumn. Articles wanted are specially warm wool underwear, wool socks, thick wool jackets, headgear, and wool blankets.

A group apart is formed by babies and infants up to the age of 18 months, for whose benefit there is absolutely nothing in the way of clothing. The number is estimated at about 80,000. All the essential usual babies' outfits should be supplied to cope with the problem. In the absence of same, mortality among infants will be terrific.

A local campaign for cutting down timber and drying it must be started within the country to replace doubtful coal supplies.

HOUSING

The housing problem is very urgent in those parts of the country where fighting has taken place, as also in shelled and bombed towns. In Warsaw, for example, as has been mentioned, 3,900 houses have been razed to the ground and 4,000 more houses have been badly damaged. The rebuilding of damaged property would cost, according to pre-war prices, about $300,000,000 and would require the labor of 90,000 men for 2 years. All attempts to organize on a broader scale the work of rebuilding has been frustrated by the Germans.

In the country over 400 villages have been burnt, representing about 20,000 detached houses or a capital loss at pre-war figures equal to about $40,000,000. Unless these houses are rebuilt during the summer, which is very doubtful, the housing problem of the refugees will have to be solved by the building of barracks in the country at places where the villages stood, so as to allow the families to work on their fields. This problem, although it cannot be handled from the outside, is yet essential, because upon its solution will depend the efficacy of keeping alive those 7,000,000 people to whom help will be brought in the form of food, clothing, and medical supplies. For this reason a close cooperation must be engendered between the Polish organizations in Warsaw and the relief distributors.

SANITATION

The eating of killed horses, the famine among the deported people and the refugees from the burnt villages has created the beginning of an epidemic of typhoid fever. In the Jewish quarters in Warsaw up to 200 cases a day were reported. In the remaining part not more than 30 a day. The epidemic was stamped out by compulsory inoculation, by the ending of the supplies of horse flesh, and by frost. The thaws in the spring, as well as the ever more desperate food position, it is feared, will bring about a recurrence of the epidemic by May. Steps should be taken to have a better sanitary supervision of the sale of meat in towns. The usual methods of supervision have been suppressed by Germans and nothing was done to replace them until December. Much of the meat sold was not fit for consumption. Generally speaking, sanitary methods of supervision of food products were utterly unsatisfactory. There were several cases of cholera, but these appeared to be of a sporadic nature and were not repeated.

Heavy cases of flu, with subsequent pneumonia, were reported in November, but have not spread to become an epidemic. An epidemic of mild flu of the usual character was in evidence in December. It took a more distressing form toward the end of December and in January. Mortality among deported children from pneumonia was extremely high.

It is essential that medical supplies should include all inoculation products to deal with the epidemics of typhoid, enteric, cholera, and different types of pneumonia; this entirely apart from the ordinary supplies for hospital work and usual pharmaceutical supplies necessary to deal with the population's needs, now entirely deprived of all essentials in this respect. The need for cotton,

wool, bandages, iodine, disinfectants, vaseline, and other more important standard pharmacy products which would be exhausted shortly or have already been exhausted is felt acutely.

HELP NEEDED FROM OUTSIDE

(a) The data supplied in this letter give an approximate picture of the position which I have personally witnessed and which I tried to depict in its essential facts. If it is taken that the feeding of one individual will cost 5 cents a day and of one child 7 cents a day, and that partial feeding will cost 2 cents a day, then the food problem could be solved by spending approximately $6,000 a month.

(b) The clothing problem would require a capital expenditure until autumn next year of approximately $10,000,000.

(c) The medical-supplies needs are evaluated at $200,000 a month.

This would mean that, if the period of 6 months be taken, from the 1st of April, a total expenditure of $47,200,000 would be required to avoid disaster in the course of next winter. One-third share of this would represent some $15,000,000.

Placing these facts before you, may I be allowed to say that at present about 900 people are dying every day of hunger and cold and that a desperately stricken nation is looking across the ocean at the American Congress with a hope born of utmost confidence in the Nation, which will not allow an innocent people to be condemned to extinction.

I know how dreadful these facts are, because I have seen them myself, but I have not used one word to affect the feelings of the Commission because I wanted this letter to be as much a matter-of-fact one as I could command myself to write, but in these last words I want you to picture each to yourself several million mothers praying at this moment to God that your decision in the next hour may save their little ones so that they might live, and that prayer I voice before you.

With cordial thanks,

Yours sincerely,

STEFAN ROPP.

American Naval Policy

EXTENSION OF REMARKS

OF

HON. JAMES W. MOTT

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

ADDRESS BY HON. ARTHUR B. JENKS OF NEW HAMPSHIRE

Mr. MOTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by the gentleman from New Hampshire, Hon. ARTHUR B. JENKS, on March 4, 1940, before the Textile Square Club, New York, N. Y.:

Mr. Reimer, Mr. Hawley, members of the Textile Square Club, Republicans aren't invited many places these days—in fact, there has been a dearth of invitations for the past 7 years—so I want to express my thanks and appreciation of the privilege of being here.

It has been suggested that I speak to you on naval affairs. I am a member of the House Committee on Naval Affairs, and in the First Congressional District of New Hampshire, which I represent, is located a United States Navy Yard at Portsmouth, N. H. Those two facts, however, do not exactly qualify me as an authority on naval affairs, but as a concession to the suggested topic I will submit for your consideration a few pertinent facts that I have absorbed regarding the aims and purposes of the United States Navy, which, as you all know, is our first line of national defense.

The American naval policy is this: "To maintain a Navy of sufficient strength to support the national policies and commerce and to guard the continental and overseas possessions of the United States."

The adoption of the Monroe Doctrine on December 2, 1823, inferred, it seems to me, something a little more comprehensive than the expressed naval policy, something that through the years has become more and more pronounced. The Monroe Doctrine, as we all know, declared that no European power could seize territory or set up a government on the American Continent, which means from Cape Horn at the southern tip of Argentina to the Canadian border. That doctrine, since adopted by 20 other American republics, was further defined and illuminated by Secretary of State Richard Olney in his celebrated Venezuelan boundary despatch of 1895, at which time he said:

"The rule in question has but a single purpose and object. It is that no European power or combination of European powers shall forcibly deprive an American state of the right and power of self-government and of shaping for itself its own political fortunes and destinies."

It will be recalled that during the period of the last World War the American republics pursued no common neutrality policy in regard to their rights and obligations as neutrals. Shortly after the close of that conflict, the American republics determined to direct some concerted effort toward the establishment of unified policy and action in the event of future world disturbances.

Cooperation among the American republics was not by any means a new idea; the Pan American Union was founded in 1890 and held its first conference in Washington in 1899, which was presided over by James G. Blaine, then Secretary of State. The Pan American Union occupies its own building which, incidentally, is one of the most beautiful in Washington, erected at a cost of $1,100,000, and dedicated on April 26, 1910, to purposes of developing closer cooperation among the American republics, fostering the interchange of information among them on all problems affecting their welfare, and strengthening the intellectual and cultural ties of the sister republics on the Western Hemisphere. Subsequent Pan American conferences have been held at Rio de Janeiro, Brazil, in 1906; at Buenos Aires, Argentina, in 1910; at Santiago, Chile, in 1923; in Habana, Cuba, in 1928; at Montevideo, Uruguay, in 1933; at Lima, Peru, in 1938; and in Panama in 1939.

Sufficient negotiations have been carried forward among the American republics to dispel any doubt as to our pan-American policy. This policy, quite naturally, adapts its dress to the decade in which it finds itself, but remains essentially, "America for the Americans," having been reaffirmed at Buenos Aires in 1936 and again in 1938 at the Eighth International Conference of American States, held at Lima, Peru, at which time it was agreed:

"First, that they reaffirm their continental solidarity and their purpose to collaborate in the maintenance of the principles upon which solidarity is based;

"Second, that faithful to the above-mentioned principles and to their absolute sovereignty they reaffirm their decision to maintain them and defend them against all foreign intervention or activity that may threaten them."

This, briefly, means that the republics of North, Central, and South America are determined to make common cause against any military, naval, or economic menace.

The recent blast of power politics in Europe, asserting that want and might make right, has once again directed the attention of the Congress of the United States to our national-defense needs. With world conditions what they are today, it would seem that every intelligent, right-thinking citizen of this country of ours must believe in and be favorable to a United States Navy sufficiently strong and adequately equipped to patrol and defend at one and the same time, if need be, the Atlantic and Pacific coasts of this entire hemisphere. That, of course, includes an adequate number of battleships, submarines, cruisers, destroyers, airplanes, airplane carriers, and an ample, well-trained, and efficient personnel to operate them, as well as the guarding of vital links of communication lines.

The Isthmus of Panama and the Caribbean must still be regarded as critical areas, as they have been since the inception of the conviction that America is and must be for Americans. This area, from its discovery by Columbus, in 1492, has furnished both the locale and the incentive for almost continuous unrest. Rival Spanish, British, French, Dutch, and American interests have repeatedly clashed. With the forced withdrawal of Spain at the close of the last century, and perhaps climaxed by America's stand during the Pacific blockade of Venezuela in 1902, the insistence of the American republics on peace, nonagression, and nonexploitation on this hemisphere has at least become a reality.

The Venezuelan incident of 1902 is one that illustrates the importance of a Navy sufficiently adequate to back up diplomatic suggestion. It will be recalled that a dispute actively developed at that time between President Castro, of Venezuela, on the one side, and Germany and England on the other over certain debts that had been contracted for public works in Venezuela; by 1901 the creditors were asking their Governments for assistance in collecting the bills. The situation went from bad to worse until Count Metternich, the German Ambassador at London, informed Lord Lansdowne, the British Foreign Secretary, that pressure upon Venezuela seemed to be the only solution. Subsequently Lansdowne informed Germany that England proposed the seizure of certain Venezuelan gunboats, adding that a blockade might cause resentment on the part of other powers—doubtlessly meaning the United States. Eventually both methods of chastisement were used; four gunboats were captured and five ports were blockaded.

On the surface it appeared that President Theodore Roosevelt was inactive in the dispute, but information subsequently divulged, showed that he had most emphatically expressed disapproval to the German Ambassador, Herr von Hollenben. With a United States Navy of superior strength over that of Germany looming in the background, the State Department, on December 5, 1902, expressed Roosevelt's hope of a peaceful settlement of the Venezuelan dispute to all parties concerned. Eleven days later Germany and England decided to accept Venezuela's somewhat belated appeal for arbitration.

The fact that a vast percentage of world shipping focuses at the Panama Canal is secondary—our primary interest in the safety and uninterrupted operation of the Canal is its importance to our national defense, in that it is the channel through which we are enabled to transfer our battle fleet from the Atlantic to the Pacific ocean, or vice versa. This facility affects not only the size and composition of our Navy, but also our naval strategy. So important do we deem the integrity of the Panama Canal that in its defense we must effectively control the Caribbean area

in order to prevent any serious attack upon the Canal from land, sea, or air. While England, France, and Holland still have possessions in the Caribbean, they apparently have acknowledged our paramount interest there. By means of our naval, air, and submarine bases at Coco Solo, Guantanamo, San Juan, and St. Thomas, our Navy is enabled to conduct operations to dominate the Caribbean, and thus prevent effective hostile operations there and against the Panama Canal. Operating out of our eastern Caribbean bases, our naval forces, of course, protect our shipping en route between our Atlantic coast ports and South America.

As a consequence of the splendid progress achieved in naval aviation, which is an integral arm of our fleet, and because of the menacing aims and threats of the dictator nations of Europe, last year Congress authorized considerable augmentation of our naval air bases. In the Atlantic area this included new and extensive bases at Jacksonville and Banana River, Fla., and at San Juan, P. R., work on which is now in progress.

New submarine facilities are being constructed at St. Thomas, V. I. Army defenses at the Panama Canal Zone are being strengthened. A naval district and an Army department have been established at Puerto Rico. The United States Marines are conducting landing-force exercises there in cooperation with the fleet.

As previously mentioned, at Buenos Aires, in 1936, and at Lima in 1938, the American republics affirmed the solidarity of the nations of this hemisphere, based on the similarity of their interests, their will for peace, their adherence to the principles of international law, of equal sovereignty of states, and of individual liberty. With these convictions in mind, the 21 American republics affirmed their determination to maintain and defend these principles against any threat from outside this hemisphere and, in event of danger, to consult among themselves as to measures which might be taken in cooperation for the common safety. Agreements were entered into which provided that in the event that any American government believed that there existed any menace to the peace of the peoples of the American nations the foreign ministers of all of them, or their representatives, would meet for the purpose of consultation in order to determine how best the peace of the Western Hemisphere might be preserved.

With the impact of the current war in Europe, in accordance with prior specific agreements, the representatives of the American governments assembled in Panama on September 23, 1939, adjourning 8 days later after completing plans for unified action for the protection of the neutrality of the Western Hemisphere, for the maintenance of normal inter-American economic and commercial activities, and for the continuance of uninterrupted inter-American communications. The negotiations completed at this conference last September are known as The General Declaration of Neutrality of the American Republics.

Finally, to deal with the all-important problems of how war might best be kept away from the Western Hemisphere, the meeting of Foreign Ministers at Panama unanimously adopted, on October 3, 1939, an agreement known as The Declaration of Panama, the purpose of which is to preserve peace on the American continent, the two elementary principles having been stated as—

First, the 21 neutral American nations affirm that, as long as they maintain their neutrality, a European war in which they are in no way involved should not interfere with their interests or their normal communications among themselves;

Second, in consequence, the activities of belligerent forces of European nations engaged in war should not take place in those waters adjacent to the Western Hemisphere which are normally used in inter-American maritime communications.

It remains to be seen how effective this last declared principle can be made or what it might involve to sustain it. However, the governments of this continent have agreed to endeavor, through joint representation to belligerents, to secure compliance by them with the principles and provisions of the declaration.

In consequence of this understanding with the other governments of the American republics, the Government of the United States has established a patrol consisting chiefly of destroyers and aircraft upon ports of the United States and its possessions. The patrol covers the waters off the east coast of the United States, the Caribbean, and the Gulf of Mexico. The duties of the patrol are to observe and report the movements of vessels in free route and other activities of belligerent war vessels and merchant shipping. The purpose of this patrol, insofar as the United States is concerned, is that the Government may be informed of the nature of belligerent activities occurring in close proximity to our shores.

I regard the maintenance of American neutrality so imperative that if it be not kept intact we will have sacrificed our true mission in world affairs; I believe that the greatest contribution we as a Nation can make to world stability is through the preservation of our own democracy, undiluted by the ravages of war, freely and efficiently functioning, holding aloft the lamp of freedom and the light of liberty. If that requires two ships for one, let there be two.

Nor am I deluded into a smug complacency that the shock and eruption of war in Europe leaves us immobile, unaffected, or untouched. There is no gainsaying the fact that war in Europe causes us to suffer an emotional and an economic disturbance that cannot be discounted. We feel it on all sides—our emotions rebel against the ruthless military invasion of small and defenseless countries, cruelly trampled down by the iron heel of stronger and more powerful nations. Because of the necessity of the nations with whom our sympathies lie to arm and defend themselves against annihilation, our industrial and agricultural activities are speeded up, even though we know that when a war-torn and war-weary continent ceases hostilities there will follow here an immediate slowing down of the wheels we have accelerated.

While the present European disturbance has been actively under way only since last September—just 6 months—in a recent statement Secretary of State Hull estimated that if the European struggle were to come to a close now approximately 100,000,000 persons would float out on a world-wide wave of idleness—the 25,000,000 men now under arms, plus the 75,000,000 persons engaged in war work of one kind or another. The United States has its percentage in this enormous group that, sooner or later, is doomed to idleness and readjustment. Indeed war in Europe does affect us—nor is there any way in which we can shield ourselves emotionally and economically from the tragic jar and jolt of war across the Atlantic.

Certainly all of us would choose to live in a world endowed more bountifully with the spirit of peace and good will among men, but facts are facts and in the interest of self-preservation we must deal with them realistically. The House Committee on Naval Affairs has reported a naval expansion bill which will be taken under consideration by the House within the next 10 days. I am for it and I hope it will pass both the House and Senate by an overwhelming majority.

In closing let me leave this thought with you, which was voiced by Stephen Decatur—"Our country! In her intercourse with foreign nations may she always be in the right; but our country, right or wrong."

Mayor of City of Warsaw, Poland

EXTENSION OF REMARKS

OF

HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

LETTER FROM THE POLISH INFORMATION COMMITTEE, DETROIT, MICH.

Mr. LESINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following protest:

DETROIT, MICH., *March 7, 1940.*

To the Honorable JOHN LESINSKI,
Member of Congress of the United States of America,
Washington, D. C.

DEAR MR. LESINSKI: In the name of the 350,000 American citizens of Polish descent, residing in the city of Detroit and vicinity, we ask you to remonstrate against the condemnation and execution of the heroic mayor of the city of Warsaw, Stefan Starzynski—the man who to the last moment stood with the residents of the city of Warsaw against the barbaric onslaught of the Nazi horde.

He is now awaiting sentence in a prison near Moabit, which is to be made by a tribunal organized especially for prosecuting and passing judgment on this great Polish patriot. It is obvious that the sentence shall be execution.

Every neutral nation should voice its horror at such heinous murder of heroic citizens of Poland.

Therefore, we appeal to you, to request that the United States of America express its protest against such action by the Nazi government.

Respectfully,

POLISH INFORMATION COMMITTEE,
JOZEF PRZYKUTA, *Chairman.*
ISABELLE TANALSKA, *Secretary.*

Letter by Professor Borchard—The "Altmark" Case

EXTENSION OF REMARKS

OF

HON. HENRIK SHIPSTEAD

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 12 (legislative day of Monday, March 4), 1940

LETTER BY PROF. EDWIN BORCHARD

Mr. SHIPSTEAD. Mr. President, on February 26 there was inserted in the Appendix of the RECORD, on page 985, a letter written by James W. Ryan and published in the New

York Times of February 25. This letter deals with the case of the *Altmark*. On March 10 there was printed in the New York Times a letter dealing with the same case and written by Edwin Borchard, professor of international law at Harvard. This letter being in answer to Mr. Ryan, I ask consent to have Mr. Borchard's letter printed in the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

[From the New York Times of March 10, 1940]

To the EDITOR OF THE NEW YORK TIMES:

While we can thoroughly understand the irresistible temptation of the British destroyer *Cossack* to release from captivity the 300-odd British seamen on board the *Altmark*, I would like to address myself to that aspect of the case which involves charges that Norway violated her duties as a neutral. This charge was made in extended form by James W. Ryan, chairman of the American Bar Association Committee on Law Protecting Americans and Their Property in Foreign Countries and on the High Seas, in a letter published in the Times of February 25.

Mr. Ryan proceeds from the assumption that the *Altmark* "in applying for entry to Norwegian waters concealed the material fact that [the] vessel was not merely a public vessel * * * but was also temporarily engaged in acting as a prison ship." He adds, "The *Altmark* * * * was menacing the safety and freedom of innocent British sailors who were within Norwegian territory. The Norwegian Government was not only doing nothing to remove this danger, but was actually affording the vessel an escort of two Norwegian gunboats," and "was guilty of a breach of neutrality toward Great Britain by voluntarily permitting innocent British civilians to be incarcerated by force within its territory."

ASSUMPTIONS QUESTIONED

He assumes that Norwegian officials were under a duty to board the *Altmark* and were under a duty to discover "the presence of the British prisoners and the variance between the ship's papers and the service the vessel was actually performing." He concludes "that the *Altmark* was not in Norwegian territorial waters from necessity, but because she desired protection from attack by British vessels while proceeding to Germany. A neutral country is under no duty to permit belligerent public vessels to use its territorial waters for such a purpose."

Assuming for the purpose of discussion that the *Altmark* was a public vessel, the assumptions and conclusions of the quotations just made seem to me without foundation in law. The *Altmark* entered Norwegian territorial waters, I presume, by virtue of the Norwegian proclamation of May 13, 1938, which grants belligerent warships, excluding submarines, in accordance with article 10 of Hague Convention XIII of 1907, the privilege of passage through its territorial waters. That article provides:

"The neutrality of a power is not affected by the mere passage through its territorial waters of warships or prizes belonging to belligerents."

RENAULT OPINION

This article, as the reporter, Professor Renault, of France, points out, finds its source in the thirty-second and last article of the British proposals to the effect that "none of the provisions contained in the preceding articles shall be interpreted so as to prohibit the mere passage through neutral waters in time of war by a warship or auxiliary ship of a belligerent." (Reports to Hague conferences, p. 847.) Professor Renault's report adds:

"The passage through neutral territorial waters of warships or prizes belonging to belligerents does not affect the neutrality of the state, and this implies at the same time that the belligerents do not contravene neutrality by passing and that the neutral does not fail in his duties by permitting them to pass."

It also appears that in observations of May 23, 1939, on Norway's neutrality regulations, Great Britain stated:

"While His Majesty's Government do not deny that there may in special circumstances be a right to refuse to belligerent warships entry into neutral territorial waters, they have always maintained and must continue to maintain the existence of such a right of entry for purposes of innocent passage and they are not aware of any case in which it has been refused by neutrals to belligerents for this purpose."

As a public ship, the *Altmark* was free from visit and inspection except perhaps to verify conformity with Norway's neutrality regulations. According to the Norwegian official statement, she was hailed twice on her way down the coast and the captain asked various questions, one of which, relating to the status of the men on board, he answered falsely. But it is not believed that the vessel was subject to general Norwegian jurisdiction or that Norway had any duty to inquire as to what seamen or nationals the *Altmark* was carrying, or, more particularly, any duty or privilege to break the relation between the captain and the persons on board.

RELATIONSHIP UNBROKEN

There is authority for the view that even if she had docked in a Norwegian harbor, no power existed to break this relationship (citations in Oppenheim, 5th ed., II, 591). She was not in Norwegian territory, so as to change her internal legal relationships. Norway might even have allowed her to employ its licensed pilots (Hague Convention, art. 11). And she was under no duty to notify Norway of her entry into territorial waters (art. 12, Draft Hague Convention, 1930, Gidel, La Mer, III, 278). She was not using Norwegian waters as a base of naval operations, although the use of her radio may raise a question.

Nor is it material what her ship's papers showed, provided we assume she was a public vessel. Even if the British seamen were not prisoners of war, as since 1907 I believe the better view, and even if the *Altmark* was thereby violating international law, it was not Norway's duty to correct the violation. The *Altmark* was under no duty to account to Norway for what she was carrying, nor was Norway bound to inquire whether she was passing through territorial waters to escape capture.

Manifestly that must have been her reason for preferring territorial waters to the high seas, for I know of no rule of law which prohibits the use of territorial waters for transit because of the motive to escape capture.

EDWIN BORCHARD.

NEW HAVEN, CONN., *March 5, 1940.*

Heirs of the British Empire

EXTENSION OF REMARKS

OF

HON. ROBERT R. REYNOLDS

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 12 (legislative day of Monday, March 4), 1940

EDITORIAL FROM THE WASHINGTON (D. C.) TIMES-HERALD

Mr. REYNOLDS. Mr. President, I ask unanimous consent to have published in the Appendix of the CONGRESSIONAL RECORD an editorial entitled "Heirs of the British Empire." This editorial was taken from the columns of the Times-Herald, issue of Monday, March 11. In the body of this editorial the editor brings up the question of what nations should be the heirs of the British Empire, when and if it finally goes the way of all previous empires? We might as well do some thinking on that subject now, in case all goes not so well with Britain in the present war. This has been well put by the editor, and I have been particularly interested in this editorial for I have now pending before the Foreign Relations Committee a resolution introduced by me several days ago, requesting the President of the United States to enter into negotiations with Great Britain with a view to acquiring the British island possessions in the West Indies, together with British Honduras in Central America, and the price agreed upon to be credited on Great Britain's indebtedness to the United States, which exceeds more than $5,500,000,000.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington (D. C.) Times-Herald of March 11, 1940]

HEIRS OF THE BRITISH EMPIRE

We hope it won't happen until we, our children, and our children's children are out of the picture, but some day the British Empire is going to come to an end.

There have been some highly durable empires in history—the Babylonian, Persian, Egyptian, Roman, and Spanish, among others, with the Roman Empire the outstanding example.

Julius Caesar (100–44 B. C.) turned Rome from a republic to a dictatorship; his successor, Augustus (63 B. C.–14 A. D.), was the first Roman emperor. It wasn't until 476 A. D. that the Teutonic King Odoacer advised Constantinople, capital of the Eastern Roman Empire, that there was no emperor in the West, an event which historians call the end of the Roman Empire.

The defeat of the Spanish Armada by the storms and Howard and Drake in 1588 is as good an event as any to which to pin the beginning of the British Empire. After that, the British pirates and privateers began the destruction of Spanish power in the West Indies. That means the British Empire has now lasted 352 years, as against the approximately 500-year record hung up by the Romans.

Reckoning on the time element alone, the British Empire should have a long life before it still. Other elements may shorten those chances. If Hitler, Stalin, and perhaps Mussolini have their way, the British Empire's years are now numbered.

We hope not. Not that it wouldn't be a good thing for somebody to collapse a lot of squabbling central European countries into one or two big customs unions, regardless of British objections;

but it's hard to picture either Hitler or Stalin as a wise ruler of conquered peoples.

Mussolini might be. After all, there would be the Roman tradition of wise colonial government for him to study and try to live up to—and the Italians are said to have proved pretty good colonial executives in the Libyan semidesert which they finally wangled out of the Allies about 6 years after the World War.

All this brings up the question: What nations should be the heirs of the British Empire, when and if it finally goes the way of all previous empires? We might as well do some thinking on that subject now, in case all goes not so well with Britain in the present war.

CARIBBEAN PROPERTIES

With the ultimate disposition of British possessions in Asia, Africa, and the South Seas, the United States has no proper concern that we can see.

But in the Western Hemisphere, the United States should become the heir of the British Empire south of Canada. We mean we should inherit the British West Indies—Bermuda, Jamaica, the Bahamas, British holdings in the Leeward and Windward Islands, etc.—plus British Honduras in Central America, British Guiana in South America, and the Falkland Islands off lower Argentina.

If we don't take those properties over from a cracked-up British Empire, some European nation or nations will try to—meaning we'll have to put up some sort of fight to keep our Caribbean and South Atlantic exposures from becoming too exposed. We'd better let it be understood around the world that we are going to move into those places when, as, and if the British move out.

IF CANADA WANTS IN

Regarding Canada in event of the British Empire's dissolution, we do not think there ought to be any United States attempt to annex it.

It may be that the Canadians will want to come into the Union of their own accord. If so, we ought to negotiate to admit them on terms of full equality with the present 48 States—the Canadian Provinces to be admitted as States with full rights under our Constitution, each of these new States to have two Senators at Washington and as many Congressmen as its population warrants. But Canada ought to start any such move, and we ought to make sure that the majority of Canadians really want to join us before we send any diplomats to talk over the deal.

All this is purely speculative, of course. But time and change can overtake the British Empire; and we ought to understand that fact, and do some thinking now and then about the tremendous implications which that fact carries for us as well as for the rest of the world.

Where the Money Was Disbursed

EXTENSION OF REMARKS

OF

HON. REID F. MURRAY

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

Mr. MURRAY. Mr. Speaker, the following table shows where the money was disbursed by the United States Department of Agriculture:

STATEMENT No. 1.—*Statement of expenditures from May 12, 1933, to June 30, 1939, inclusive*

[U. S. Department of Agriculture, Agricultural Adjustment Administration]

	Fiscal year 1934	Fiscal year 1935	Fiscal year 1936	Fiscal year 1937	Fiscal year 1938	Fiscal year 1939	Total May 12, 1933, to June 30 1939
Washington, D. C.	$7,884,017.03	$16,205,502.96	$14,685,400.84	$12,621,749.05	$8,165,897.57	$6,548,007.22	$66,110,574.67

The following article shows the large amounts disbursed to big corporation farmers:

[From the Washington Times-Herald of March 4, 1940]

SURETY FIRM GETS BIGGEST A. A. A. PAYMENT—TOP BENEFITS TO OWNERS OF FORECLOSED FARMS

(By Fred Bailey)

The biggest single beneficiary of the New Deal's farm program in 1937 was the Metropolitan Life Insurance Co. An Agriculture Department report to Congress today revealed it was paid $257,095 in A. A. A. benefits on farms it owns.

Nearly all the top payments went to life-insurance companies and banks which have become large-scale owners of farms on which mortgages have been foreclosed.

PAYMENTS LAG A YEAR

More than 20,000 farmers and corporations received A. A. A. benefit payments of $1,000 or more for compliance with the 1937 program. Most of the checks were sent out in 1938 and 1939, since payments usually lag more than a year behind program compliance.

The report disclosed 272 farmers and corporations received more than $10,000 each, and 594 received $5,000 or more. Total payments for 1937 were $325,856,887.

The payments were obligated before Congress amended the Agricultural Adjustment Administration Act in 1938, prohibiting the payment of more than $10,000 to any person or corporation. The limitation became effective last year.

CONTINUE TO COOPERATE

Agriculture Department officials said "very few" of the large corporations had ceased cooperation in the farm program because of the limitation. It has resulted, they said, in larger payments to small farmers.

A. A. A. officials said the average check sent 3,750,000 farmers who participated in the 1937 program was about $75. Since then the average has increased, partly because nearly $500,000,000 was provided by Congress for such payments in both 1938 and 1939.

There were 11 payments of more than $100,000 each, and 12 of between $50,000 and $100,000. After the Metropolitan Life Insurance Co., the next biggest payments went to the Prudential Insurance Co. of America, $231,158, and the Equitable Life Assurance Society of the United States, $206,962.

OTHER HIGH PAYMENTS

Other payments of more than $100,000 were:

Travelers Insurance Co., Connecticut, $211,521; Union Central Life Insurance Co., Ohio, $166,280; Mutual Benefit Life Insurance Co., New Jersey, $161,110; Northwestern Mutual Life Insurance Co., Wisconsin, $156,444; John Hancock Mutual Life Insurance Co., Massachusetts, $147,647; Federal Land Bank of Omaha, Nebr., $124,139; King Ranch, Texas, $122,140; and the Federal Land Bank of St. Paul, Minn., $103,925.

Payments of between $50,000 and $100,000 were:

Matador Land & Cattle Co., of Denver, Colo., $60,153; Delta & Pineland Co., Mississippi, $64,168; Mississippi State Penitentiary, $52,429; United States Sugar Corporation, Florida, $68,893; Bank of North Dakota, $83,411; Bankers Life of Iowa, $80,268; Equitable Life Insurance Co. of Iowa, $77,676; State of Minnesota, $74,713.

Some of the interesting facts to be learned by studying table 1 are that some sections of the country, having received the disbursements shown in this table, certainly must be made safe for Democrats, and, we hope, safe for democracy. You will note that 1 State has received over 11 percent and 10 States received over half of the total money disbursed.

Wisconsin has had subsidies that represent but 3 percent of the valuation of its farms, so if the United States Treasury is out of balance, the farmers of Wisconsin cannot be held responsible.

Some States have received subsidies that represent over 30 percent of the value of their farms and are still eager to obtain more.

THE PUBLIC DEBT

The public debt has been increased $21,000,000,000 during the past 7 years and the rural people, representing 20 to 30 percent of the total population, will eventually have to repay 5 to 6 billion dollars of the public debt.

There are approximately 341,000,000 acres of cropland harvested each year. We then have 341,000,000 acres to pay back this five to six billion dollar public debt, or, in effect, we have an invisible mortgage of $15 per acre on every acre of cropland harvested in the United States. While the records in the offices of the register of deeds may show the farm lands free of debt there will, nevertheless, be exacted a toll of $15 per acre from the owner of the farm, his son, or his grandson, to repay their portion of the public debt.

In short, the farmers have been the recipients of about $3,000,000,000 but they will have an opportunity to repay $6,000,000,000 with interest.

The cross purposes of the New Deal agricultural program must be avoided and immediate steps taken to give the farmers parity. A good place to start is to give the American market back to the American farmer insofar as he has the ability to supply it.

According to statistics this country imported $3,800,000,000 worth of competitive agricultural products during the period 1933 to 1939 and during the same period spent around $3,000,000,000 to control our own agricultural production. How many men would have been taken off from W. P. A. if this $3,800,000,000 worth of agricultural products had been produced and processed by W. P. A. labor? How much money could have been saved in subsidies if the American farmer had produced this $3,800,000,000 worth of competitive agricultural products? What do you think?

Required Construction for Public Water Supply and Pollution Abatement

EXTENSION OF REMARKS

OF

HON. HARRY R. SHEPPARD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

Mr. SHEPPARD. Mr. Speaker, I wish to place some data in the RECORD that I think is interesting.

The most authoritative information available showing the extent of waterworks and sewerage works required to meet the needs of the Nation is contained in the National Resources Committee Report on Drainage Basin Problems and Programs, 1937 Revision. The information in that report is the result of a review of the suggestions of 45 drainage basin committees designated by Governors and State planning boards and including field men from interested Federal bureaus. The time and cost of securing an up-to-the-minute estimate for the purpose of this discussion is prohibitive. However, since the recent expenditures effected through the grant-in-aid programs of the Government resulted in restoring the building program to normal figures only the error in the analysis based on the 1937 figures is not material.

The following tables appear on page 129 of the 1937 report of the National Resources Committee:

TABLE XVII.—*Water-supply and pollution-abatement requirements, based on reports from drainage-basin committees*

RECOMMENDED CONSTRUCTION

Region	Water supply		Pollution abatement and sewerage	
	Number of projects	Estimated cost	Number of projects	Estimated cost
New England	116	$23, 255, 000	131	$82, 366, 000
North Atlantic	98	373, 436, 000	270	215, 852, 000
Middle Altantic	464	24, 358, 000	612	49, 805, 000
Southeast	67	6, 769, 000	75	10, 188, 000
Tennessee Valley	28	1, 792, 000	31	2, 881, 000
Ohio	124	12, 980, 000	272	104, 155, 000
Great Lakes—St. Lawrence	131	46, 733, 000	267	58, 863, 000
Upper Mississippi	709	22, 133, 000	681	58, 043, 000
Lower Mississippi	45	1, 218, 000	76	5, 238, 000
Western Gulf	372	8, 703, 000	410	6, 997, 000
Southwest Mississippi	210	12, 718, 000	342	13, 295, 000
Missouri	205	6, 116, 000	184	9, 466, 000
Colorado	50	5, 851, 000	38	2, 424, 000
Great Basin	10	338, 000	6	190, 000
California	37	17, 373, 000	62	33, 988, 000
Pacific Northwest	12	2, 992, 000	27	13, 260, 000
Total	2, 678	566, 765, 000	3, 484	667, 011, 000

TABLE XVIII.—*Expenditures for waterworks and sewerage projects in the United States, by years*

Year	Waterworks	Sewerage
1925	$151,000,000	$126,000,000
1926	147,000,000	138,000,000
1927	147,000,000	166,000,000
1928	123,000,000	175,000,000
1929	133,000,000	122,000,000
1930	218,000,000	140,000,000
1931	172,000,000	114,000,000
1932	103,000,000	71,000,000
1933	172,000,000	47,000,000
1934	211,000,000	125,000,000
1935	154,000,000	117,000,000
1936	200,000,000	242,000,000
Mean, 1925-36	161,000,000	129,000,000

In 1939 the National Resources Committee published a report on Water Pollution in the United States, in which table the expenditures for 1937 for sewerage projects is given as $257,000,000.

The attached graph of Expenditures for Sewerage Works and Required Construction in the United States is an analysis of the conditions relative to sewerage works construction based on the information given in table XVIII above. The cost of required construction is the sum of the differences between actual expenditures and average normal expenditures for each year and amounts to approximately $703,000,000. This figure compares with the estimate of $667,000,000 reported by the National Resources Committee and arrived at by a consideration of the needed projects in the various drainage areas. The restoration of expenditures to a normal level by Federal grants-in-aid is evidenced by the rapid rise of curve (a) after 1933.

The construction of waterworks did not lag similarly to that of sewerage works. Provision for this essential to life has forced the needed expenditures even in time of financial stress. This fact is supported by a comparison of the estimates for water supply and sewerage given in table XVII since the normal per capita cost of water supplies is approximately 50 percent in excess of that for sewerage works. Furthermore, as opposed to sewerage works, waterworks in general are self-supporting and that, together with the necessity for their product, has resulted in their construction more in keeping with the needs as indicated by our standard of living. Then, too, it has been the practice in the past to construct waterworks on the basis of a longer life expectancy than works for the treatment of sewage which has resulted in a lesser annual cost for replacements.

The increasing knowledge of the benefits which accrue to the public health in improved water supplies, the decent disposal of human wastes, and the proper disposal of the wastes of industry indicate that the expenditures for both waterworks and sewerage works should be materially increased.

Mr. Abel Wolman, professor of sanitary engineering, Johns Hopkins University, and an eminent practicing engineer, in writing on the subject of stream pollution in Transactions of the American Society of Civil Engineers, volume 104, page 874, 1939, says in part:

> The key to the primary question of what can be done about pollution, to the writer's mind, lies in money. How can stream-pollution correction best be paid for? "Depression thinking" has given even greater emphasis to the ever-present question of how to raise money for sewage disposal and treatment. Such an enterprise is seldom popular, largely because, in most instances, the sewage nuisance is remote from the average taxpayer's eyes and nose, and in the years of depression money for such purposes has become increasingly difficult to raise. A revival of a criterion of decency in the American public conscience is a first essential, but no less important is the development of financial techniques for raising funds.
>
> Experience since 1933 has indicated how important an impetus may be given to sewage-treatment-plant construction by the artificial device of Federal grants-in-aid. More than 25 percent of existing sewage-treatment plants in the United States have been constructed since 1933. It is difficult to believe that this is the result of chance or of a simple natural process of growth, rather than the obvious result of the artificial stimulation of activities in this field by Federal funds. The principle of grants-in-aid to stimulate special types of local endeavor is of course not new; it has been applied for more than 50 years in a variety of highway, navigation, reclamation, public health, and agricultural projects.
>
> This experience leads the writer to suggest that perhaps the most valuable stimulus for correction of stream pollution is in the grant-in-aid principle. * * *
>
> In other words, if money is the key to stream-pollution control, a central stimulation of activity—based, of course, upon a reasonable balancing of convenience—offers one of the soundest bases for future success. Correction is cheap, as such expenditures go, but the incentive has been missing.

The Road to Peace

EXTENSION OF REMARKS

OF

HON. LOUIS LUDLOW

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, February 13, 1940

Mr. LUDLOW. Mr. Speaker, Woodrow Wilson, scholar and statesman, had a favorite saying in reference to the origin of wars. In numerous speeches, delivered shortly before the outbreak of the World War, he said that he had known of "governments making war on governments" but never within the range of his reading of history and his personal observations, had he known of "peoples making war on peoples." Our present peace-loving President, Franklin D. Roosevelt, voiced the same truism in a different linguistic dress when he said that "war by governments must give way to peace by peoples." The idea which both of these distinguished statesmen had in mind was that wars are made by rulers and not by the peoples who comprise nations. A legitimate deduction from the truth expressed by these two Presidents is that if the question of war or peace were left to the decision of the peoples of the various countries there would be no wars. Especially would this seem to be a natural and justifiable conclusion at the present time when the people all around the world are inexpressibly weary of war, weary of its sickening toll of young manhood, weary of its heart-breaking griefs and back-breaking costs, weary of the pain it puts in the hearts of mothers.

What, then, may I ask, is the most effective way to combat the curse of war, a curse so hideous and terrible that even the winner loses? The way to cope with war is to give the people a chance to get at this evil. The way to get rid of war is to build up democracy. If the people of all the countries could exercise the right to say when their countries shall enter nondefensive wars, the time would indeed be near at hand when "war by governments" would give way to "peace by peoples."

So far, the right to make that vital decision has not been conferred upon any people in the world, not even our own. The nearest approach to the exercise of that right occurred during the World War when the people of Australia were allowed to vote on conscription in a Nation-wide plebiscite. That was an honest-to-goodness referendum and presented a vivid illustration of democracy at work. Citizens of Australia turned out at the polls by the millions and conscription was defeated by a rather small margin.

It is noteworthy that in America, notwithstanding the fact that five Gallup polls have shown a popular majority in favor of my resolution for a constitutional referendum on participation in foreign wars, we still have a situation where our democracy stops at the water's edge. Recently my home city, Indianapolis, was in a furor of excitement over a proposal by the city to purchase the privately owned water plant which furnishes water to our thousands of consumers, and one of our great Indianapolis newspapers insisted that in all honesty and fairness the question should be decided by a referendum to the people. Yet that same newspaper vigorously and uncompromisingly opposes letting the people decide whether our sons shall be sent overseas to be gassed and shot and bayoneted in foreign wars.

OUR GOVERNMENT NOT A DEMOCRACY AT ALL

In its foreign relations our Government is not a democracy at all, but a pure autocracy. The citizen can vote on the election of a constable or a dog catcher, the location of a pesthouse, or the purchase of a water plant, but he has no vote on the greatest and most tragic of all questions, the question that involves breaking up of family ties, tearing heartstrings asunder and hurling our precious young men into the bloody chasm of foreign war. If our democracy means anything at all, if it has any force and vitality whatever, it should apply in the great and tragic decisions that are intertwined with life and death, as well as in such minor and inconsequential matters as the election of a constable or dog catcher, or the purchase of a water plant.

If a start is to be made toward freeing mankind from the yoke of war, I believe the United States will have to take the lead. It is unthinkable that anything can be done now in the direction of a plebiscite on war in countries that are under the thumbs of dictators. In those countries the individual is nothing and the state is everything and human liberty long since burned to ashes on the altar of totalitarianism. The democracies of Europe are too busily engaged checkmating the dictators to give any time or attention to the enlargement of individual rights, and it is seemingly apparent that if there is ever to be a world-wide movement whereby "war by governments will give way to peace by peoples" as envisioned by our President, that movement will have to be cradled in the United States of America.

I am one of those who believe that adoption of the resolution I have introduced, known as the peace amendment, might initiate something very important toward breaking the war spell and turning the attention of the world from human slaughter to the peace for which humanity is yearning and for which millions upon millions are pleading in their daily prayers to the throne of God. America is the most influential country on the entire earth, and its geographical position, detached from the hatreds and enmities of the Old World, enables it to accomplish more by precept and example in setting the fashion of the world than could possibly be accomplished by any other country. If America should decide to let our people vote on whether or not we shall take part in foreign wars we would make a powerful appeal to the peoples of other countries who would be encouraged to demand the same right, and it is not assuming too much to believe that this growth of democratic sentiment in many lands would be the most effective deterrent of war that could be imagined.

Let us for a moment examine the situation in our own country in respect to the exercise of the war power. I have said that in our foreign relations our Government is not a democracy at all, but a pure autocracy, and I propose now to try to show how small and powerful that autocracy really is. I propose also to try to show that the existing provision in our Constitution relating to the declaration of war is not a dependable mechanism in registering the popular will. Under that mechanism America can be plunged into the most horrible foreign war imaginable by the votes of 267 Members of Congress, comprising a bare majority in both branches, but even that does not give an accurate idea of the centralized control of our foreign relations, for the reason that over and above Congress, singularly influencing and overlording it, is one individual who happens at any given time to be the President of the United States. So highly centralized is our Government in its foreign relations and so subservient to the President is Congress in its war psychology, that the President—any President—could get the country into war at any time it suits his inclination or purpose to do so.

WHEN DEMOCRACY WAS MURDERED IN THE HOUSE

If anyone doubts this let him remember what happened in the House of Representatives on January 10, 1938, after a majority of the Members of the House, or 218 to be exact, had signed a discharge petition to bring my resolution out of the Judiciary Committee for debate and a vote. The President sent a letter to the House, which was read by the Speaker, asking the House to defeat the resolution, and, lo, the majority changed in a twinkling to a minority and the motion to discharge the committee was defeated, 188 yeas to 209 nays. In narrating these facts I am not at all finding fault with the President, whose sincerity I recognize, but if a President of the United States has power enough to prevent a resolution of this character from even being discussed in Congress, is anyone credulous and simple-minded enough to suppose that he could not prevail upon our legislative body to adopt a declaration of war if he thought the time had come for such a declaration? With the war power lodged where it now is, there would be absolutely no protection to the Republic against involvement in war if a modern Napoleon should appear in the White House.

I shall now undertake to show by some concrete illustrations why I think the existing war provision in the American Constitution is a defective instrumentality in registering the popular will.

Let us try to visualize just a few of the myriad of influences and pressures that may now be brought to bear on Congress to force a declaration of war—influences and pressures which might be effective on Congress but which would be wholly ineffective if applied to the Nation under the war-referendum system.

Illustration No. 1: Senator John Smith has a brother who is president of a large munitions company. The brother has visions of enormous bonuses certain to come to him if war is declared. If Senator Smith were a judge assigned to try a case under such circumstances he would be expected to disqualify himself, but as a Senator he is under no such compulsion and he will have a vote on the declaration of war.

Illustration No. 2: Representative John Brown owes a large sum of money to the home bank at Smithville, his loan being subject to call. The Smithville bank is affiliated with a great big bank in New York which belongs to a ring of international financiers. The New York bank and its associates are promoting the war movement. It says to its Smithville correspondent: "Take care of Congressman Brown and see that he votes right on the declaration of war."

Illustration No. 3: War clouds are gathering over America and, let us say, Japan. A break appears imminent. During the week immediately following the time set for a vote in Congress on a war resolution the congressional convention will be held in Congressman John Jones' district, and Congressman Jones is a candidate to succeed himself. Without the support of the Sharpsville Bugle, the leading newspaper of his political faith in the district, John Jones could not get within a thousand miles of the nomination. The Bugle is violently anti-Japanese, and is demanding that Representative Jones vote for war.

Illustration No. 4: With the war declaration pending in Congress the Legislature of the State of New York meets, and in its assumed capacity to speak for the people of that sovereign State, it adopts a resolution in the form of a memorial demanding that the New York delegation in Congress, 2 Senators and 45 Representatives, shall vote for war. The action of the letgislature is unanimous. The vote of the New York delegation in Congress is numerically equal to the combined votes of many other States. If it is cast as directed from Albany, it will tip the scales in favor of war. It is known that ulterior influences were very busy around Albany before the legislature took action.

A THOUSAND PRESSURES TO FORCE WAR

These are but instances of many forms of pressure to which Congress may be subjected in wartimes. A thousand other illustrations could be given of special pressures that might be brought to bear on Congress to force a declaration of war, influences which could not possibly be brought to bear on the country at large in a referendum on war. If the decision of war or peace were left to all of the people of the country the action of the New York Legislature would not have an effect altogether out of proportion to its actual importance. It might have a little influence on the great national jury but it assuredly would not be a determining factor in the result. The Sharpsville Bugle might bugle to its heart's content but its raucous calls would hardly swing a nation.

There is no desire or intent in this recital of just a few of the ulterior influences that may now operate to defeat the popular will, to speculate on how John Smith, John Brown, John Jones, and the New York delegation would vote on a declaration of war. Giving to all of them the credit of being honest, sincere, and patriotic men who will see their duty and do it, nevertheless it must be obvious to everybody that such a system of declaring war is all wrong.

The tendency of governments all around the world is to go centripetal at an amazing rate. Nineteen democracies have died since the World War, and with them have died the hopes and aspirations of the common people of those countries. Centralization is the order of governmental development everywhere. Too often all power is being centralized in tyrants who play with the lives of their subjects as they would with so many toys, moving them here, there, and yonder on war's checkerboard, using them as cannon fodder without the slightest regard for humane considerations. Is it not our bounden duty, as citizens of the only great free government left on earth, to do all we can to counteract this evil tendency? The way to counteract it is to build up democracy.

DEFENSE WARS AND POLICY WARS

There are defense wars and there are policy wars. If the defense of our homes and firesides were the issue, all America would rally to the colors and a referendum would not be expected or required. But when it comes to deciding whether it is the best policy to send our boys overseas to fight in wars of alien origin over boundary disputes and blood feuds, those who have to suffer and, if need be, to die and to bear the awful burdens and costs and griefs of war should have something to say about it. The principal and not the agent should make the decision, and in this case the principal is the 130,000,000 people who comprise the American nation. The only place to decide this question of transcendent importance is in the privacy of the ballot booths, where every voter will be alone with his Maker. In that way we shall have a verdict that will truly represent the combined judgment and conscience of America.

WOMEN NOW HAVE NO VOICE ON WAR

In reaching that verdict women, under the terms of the resolution, will have an equal vote with men. And why should not women have a right to vote on a declaration of war? Women go down into the valley of the shadow of death to bring our boys into the world. Why should not they have something to say as to whether their flesh and blood shall be hurled into the hell of a foreign conflict? In the present Congress only 7 of the 531 Members are women, so you see how pathetically impotent is the opportunity afforded to give expression to whatever may be women's viewpoint on any particular war proposal.

It is my considered opinion that if this proposed amendment giving the people a right to vote on entering nondefensive wars is written into the Constitution, it will keep us out of all foreign wars, and, indeed, out of all wars, unless occasion might arise to wage a war of defense, which is highly improbable. If then the peoples of other lands, inspired by our example, should succeed in getting a similar vote on war, the foundation would be laid for world-wide peace and security. Meanwhile there would be no impairment of our national defense in any way, shape, or form, for under the very terms of the proposed constitutional amendment, if America or any other country in the Western Hemisphere is attacked or invaded the referendum could not be invoked; nor is there anything about the amendment that would control or limit the President's power as Commander in Chief after war is declared. It would only curtail the President's power to get us into war by allowing the people to decide that question, except when our country is attacked or in peril of attack. This is a wise limitation, since a constitutional amendment is not intended for a day, or for a generation, but for the long-range future, and sometime we may have a President of dictatorial bent who is determined to get us into war for personal aggrandizement. With the war power vested as it now is, a dictatorial, war-mad President would find the setting exactly to his liking.

Modern means of communication in all civilized countries, where the fast trains, telegraph, telephone, airplanes, and radio have annihilated time and space, have made referendums on war possible and practicable. I am in favor of the United States taking the lead in making provision in its Constitution for such a referendum, except in the case of attack or invasion. I am for this because I believe it would be a measure of elemental justice to our own people and a logical conclusion of our great charter of freedom, the Bill of Rights; but I am for it even more because I think it would create a peace consciousness in every country and would set an example to inspire war-sick nations around the globe to break the war psychosis that is driving the world to the brink of destruction. I fervently believe that it would go a long way to stabilize the peace of America and the peace of the world.

Amending the Wagner Act

EXTENSION OF REMARKS

OF

HON. THOMAS C. HENNINGS, JR.

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

EDITORIAL FROM THE ST. LOUIS STAR-TIMES

Mr. HENNINGS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial recently published in the St. Louis Star-Times:

[From the St. Louis Star-Times]

AMENDING THE WAGNER ACT

The Wagner Act changes proposed yesterday by a majority of the Smith investigating committee, clearly go so far toward emasculation of the law, in the guise of "amendment," that the United States Chamber of Commerce and the National Association of Manufacturers are ungrateful indeed if they do not rally round with hearty cheers for the three committee members supporting them.

Some of the proposed amendments are desirable. Administrative procedure would be speeded up by the recommendation that the right of appeal against an intermediate finding be limited to 30 days. The proposal that the Wagner Act could not be invoked by fewer than 20 percent of employees would eliminate some borderline cases. The suggestion that a Labor Board decision, once confirmed, would be binding for a year would save an employer from ceaseless bickering.

But other proposed amendments show plainly which way the wind was blowing when the committee majority voted its recommendations.

The committee would strike out the language of the Wagner Act which characterizes the denial of collective bargaining as a prolific cause of strikes and declares that the policy of the United States is to encourage industrial peace through guaranteeing collective bargaining.

It would split the prosecuting function from the judicial function by making the new Labor Board a purely judicial agency and setting up a single administrator to file complaints, prosecute cases before trial examiners, and, finally, to apply for enforcement in the circuit courts of appeals.

It would require the Labor Board in its hearings to follow the strict judicial rules of evidence, "so far as practicable," observed in United States district courts.

The first of these proposals would cut the heart out of the Wagner Act. Chief Justice Hughes, in holding the law constitutional in the Jones & Laughlin case in 1937, leaned heavily on the declaration of Congress that labor disputes could have a clear effect on interstate commerce. To eliminate the section of the act citing denial of collective bargaining as a cause of strikes might destroy the theory on which the law was deemed legal.

The second and third proposals would harass the administration of the law by forcing a division of powers and the observance of hairsplitting rules of evidence, which are required for no other administrative agency of the Federal Government.

A tremendous wave of abuse and condemnation has been vented on the N. L. R. B. because it combined prosecuting, fact-finding, and enforcement functions within one body. But the Interstate Commerce Commission, the Federal Trade Commission, and numerous other quasi-judicial agencies operate in exactly the same way. The Supreme Court has shown that when and if such power is abused the Board will be overruled and reprimanded.

The same is true of the "rules of evidence" amendment. The administration of a complicated law in the difficult field of labor

relations will be wrecked if the meticulous, precise, formal procedure of Federal courts must be followed. The Logan-Walters bill, seeking to force all administrative agencies to follow these rules, has been held up in Congress because of the danger that its enactment would disrupt the vital work of these agencies. But the Smith committee majority proposes to apply it to the Labor Board alone.

In other amendments the committee exposes its basic antagonism to the Wagner Act by proposing, in effect, an exemption for any employer who can persuade a minority of his workers to engage in a factional dispute; by allowing an employer to claim he is bargaining collectively even if his sole act is to meet with his workers, then refuse their demands and refuse a counter offer of his own; by depriving of the Wagner Act's protection any striker guilty of willfully violating any law.

The enactment of these proposals by Congress would be unthinkable if labor were united in defense of what, until recently, all branches recognized as labor's Magna Carta. It is difficult to believe, even now, that Congress will pass the more vicious amendments. Yet what will happen when the A. F. of L. and the C. I. O. are split wide apart by their short-sighted bickering leaders—when the A. F. of L. wants certain amendments for its own protection and may make trades—is in the realm of speculation.

But neither the rank and file of labor nor the public should be under any misapprehension about the purpose of the proposed amendments. Their predominant effect, as the committee minority declares, "would eviscerate the (Wagner) Act and deprive labor of guaranties which are the fruits of many years of struggle and hardship."

Payment of Income Tax in the District of Columbia by Persons Domiciled in Massachusetts

EXTENSION OF REMARKS

OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

LETTER FROM THE COMMISSIONER OF CORPORATION AND TAXATION OF MASSACHUSETTS

Mr. McCORMACK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter received by me from the commissioner of corporations and taxation of Massachusetts:

THE COMMONWEALTH OF MASSACHUSETTS,
DEPARTMENT OF CORPORATIONS AND TAXATION,
State House, Boston, March 5, 1940.

Hon. JOHN W. McCORMACK,
House of Representatives, Washington, D. C.

DEAR CONGRESSMAN: It appears clearly that inhabitants of Massachusetts, wherever they physically may be, are subject to the Massachusetts income tax. It is equally true that those who are domiciled in the District of Columbia are liable for the District of Columbia income tax.

The question of determining whether a person who has indicated an intention of retaining his domicile in Massachusetts but is physically present in the District of Columbia for a major portion of the year is domiciled in Massachusetts or the District of Columbia is a matter of fact after considering all of the evidence which can be presented in a given case.

Speaking generally, domicile is where a person intends it to be, provided his acts indicate that that is his intention. Unquestionably, the District of Columbia, because it has a tax on those who are domiciled in the District of Columbia, cannot tax an inhabitant of Massachusetts nor can Massachusetts, because it taxes only those domiciled in Massachusetts, tax an inhabitant of the District of Columbia. It is clear that a person cannot have but one domicile. It is well established that he cannot have a domicile for voting purposes and another domicile for tax-paying purposes. He cannot have a domicile for general living purposes and a domicile somewhere else. These doctrines, however, cannot be loosely applied as the circumstances of each individual must control in the ultimate determination of where his domicile is.

Everyone must have a domicile. The domicile of origin persists longer than any other domicile and is the most easily regained. My own thought in the matter is that it would not be difficult to prove that most of the persons who are employed in the District of Columbia who have retained their voting rights in Massachusetts, and therefore have established their responsibilities toward that State in tax payments and other ways, are, despite the fact that they may be physically present in the District of Columbia a major part of the year, still inhabitants of Massachusetts.

In respect to a single person who will go to the District of Columbia either to work for an elective or appointed official, or for that matter under civil service, he undoubtedly does not abandon his Massachusetts' domicile. The logic against such an abandonment is strong because the right to vote is an important privilege in the eyes of Americans, and the assumption is that they will not under any circumstances give it up. The mere fact that a person is earning his livelihood in the District of Columbia which primarily is a governmental center and not a jurisdiction such as is true of the States presupposes that there is a limit to that employment, and when it is completed the person will return home.

Speaking now in general terms, it is my thought that, aside from some very unusual cases, all inhabitants of Massachusetts, that is, those who have persisted in filing an income-tax return here and voting here, even though they are in the District of Columbia, should resist by noncompliance with the District of Columbia tax law. The District of Columbia cannot tax nonresidents because their law is not broad enough for that. It can only tax inhabitants and those are persons who are actually domiciled in the District of Columbia. As a general thing, it is safe to say that one who wishes to retain his domicile in Massachusetts should not under any circumstances file an income-tax return in the District of Columbia. The District of Columbia seems to be weak in any provision of its law for a person subsequent to being declared not subject to its law to recover any money.

It is, of course, true that the District of Columbia would have a very strong case where a person, let us say, left Boston, went to the District of Columbia perhaps undetermined as to whether he would return or not, who subsequently started the practice of law, married, and under this set of circumstances unquestionably domicile had been established in the District of Columbia.

It is inconceivable that a Congressman, however, who moved his family to Washington and stayed there 12 months of the year could be held to be domiciled in the District of Columbia. In the first place I doubt very much if the voters of Massachusetts could elect a person domiciled in the District of Columbia as a Congressman from Massachusetts. Those who were employed by the Congressman so elected, even though they spent 12 months in Washington, provided they were in fact domiciled in Massachusetts before entering upon employment with the Congressman in Washington, unquestionably could not be held to be domiciled in the District of Columbia and, therefore, subject to that tax. This same rule would apply to practically all of those who are employed in Washington in a governmental way if, as I have indicated, they were originally without question domiciled in Massachusetts. On the other hand, those who have gone to Washington, possibly retired for one reason or another from governmental service, and established themselves in a profession or a business, might clearly be held, particularly if they had married or had their families there, to be domiciled in that jurisdiction.

In any event, no inhabitant of Massachusetts can be subject to the District of Columbia tax and, therefore, there would be no requirement to pay the Federal tax, the State tax, and the District tax. The District of Columbia tax law is the same as Massachusetts in that it applies only to those domiciled within the jurisdiction as a person cannot be domiciled in Massachusetts and also be domiciled in the District of Columbia. In other words, he cannot have but one domicile. Therefore, there is no possibility of two jurisdictions taxing him.

My suggestion is to advise all those who may seek information from you to refuse to file a District of Columbia income tax if in fact they were domiciled in Massachusetts, are filing a Massachusetts' income-tax return, and are on the voting list of any city or town in Massachusetts.

In the event this does not answer your inquiry, I shall be very glad to advise you further.

Cordially yours,

HENRY F. LONG,
Commissioner of Corporations and Taxation.

Retired Railroaders Support Wheeler-Lea Railroad Bill

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

RESOLUTION OF THE INTERNATIONAL RAILWAY ASSOCIATION

Mr. VAN ZANDT. Mr. Speaker, speaking from their many years of service and loyalty as employees of the major railroads of the United States, the International Railway Association with a membership of 637 retired men adopted on Febru-

ary 12, 1940, the following resolution evidencing their wholehearted support of S. 2009—the Wheeler-Lea bill.

Through their secretary, Mr. J. A. Nesbitt, 451 Sixth Street North, St. Petersburg, Fla., I have been furnished this resolution and advised that the International Railway Association is an organization formed for the purpose of enabling retired railroad employees on the railroad pension rolls to keep in touch with railroad problems and do what they can to advance the interests of both the railroads and their employees.

The expression from this group of retired men is typical of the support that the Wheeler-Lea bill is receiving from the railroad employees of the Nation in addition to similar support from the farmers and the business and professional men of the country.

The resolution follows:

The members of the International Railway Association are retired railroad men, who retain their interest in the great industry to which they have given the best years of their lives. They are proud of their long connection with a business affected with a public interest, and essential to the welfare of the Nation. Without efficient transportation, no people can be prosperous; without a fair degree of prosperity no nation can long survive. There are several useful agencies of transportation, each having its place in what should be a well-ordered system by which the exchange of goods and the movement of people may be brought about with due regard to economy and efficiency. Of all these, the railroads are by far the most important, since they furnish the only form of transportation capable of serving every section of the country, every day of the year, with respect to every commodity, without limitations as to length of haul.

The railroads are self-supporting; they ask for no subsidies; they seek no special favors. They employ a million men, they pay good wages and they recognize the right of employees to bargain collectively. They pay almost a million dollars a day in real taxes for the support of schools and other activities of local, State, and national governments. They care for their aged and unemployed. The railroads make no demand upon the Government except that they may be permitted to carry on business upon fair and equal terms with their competitors. This statement means only that there should be equality of treatment with respect to subsidies, taxation, and regulation.

To this end, they favor the enactment of such amendments to the laws governing transportation as will regulate all alike, so far as the character of the business will permit. Such an act is the bill now before the Congress of the United States, known as S. 2009. If this bill becomes a law substantially in the form in which it passed both House and Senate at the first session of the Seventy-sixth Congress, in addition to minor matters of some importance, it will accomplish four significant ends:

1. It will pledge the Congress to a policy of fair and equal treatment of all forms of transportation, and direct the regulating authority so to administer the law as to bring this about.
2. It will subject water carriers to reasonable regulation by the same body that regulates the railroads, the pipe lines, and the highway carriers, thereby putting an end to secret and discriminatory rates in the field of water transport.
3. It will improve the machinery for effecting railroad consolidations, where the public interest requires such action.
4. It will provide for a competent and impartial board of experts to be appointed by the President to investigate and report upon the subject of subsidies and to deal with the problem of integration as among the different transportation agencies.

Our interest in the business which has been our life work moves us to urge the Members of Congress to support this bill, which represents a long step forward in the process of improving conditions in an industry which, if restored to health, will lead the way to complete business recovery.

Crop-Control Beneficiaries

EXTENSION OF REMARKS

OF

HON. FRANK O. HORTON

OF WYOMING

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

EDITORIAL FROM THE KEWANEE (ILL.) STAR-COURIER OF MARCH 6, 1940

Mr. HORTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial, which was published in the Star-Courier, Kewanee, Ill., on March 6, 1940:

[From the Kewanee (Ill.) Star-Courier of March 6, 1940]

CROP-CONTROL BENEFICIARIES

The A. A. A. checks which filtered into Illinois for cooperation with the 1937 New Deal farm program have been small in size. This last large-scale pay out has enriched life-insurance companies, farm land banks, and mortgagors who have become large farm operators as the result of depression foreclosures.

Largest A. A. A. benefit check for 1937 crop control was the $257,095 paid to the Metropolitan Life Insurance Co. The Prudential Insurance Co. collected $231,158 from the A. A. A.; the Equitable, $206,962; Travelers, $211,521; Federal Land Bank of Omaha, $134,139; * * * Federal Land Bank of St. Paul, $103,925; United States Sugar Corporation, $68,893; Bank of North Dakota, $83,411; and so through the list of life-insurance companies, banks, liquidation receiverships, and land banks.

This is the last Santa Claus outpouring of this sort for soil conservation. These payments were obligated before Congress amended the A. A. A. in 1938 to prohibit the payment of more than $10,000 to any single person or corporation. This limitation was imposed when farmers, who expected to benefit first and last from crop payments, discovered that life-insurance companies and large corporations took the big money from the A. A. A. and left only an average of about $75 for the individual farmer.

The shift of land ownership through foreclosure and depression put corporations first as A. A. A. farm beneficiaries. The A. A. A. and every Washington agricultural program was designed to benefit farmers, which quarter-million-dollar payments to life-insurance companies and land banks do not directly benefit.

Crop control is not making many converts among stock breeders, judging from the poll of 200,000 stockmen by the Breeder's Gazette, their trade publication. Replies to 200,000 questionnaires by the Breeder's Grazette revealed the following answers and comments by this leading stock publication:

	Percent	
	Yes	No
Should production be controlled?	26	74
Should payments be made for soil conservation?	27	73
Should United States make parity payments to farmers?	22	78
Would you give up all farm benefits payments in the interest of a balanced Budget?	77	23

"The livestock farmers of America stand 3 to 1 in favor of an independent agriculture. They voted in that ratio against controlled production. They want a free farming enterprise.

"They stand 3 to 1 against taking pay for conserving their soil. Animal husbandmen are bent on improving their soils anyhow and will take their reward from the increased productivity of their acres.

"Stockmen record their opinions a little stronger than 3 to 1 as not wanting to be on the parity dole. The so-called farmer's tariff is a delusion.

"Our farmers, 3 to 1, would give up all subsidies whatsoever if that billion were entered in the national ledger as agriculture's contribution to a balanced Budget. Replies to the questionnaire express a stout faith in the future of agriculture and of America. The stock farmer has faith in his business and in himself to institute adequate recovery."

How You Gonna Keep Them Working the Farm When the Census Man Comes Around

EXTENSION OF REMARKS

OF

HON. GEORGE H. BENDER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

Mr. BENDER. Mr. Speaker, back in the years just after the World War, one of the popular songs asked the question, "How you gonna keep them down on the farm after they've seen Paree?" This year the farmers are wondering, "How you gonna keep them working the farm after they've seen the census?"

It is enough to drive folks right into the city, just to escape the flood of questions Uncle Sam's curiosity shop is pouring out. Starting in during April, just at the time when most farm folks are starting to do their spring plowing and planting, the census takers will be making their rounds. All they want to know is almost everything. Two hundred and thirty-two questions are on the list, and every farmer is expected to answer them.

Apparently, Uncle Sam is not exactly naive. Accompanying the census questions sent out to the Nation's farming population is a letter asking the farmers and their families to receive the census taker with a "cooperative attitude and a cheerful friendly greeting."

Some of the miscellaneous items that our New Deal friends want to know require the assistance of an encyclopedia, an unabridged dictionary, and a very hopeful disposition. For example, someone in Washington wants to know how old every calf and every colt on the old farm has gotten to be by this springtime. Someone else would like to find out how much the help were paid. Among other obscure items, the census asks farmers to write in their acreage of escarole and kohlrabi. A trip to the ordinary small dictionary will not tell you anything about escarole, but it seems that kohlrabi is a race of cabbage which is a twin brother to cauliflower. Some census takers may well be warned to look out for themselves in their journeys to the farm land, for fear of contracting a few kohlrabi ears at the hands of indignant farmers.

After the farmer has told Uncle Sam's busybodies about how much acreage he has plowed and how much he has plowed under, he can spend a little time counting the number of his sows which are in the well-known delicate condition. After the farmer has explained why his hens have not been laying with the expected frequency, he can go on to tell whether or not he is a frog farmer. If he happens to be one, all the time he has spent in answering all the questions up to page seven are a waste of time, because he did not have to fill out a questionnaire in the first place.

We do not really have to worry about this, though, because there are not supposed to be any frog farmers in this country. In fact, if the Government insists on getting answers to all the fool questions it put into this census, there are not going to be any farmers of any kind in this country.

But we do not really have to kick about it, we Republicans, because there is one good thing about this farm census, it will make an awful lot of Republican votes.

Edward W. Patterson

EXTENSION OF REMARKS

OF

HON. JOHN M. HOUSTON

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

Mr. HOUSTON. Mr. Speaker, the House extends to the devoted wife and children of former Congressman Edward W. Patterson, of Kansas, sincere and earnest sympathy upon the passing of this loved one.

Mr. Patterson was born October 4, 1895; served with the American Expeditionary Forces in France; graduated from the law school of the University of Kansas in 1922; married Miss Leah Kennedy, of Coffeyville, Kans. There are two children, Patricia and James. He engaged in the practice of law at Pittsburg, Kans.; was elected prosecuting attorney of Crawford County, Kans., in 1926; and was elected to the Seventy-fourth and Seventy-fifth Congresses.

I am honored in having the privilege of paying tribute to "Pat," one of the finest characters and most lovable men I have served with in the Congress of the United States. He was always anxious to help a friend, and the influence of his upright, unselfish character will remain, as will his memory, in the hearts of the people of Kansas and those with whom he served here.

He possessed the sincere, militant, patriotic Kansas spirit; earnest, aggressive, and fearless, he labored for the good of the common people and never disappointed them. He served his country well. His district, the State, and the Nation have lost an able lawyer, a valuable legislator, and I have lost one of my best friends.

I admired his courage, ability, and patriotism as a soldier, private citizen, and public servant. As an orator and debater, he was inspiring and was always on the people's side. He was forever reminding us of the plight of the poor in his district known as the Balkans of Kansas. "Come down into the third district," he would say, "away from more favored sections made prosperous by agriculture, oil, and industries, and I will show you people living under conditions of which you cannot conceive, poverty indescribable, and human misery such as exists in few parts of this country."

It was for these unfortunate people that Ed Patterson arduously worked at home and in Washington, bearing no malice, no hatred, no ill will, but with a burning desire and determination, and a philosophical indifference to consequences. He was always for what he believed to be right for all of the people, particularly those who most needed it and could not speak for themselves.

He has left an example we all may emulate. The memory of his worth and work accentuates the promise and the hope which leads us to the heights of our best selves. It is my prayer that this noble, generous, thoughtful friend of humanity will have eternal happiness in the realm of his Creator.

Good-bye, good friend,
In God's good time,
In God's good clime,
We'll meet again.
And in that land
Where we shall know
No pain, no woe,
We'll understand.

Preserving American Neutrality

EXTENSION OF REMARKS

OF

HON. JAMES H. FAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

RADIO ADDRESS BY HON. JAMES H. FAY, OF NEW YORK

Mr. FAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me over the radio on February 22, 1940:

I hope to be one of the relatively few speakers on the air this evening who will not depend entirely for his text and subject matter upon George Washington's famous admonition concerning the avoidance of foreign entanglements. Not that I do not believe in the practical wisdom of that warning: I believe in it with all my heart; I think it is just as sound today as it was when our revered first President uttered it. But I grow a little weary of speakers who take a quotation from long ago and make a theme song out of it without looking at it, turning it over, and applying it in the light of the facts of today.

I do not want alliances with countries which either already have wars on their hands or have a demonstrated facility for getting into difficulties with their neighbors. I want this country to preserve its neutrality and to stay at peace. I shall do everything in my power as a citizen, as a leader in my home bailiwick, and as a Congressman to pursue and encourage that policy. I realize, however, that in such a complicated situation as we face today we cannot preserve our neutrality merely by proclaiming it, or by quoting and reiterating the famous sayings of our forefathers. I realize, too, that we cannot remain at peace by doing the ostrich act—that is, by sticking our heads in a hole in order not to see what is going on around us. So I urge not only that we preserve our neutrality and stick doggedly to a policy of nonintervention in the present wars but also that we look frankly, studiously, and critically at the influences which might force or lead us into perilous detours from the path of peace. You know, you cannot claim to be a good driver just because you do well on a clear road. You have to know also how your mind, and especially your nerves, are likely to react in an emergency. And you have to have a sixth sense about what the other fellow is likely to do. So it is with all of us in these days which are fraught with emergency.

What is it that we have to fear?

Do we fear our neighbors?

Hardly. We look with pride and great satisfaction at our unarmed borders both of the north and to the south, and at the peaceful and friendly relations between us and our neighbors which these unarmed borders symbolize. There is even greater satisfaction than in normal times in the thought that we can continue to

maintain an unarmed border with one of our neighbors which is actually a participant in the present European war.

Do we fear the war lords of Europe and Asia?

Hardly. They are fairly busy in their own backyards, or in each other's. And we have two very effective allies in the form of the Atlantic and Pacific Oceans. Besides, with our Navy, our air force, our economic resources, and our actual and potential military strength, we are quite capable of giving a good account of ourselves if forced to do so for purely defensive purposes.

Do we fear the propaganda of the belligerent powers?

Hardly. The American people are far better insulated against foreign propaganda today than they were in 1914 and 1917. Even though we have more of it to cope with now that radio has become such an important channel of communication our people are wiser and more calculating than they were 20 years ago. They have had a lot of experience with the methods and the machinery of propaganda. Even the least educated amongst us know enough to take with a grain of salt the war bulletins, the exhortations, the arguments, the rumors, and the atrocity stories which emanate from the various belligerent capitals. Indeed, one of the most reassuring signs that we have of a steadily rising level of intelligence is the fact that our people look twice even at those statements which come from the nations whose causes they favor.

Do we fear our own leaders?

Hardly. The President of the United States has not only committed himself time and time again to a policy of nonintervention, but has taken advantage of every promising opportunity to try to restore peace abroad. The Secretary of State and our whole highly efficient State Department, with its net work of embassies and consulates throughout the world, have been working night and day to keep this country in a peaceful channel in the midst of tempestuous waters. And I need hardly tell you that the Congress of the United States, regardless of party divisions or splits on domestic issues, is fixed in its determination to keep this country out of the present catastrophe so long as we can do so with honor and integrity.

Well, if we do not fear our neighbors, if we do not fear the war lords, if we do not fear the propaganda machines, and if we do not fear our own leaders, what, then, is there to menace our neutrality? There is a menace, and I think I can tell you more or less exactly what it is.

The only menace to our neutrality which really counts in a serious way is to be found in our own instincts and emotions as a people—in our reactions to the various phases of the war tragedy as it unfolds from day to day. There is the real danger to peace. It must be remembered that a nation can proclaim a policy of neutrality, but it cannot impose an attitude of indifference upon the people, either through legislation or executive order. We Americans are human beings. We are very lively and alert human beings. We have strong likes and dislikes, and we do not hesitate to express them. We are a deeply sympathetic and often a sentimental people. We like fair play. We do not like to see the underdog kicked around. We do not like tyrants. We hate injustice, and we react sharply against it, whether it directly affects our own interests or not. As alert, intelligent, and sympathetic human beings, we do not like to see other human beings victimized by brute force.

It is all very well to say that the wars abroad are not our wars. That is true, but we cannot let it go at that. It is not as simple as that, principally because our people are not apathetic or callous and indifferent to the outrages which the fanatic dictatorships have committed against their neighbors.

Our people were not indifferent to the theft of that splendid little democracy, Czechoslovakia; we have been far from insensible to the brutality to which both Jews and Christians have been subjected by the Nazi tyranny; we were not indifferent to the swift obliteration of the Republic of Poland; we do not look with cynical unconcern upon the despicable attack of the communistic tyranny upon that other splendid little democracy, Finland; nor are we placidly immune to anger over the spreading of the new order in the East through the dropping of bombs upon millions of Chinese women and children. Let us remember that millions of our own people are either immigrants or the first-generation descendants of immigrants. Official records show that two-fifths of our total populations is of other than Anglo-Saxon stock. As one writer puts it, Ellis Island is just as important as Plymouth Rock as a symbol of the culture and the actual composition of our population. So, in addition to normal human sympathy for the oppressed and the persecuted, we have the element of direct interest on the part of millions of our own people. Think for a moment of our German-Jewish citizens, our Polish-American populations, our Finnish-American groups in the Middle West. All of them, for the most part, are good Americans, but can we expect them to be stolid and unmoved while their own aunts, uncles, brothers, sisters, mothers, and fathers are targets for bombs and artillery and even more subtle kinds of unmerited punishment in the homelands?

The fact is we Americans are disgusted by all of these manifestations of organized and sanctioned cruelty in the world. We are angry, and I believe we are getting angrier as the situation becomes worse. The most important questions in my mind are, How angry are we going to get, and in what way are we going to express our anger? You cannot, as I have already said, do anything about our instincts and our emotions. The problem is, what are we going to do about them? Are we going to go to war, or are we going to use our ingenuity our economic powers, and the best statesmanship that we can develop to make our influence felt in other ways?

This question reduces the entire complicated business down to a directly personal issue for all of us. So many of our people talk as though we must be the passive victims of forces over which we have no control. We hear such questions as, Will the United States be drawn into the war? Can the United States stay out? Such questions imply that we must drift into whatever policy we happen to pursue.

Still others amongst us, apparently forgetting that we live in a democracy in which the people exercise the ultimate control, talk as though they lived in a dictatorship. We hear such questions as, What is President Roosevelt going to do about it? What would another President do about it? What is Secretary Hull going to do? We should not drift into any policy; 1917 taught us what it is to be drawn into trouble. We should have our eyes and ears open, and know what we are about. And we should not assume the attitude that the President, the Secretary of State, or the Cabinet, or the Congress—or any other individual or group—is going to decide for us. These agencies of government will, of necessity under our democratic system, adopt the policies which the people demand. If we as a people get really mad and insist that we must help to inflict physical punishment upon the wrongdoers, that will be the policy of our governmental representatives. If, on the other hand, even though we are moved and outraged by what is going on, we insist upon staying out of the conflict, and making our influence felt in other ways, then that will be the policy of our governmental representatives. So it is not a question of what President Roosevelt is going to do about it, or what Secretary Hull is going to do about it, or of what Congress is going to do about it. It is a question of what you and I and the hundreds of thousands of other citizens like us insist that these authorities do about it.

For my part, I think that this Washington's Birthday is a good day and a good occasion for rededicating ourselves to peace—not to indifference, not to selfish isolation, not to inhuman disregard of suffering in other parts of the world—but rededication to a policy of peace, because the welfare of the entire world as well as our own welfare demands that we as a major power keep our head, maintain our balance and sanity, and preserve our forces for the work of healing, of readjustment and reconstruction which must be done after the other major powers have exhausted themselves in the futile business of war. Justice, humanity, and intelligence will play a small part at the council table unless these finer human attributes have a strong champion. Therein lies our role after the last shot has been fired, and we should be prepared to play that role far more courageously and unselfishly than we did after the last war. We can do it with power and authority only if we ourselves have not fired a single shot at anybody.

George Washington Birthday Anniversary

EXTENSION OF REMARKS

OF

HON. JAMES H. FAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

RADIO PROGRAM BY THE RAINBOW DIVISION VETERANS

Mr. FAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of the radio program of the Rainbow Division veterans, broadcast through the National Broadcasting Co. on the afternoon of February 22, 1940, George Washington's Birthday anniversary.

INTRODUCTION OF LT. COL. DAVIS G. ARNOLD BY WALKER H. COLSTON

Good afternoon, radio audience, I have the honor of introducing the first speaker on this Rainbow Division veterans' broadcast. This comrade is at the present time an official of the Veterans' Administration here in the Nation's Capital. During the World War he served as commanding officer of the One hundred and Seventeenth Headquarters Train and Military Police of the Forty-second Division. He is also former Chief Examiner of the Federal Communications Commission. I present to you Lt. Col. Davis G. Arnold.

ADDRESS BY LT. COL. DAVIS G. ARNOLD

Twenty-one years ago today the Rainbow Forty-second Division was a part of the American Army of Occupation in Germany, having, as we then thought, won the war for democracy.

As we entered Germany with our band instruments in our band wagons, and with no display, we were filled with mixed emotions of sorrow and joy. We had left behind in France too many of our dead and wounded comrades, and we were looking forward to returning to the United States, which a short time before we had doubts of ever seeing again.

George Washington's Birthday in 1919 was celebrated by us in Germany, and you will remember that our German friends then pointed to vast numbers of little children with a promise that in 20 years Germany would show England and France.

When we look at our old war maps of France it is a nightmare to us to visualize what is now going on in Europe. On this honored day, with all of the indescribable conditions and possible happenings abroad, we of the Rainbow must think and act to meet the difficult economic circumstances which threaten the democracy and peace of our own country.

Our duty now is to continue our fight for democracy and end the existence of organized groups that seek to undermine our fundamental structure of constitutional liberty which George Washington gave us and our ancestors and comrades bled and died for.

Through this great radio chain which has honored us today with the opportunity to talk to one another, our country's safety and future is made more secure. Our chain of comradeship is relinked by the National Broadcasting Co. when they make it possible for me to introduce to you our next speaker from Detroit, Mich., Hon. Wilbur M. Brucker, wartime signal officer of the One Hundred and Sixty-sixth Infantry, who, after valiant service to his country, served the great State of Michigan as its Governor.

ADDRESS BY WILBUR M. BRUCKER

Washington's Birthday, 1918, will forever be remembered by the Rainbow Division as marking its entry for the first time in the front-line trenches in France. If anyone today doubts the soldierly qualities of America's citizen soldiers, he should have seen those gallant lads of the Rainbow Division as they struggled in the cold of winter through the trench warfare of the Lorraine sector and emerged seasoned veterans in the spring; then fought through the long, hard, bloody summer at Champagne, Chalons, Chateau Thierry, and the Marne; and then as a part of the glorious breakthrough at St. Mihiel in September and the hammering of the Hindenberg line in the Argonne through October until the armistice came with its unbounded joy for all the civilized world.

Looking back 22 years ago today seems to all of us like a bad dream, particularly to those of the Rainbow Division veterans dispersed throughout the world. They have experienced war; they have been in the thick of it; and yet they are the most peace-loving citizens in all our land today. They view with genuine alarm the new European war and vow that it will require something endangering our own national security before they will lend their support to our own country ever again becoming involved. The men of the Rainbow Division left thousands of comrades over there in Flanders' Field, and they offered their own lives in sacrifice, if need be, that this Nation might continue to live. They know the cost of this to the United States of America, and they don't propose to forget it now.

We need in this dark hour of history to keep our heads. We need to remember that America holds the torch of civilization in its own hand. Our highest duty is to continue to carry forward the system of American life which is the flower of 40 centuries. We need to preserve our own country so that when the present European cataclysm is over, America may succor and relieve those who will need to be rescued and salvaged from the horrible effects of war as we have seen it.

In the meantime we certainly do need an adequate national defense. But America's national security fundamentally rests in the faith of its people—in the justice and fairness of the American system of life and opportunity. To the future success of this great accomplishment we renew, on this twenty-second memorable anniversary of the Rainbow Division's entry into the trenches on Washington's Birthday, our lives, our fortunes, and our sacred honor.

It is now my pleasure to introduce the next speaker. He was a member of the Rainbow Division, a private of Company K of the Fighting Sixty-ninth, the One Hundred and Sixty-fifth Infantry. He lost his leg in the Battle of the Argonne on November 1, 1918. He is now the Congressman from the Sixteenth Congressional District of New York, Hon. JAMES H. FAY, who speaks to you from New York.

ADDRESS BY HON. JAMES H. FAY, OF NEW YORK

It is with a deep feeling of concern as well as with great pride that I speak for New York today in this annual tribute to the Rainbow Division. It is entirely proper—yes, it is more than proper, it is good for our souls and for our powers of perspective—that we should pause once a year to review and revere the heroism which this great division, representing a cross-section of the youth of our country, brought to the grim business at hand on the western front 22 years ago. But—with war again raging in the world—we cannot help but be concerned lest circumstances should be allowed to develop in such a way as to mislead us into another European conflict.

Members of the Father Duffy Chapter only a few hours ago attended their annual mass in memory of their beloved spiritual leader of the last war. And, as I left the solemn atmosphere of the church, the thought which pressed in upon me was simply this: That we Americans must not become involved in this new conflict. It is not selfishness, or merely the instinct of self-preservation, but the future welfare of the world at large which dictates our determination to stay out of this new war. We are the only major power in the world today which is not either actually at war or threatened with war; and, if we become involved, we will not only bring additional distress and confusion to our own people, but also compromise if not ruin the influence which we probably can exercise toward a sane and just settlement when the last shot has been fired.

So I say to you that this is a good day, and a good occasion, for rededication to peace. We associate Father Duffy with war—with the last war. We carry mental pictures of him in uniform. But today in church I saw him again, in my mind's eye, as the man of peace, as the representative of reason, as the exemplar of mercy and humanity. No matter how our feelings may be outraged by what is happening across the sea, let Father Duffy's mission as a spiritual leader be our guide and inspiration as we keep our feet on the path of peace through these tragic times. The Rainbow Division wrote glory and heroism into the history books of this Nation—but this is decidedly one instance in which we do not want to see history repeat itself.

(Gen. Henry J. Reilly was introduced to the radio audience.)

ADDRESS BY GEN. HENRY J. REILLY, O. R. C.

I have recently flown home from Europe and the Mediterranean area, after an absence of 2½ years.

I mention that I flew home by the *Yankee Clipper* only because since my return I have heard so much about the two oceans protecting us from European or Asiatic interference. When it is possible to have breakfast in Lisbon, Portugal, and lunch in New York the next day, the Atlantic Ocean is no longer a barrier. I do not mean that bombers can fly across and destroy our big cities. I do wish to point out, however, that many times in the military history of the world, it has been proven that it is easier to transport troops by water than by land. Though little attention has been paid to it, General Grant in our Civil War showed that waterways, far from being an obstacle to a general supported by a fleet, are pathways instead.

I have returned impressed with the seriousness and the danger of the situation in Europe. The idea that the economic and sea strengths alone of the Allies will whip Germany is not founded on fact. Every soldier in Europe knows that only large armies fighting over a considerable period of time can bring the wished-for victory. Despite that fact we are arguing about whether or not we should bring our Navy to the strength necessary to fully protect our sea coast on but one of our oceans. Our Regular Army and National Guard have not the armament and equipment to stand up against the attack such as the Germans made in Poland anymore than had the Poles. We lack the antitank guns, the antiaircraft guns, the armored cars, the tanks, and the artillery necessary. Our industry, unjustly accused for years of being "merchants of death," lack the tools and machines to make this armament.

Since the last war, this country has been deluged by the false prophecies of those who said disarmament and international agreements would bring peace in the world and save your sons from going to war. Despite the utter fallacy of their arguments, as is being proven both in Europe and Asia today, these same people are still working to keep the United States from being adequately armed. You veterans, who know what war is, now in many cases have grown children. They have been brought up under these falsities.

For their safety and the preservation of the country from possible defeat, it is necessary for you to teach them the truth: "A strong man armed guards his own goods."

INTRODUCTION OF HON. WILLIAM B. BANKHEAD, SPEAKER, HOUSE OF REPRESENTATIVES, BY M. MANNING MARCUS, PAST NATIONAL PRESIDENT, RAINBOW VETERANS

The next speaker is a distinguished citizen who has served as a State legislator, as a city attorney, as a judicial circuit solicitor, and for 12 uninterrupted terms as a Member of Congress. He has served with outstanding distinction as chairman of the Rules Committee, as majority leader, and continuously since the 5th of June 1936 in the highest office the House can bestow.

I have the honor to present the Member from the Seventh Congressional District of Alabama, the Speaker of the House of Representatives of the United States, the Honorable WILLIAM B. BANKHEAD.

ADDRESS BY HON. WILLIAM B. BANKHEAD

It is singularly appropriate that Washington's Birthday should be selected for this Nation-wide recognition of the distinguished military record of the Rainbow Division of the American Expeditionary Forces in France, for the reason that 22 years ago last night that division entered the front-line trenches in Lorraine for their first baptism of fire. Without making any invidious comparisons with other gallant military organizations, I think that it may be stated that no other division in the American Army from that date on until the end of hostilities performed more gallant and distinguished service in all fields of active operations than did the Rainbow Division. It was most appropriately named, because it was a composite unit of National Guard outfits from 26 different States, and in that blending of sectional forces it forever destroyed any distinctions between North and South. There were no closer

comrades in the Army than the old Fourth Alabama and the Sixty-ninth Regiment of New York that had fought against the other in the Civil War. The title "Rainbow" reflects the colors representing the various States from which the division was drawn, and the variety of types of life, the colors and shades of thought, and differences in point of view were brought together in one harmonious unit and molded into a cohesive force. This division participated in every major engagement on the battlefields of France. It fought with desperate and heroic courage on every field of action—never in all its record engaged in a single retreat.

I trust that I may be pardoned for calling particular reference to the One Hundred and Sixty-seventh Infantry, the Alabama regiment of the division. I think that it may be truly asserted that this gallant outfit, under the command of Col. William P. Screws, made an everlasting record of gallantry upon every field of action, and I feel confident that all of their comrades in arms from other States will be willing to bear tribute to the valor of these soldiers who were called by the French "the hell cats of Alabama" because of their tenacious military qualities. The regiment suffered 3,200 casualties in France, and it has been asserted that the One Hundred and Sixty-seventh Infantry served longer in the face of the enemy than any other American regiment. No more suitable comment could be made upon the bravery and heroism of the Rainbow Division's contribution to the speedy and successful conclusion of hostilities than to recite the statistics that there were in battle deaths 2,950 men; wounds and gassed, 13,292 men; total casualties, 16,242 men; with total replacements of more that 17,000.

Every American citizen who cherishes with patriotic fervor and appreciation the courage and sacrifices of the American Army in France should hold in everlasting gratitude the memory of this great military organization. In all the tide of time there has never been presented a finer type of valor, sacrifice, and fortitude than that witnessed upon the part of this gallant division of all those bloodstained and heroic hours between the 22d of February 1918 and the close of hostilities on November 11 of that year. All honor and all praise to them and their descendants and all those who survive may be assured that they will have the everlasting gratitude and admiration of the American people.

INTRODUCTION OF NATIONAL PRESIDENT ELMER F. NEAGLE BY WALKER H. COLSTON

And now I am again honored; this time by virtue of having been chosen to introduce to this vast radio audience, my very close friend and pal, who at the present time holds the highest office in the Rainbow Division veterans' organization. A veteran who, through these many years has served this association in time of peace, with the same sincerity of purpose that exemplified his activities as a member of the Forty-second Division in time of war. Having held local and national offices too numerous to mention, he is now the national president of the Rainbow Division veterans, Comrade Elmer F. Neagle.

ADDRESS BY ELMER F. NEAGLE

On behalf of the Association of the Veterans of the Rainbow, composed of members of the valiant Forty-second Division, American Expeditionary Forces, I express our gratitude to the National Broadcasting Co., Inc., and its associated stations for the opportunity to present this patriotic program in homage to the Father of our Country, George Washington, on whose birthday, 22 years ago, occurred our first contact with German troops on the Lorraine front in France. I should also like to thank the participants in this program.

Today we of Rainbow join with our fellow countrymen in revering the memory of Washington and in rededicating ourselves to the support of those public virtues which made him outstanding among men.

Twenty-two years ago young men from all walks of life—citizen soldiers—were one compact body, the Rainbow Division, fired with but one objective, to execute their military mission. Now they are again civilians, residing in all parts of the country and carrying on the normal activities of American life—the life of a balanced, peace-loving society. But we must not be blind to the fact that we are living in an armed militant world—a world which is at the mercy of incident. Our present position calls for greater responsibility. With our former Allies again at war, it is idle to say that we are not affected by it. We can well emulate the example of George Washington. Just as he, fresh from the arts of war, committed the country to the blessings of peace, so must we commit ourselves to the maintenance of peace. Not peace at any price, understand—not the kind that would be a threat to American security, American liberty, American institutions. These we shall always fight for, no matter what the price.

As national president of the Rainbow Division veterans, I greet you, men of the Rainbow. I wish you happiness in the security of a land which you struggled to preserve. I am looking forward with pleasure to greeting you in person at the national reunion in Montgomery, Ala., next July.

And so today, to the memory of our George Washington, to the memory of our departed comrades, to our buddies in hospitals, Rainbow tenders its most reverent salute.

Promotion of General Welfare Basic Principle of New Deal

EXTENSION OF REMARKS

OF

HON. KNUTE HILL

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

ARTICLE BY RALPH SCOFIELD

Mr. HILL. Mr. Speaker, I am not often given to extending my remarks or to the promiscuous insertion of news articles in the CONGRESSIONAL RECORD. However, the attached article by Ralph Scofield, editor of the Adams County Leader, shows so clearly why the New Deal was necessary, why its basic principles are sound and permanent, and is so packed full of common sense, that I feel it deserves a place in the CONGRESSIONAL RECORD. It is so different from the common patter of the average country weekly that one is moved to declare: Here is another William Allen White of the far Northwest.

The article is as follows:

PROMOTION OF GENERAL WELFARE BASIC PRINCIPLE OF NEW DEAL—INTERPRETS PROVISIONS OF THE CONSTITUTION TO BENEFIT PEOPLE

Frequent discussions of the policies of the Roosevelt administration, engendered by the forthcoming general election, indicate that people are genuinely interested in the achievements of the New Deal, in whether they have proved beneficial and if they should be continued.

The New Deal is the outgrowth of the economic collapse which hit this Nation with unprecedented severity in 1929. It came in the midst of a highly conservative administration which enjoyed the full confidence of business. It was not foreseen by those in power and was long and often denied to be really a depression. It came after several years of the kind of administration, the kind of legislation, and the kind of business confidence that they now tell us we should go back to. And moreover they are unable to this day to tell us why it came, when it did or what caused it, and the party under whose administration it occurred did not then produce, and has not since proposed, even a partial remedy.

In the midst of this collapse, so complete that it threatened the social order and the Nation's domestic tranquillity, the New Deal was born. Problems met with action that was often frankly experimental because there was no previous American experience to guide it. Other problems were left over from the previous administration. We must remember that today the New Deal, whatever its defects, represents the only coherent program of action to adjust our life to the new problems of this decade. No other political body has offered a constructive or affirmative alternative.

It has been a basic doctrine of the New Deal that our economic system needed to be reformed in order to save it. Those whose privileges and profits were threatened by such a program have attempted to make it appear that the New Deal and this administration are antiprivate enterprise. Nothing is further from the truth. To try to rid American business of its parasites and speculators is no more hostile to private enterprise than it is hostile to a dog to try and rid him of fleas.

Every time an American workingman has seen his savings swept away by a bank failure, or by foreclosure on his home, or by the fraud of a glib stock salesman, or by a period of unemployment, a blow has been dealt at our system of private enterprise. The plain fact is that this system of private enterprise is not going to be safe for anybody if it isn't safe for small investors, for willing workmen, for thrifty home owners, and for small independent businessmen.

Another point of doctrine in which the advocates of the New Deal generally are in disagreement with its predecessors is that the New Deal has believed in an efficient and effective government for the promotion of the general welfare and the protection of the people from exploitation.

The very first powers given by the Constitution is to raise revenues and appropriate funds for the common defense and the general welfare. Almost every clause of the Constitution had been the subject of interpretations in the 150 years of our Government, but it was not until the administration of Franklin Roosevelt that the power of the Federal Government to serve the general welfare was sufficiently exercised to be challenged and sustained in the social-security cases. The way is now open to our country, as it has always been open to most others, to relieve some of the individual cruelties and hardships of our system by resort to unemployment

insurance, health insurance, and old-age benefits. You can no more rip the philosophy of the New Deal out of future American life than you can rip out the philosophy of the emancipation proclamation or the strong doctrine of the Declaration of Independence. It is our best insurance against the return of the recent grim and tragic years.

Ten Million Forgotten Men

EXTENSION OF REMARKS

OF

HON. RALPH E. CHURCH

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

RADIO ADDRESS BY HON. RALPH E. CHURCH, OF ILLINOIS

Mr. CHURCH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address which I delivered recently over the radio:

Friends and neighbors of my home State of Illinois, I am speaking to you again tonight from Washington in the second of my radio broadcasts.

You will remember last week I gave you, as it were, my political philosophy for a revitalized America. Tonight, in a more detailed study, I wish to consider with you the most vital, yet the most neglected of all our national problems, unemployment.

Perhaps before I begin you will let me explain that my engrossing work this week as a member of the Naval Affairs Committee, which has been considering the naval expansion bill, has prevented the immediate answering of the scores of encouraging letters received since my first broadcast. I wish now to express my appreciation.

Seven years ago much was said about "the forgotten man" and much was heard about the "more abundant life" for all of us. We were to have a "rendezvous with destiny," where we would find a balanced National Budget, elimination of useless bureaus, less centralization of power in Washington, reduction of taxes, parity prices for agriculture, improved business, and general national prosperity. All this we were promised.

Such a program embodied tested American doctrines of government and finance; the best government is that which governs the least, and, we must add, that which taxes the least. To a confused people, caught in the throes of a world depression, the promise offered renewed hope. No man would be forgotten. His opportunities would be increased and his taxes decreased, for America was acknowledged then to be a country capable of producing an abundance. The people listened, believed, and followed.

Seven years have passed, during all of which time the New Deal has had complete control of the National Government. We now know that our rendezvous has been with experiments foreign to American ideals of self-reliance, thrift, and individual initiative. We now know that the "more abundant life" is a mirage as we travel aimlessly on the desert of New Deal scarcities. And what about the forgotten man? The New Deal simply forgot to remember.

The "forgotten man" is the unemployed man. A relative, a neighbor, or, perhaps, a friend who, through no fault of his own, has been unable to secure regular employment. He is not ungrateful for the work relief provided through the W. P. A., but surely a country with limitless resources and great technical skill should have more to offer him and his family than mere subsistence on relief rolls year in and year out, as in the last 7 years of the New Deal. The "forgotten man" wants only a chance to earn a decent living at fair wages.

The number of unemployed in the United States has been variously estimated but we are reasonably safe in saying that there are still 10,000,000 citizens without jobs. It is indisputable that the New Deal, after 7 long years of costly experimentations, "quarterbacking" from one thing and then to another, has failed completely to solve America's most fundamental problem—that of unemployment. The immediate necessity has been to provide relief for these unfortunates, but the larger and more important problem has been to provide permanent jobs. That problem will continue to remain unsolved until it is realized that the principal task of statesmanship is to clear the way for free, private enterprise. You cannot have employees without employers. There must be employers and there must be a flow of capital in productive channels in order that there may be employees, pay envelopes, and consuming power.

In the language of the New Deal's own National Economic Council, "The American machine is stalled on dead center." That is understandable. When a bureaucracy undertakes to tell the people what they may or may not do, opportunities for development, for employment, and for profit and wages are closed. We are faced with a choice between planned economy, on the one hand, and a free competitive economic system on the other.

We have been in a decade of New Deal stagnation. It has been reliably estimated that at least $25,000,000,000 of new capital could be poured into industry today simply to put our plants in running order. But vast sums of money lie idle in the banks for want of places to work. Not being able to find a market for the people's savings the banks have been forced to reduce their interest rates. There is work to be done. There are men to do it. There is capital available. But our economic machine remains stalled on dead center. What is the difficulty?

In a word, it is the New Deal. Not only has it been attempting to manage and control all private enterprise with political appointees and theorists, but it has actually divided the country into factions. It has persisted in fostering among a free, friendly, and otherwise united people a spirit of hate, bitterness, intolerance, bigotry, and class consciousness.

The United States is not composed of over 130,000,000 people sharply divided into classes, with conscious differences which cannot be reconciled. The strength of our country as a democracy has always been the absence of defined classes with clashing interests.

We must recognize certain differences of opinion between groups. There is constant need for adjustments that all may enjoy equal opportunity, and an equitable share in the product of their labors. At the same time, we must recognize that the welfare of one is intimately bound up with the welfare of the other. For a return of confidence and business recovery there is, first of all, need of a moral leadership which will foster a spirit of unity and cooperation, between employers and employees. There is a common meeting ground to which the New Deal is blind.

Private enterprise, moreover, is not some sinister alien power threatening our social order and therefore to be attacked with all the forces that the Government can muster—to be blockaded by Government competition, machine-gunned by restrictive regulations, bombed by experiments, and torpedoed by heavy taxes. That is the New Deal conception. It is not the Republican conception. It is not the American conception. It certainly is not my conception. As a result of this New Deal warfare, business has become practically lifeless. Ten million people remain unemployed and the "forgotten man" remains forgotten.

American business consists of capital made up of the small savings of all the people, of citizens willing and able to direct its use and of millions of workers willing and able to apply their skill of mind and brawn to turning out products for your use and mine. It is, if you will, a cooperative enterprise in which all of us are engaged and out of which all of us are entitled to receive a just share of the profits.

As the Nation moves down the highway of progress, business traffic rules are as indispensable as the rules of driving. The proper role of the Government is that of traffic officer. But under the New Deal policing one cannot determine from one day to the next, what the traffic rules will be next. And when business is called before the judge, the judge is almost certain to be some young bureaucrat, belonging to some New Deal agency, eager to apply the New Deal rule of law that every man is guilty until he conclusively proves himself innocent. Small wonder that with the highway of progress practically deserted, with business activity under arrest, 10,000,000 "forgotten men" remain forgotten.

Future and confidence are distinctive factors of business. One does not borrow unless confident that he can repay. One does not loan unless he is confident of repayment. One does not buy unless confident that he can pay. One does not sell unless he is confident that the buyer can pay. One does not invest unless confident of a return on his investment.

When the element of confidence is missing, trade reaches low levels. We are in a period of New Deal defeatism and despair. Nor does the future seem brighter than the present.

What will be the future value of the dollar? The New Deal has already depreciated our currency. We do not know even if it is intended to place the United States on a bimetallic standard. Will the dollar loaned today be worth the same as the dollar ultimately repaid? Will the yardstick contain 36 inches tomorrow, 30 inches, or 42?

We cannot look with certainty at the national credit. The public debt is almost $45,000,000,000. Government expenditures have increased almost 300 percent. Taxes are going up and up. What confidence can anyone have in the future?

In my view, economic freedom is the basis of all freedoms. If we want to continue to be able to think as we like, to read what we like, to worship as we please, to vote as we please, we must be able first of all to work as we please, because when a man cannot work and support himself he loses the basis of all freedom. More and more during my 22 years of legislative experience I have come to realize, and, as I have said over and over again, political liberty cannot long endure when economic freedom is lost.

If we abide by that truth and restore sanity in government, we will thereby remember the "forgotten man." He will return to work and a dynamic America under Republican leadership will move forward.

Let our rendezous be only with Americanism. Then, and only then, will we enjoy the "more abundant life."

President Roosevelt Favors Protecting Small-Business Man and Encouraging Local Ownership of Local Business

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

Mr. PATMAN. Mr. Speaker, the President definitely came out in favor of local business, locally owned and owner-operated, in a message that he delivered to Congress January 3, 1938. In this message it was stated:

There are practices which most people believe should be ended * * * unfair competition which drives the smaller producer out of business locally, regionally, or even on a national scale.

Another group of problems affecting business, which cannot be termed "specific abuses," gives us food for grave thought about the future. Generically such problems arise out of the concentration of economic control to the detriment of the body politic—control of other people's money, other people's labor, other people's lives.

From these statements no one can question the direction the President of the United States is going. He is determined to protect local business, locally owned and owner-operated, as against absentee ownership or control.

ATTORNEY GENERAL ROBERT H. JACKSON REALIZES SERIOUSNESS OF PROBLEM

The Honorable Robert H. Jackson is the President's new Attorney General and chief of all Federal law enforcement. Recently Mr. Jackson gave a special interview to the United States News. As Solicitor General—chief of the Federal Government's legal staff—he sold the Supreme Court of the United States on 21 of the 24 cases he argued before that august body, according to this quoted interview.

In this interview he stated, according to the United States News:

The President's "favorite son" has one criticism to make of the last 7 years' reforms: If anything, they have been "too moderate."

By this he means that the efforts to regulate business and finance have not been wholly successful. The trend toward concentration of wealth continues because the Roosevelt checks have been "too moderate."

He explains: "The unvarnished truth is that the Government's recovery program has succeeded nowhere else so effectively as in restoring the profits of big business. Labor has had no such advance. The small merchant has had no such prosperity. The small manufacturer has had no such advantage."

Looking ahead, the new Attorney General sees the trend toward concentration threatening the individual competitive system. This concentration of the control of wealth, accompanied by the disappearance of the local utility, the independent merchant and the small industry, he believes, is the most significant trend toward socialism in the United States.

Notice what Attorney General Jackson said about concentration of the control of wealth and the disappearance of the local utility, the independent merchant, and small industry.

A BILL TO STOP GROWTH OF DESTRUCTIVE INTERSTATE CHAINS

H. R. 1, a bill providing for a Federal tax on interstate retail chain stores, will have a hearing before a subcommittee of the Ways and Means Committee commencing March 27. A few of the large national corporate chains have become so powerful that they are destroying farm prices, crushing consumers, and denying a fair income to labor. Through their interlocking directorates, they will, if not stopped in a very short time, control retail distribution in the 3,070 counties in the United States and will employ from New York all the workers in their stores throughout the Nation, thereby denying opportunity to both old and young in local communities. Further, the wealth of the country will be further drained from the local communities to a few banks in New York City and will give the few men, who now control a majority of the corporate wealth of the Nation, a firmer monopolistic grip upon the throat of the American people.

INTERSTATE CHAIN SYSTEM CAUSE OF FEDERAL RELIEF

Interstate chain-stores system is directly the cause of our serious unemployment and relief problem. When local people owned local businesses and kept their net profits at home, they were able to take care of their own unemployment and relief problems locally. We did not have Federal relief and there was no need for it until the enormous growth of the interstate chain-store system.

Russian War Propaganda

EXTENSION OF REMARKS

OF

HON. LEWIS D. THILL

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

Mr. THILL. Mr. Speaker, the belligerents in the wars waging in Europe control and censor the news releases which issue from their respective countries. The American newspapers carry such news dispatches from the warring nations of Europe, and the reading public accepts the information as true. The press of this country presents much factual material, and in most cases does so in an honest and straightforward manner. As a result, the readers of the daily newspapers in the United States accept the information presented to them by the press as a truthful presentation of the facts.

Unfortunately, the information which the press receives from its war correspondents in Europe is censored and colored by the nation which permits the release of the correspondents' news articles. The official government news agencies not only disguise and distort the facts but, as the following editorial from the Milwaukee Journal of March 7, 1940, indicates, they may be guilty of preposterous lying:

WHO BELIEVES THE BOLSHEVIKS?

None but a feeble-minded person, it would seem, could now give the slightest credence to the official statements of the Soviet Government or of Tass, the official Soviet news agency. It may, therefore, seem a bit superfluous to illustrate the deliberate falsehoods they perpetrate, lies that reveal themselves to all the world almost before they have been broadcast. But just for the record:

On February 23, 2 days after Russian planes bombed the Swedish city of Pajala, the official Soviet news agency issued this statement: "Not a single Soviet plane has flown over Pajala." Tass called the report that Soviet planes had bombed Pajala "a malicious fabrication."

But on March 5 the Soviet Government admits that its planes had bombed Pajala and expresses regret over the mistake.

Nobody is surprised. Why? Because everyone felt certain all the time, on the basis of reputable observers' reports, that Soviet planes had bombed Pajala, even as they know that Russia "wantonly attacked" Finland.

It is the same today. The world sees Soviet planes bomb a hospital in south central Finland. The world has watched Soviet planes, day after day, bomb Finnish civilians. The world saw Soviet planes bomb Helsinki on the first day of the unprovoked attack on Finland.

So the world does not believe any such statements as Molotov's when he said to United States Ambassador Laurence A. Steinhardt in Moscow: "The Soviet Government has not bombed cities and will not do so * * * because the Soviet Government considers the interests of the Finnish population no less than any other government."

Soviet officials went so far as to say that it was unnecessary to order "red" airmen not to bomb civilians, because they were, in effect, too noble to do such a thing anyway.

What preposterous lying.

As the Presidential secretary, Stephen T. Early, said about the brazen Soviet reply to American protests: "You might ask the dead civilians, the injured, and their widows and orphans how 'pointless' the American protests have been."

The trouble with the Soviet Government's technique is this: The "red" dictators are so used to handing out fabrications to their own dismally misled millions, who have no chance of hearing the truth, that they try the same sort of lying to the outside world.

But the outside world has an opportunity to see and hear what really happens.

No wonder that much early sympathy in this country for Soviet Russia and its struggles has almost vanished. No wonder that only the dwindling American Communists can still pretend to stomach the Soviet lies.

Congressional Conference on Unemployment

EXTENSION OF REMARKS

OF

HON. JERRY VOORHIS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

Mr. VOORHIS of California. Mr. Speaker, in the strong belief that no business before this Congress is half so important as the solution of the unemployment problem, a group of House Members of all parties sent the following letter on February 21, 1940, to every Member of the House:

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., February 21, 1940.

DEAR COLLEAGUE: In the month of December 1939 factory production in the United States reached a level of 130, 11 points higher than 1929. But the index of employment stood at only 104, slightly below the 1929 level. In the entire year 1939 we produced more goods than were produced in 1929, but we employed 1,000,000 fewer workers to do it, and we had between 9,000,000 and 11,000,000 unemployed. We had recovery without reemployment. Under these circumstances recovery could not last and production is now once again on the downgrade, primarily because consumer buying power did not keep pace with production, and inventories piled up.

Unemployment is the first and most fundamental problem before this Congress and before the Nation today. For with it come the fear, doubt, and insecurity which inevitably fill the hearts of people who have no work to do or who may soon become unemployed. If we do all other things and fail to overcome this problem we shall in the largest sense have failed. If we conquer this problem we will place our democratic institutions in a position unassailable by any powers or subversive influences within or without our country.

It is true that more legislation aiming at a progressive solution of our problems has been put on the statute books in the last 7 years than in any other like period in our history. But unemployment has not yet been conquered.

It is time that earnest Members of Congress joined together to carry on an incessant war on unemployment, on want and lack of business opportunity in a land of possible plenty. It is time we put first things first.

Let us forget petty differences and join together for earnest thought and study of an attack on unemployment on the broad plane of simple devotion to our Nation, its institutions, and its people.

We ask you to be with us in the veterans' committee room, 356 old House Office Building, at 7:30 p. m. on Monday, February 26, to begin this work. At our first meeting there will be no speaker, and we will simply discuss together what we can and ought to do.

This is not a move to form a "bloc" or to gain political advantage for any person, or any party, or any particular program. It is precisely what it purports to be—a coming together of Members of the House to seek to work out and then act upon the answer to the greatest problem of our age.

We hope you will be with us when we meet on February 26.

Sincerely yours,

Joseph R. Bryson, South Carolina; Joseph E. Casey, Massachusetts; Fred L. Crawford, Michigan; Thomas F. Ford, California; Knute Hill, Washington; William S. Jacobsen, Iowa; Jed Johnson, Oklahoma; Kent E. Keller, Illinois; Sam Massingale, Oklahoma; John R. Murdock, Arizona; James C. Scrugham, Nevada; John J. Sparkman, Alabama; Usher L. Burdick, North Dakota; John M. Coffee, Washington; Clyde E. Ellis, Arkansas; Franck R. Havenner, California; Ed. V. Izac, California; Joshua L. Johns, Wisconsin; Estes Kefauver, Tennessee; Charles H. Leavy, Washington; Abe Murdock, Utah; James C. Oliver, Maine; Martin F. Smith, Washington; Jerry Voorhis, California.

The response to this call was most encouraging. Not only did 47 Members attend the first meeting and decide to divide the group into working committees, each to study a particular phase of the unemployment problem, but a flood of letters poured in to every Member who signed the original letter. Without exception, these letters expressed interest and approval of the step being taken, and many of them contained valuable suggestions and material on the problem itself.

Editorial comment came from all sections of the Nation, a portion of a typical editorial being the following from the Post of Houston, Tex.:

That little group of Congressmen * * * which proposed a nonpartisan solution of the unemployment problem, may deprive campaigners in the forthcoming Presidential election of one of their most potent issues.

Yet * * * unemployment deserves more than a political lick and a promise. It should be taken out of the atmosphere of partisan debate and given calm, sober, and serious consideration.

As we recall, every Democratic and Republican platform of the last 20 years has addressed itself earnestly to the jobless, and has promised work for all able-bodied men and women. But the army of the idle grows constantly, and today at least 10,000,000 persons are unemployed.

So there is a great field for useful accomplishment open to the Congressmen who are pleading for a sound and permanent solution of the unemployment problem. As they contend, the chance of finding such a solution will be greatly enhanced by taking the entire discussion out of the realm of partisan politics.

In addition, the press of the Nation took notice of our work, and one item appearing in Labor, official organ of the railroad brotherhood, is certainly worth quotation:

Forty-four Congressmen—Democrats and Republicans, progressives and conservatives—this week organized a conference to "make incessant war on unemployment."

On Monday night, the day of hardest work in Congress, Members left their homes and went back to put in 3 more hours of work at organizing.

It was a rather tense group of men * * * a group which heard at least four times the statement that "unemployment is the No. 1 problem of the Nation" and that "unless something is done about it at this session of Congress there will be a number who will not return" to public life.

* * * * * * *

Congressman JED JOHNSON, Democrat, of Oklahoma, said, "The eyes of the country are on this conference and the people are waiting to see what you will do.

"I was in Oklahoma City last Saturday," he said. "I went to what I thought was a conference on agriculture and found 40 representatives of organizations which were interested in this problem of unemployment. And they were talking about this very conference we are attending tonight. I hustled right back to Washington so I could get here for this meeting, and I tell you we've got to do something about this in this Congress."

All Members who have so far shown active interest in this work of developing a fundamental solution to the unemployment have now been assigned to subcommittees, each of which is to study the relationship of its particular aspect of our economic system to unemployment and develop a brief report to be presented to the entire group, setting forth what, in the committee's judgment, could and should be done in its field of study toward solving the unemployment problem.

These committees as at present constituted are as follows:

Agricultural income and unemployment: Stephen Pace (Democrat, Georgia), chairman; John Z. Anderson (Republican, California), Lindley Beckworth (Democrat, Texas), Clarence Cannon (Democrat, Missouri), Alfred J. Elliott (Democrat, California), George W. Gillie (Republican, Indiana), Vincent F. Harrington (Democrat, Iowa), William S. Jacobsen (Democrat, Iowa), William Lemke (Republican, North Dakota), James F. O'Connor (Democrat, Montana), David D. Terry (Democrat, Arkansas).

Farm tenancy and unemployment: Usher L. Burdick (Republican, North Dakota), chairman; H. Carl Andersen (Republican, Minnesota), E. C. Gathings (Democrat, Arkansas), Jack Nichols (Democrat, Oklahoma), John J. Sparkman (Democrat, Alabama), Karl Stefan (Republican, Nebraska).

Foreign trade and unemployment: Thomas D'Alesandro, Jr. (Democrat, Maryland), chairman; Thomas F. Ford (Democrat, California), Carl Hinshaw (Republican, California), Karl E. Mundt (Republican, South Dakota).

Monetary and financial system and unemployment: Fred L. Crawford (Republican, Michigan), chairman; Kent E. Keller (Democrat, Illinois), James C. Oliver (Republican, Maine), Wright Patman (Democrat, Texas), Frederick C. Smith (Republican, Ohio), Jerry Voorhis (Democrat, California).

Monopoly and unemployment: Wright Patman (Democrat, Texas), chairman; John M. Coffee (Democrat, Washington), John W. Gwynne (Republican, Iowa), Charles H. Leavy (Democrat, Washington), Raymond S. Springer (Republican, Indiana).

Natural resources and unemployment: Estes Kefauver (Democrat, Tennesse), chairman; Homer D. Angell (Democrat, Oregon), Charles H. Leavy (Democrat, Washington), John R. Murdock (Democrat, Arizona), Harry Sandager (Republican, Rhode Island).

Public works and unemployment: Knute Hill (Democrat, Washington), chairman; John G. Alexander (Republican, Minnesota), Joseph E. Casey (Democrat, Massachusetts), Abe Murdock (Democrat, Utah), Adolph J. Sabath (Democrat, Illinois), and J. Joseph Smith (Democrat, Connecticut).

Social security, old-age pensions, and unemployment: Frank B. Keefe (Republican, Wisconsin), chairman; Homer D. Angell (Republican, Oregon), Franck R. Havenner (Democrat, California), Martin F. Smith (Democrat, Washington), John H. Tolan (Democrat, California), Jerry Voorhis (Democrat, California), R. T. Buckler (Farmer-Labor, Minnesota), and Gerald W. Landis (Republican, Indiana).

Taxation and unemployment: Ed. V. Izac (Democrat, California), chairman; William T. Byrne (Democrat, New York), John D. Dingell (Democrat, Michigan), Merlin Hull (Progressive, Wisconsin), Jack Nichols (Democrat, Oklahoma), and Robert F. Rich (Republican, Pennsylvania).

Technological change and unemployment: Joseph R. Bryson (Democrat, South Carolina), chairman; Robert G. Allen (Democrat, Pennsylvania), Francis H. Case (Republican, South Dakota), Frank Crowther (Republican, New York), Raymond S. McKeough (Democrat, Illinois), Rudolph G. Tenerowicz (Democrat, Michigan), and Richard J. Welch (Republican, California).

Trade barriers and unemployment: Sam C. Massingale (Democrat, Oklahoma), chairman; Clyde T. Ellis (Democrat, Arkansas), and Joshua L. Johns (Republican, Wisconsin).

Youth and unemployment: Jed Johnson (Democrat, Oklahoma), chairman; William W. Blackney (Republican, Michigan), Edwin A. Hall (Republican, New York), Gerald W. Landis (Republican, Indiana), Pius L. Schwert (Democrat, New York), James G. Scrugham (Democrat, Nevada), and Clarence J. McLeod (Republican, Michigan).

There are without question many Members who will be eager to engage in this fundamental work, who have as yet not had opportunity to attend any of our meetings. All they need do is indicate to one of the members of our Committee on Committees the preference as to a committee assignment and we will be delighted to immediately assign them to that committee and they can engage in the work at once.

The Committee on Committees consists of the following: Mr. Johnson of Oklahoma, Mr. Ellis of Arkansas, Mr. Coffee of Washington, and Mr. Voorhis of California (Democrats), Mr. Crawford, of Michigan, Mr. Oliver, of Maine, and Mr. Johns, of Wisconsin (Republicans).

It is our hope to bring forcibly to the attention of the Congress and the country the fact that the unemployment problem must and can be solved and that if this Congress is to perform its central duty it will put this task ahead of all others.

Attorney General of Nebraska Sues Atlantic & Pacific Tea Co. and Asks Ouster From State

EXTENSION OF REMARKS

OF

HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

Mr. PATMAN. Mr. Speaker, it is perfectly natural that a concern that has grown to be very big will attempt to destroy its competitors in business. That has always been true, and probably always will be true, as long as individuals remain selfish. Knowing this to be a fact, it is the duty of Government to protect the small-business men of the country from the greed of those who are ruthlessly directing such giant concerns.

MAKE PEOPLE PAY DEARLY

There is ample proof to support the statement that large interstate retail chains will sell goods and commodities below cost for the purpose of destroying the business of their competitors and then put prices up higher than ever and make the people pay and pay dearly. They can do this by using the large profits which they compel the consumers to pay in the markets where they have charge of the retail business.

PROFIT TWO WAYS

These huge concerns profit in two ways—one, by making the producers and manufacturers sell to them for a low price because of their enormous buying power, and the other is by making the consumers pay what monopoly almost invariably exacts—a price as high as the traffic will bear. This enables them to make what can be considered excessive profits for themselves.

FAKE CONSUMER GROUPS

The Atlantic & Pacific Tea Co. has been making over 20-percent profit on its investment, even in bad years, after paying a number of its officers and directors fabulous salaries amounting to $100,000 each, and after paying hundreds of thousands of dollars for lobbying purposes, including the amount paid prominent women as fronts for fake consumer groups to oppose anti-chain-store legislation and old-age pensions.

ATTORNEY GENERAL'S PETITION

Omaha and Falls City are in the same State, Nebraska, and about 100 miles apart. The following petition, which was filed a few days ago against the Great Atlantic & Pacific Tea Co. by the Honorable Walter R. Johnson, attorney general of Nebraska, of Lincoln, is self-explanatory:

[In the District Court of Douglas County, Nebr. The State of Nebraska, ex rel. Walter R. Johnson, attorney general, plaintiff, against The Great Atlantic & Pacific Tea Co., a Corporation, defendant. Petition]

Comes now the plaintiff, and for cause of action against the defendant alleges:

1. That the relator is the duly elected, qualified, and acting attorney general of plaintiff State.

2. That the defendant is a corporation duly existing under and by virtue of the laws of the State of New Jersey, and is, and at all of the times hereinafter mentioned has been, engaged in trade, commerce, and business in the State of Nebraska in the sale and distribution at retail of certain commodities in general use in the State of Nebraska, to wit, staple foods, groceries, and meats.

3. That at all of the times hereinafter mentioned defendant has owned, operated, and maintained, and now continues and will, unless restrained, continue to own, operate, and maintain in different sections, communities, and cities of the State of Nebraska certain retail food, grocery, and meat stores, in all of which said food, grocery, and meat stores the defendant engages in trade and commerce and business by selling and distributing at retail to the inhabitants of said several sections, communities, and cities said commodities; that among said retail food, grocery, and meat stores defendant now operates and maintains, and at all of the times hereinafter mentioned has operated and maintained, three in the city of Omaha, in Douglas County, in the State of Nebraska, and one in the city of Falls City, in the county of Richardson, in the State of Nebraska, and that in each of said stores defendant has, at all of the times hereinafter mentioned, sold and distributed at retail, and now continues to sell and distribute at retail, said commodities, to wit, staple goods, groceries, and meat of the same grade and quality.

4. That since on or about the 1st day of August 1939, and continuously since on or about said date, the defendant has attempted to monopolize a part of the trade and commerce of the State of Nebraska, to wit, the trade and commerce in staple foods, groceries, and meats, as hereinafter more particularly alleged, and has discriminated between the city of Omaha in this State and the city of Falls City in this State by selling commodities, to wit, staple foods, groceries, and meats, of equal grades and qualities at a lower rate in the city of Omaha than it charged for the same commodities in the city of Falls City, intentionally for the purpose of destroying the business of its competitors in the city of Omaha, and by selling said commodities at a higher rate in the city of Falls City than the fair market price of said commodities for the purpose of and with the intent of thereby reimbursing itself at the expense of the inhabitants of the city of Falls City and the trade territory thereof for the lessening of its profit upon its aforesaid sales in the city of Omaha; and has ever since said 1st day of August 1939, for the purpose of driving out of business any and all other persons engaged in the sale at retail of staple foods, groceries, and meats, sold staple foods, groceries, and meats at less than its fair market value in the city of Omaha and at a less price than it is and was accustomed to demand and receive therefor in any other place under like conditions.

5. That all of the aforesaid acts and things have been done and are being done by the defendant intentionally, unlawfully, and with the intent and for the purpose of practicing unfair and unlawful discrimination in prices between the cities of Omaha and Falls City, Nebr., for the purpose of destroying the business of competitors and driving out of business any and all other persons engaged in the

same business, restraining trade and commerce in staple foods, groceries, and meats in the State of Nebraska, of monopolizing the trade and commerce in staple foods, groceries, and meats in the State of Nebraska, and to enable the defendant by so driving out and destroying competition and the business of competitors finally to create a monopoly in the sale of said commodities and enable defendant to fix higher and unfair prices without let or hindrance and to extort from the public higher, unfair, onerous, and oppressive prices for foods, groceries, and meats, contrary to public policy and to the great and irreparable detriment, injury, and damage of the public generally and the people of the State of Nebraska.

6. That, as hereinbefore alleged, there has at none of the times herein mentioned been or existed any difference in the grades and qualities of said commodities so as aforesaid sold in said several stores, nor has there been or existed any difference in the cost of transportation from the point of production or management, to said several stores.

7. That for the purpose and with the intent aforesaid and as a part of and in furtherance of the designs and purposes hereinbefore set forth, the defendant has on the dates hereinafter mentioned been guilty of particular instances of discrimination, in that on said dates the defendant did sell in its said stores in Omaha, Nebr., the specific items and articles of foods, groceries, and meats shown in the lefthand column below at the prices indicated in the middle column opposite the names of said items or articles, and on the same dates the defendant did sell the same items and articles of foods, groceries, and meats at its said store in the city of Falls City, Nebr., at and for the prices shown opposite said items in the right-hand column below:

Item or article	Prices in Omaha stores	Prices in Fall City store
AUG. 19, 1939		
Pot roast	Per pound, 11 cents	Per pound, 13 cents and 15 cents.
Iona peaches (2½)	2 for 25 cents	2 for 29 cents.
8 O'clock coffee	3-pound bag, 37 cents	3-pound bag, 39 cents.
SEPT. 1, 1939		
Ann Page salad dressing	Quart, 25 cents	Quart, 29 cents.
Evaporated milk	4 tall cans, 22 cents	4 tall cans, 25 cents.
Bologna	Per pound, 10 cents	2 pounds for 25 cents.
OCT. 27, 1939		
A. & P. soft-twist bread, 24-ounce loaves.	2 for 19 cents	3 for 25 cents.
Jane Parker Donuts	2 dozen for 19 cents	3 dozen for 29 cents.
Iona tomatoes (No. 2 cans).	4 for 25 cents	4 for 29 cents.
Pot roast	Per pound, 12 cents	Per pound, 18 cents.
Navy pea beans	4 pounds for 19 cents	3 pounds for 25 cents.
FEB. 2, 1940		
Dexo	3 pounds for 39 cents	3 pounds for 41 cents.
FEB. 16, 1940		
A. & P. grapefruit juice	46-ounce tin, 17 cents	2 for 25 cents.
Coldstream pink salmon	2 for 29 cents	2 for 27 cents.
MAR. 2, 1940		
Oxydol	24 ounces, 2 for 37 cents	2 for 35 cents.
Iona flour	48 pounds, $1.33	48 pounds, $1.29.
A. & P. bread	2 for 19 cents	3 for 25 cents.
Dexo	3 pounds, 39 cents	3 pounds, 41 cents.

8. That large numbers of said several items and articles of staple foods, groceries, and meats were on said several dates sold to large numbers of persons whose names are to plaintiff and to relator unknown.

Wherefore plaintiff prays:

That the court find the allegations of plaintiff's petition to be true and find herein that the defendant has been guilty of unfair and unlawful discrimination in the respect, manner, and form hereinbefore alleged, and that the defendant has attempted to create a monopoly as hereinbefore alleged, all with the intent and purpose hereinbefore charged;

That the defendant be forever restrained and enjoined from discriminating between the cities of Omaha and Falls City by selling foods, groceries, and meats of like grades and qualities at a lower rate in one or more of its stores in said cities than is charged by it for said commodities in another city in the State of Nebraska, and from selling any article or product at a less price than it is accustomed to demand and receive therefor at any other place under like conditions; and

That pending the final hearing of said cause a temporary injunction issue restraining and enjoining the defendant from committing each and all of the unlawful acts, practices, conduct, and unfair discrimination herein complained of, and that upon final hearing said injunction be made permanent.

That upon final hearing of this cause the defendant be ousted from all business of every kind and character in this State; that the charter of the defendant be annulled and its permit and authority to engage in business in this State be revoked, and that the defendant be permanently enjoined from transacting any business in this State; and for such other and further relief in the premises as justice and equity may require.

THE SATE OF NEBRASKA, EX REL., WALTER R. JOHNSON, ATTORNEY GENERAL, PLAINTIFF.

———— ————, *Attorney General.*

———— ————, *Assistant Attorney General.*

STATE OF NEBRASKA,

Lancaster County, ss:

Walter R. Johnson, being first duly sworn upon his oath, deposes and says that he is the duly elected, qualified, and acting Attorney General of the State of Nebraska and is the relator herein; that he has read the foregoing petition and knows the contents thereof; and that the statements and allegations therein contained are true.

Subscribed in my presence and sworn to before me this 4th day of March, 1940.

————— ————,

Notary Public.

Unfounded Objections of Lake Carriers Association to St. Lawrence Seaway Project

EXTENSION OF REMARKS

OF

HON. WILLIAM A. PITTENGER

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

Mr. PITTENGER. Mr. Speaker, recent newspaper statements quote L. C. Sabin, of Cleveland, Ohio, vice president of the Lake Carriers Association, in opposition to the St. Lawrence seaway project. Mr. Sabin is quoted as having said at a meeting on March 8, last, that the building of the seaway would injure Duluth and vicinity. Such statements, in my opinion, are unsound and purely propaganda.

Mr. Sabin says that the building of the seaway would result in iron ore being sent to the United States by other countries, and that this would harm the iron-ore industry in Minnesota.

Of course, the argument is absurd because the industries that use iron in the United States will continue their present industrial program rather than enter upon efforts to develop new fields which will require transportation of iron ore long distances from other countries. The present industry is not going to add to its burdens such enormous costs. Further, if any such plans were contemplated, the importation of foreign ores could easily be prevented by proper protective tariff schedules. This announcement by the Lake Carriers Association that they are against the seaway development is just a part of the powerful opposition that is being encountered by friends of the St. Lawrence project.

The opposition from the Lake Carriers' Association comes because that organization does not want anything to happen to interfere with its monopoly of the shipping on the Great Lakes. The fleets of boats owned by the Lake Carriers are landlocked, and at the present time all ocean vessels are shut out from the Great Lakes. This gives the Lake Carriers a monopoly on transportation and, naturally, they want nothing to interfere with it. Their opposition is purely monopolistic, selfish, and they may possibly be actuated by fear of competition. As I understand it, under the present law, water-borne commerce between two American ports has to be carried on by American ships, flying the American flag. Foreign ships cannot compete. Consequently, the Lake Carriers are not harmed by the seaway development.

There is something else in connection with this matter which will interest the public, and that is the fact that pending in Congress at this time is a bill to place all transportation under the Interstate Commerce Commission. Under the bill, the Lake Carriers are exempt. Can it be possible that the railroads who want this pending transportation legislation enacted have agreed to exempt the Lake Carriers if the Lake Carriers would help the railroads fight the St. Lawrence Seaway project? At any rate, I take issue with the Lake

Carriers' Association and believe that great results will follow when the landlocked empire of the Middle West is brought 2,770 miles closer to ocean transportation.

The "Disenfranchised" Voter

EXTENSION OF REMARKS

OF

HON. PETE JARMAN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

EDITORIAL FROM THE TUSCALOOSA (ALA.) NEWS

Mr. JARMAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from a recent issue of the Tuscaloosa (Ala.) News:

[From the Tuscaloosa (Ala.) News]

THE "DISENFRANCHISED" VOTER

"One of the anomalies of our democratic system in the United States," says the Birmingham Age-Herald, "is that citizens of the very seat of American democracy, the District of Columbia, have no voice in their local government. The thousands of residents of the great American city of Washington have absolutely no voice in the administration of municipal affairs.

"The other day Mrs. Roosevelt visited a District of Columbia institution for the aged and infirm. She was shocked by the neglect of the inmates of the institution and by the apparent carelessness of the officials entrusted with caring for these old and sick people. Because she is the First Lady of the land, her protests attracted immediate and wide attention. Steps were taken to remedy the conditions she found in this one public agency, and investigations of similar institutions were launched.

"The management of the city of Washington is left in the hands of a commission appointed by Congress. But Members of Congress, no matter how able they may be, have their own districts to look after. Residents of Washington cannot vote. If the people of Washington are dissatisfied with the manner in which their city is operated, they must protest to a large and unwieldy body, a body that looks on the Capital City as a temporary residence.

"If the Alabama Legislature governed the city of Montgomery, one can imagine just how the disenfranchised residents of Alabama's capital city might fare in facing their own peculiar municipal problems. Washington is much larger than Montgomery; its problems are more complex."

We fail to follow the Age-Herald's logic. The Age-Herald cites the case of Mrs. Roosevelt and the institution for the aged and infirm, but we question its conclusion that these conditions could not have existed had the voters of Washington had a right to set up their own local government. For instance, Birmingham and Jefferson County have their local self-government, but it seems only yesterday that the reformers up there were crying about the atrocious conditions at Hillman Hospital, and it took more to get these conditions corrected than it has done in the Washington case.

As for "disenfranchising" the residents of Washington, that is so much piffle. In the early days of this country the city of Washington was established to meet for all time the very objections which the Age-Herald raises. An area of land was selected and divorced from all States. There Federal dominion was established, and the city was built in a wilderness.

Long ago, the necessity of keeping the capital free of petty local politics was seen, and Congress has functioned effectively through all the years as its governing agency.

At best we are all selfish as average voters, but to have an entire city of officeholders embroiled in local politics and carrying their politics into the National Government would be unbearable. Nobody has "disenfranchised" these Washington people. If they have been disfranchised, they have done it themselves, by electing to live in the one small spot in America where, for good and sufficient reasons, the franchise is withheld. These people cannot be citizens of Washington; they are citizens of the States from whence they came, and as such they have a perfect right to help in the selection of those men who control the city where they live. If they do not find it convenient to vote by absentee ballot, or to return to their original homes when election time comes around, they have nobody to blame but themselves. If they have chosen to attach themselves to the Federal pay roll in Washington instead of remaining at home to engage in private enterprise, they have nobody to blame but themselves. If they are not satisfied with their fate in Washington, they don't have to accept it. Let those who want local self-government go where they can get it.

As for that comparison between Montgomery and Washington, there are a lot of people who, having watched politics in Montgomery and its effect on the State government, will wish to heaven that our forebears in this State had been as intelligent as those who established the National Capital in a wilderness. If Goat Hill had been a cornfield, surrounded on all sides by "disenfranchised" voters, Alabama would have profited by the amount of some millions of dollars.

The Outstanding Career Men of America—The Work of the United States Army Engineers Is in Large Part the Basis of Our National Development

EXTENSION OF REMARKS

OF

HON. FRANCIS D. CULKIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

Mr. CULKIN. Mr. Speaker, the United States Army Engineers are the outstanding career men of the American public service. During my 11 years' service on the Rivers and Harbors Committee of the House I have been more and more amazed at their efficiency and devotion to the cause of America. Their work is in large part the basis of our national development. The future engineers were the intellectual leaders at West Point. Under the stress and discipline of that system they were the dominating mental types and as such were selected for the engineering service.

The romantic settlement of the West was made possible by their vision and engineering achievements. In that new country they laid out the railroads, built highways, roads, bridges, and performed other notable services that smoothed the pathway of the oncoming pioneer.

The United States Army Engineers are, of course, a combatant branch of the United States Army in times of war. Gen. Robert E. Lee, Gen. George Brinton McClellan of the Civil War period, and a host of other Army officers of high rank in all our wars, gained their inspiration and were recruited from the Corps of Army Engineers. The engineers combine high professional qualifications in administering the public domain with esprit, personal probity, and complete freedom from political influence.

The Nation has expended over $3,000,000,000 for pioneering purposes, for the improvement of rivers and harbors, and for flood control. This work has been highly technical in character, requiring the exercise of the highest engineering skill. It has all been accomplished successfully, and the Nation, which hears little of this group of technicians, has reaped incalculable economic benefits from their work.

It is interesting to note that while all the millions of dollars appropriated for these purposes, running beyond the three-billion mark, has been expended under the direction of the engineers, there has been but one case of peculation in 110 years of this service. It is now vigorously asserted in responsible quarters that there was a miscarriage of justice in this one case. The engineers are the real field marshals of the public domain. They combine extraordinary industry and power of research with the highest order of intellect. Through my service on the Rivers and Harbors Committee I have been brought in contact with this group of remarkable public servants and have been amazed by the breadth and clarity of their findings on all questions concerning waterways and economics.

These men are among the unsung heroes of the Nation. The tyros and the untrained sometimes charged with high responsibility in this Republic regard this great organization with its record of marvelous achievement with jealousy and uneasiness. Veiled attacks have been made upon the status of engineers from irresponsible sources, but Congress knows and appreciates the services and worth of the engineers as the outstanding advisory body in the field of the public domain.

I said a moment ago that these men were unsung heroes. No history has ever been written of them although their part in the making of America is worthy of the pen of a Bancroft or Parkman.

I ran across an article on the Army engineers in the yearbook of the Washington Society of American Military Engineers. It gives a brief history of the Engineer Corps and is written by Capts. Louis J. Claterbos and John R. Noyes. It is brief, and I trust every Member of the House will take time out to read it. It is a record of which the Nation can be proud. Pursuant to the permission of the House, I append the same hereto:

HISTORY OF THE CORPS OF ENGINEERS

(By Capts. Louis J. Claterbos, C. E., and John R. Noyes, C. E.)

The earliest records of the organization that is now known as the Corps of Engineers, United States Army, are found in the Journals of the Continental Congress and in the incomplete documents which have come down to us from the period of the Revolutionary War. Upon the outbreak of the Revolution in 1775, the country was singularly deficient in persons acquainted with the duties of military engineers. A few had seen service at Louisburg, Lake George, Ticonderoga, Crown Point, and Quebec, and had thus gained some practical experience in the construction, attack, and defense of fortified places. Aside from these, there was scarcely any engineering skill or talent in the Continental Army.

Recognizing this deficiency, the Continental Congress, on the day before the Battle of Bunker Hill, authorized one chief engineer and two assistants in "the Grand Army," and one chief engineer and two assistants "in a separate department." These officers were commissioned in the grades of colonel and captain, respectively. In December 1776 General Washington was authorized by the Continental Congress "to raise and collect" a corps of engineers and to establish their pay for a period of 6 months. Under this law it is probable that an organization styled a "corps of engineers" was established in the Army. By a resolution of Congress dated March 11, 1779, a corps of engineers was formally established with Brig. Gen. Louis du Portail as commandant of the corps. General du Portail was a distinguished officer of the French Royal Engineers and brought to the corps the military engineering genius of the French. Over 20 other French engineers followed Du Portail to America and were commissioned in the Continental Army, the foreign element prevailing almost to the exclusion of native-born engineer officers. This organization, including three companies of sappers and miners, served with efficiency and distinction during the Revolutionary War, and a number of its officers were brevetted by Congress for their distinguished services. The names of the brigadier general, commandant of the corps, of 6 colonels, 8 lieutenant colonels, 3 majors, and 10 captains are on record. In November 1783 the Corps of Engineers was mustered out of the service.

During the administration of Washington, when conditions in Europe were unsettled and this country was threatened, Congress authorized the President to fortify certain harbors on the coast. There being no engineers in the service at this time, Washington appointed several foreign-born gentlemen, mostly French, a number of whom had served in the Revolutionary War, to direct the work temporarily. In May 1794 Congress passed an act raising a corps of artillerists and engineers for a term of 3 years. This organization consisted of a regiment of four battalions of four companies each. In April 1798 a second regiment of three battalions of artillerists and engineers was authorized by Congress, and 4 months later four "teachers of the arts and sciences" were authorized for the instruction of these organizations.

The act of March 16, 1802, which set up a new Military Establishment, authorized the President to organize and establish a corps of engineers, separated from artillerists at this time, to consist of one colonel, one lieutenant colonel, two majors, four captains four first lieutenants, four second lieutenants, and four cadets. It was provided further that the corps should be stationed at West Point in the State of New York and should constitute a military academy. This was the beginning of the present Corps of Engineers. It was also the beginning of the Military Academy, which, since 1812, has provided officers for all branches of the Army. The superintendence and responsibility for the successful operation of the Military Academy was vested in the Corps of Engineers from its establishment until July 1866, when the institution passed to the Army at large.

During much of the early period of its organization the duties which now pertain to the Corps of Engineers were divided between two branches, sometimes under a common head and at other times separately commanded. These two branches were known as the Corps of Engineers and the Corps of Topographical Engineers. Topographical Engineers were first provided during the War of 1812, when Congress authorized, as a part of the General Staff, eight Topographical Engineers with the rank of major and eight assistants with the rank of captain. At the conclusion of peace in 1815, all were mustered out of the service except two majors. In April 1816, however, the corps was reestablished, three Topographical Engineers and two assistants (still attached to the General Staff) being provided for each division of the Army. In 1818 the staff assignment was discontinued and these officers were assigned to the Engineer Department and made subject to the orders of the Chief and Commanding Engineer.

The Topographical Engineers continued in service and were gradually enlarged, a Topographical Bureau being established in 1818 under the Chief Engineer in Washington. In 1838 this organization became a separate corps and remained so until 1863. During half a century it was in charge of the vast number of internal improvements, military and civil surveys, and explorations. It was consolidated with the Corps of Engineers in 1863.

During the period 1802 to 1863, the Corps of Engineers was charged with much construction work, being responsible for the building of fortifications, lighthouses, and roads, for the improvement of rivers and harbors, as well as for important military duties connected with the War of 1812, the Mexican War, the Civil War, and operations of the Army against the Indian tribes.

Staff duties of an especially high order in both the Mexican War and the Civil War were performed by the officers of the Corps of Engineers and the Topographical Engineers. These resulted in a large number of brevets for distinguished services. Many of the engineer officers who served with distinction in the Mexican War later became troop commanders of high rank in the Civil War, among whom were Lee, McClellan, J. E. Johnston, Halleck, Beauregard, Mansfield, Meade, and Pope.

After the consolidation of 1863, the Corps of Engineers was increased in July 1866 to 109 officers. Subsequent increases in the corps were made by acts of Congress in 1898, 1901, 1904, 1911, and 1916. The last of these acts fixed the commissioned strength of the Corps of Engineers at one Chief of Engineers (brigadier general) and 504 officers.

The first reference to any engineer troops in our Army is found in an act of Congress of May 1778, when three companies of sappers and miners were organized. They were scattered among our various fortifications, a considerable portion of the strength being in garrison at West Point. Between 1783 and 1794 there were no engineers in our service. In 1794 Congress authorized a Corps of Artillerists and Engineers, previously mentioned, which continued in existence until 1802, when it became the Regiment of Artillery, a few officers being detached to form the Corps of Engineers.

In 1812 a company of bombardiers, sappers, and miners was authorized by Congress, and this company served throughout the War of 1812 along the Niagara frontier. In 1821 this company was abolished, the men being either discharged or transferred to the artillery, and from that time until 1846 there was no organization of engineer soldiers in our service.

In 1846 Congress again established "a company of engineer soldiers," which was organized at West Point, N. Y., and was designated "Company A, Engineers." It has a continuous history in service since this time, and is represented by the present Company A, First Engineers, stationed at Fort Du Pont, Del. The company served with General Taylor's and Scott's command in the War with Mexico, where it took a gallant and distinguished part in the battles of that war. In June 1848 the company was returned to West Point after making for itself a war record of which it had every reason to be proud.

Until the outbreak of the Civil War the Engineer company assisted in the survey of the North Pacific Railway, accompanied the Utah expedition in 1858, and assisted in road and bridge building on the Pacific coast. In January 1861 the company was ordered to Washington for the purpose of protecting the public buildings, stores, and arsenals. On August 3, 1861, three additional companies were authorized by Congress and this group of four Engineer companies (A, B, C, and D) was known throughout the Civil War as the Battalion of Engineer Troops, although it had no authorized battalion organization until after the war. On August 6, 1861, a company of topographical engineers was authorized, which later formed the fifth company (E) of the battalion.

Throughout the Civil War the battalion was assigned to duty with the Army of the Potomac, where it took part in the siege of Yorktown, the Battles of Malvern Hill, Antietam, Fredericksburg, Chancellorsville, The Wilderness, Cold Harbor, and the seige of Petersburg. In these engagements much difficult work was required of the battalion in the way of bridge building, road making, sapping and mining, and other duties pertaining exclusively to the engineer-soldier. In many of the battles the battalion, after completing its engineering duties, was employed as infantry in the line of battle or in the support of batteries.

In 1865 the additional company of Engineers authorized August 6, 1861, was enlisted, and in July 1866 the five companies of Engineer troops were formerly organized into a battalion. Until the outbreak of the Spanish-American War, the battalion served at the Engineer School and the United States Military Academy, and also performed such unusual duties as the suppression of illicit distilleries near the Brooklyn Navy Yard in December 1869, riot duty during the railroad strike of 1877, and assistance at the time of the disastrous flood at Johnstown, Pa., in 1889. Battalion headquarters and most of the troops were at Willets Point, N. Y., during this period, with one company at West Point.

Upon the outbreak of the War with Spain, in 1898, Companies C and E were organized into a provisional battalion for service in Cuba; Company A went to Manila, and Company B remained at Willets Point, engaged in the submarine defense of New York Harbor. Later, Companies B and E were both sent to Manila, where they assisted in repairing roads, relaying railroad tracks, and constructing ferries and bridges.

In 1901 Congress increased the number of Engineer troops to three battalions of four companies each, and in this reorganization the old Battalion of Engineers ceased to exist. Companies A, B, and E, then in the Philippines, were absorbed by the First Battalion of Engineers; the designation E was changed to C and a new com-

pany designated D was formed by the transfer of men from the other three companies. The original Companies C and D formed the nucleus for both the Second and Third Battalions in the United States.

Thus passed out of existence the organization known as the old Battalion of Engineers. Born of the difficulties confronting the Army in Mexico, expanded under the difficulties arising in the Civil War, revived and enlarged during the Spanish-American War, the situation in the Philippines demanded a further increase to which the battalion's organization did not lend itself. With the transfer of its men to the new battalions of engineers, its name disappeared from the roster of the Army, but the spirit which marked its service in Mexico, in the Army of the Potomac, in the Cuban campaign, in the Philippines, and in China still lives and animates its successors. To these will ever remain bright the memory of the old Battalion of Engineers.

The newly formed battalions garrisoned the Willets Point post, served at Fort Leavenworth, Kans.; West Point, N. Y.; and Washington Barracks, D. C., with periodic tours in the Philippine Islands. In the islands they performed many tasks of real pioneering. The National Defense Act of June 3, 1916, reorganized the Engineers into regiments, three of six companies each being formed from the three battalions of engineers. They participated in the movement of troops to the Mexican border and accompanied the punitive expedition to Mexico. Here they performed a great road-building task which permitted the first extensive use of motor-trucks by an army for supply purposes.

* * * * * * *

The record of the Corps of Engineers in the World War is an outstanding one. During this war, the engineer arm of the Army was expanded from 256 officers and approximately 2,200 enlisted men to a peak on November 25, 1918, of 11,175 officers and about 285,000 men. This included National Guard and National Army units, as well as those of the Regular Army. The civilian engineers of the Nation responded enthusiastically in making this great expansion possible. Many of the units were temporary wartime organizations, which were disbanded after the emergency, but which have been retained in many cases as inactive or reserve units.

During the war approximately 86,000 men in engineer regiments were assigned to various divisions, where they performed invaluable engineering services in support of the infantry and artillery. Of these operations, the most important had to do with routes of communication. The once excellent roads of France were worn out after 4 years of intensive warfare. Our engineers rebuilt and maintained the essential roads across no man's land and beyond. They built hundreds of essential bridges. They prepared defensive positions, erected obstacles, and performed many other engineering tasks. Much of this engineering work was done close to the front, under fire. The history of these regiments is intimately associated with that of their divisions, even in combat. On many occasions engineers effectively relieved the hard-pressed infantry in holding defensive positions, and even took part in offensive actions. They suffered their full share of casualties, and earned a place the more secure because of this combat function.

A much greater number of engineers formed a part of the corps and Army troops which operated behind the front line. Here again routes of communication provided the main task. Corps and Army engineers repaired and maintained light and standard-gage railroads, as well as roads and bridges, and even built new links of railroad. Other important tasks included general construction in Army areas, map reproduction and supply, water supply, camouflage activities, and the operation of searchlights. The tonnage of engineering material and supplies used in the First Army was roughly equal to that of the class I supplies consumed.

Many special types of engineer units were organized for the A. E. F.—such as road, railway, topographical, forestry, camouflage, searchlight, water supply, mechanical, and electrical. The railway regiments were among the first to be sent to France, and as early as November 30, 1917, the Eleventh Engineers (Railway), which was operating with the British Third Army at Cambrai, assisted in meeting the German counterattack in that sector.

Besides furnishing the engineer troops for the combat elements of the A. E. F., the engineers were responsible for all construction in the S. O. S. The distribution of supplies to the American forces was, in the first instance, a problem of ports, second a problem of railroads, third a problem of motor and horse-drawn transportation, and fourth a problem of storage. American engineers built 15 new ship berths, about 1,000 miles of standard-gage railway track, including a bridge 2,100 feet long over the Loire River, and 125 miles of narrow-gage track. Over 20,000,000 square feet of covered storage was provided for supply purposes of all services, and more than 3,000,000 tons of engineer supplies were received, transported, and distributed. About 280,000 hospital beds were provided and 16,000 barracks buildings were erected. In order to obtain the material for this vast construction program an Engineer Forestry Service produced about 220,000,000 feet of lumber, 4,000,000 ties, 2,000,000 piles, and miscellaneous timber, and 340,000 cords of firewood. All told, the engineers in France completed, during the course of the war, 831 construction projects, the aggregate cost of which was over $165,000,000.

* * * * * * *

The National Defense Act of 1920 authorized 1 chief of engineers with the rank of major general, 1 assistant with the rank of brigadier general, and 600 officers in grades from colonel to second lieutenant, inclusive. Seven additional officers were authorized by the act of August 30, 1935. In 1936, an additional assistant in the grade of brigadier general and 185 additional officers were provided, so that the present maximum authorized strength of the Corps of Engineers is 795 officers. The actual strength (September 1, 1939) was 785.

At the present time there is maintained in each of our overseas departments (except the new Puerto Rican Department) a war strength unit of combat engineers as a component of the defense force located there. These units are a regiment in Panama, the Eleventh; a regiment (less band) in Hawaii, the Third; and a regiment (less one battalion) in the Philippines, the Fourteenth. The Twenty-seventh Engineer Battalion (combat) (less one company) has been recently constituted in Puerto Rico.

Within the continental limits of the United States there existed, as of September 1, 1939, four combat engineer regiments, one squadron (a combat organization), two topographical battalions, and two detached units—a company at the Infantry School and a troop at the Cavalry School. Most of these units had inactive companies, the Fifth Engineers at Fort Belvoir being the only complete regiment.

* * * * * * *

The civil duties of the Corps of Engineers, assumed a few years after its formation, have continued without interruption. The first river and harbor bill was enacted in 1826, and the corps has since that date been charged with all navigation improvements and most of the flood-control projects undertaken by the National Government. It has also been charged from time to time with many other miscellaneous activities of the Federal Government to include the construction of many of the public buildings (Washington Monument, Capitol, Library of Congress, Arlington Memorial Bridge, etc.), and the international boundary survey. It surveyed and built the first national highways and furnished the leaders for several early and valuable explorations, of which the Wheeler survey was outstanding. The result of this survey was the establishment of the United States Geological Survey as it now exists. Various of its early activities have since been transferred to other permanent agencies of the Government on a firm, well-organized basis, but new activities appear quickly.

The total volume of river and harbor and flood-control work entrusted to the corps over a period of more than 100 years aggregates $3,029,750,000; of this amount about $1,000,000,000, more than 30 percent of the total, has been provided during the past 5 years of economic depression. These figures point out clearly the enlarged responsibilities which have been met successfully by the corps without the expansion in personnel which occurs in war. The emergency construction operations had as their purpose the provision of immediate employment, and speed in commencing operations was essential. Within 75 days after securing the initial relief allotment in 1933 the corps had contracted for, or actually commenced upon a hired labor basis, work totaling more than $100,000,000. This record was achieved without any sacrifice of sound engineering design and construction by officers and civilian assistants who worked unceasingly to accomplish the desired results.

For the supervision of this large civil construction establishment the United States is divided into 11 divisions, each of which in turn has several districts within its boundaries. Each division engineer exercises general supervision over the engineering and construction and is responsible to the Chief of Engineers for the orderly progress of the work in his districts. A large research institution, the United States Waterways Experiment Station, is maintained at Vicksburg, Miss., to assist in developing engineering progress in the fields of hydraulics and soil mechanics.

The projects included in the relief program have been varied in type, embracing almost every conceivable phase of engineering. Many of the projects have necessitated the establishment of new districts, which have required the formation and training of new engineering and administrative staffs. A number of projects have been located in isolated areas and have required the construction and operation of self-contained villages for the housing of several thousand employees. The successful execution of these projects has developed an increased public confidence in the Corps of Engineers and a public recognition of the value of its services.

While carrying on a greatly expanded volume of assigned work, numerous officers have been loaned to various emergency agencies. Engineer officers had much to do with the organization of the Public Works Administration. Engineer officers were loaned to the Recovery Administration and the Civil Works Administration. Several major projects were undertaken by the engineers for the Civilian Conservation Corps, using the personnel of that corps for labor. Forty-one officers were made available to the Works Progress Administration, and the services of these officers were instrumental in greatly facilitating the activities of the administration. An officer of the Corps of Engineers is now at the head of that organization.

* * * * * * *

Now begins another phase in the history of the Corps of Engineers. With the recent far-reaching change to a much smaller infantry division, the combat engineer regiment of the division is replaced by a small engineer battalion. Many of the functions formerly pertaining to division engineers must accordingly be relegated to the Army corps, which it is contemplated will have both a combat engineer regiment and a general service regiment. Engineer units will be constituted as a part of the mechanized forces, and of the general headquarters air force.

Whatever changes in organization occur, to meet new developments in tactics, the essential role of the engineers in war remains unchanged. They must be prepared to assist our troops forward,

to impede the advance of the enemy, to minister to the welfare and comfort of our forces.

Looking backward over the record of the corps, in peace and war, its members may well take pride in its record of accomplishment and service to the Nation, and be inspired thereby to maintain its tradition of high achievement.

Back to the Land?

EXTENSION OF REMARKS

OF

HON. JOSH LEE

OF OKLAHOMA

IN THE SENATE OF THE UNITED STATES

Tuesday, March 12 (legislative day of Monday, March 4), 1940

ARTICLE BY DAVID CUSHMAN COYLE

Mr. LEE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine article by David Cushman Coyle entitled "Back to the Land?" published in the Survey Graphic for February 1940.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Survey Graphic for February 1940]

BACK TO THE LAND?

(By David Cushman Coyle)

To anyone who knows about city industries and city slums, it seems plain that thousands of families ought to be encouraged to move back to the land where at least they could find "subsistence." If you travel around in the country, down South or in the cut-over lake States or in the irrigated West, it seems plain that thousands of families must move away from the submarginal lands, the dying crossroads villages, and into the cities where new industries may give them employment.

It works—or rather fails to work—both ways.

Underlying the city and country unemployment and poverty are the same causes, with local variations. Technology is destroying jobs in industry, and there is plenty more of the same in the blueprint stage. Agricultural technology is raising the productive power of well-organized farms so that they can glut the markets, leaving little or no money income for the millions who live on poor land with little capital.

Decentralization, merely in the sense of getting rid of city people who have no jobs, is a mirage. Its effect on unemployment, if any, is indirect and dependent on other adjustments, mainly in the distribution of money incomes.

TOO MUCH OF A GOOD THING

And yet it is evident that the largest cities are dying of strangulation. Automobiles jam the streets. Trucking is expensive, rents are expensive, wages have to be high if the workers are to live. Workers travel on subways or streetcars, at a high cost in nerve strain which is not shown in the accounts of city business, but turns up in taxes, disease, crime, and mental break-down.

The metropolis is an example of the advantage of concentration, carried to the extreme where it costs more than it is worth. There is no argument about the necessity for a certain amount of bigness. The Virginia State Planning Board showed several years ago that counties with less than 5,000 inhabitants are saddled with unconscionably high costs of government, and that most of the services necessary to modern living are beyond their means. The economy of consolidated schools, and the fact that rural electrification becomes impractical below a certain customer-density per mile, are illustrations of the same principle. So it is necessary for civilization that people should concentrate in cities.

But when the people concentrate so far that cars cannot be parked, that dwellings must have elevators, trees and grass are too far away for a child to reach, transit lines have to be elevated or put underground, water must be brought from immense distances, food and fuel must be carted and stored at exaggerated costs—all these symptoms of getting in one another's way add up to over-all inefficiency.

A city is too big when its operation costs more than its inhabitants can or will pay. How can it get that big? If people won't pay, how does it get built? We all remember the answer.

Before 1929, investors were fat, simple, and as yet unburned. A building mortgage company boasted that it had never lost a dollar of a customer's money. It was easy to build office buildings and apartment houses on a shoe-string and with more than 100 percent of borrowed money. The building itself made prosperity.

Even then, city people were not prepared to pay for city costs, but they were prepared to lend, which was unconscious payment. The cities lived on the lost money of suckers. A newspaperman in Los Angeles expounded to me that his city lived largely by persuading tenderfeet to invest in local business ventures. The drugstore or the laundry was used on one sucker after another, year after year, like the oyster that traveled from one church fair to another, swimming about in warm water at each, and thus sending many missionaries to the heathen. So, by one way or another, the golden lure of the city drew out the savings of simple folk, and so, for a time, found the money to carry on an unsound growth.

The public debt of the cities was a form of the same activity, less important in amount though more visible. Today it is reported in New York that any new construction as a rule destroys more taxable values than it creates. New housing destroys slum values, which may not seem unjust; but loss in tax appraisals may represent a headache for the city, possibly temporary. Any change of land use throws private and public property into disuse, with consequent losses. The only way a city can go on is by finding more suckers, private or public, to put up money that they will never get back. The prosperous enterprises make profits that fail to balance the losses of other enterprises.

On the face of it, the crowded cities do not look like much of a bet from now on. Military danger of crowding puts the final touch to a picture of overgrowth.

THE TUG OF DECENTRALIZATION

In the meantime the scientific developments of the past 40 years have given some impetus to decentralization. Hard roads and automobiles have enlarged the effective area of business and social life. Electric power has detached the factory from the need for direct access to coal and water. Machine production has not developed wholly toward larger size of factory, as was expected, but has included small plants, household, and, lately, small farm machinery.

The cultural advantages of the city have largely disappeared. The movies offer better entertainment at the crossroads than any poor man could ever buy for his girl in Chicago. The radio has transformed the relation of the people to good music. Even painting, under Federal patronage, is to be seen in small towns, where farmers and their wives drive 50 miles to see a painted picture for the first time in their lives.

The remaining cultural advantages of the big city are, of course, open as always to the well-to-do. Rich planters from Mississippi have always traveled to New York and Paris; today they can fly to New York instead of coming by coach or railroad. Poor people can sometimes get to the big city, perhaps to visit a world's fair, and feel the stimulus of the crowds and the roaring traffic. But these are no novelties to movie-goers, who have walked intimately in Shanghai and London, and have stood in the Roman crowds while Mussolini bellowed or while Julius Caesar and Claudette Colbert rode in triumpt. If culture is, as Albert Jay Nock says, the acquisition and subsequent forgetting of a maximum of useless information, our culture is already well decentralized and likely to be even more so.

HOW BIG IS A COMMUNITY?

In another sense, of course, our culture may be said to include hospitals, libraries, and high schools, which now are no longer necessarily confined to cities of large size. The chief factor in the relation of these civilized institutions to a scattered population is the paved road, and it is in terms of roads that a decentralized civilization has to be defined.

A community may be defined as a local group of people who can go to a common center for some or all of their organized services—stores, schools, churches, libraries, movies, and medical and legal institutions. A community has three kinds of size—economic and geographic as well as population.

Its geographic size is a star-shaped area stretching out along the good roads leading from the center as far as people will actually travel without coming into the sphere of influence of a different center. One of the most striking aspects of rural America is the vast growth in geographic area of the typical community, with the consequent atrophy of many small crossroads communities of the horse and buggy age.

The population of a community may be 5,000 or 10,000 or several hundred thousand, but so long as they are not so many as to get in one another's way, the community may be workable as a social unit.

In order to be civilized, the people of the community must have an economic income large enough to reach to consolidated schools, well-appointed hospitals, and successful churches, stores, libraries and movies. Conceivably a millionaire might constitute a community of his own household, with all these services provided on his own estate. But in practice it seems to take about 10,000 people to justify on an economic basis a full set of civilized institutions.

The ideal rural community, therefore, can be roughly defined as consisting of not less than 10,000 people, living within practicable travel distance of a central town, and having enough income to pay for a full set of civilized services.

To approach this ideal may require both decentralization and centralization. The largest cities may have to lose enough population to relieve their intolerable congestion. In doing so, no doubt tremendous capital losses must be realized. On the other hand, there are many areas in our country that can never support enough people to be civilized. Ten thousand people in a 9-mile radius equals 40 to a square mile, about the national average. Submarginal areas will generally have to be depopulated, leaving only C. C. C. boys, foresters, and others of similar type who are highly mobile or are able to live for considerable periods out of range of ordinary social services. This process also will require a fairly large writing off of dead capital.

WISCONSIN LEADS THE RURAL ZONERS

The Wisconsin rural-zoning system, which has now spread to six other States, illustrates perfectly how the concentration of rural communities can be brought about. Under State law a county may zone off the land where roads, schools, and relief for isolated farm families cost more than the farms can pay in taxes. Farms acquired by the county through tax delinquency are not resold. New settlement is forbidden. The Farm Security Administration helps the process of withdrawal by buying out those of the isolated farmers who are willing to sell.

The immediate book losses involved in zoning were at first an obstacle to its acceptance, but arithmetic prevailed. In many cases the profit in reduced county budgets has paid back the cost of liquidating the outlying farms within 2 or 3 years.

Here on a small scale, where local voters can see the facts, the good sense of common Americans shines through. How long must it be before we turn our eyes with similar good sense to national affairs, and leave off the silly economy that condemns us to vast losses in sickness, crime, and unemployment so long as we refuse to face the costs of reorganization?

There seems to be no doubt that the process of rearranging our population into workable communities will be slow, costly, and confused. Economic pressures will help, but the Government will undoubtedly have to take a hand as well. Economic pressures, bankrupting the big cities and starving the submarginal farmers, are crude and cruel. Public help by way of bailing out the cities and the farmers can hardly be avoided. Some of the forms of Government action may be dimly foreseen.

EXPERIMENTS IN HOUSING

Housing, so far, is too small a factor to need immediate over-all planning before proceeding further. Even Atlanta, which built the first P. W. A. housing project, and now has $16,000,000 worth of slum clearance under way, is not close enough to complete rebuilding to need an accurate estimate of its future population in order to justify its present program.

The U. S. H. A. program, with no pretense of self-liquidation, is frankly buying out or liquidating the slums by requiring that for every new house built an old one must be torn down. Thus a beginning is being made in the long job of taking the loss on city property.

In the country, the Government has begun to buy up submarginal lands and turn them back to forest, national park, or game refuges, all at the expense of the Federal taxpayers. This, too, is painful but unavoidable.

It is necessary to keep steadily in mind that every billion dollars spent by the Government to wipe off dead capital and open the way for a workable social system is that much added to the economic soundness of the Nation. The losses are there, like it or not. The mistakes have been made. The distribution of the population is not fitted to the operations of a modern, high-powered economic order. The sooner we pay the bill and start over, the less we shall suffer.

No excuses need to be made for experimentation, even though some of it is unsuccessful. Certainly no criticisms are in order from any business interest which was involved in the building of our bankrupt office buildings, our blighted suburbs, or our vacant factories. They were experiments too. With that proviso, it is proper to take some lessons from the early efforts of the New Deal to promote decentralization.

Most of the subsistence homestead communities have been a headache. There was a tendency to build housing and hope for an industry to come in. But at the same time there was a desire to protect the inmates from exploitation, which often meant that they could not have jobs at all. Another trouble was high-brow ideas of decent housing. Stuart Chase remarked to me in 1934, as we were looking over a southern subsistence project, that our pioneer ancestors had no plumbing, but they also didn't have a $2,500 debt to pay. Such synthetic pioneering is tied into modern finance via a debt, but not tied into modern business via a cash income. The first settlement cost too much, and some of the thought that went into cultural activities might better have been devoted to finding a cash income. Even the T. V. A., which has probably wasted as little money as any public enterprise to date, made mistakes in its first synthetic community, Norristown. But the rate of improvement in planning and building fully justifies the cost of the experiments.

In October I visited a sharecropper's cabin in Georgia. It was a rickety affair, showing daylight through the cracks in all directions. But on tiers of shelves were 540 quart cans of vegetables laid up for the winter. A few years more and there will be a small cash profit coming in from cotton, enough to let them have a better house.

The Farm Security Administration and the T. V. A. have both emphasized the necessity for self-containment, and much of the N. Y. A. training in rural areas points in the same direction. This is one of the three basic trends that need to be encouraged in order to create a properly decentralized social order.

The T. V. A., for example, has invented small farm machinery suitable for use in handling soil-saving crops, cattle, and chickens. Its walk-in refrigerators make it possible for farmers to eat their own beef. Hay driers give them a chance to process their own hay. They can clean their own lespedeza seed and grind their own feed.

The effect of supplementing cash crops with food crops for home use, is of course, to reduce the farmer's need for imported food from other regions. He can have a little more to spend on the community services.

The second element in decentralization is the growth of small local industries. Not much progress has been made so far, other than a movement of manufacturing from large cities to suburbs or smaller cities. Federal tax policies have not encouraged small business to an effective degree, but they might be made to do so. A few experiments have been made in the direct encouragement of local industry, such as the T. V. A. freezing process for small fruits and the successful craft industries at Cherry Lake, Fla., and Dyess, Ark. The tax problem in Washington is still overshadowed by Budget trouble, but in the future it may be possible to give advantages to local industries.

CANDY AND GASOLINE AND CIVILIZED SERVICES

The third necessary element in decentralization is an effective buy-at-home spirit in the rural areas, of which the South is the largest. The South, altogether, undoubtedly is running a deficit, buying more from outside than it can pay for. The poorest districts are the worst. One study of a southern county showed an adverse trade balance of about $100,000, half of which was for candy and the rest was, no doubt, for gasoline.

To grow one's own food or buy it from local farmers, to have a factory within reach of the farm, and to buy so far as possible goods and services made in the community are the three chief means for decentralizing industry. Evidently they all look toward a decrease of trade, and in detail to a small decrease of productive efficiency. They represent a reverse of the trend to mass production, national advertising, high efficiency, high distribution costs, high transportation costs—general stagnation that has led us to our present unhappy situation. We went too fast and too far, got in a jam, and now we have to get out of the jam by modernizing some of the patterns.

Underlying the need for a better distribution of population is the drift of employment away from both manufacturing and farming. On the whole, neither will ever support an increasing number of workers. The majority of gainful workers are already in service occupations and the proportion will steadily increase. By forming decentralized, workable communities of sufficient size, with a suitable share of self-containment, it will be possible to bring millions of people within range of the civilized services, with money enough to pay for them. As this readjustment is gradually perfected, there will be an opportunity to employ the necessary percentage of workers in services, which is, of course, the ultimate answer to technological unemployment in factory and farm.

Physical Education

EXTENSION OF REMARKS

OF

HON. WILLIAM H. SUTPHIN

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

Mr. SUTPHIN. Mr. Speaker, the most valuable asset this country has today is the youth of the land. In the trying years of the World War this Nation made a valiant effort to place its resources at the disposal of the Allies. The greatest contribution that America made to this cause was our manpower. While endeavoring to equip, train, and place in the field American expeditionary forces of over 2,000,000 Americans, some very different and disturbing conditions were brought to light. Perhaps the most amazing factor that stunned our leaders was that only 30 percent of our male population confined to the draft ages were barely able to meet the physical requirements of the service.

We have endeavored to improve the standard of livestock, including cattle, horses, sheep, and hogs, and have provided protection for our wildlife, where they may receive proper care and nourishment. It is therefore apparent that we would certainly be justified in making it possible to strengthen through a carefully planned program our future generation of men and women by a system of more universal physical education and recreation, in which the Federal Government might be of real assistance.

Considerable contribution was made by Congress in 1935, which authorized the Works Progress Act, and which has made a definite contribution to the improvement of recreative and competitive athletic facilities throughout this country. This consisted primarily of labor, in connection with the unemployment problem, but did make possible the construction of playgrounds, baseball diamonds, cinder tracks, swimming pools, stadia, parks, as well as a vast amount of recreative area for public use. These projects have been of material benefit and have served as a great impetus to a new hope that

more people in all walks of society would share in such benefits, such as sport participation and community-center activities, as well as a general improvement of leisure-time activities for the betterment of all our citizens. These opportunities were offered to all of our people, benefiting each and every section of the United States. I am sure you Members of the House of Representatives have had experiences similar to mine. Year after year I have offered young men opportunities to qualify physically and mentally for appointment to the Naval and Military Academies, and have been shocked because about 90 percent of those who presented themselves for physical examinations were found to be defective in some important respects, usually eyes, teeth, and general undevelopment. Therefore I decided that important and immediate action was necessary to enact legislation conducive and furthering the development of our young men and young women. After several conferences with the chairman of the College Physical Education Federal Committee, George Little, the director of physical education at Rutgers University, who in turn had conferred with members of the aforementioned committee throughout the land, as well as the president of the university, Dr. Robert C. Clothier, and the trustees and administrative officers, the opinion of newspaper publishers, business and professional leaders, school executives, sport writers, and others along the Atlantic seaboard was also sought.

As a result of these conferences it was determined to ask for Federal aid and assistance by the introduction of H. R. 7661, which authorizes a survey of our country's resources from the standpoint of facilities and personnel, for purposes of improving our assets in the field of physical education and athletic participation, so planned to meet their respective needs. This measure has been thoroughly considered and universally endorsed by a group of men who have for the past 20 years spent their lives in the field of college physical education and who are in close touch with the problem in all sections of the United States. Such a study would require a 2-year period and it would involve the cooperation of all groups now engaged in sponsoring and conducting programs designed to benefit our young people, for whose physical welfare they are responsible.

The chief aim of such a study would be to carefully survey by States, through such existing State organizations as are provided in at least 26 States, who would be in a position to aid in determing what facilities are available, as well as the number and type of organizations now making a definite contribution to a participation program. Great care should be exercised in the conduct of this proposed survey to safeguard against any ill-effects, such as oversight in accuracy, which might result in unfairness to agencies now performing a very worth-while service. It will be the primary purpose of the survey to make some estimate of the wholesome effect of the benefits derived and the number of people engaged in participation, under the sponsorship and direction of the different groups.

Directly responsible for active programs are Amateur Baseball Association, Amateur Athletic Union, American Legion activities, American and National Leagues of professional baseball, American professional football, Boy Scouts of America, Columbian Squires, De Molay, intercollegiate sports, intramural sports sponsored by colleges, Knights of Columbus, National Recreation Association, parochial schools, parks and playgrounds, public school system, private school system, secondary school system, Y. M. C. A., and Y. M. H. A.

For years the gate receipts accruing from intercollegiate athletic contests throughout our country have returned to the Federal Government a large sum of money representing the Federal tax. Therefore it would seem justifiable to set aside a small percentage of this large amount to determine how we can improve our present system of physical education and its lasting benefits through this proposed survey.

Our Farm Policy

EXTENSION OF REMARKS

OF

HON. WARREN R. AUSTIN

OF VERMONT

IN THE SENATE OF THE UNITED STATES

Tuesday, March 12 (legislative day of Monday, March 4), 1940

ARTICLE BY HON. W. WARREN BARBOUR, OF NEW JERSEY

Mr. AUSTIN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine article written by the distinguished Senator from New Jersey [Mr. BARBOUR] and published in the March issue of New Jersey's Farm and Garden, a well-known farm magazine in that State.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From New Jersey Farm and Garden for March 1940]

NONSENSICAL CONFLICTS IN OUR FARM POLICY

(By W. WARREN BARBOUR)

From the time Eve harvested the first apple crop and carried it to the only available market, thereby discovering with her husband Adam the law of supply and demand, I suppose there has been a farm problem. Whether the emphasis of the moment is on scarcity or surpluses, marketing or transportation, acts of men or acts of God, the complexities have kept pace with the growth of the human family.

Although supply and demand continue as always to dominate the processes of production and consumption, a multitude of factors unknown to primitive agriculture in a primitive society now come between the two. They are inescapably part of the task of feeding, clothing, and sheltering the human inhabitants of a world which becomes constantly more crowded.

NOT A PARTISAN MATTER

With that brief prelude, I should like to tell you, in the space allotted to me by the editors of New Jersey Farm and Garden for this purpose, how the American farm problem in its present evolution looks to me. I do not speak as a partisan, for I feel with Senator CAPPER that the farm problem, whether in its local or national aspects, is not a partisan problem and should not be dragged into the arena of partisan politics. I am quite sure that when a hen lays an egg on a New Jersey farm she doesn't stop to think whether she is laying it for a Republican or a Democrat, and the ham and eggs and fried chicken and dairy products and garden vegetables we eat come to our tables not with any party label, but as the product of the toil of men of all persuasions, with an identic interest in earning a living from the soil.

In that spirit therefore I can say quite honestly that in my opinion the efforts of the Federal Government to deal with the farm problem have been on the whole so flagrantly wasteful, extravagant, discriminatory, and ineffectual as to call for a searching reexamination of our farm policies by some agency or group capable of considering them intelligently and as a whole, without sectional or partisan bias. It was this conclusion which prompted me to introduce my Senate resolution (S. J. Res. 197) directing the President to call a national farm conference to study our present Alice-in-Wonderland farm program. Such a conference, if representative in its make-up of the groups and interests specified in the language of the resolution, would at least offer a hope that we might in time be able to introduce into our farm policy some semblance of fairness and common sense. We should, however, have to consider the possibility that the delegates to such a conference might die laughing as they contemplated some of the stupidities of what we are doing now in the name of farm relief.

WE BANDY BILLIONS

In this article I shall not attempt to compute the total of the amounts so spent. We bandy billions about with such nonchalance these days that it would be meaningless to do so here. We all know Federal appropriations for agriculture have been running around a billion dollars a year. We know, too, that the results obtained for the expenditure are certainly not commensurate with the amounts expended, and that like any other form of futile spending, the process simply helps pile up a national debt for which we get a wholly inadequate return in national welfare, and which all of us ultimately will have to pay in higher taxes and higher prices for the things we buy. New Jerseymen are well aware, in addition, that New Jersey and other Northeastern States have been getting only a trickle from the flood of appropriations for farm aid, although paying heavily in taxes for the support of the present unfair and

ineffectual system. Last year, for example, North Dakota received from the A. A. A. in farm benefit payments an amount equal to $40 for every man, woman, and child in the State, while New Jersey on the same basis got exactly 30 cents.

Standing off now, and looking at the picture as a whole, what do we see? A government spending vast sums on irrigation and reclamation, Dust Bowl rehabilitation, so-called soil conservation, or to combat erosion or clear cut-over lands in the Tennessee Valley, while spending comparable sums to take other worthless or so-called marginal lands out of production. Can't the Washington bureaucrats see that one process cancels the other? Why take millions of acres of land out of production in one place if we are going to put millions of acres of new land into production elsewhere? Where does that get us?

There are two aspects of the irrigation and reclamation policy which call for critical reexamination: Why put water on desert lands in the first place, or bring any new lands into agricultural production, for that matter, while crop surpluses constitute our biggest farm problem? But if we must increase our production, why not spend a little of the money rehabilitating the many thousands of abandoned or run-down farms in populous States, most of them on good roads and adjacent to markets? Every well-informed student of the farm problem knows such a program would be not only more logical than the one we are now pursuing, but that it costs less to make a run-down farm productive than it does to put water on a patch of desert land and build a completely new farm plant with which to operate it.

Next, we pay corn, wheat, and cotton farmers to restrict their crop acreage in the foolishly unsound assumption that this will cut their crop yield proportionately, only to find that by intensive and intelligent farming they can and do grow almost as much on the smaller acreage as they did before.

We beg and browbeat farmers and even pay them to reduce their crops by curtailment of acreage or destruction of surpluses, yet constantly expand the scientific services of government which are concerned with teaching the farmer how to grow more on less land.

We spend hundreds of millions to destroy crops, when a fraction of that sum devoted to problems of marketing and distribution would yield far greater benefits to producers and consumers alike.

EXPANSION ENCOURAGED

We lower interest rates on farm borrowing, as we should, then seize this saving or wipe it out in higher taxes and higher costs of farm operation, due to Government spending.

We encourage farmers to expand their acreage in the assurance that they will at least be protected against foreign competition in the domestic market, and then reverse our traditional policy of protection and introduce a double threat to American agriculture in the new trade agreements, first, a threat of direct competition in introduction of a larger volume of competitive farm products from abroad; and, second, a threat that lower duties on industrial products will bring a larger volume of competing foreign goods to the United States, and by increasing unemployment in industrial districts, injure the farmers' only important market for the output of their farms.

These are but a few of the utterly nonsensical conflicts anyone can see in our farm policies at present. The main trouble is that our farm program, like Topsy, has "jest growed." Then there is constant pulling and hauling by selfish groups and competing Washington bureaus, with the continuing struggle between the reclamation people in the Department of the Interior and the crop-curtailment thinkers in the Department of Agriculture as the perfect example of bureaucratic conflict. All this isn't necessarily the Democrats' fault, although the biggest and most wasteful expenditures have occurred in the last 7 years, and it certainly isn't the Republicans' fault, although we must admit we did little if anything to correct these conflicts. Summed up, the failures of our farm program may be laid primarily to bureaucratic bungling, selfish sectionalism, lack of coordination in the Washington Government, and inexcusable failure to see that we are tearing down with one hand what we are trying to build with the other—a sound program under which the American farmer can prosper, and which in turn, as he prospers, will contribute to the prosperity of everyone.

Now, I have no idea, of course, what results might flow from a national farm conference such as I have proposed, particularly if it should set up an advisory farm council, as also proposed, to formulate a permanent, long-range farm policy. I can only express the hope that among other changes in the present wasteful, ineffective, and inconsistent program, the conference and its agent, the advisory council, would give us a greater degree of State autonomy in dealing with the farm problem than we enjoy now.

PRO RATE APPROPRIATIONS

If the farm program were to be reorganized on a sound basis we could well ask that the bulk of agricultural appropriations by the Federal Government be prorated among the States on the Federal-grant principle, as it is done in the case of highway and social-security funds and other forms of Federal aid in which the States participate. It does seem to me that the public agencies and land-grant colleges of any State, and the farmers of that State, should in the main be better judges of what the farmers of that region need, and of the measures proposed for their benefit, than any group of bureaucrats sitting in Washington, no matter how high their standing in the misnamed "brain trust."

Under such a system allocations of Federal funds for farm aid might well be made to the States on the basis of farm population, number of farms, value of farm products, and other factors in addition to those of crop size, cost, and price.

Finally, there can be no possible justification except on the score of sectional advantage or political expediency for a system which, as at present, gives New Jersey, New York, and the New England States, containing as many people as all of the States west of the Mississippi River or south of the Mason and Dixon line combined, and all of them intensively developed agriculturally, a meager $10,000,000 out of approximately $700,000,000 distributed in 1 year in the form of Federal farm payments, while the corn, wheat, and cotton States get the rest. If we are going to have any parity payments, or farm payments of any kind, it's about time we got a little "parity" in the administration of farm aids right here in New Jersey. We are not beggars, and our farmers are neither lazy nor inefficient. All we ask is fair play.

Money

EXTENSION OF REMARKS

OF

HON. KENT E. KELLER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, March 12, 1940

Mr. KELLER. Mr. Speaker, money is a cumulative invention of mankind. It liberates or enslaves humanity, depending entirely upon the use to which it is put. Controlled in the interest of men it is the great builder of industry, the guarantor of opportunity. Controlled by the few it becomes the destroyer of opportunity, the limiter of the lives of men. Wherefore if men value life and desire liberty in a republic where all things are decided by political action, they must thoroughly understand this thing called money.

Money is a simple thing and easy to understand, as all things are which we use in everyday life. There is only one requirement to a perfect understanding of money; that is the simple presentation of the facts in relation to it. There is no mystery about money. The use to which it is honestly put tells exactly what money is.

Money came in answer to the call of developing industry for help in the exchange of things men made and used. It has no other legitimate use. It has changed in form and increased in amount and use, in proportion to the growth in the production of wealth, and the resulting greater necessity for exchanging things which men use.

Now let us trace its origin and use—the reason for its existence. In early times men trade one article for another. One man had an untanned skin, another man made a pair of moccasins. The skin was swapped for the moccasins; a hunter traded meat for a measure of grain; a maker of bows and arrows traded a bow and arrow to a basket maker for a basket. It is written that a shepherd traded five sheep for a cow 2,500 years before Christ; again it is written that 750 years after Christ another shepherd traded five other sheep for another cow.

Trading of this sort is called barter. The amount of trade that could be carried on by barter was very small. This limited the creation of wealth—the things men want and use—because there is no reason to make more things than we can use ourselves, unless through some means we can trade them for things we do not make but which we do want.

Men found great inconvenience in taking cows great distances, and not everybody wanted a cow. A cow had to be fed. That cost continuous effort. It gradually dawned on the minds of men that they might find some object that would not cost effort to maintain, that was small enough to carry readily, and that other men would accept in trade for what the possessor of that object should want.

The rights of men are so intimately associated with what men use in doing things—their tools—that everything they

use is a part of life and directly affects their happiness, their growth, their very existence. In civilized life by far the most important of these tools is money.

The rounded center of a dark-colored sea shell, native to the coast of New England, with a hole drilled through the center for convenience in stringing together for carrying, was already in use by the Indians when white men first came to these shores. It was called wampum. Though it had no value itself, it was accepted as money by the Colonists in trading with the Indians for many years. It was so accepted and so used until a wider field of trade outside the Colonies made other forms of money more convenient and more necessary.

That was and is primary money. Money is simply a convenient utility in buying and selling the things men use, services they need, and for paying debts. Various objects have been used for this purpose at different periods of human development under various conditions.

The value or use of any object which has been accepted as money has depended solely on two things: The continuous acceptance of it in buying commodities and in paying debts. Whatever has been freely, certainly, and continuously accepted for these two purposes has been good money, whether of any intrinsic value or not.

Gold and silver, because of their beauty, noncorrosive and indestructible qualities, and their comparatively small bulk, became, after long experience, almost the universal mediums of exchange, and so remained until in amount these precious metals became inadequate for carrying on the ever-increasing commerce of the world.

Trade was attempted by men in proportion to their enterprise and opportunity. But both enterprise and opportunity continued to be limited by the scarcity of a medium or means of exchange—that is, something with which to buy and sell and pay debts. Gold and silver had for a long time been used as this medium of exchange, but carrying gold and silver from one point to another was always subject to brigandage on land and piracy on sea. In time of war transportation of gold and silver became next to impossible, and industry suffered tremendously for lack of money with which to trade. A system to reduce these dangers and difficulties became a necessity. The Italians appear to have been the first to provide for this on any considerable scale, as they were the first to originate and develop banking largely as we practice it today.

The Venetians established correspondents or branch houses in the Orient and sold bills of exchange to the merchants, who traded in the East. These merchants brought these written orders to the correspondents of the Venetians in the Orient. Their correspondents paid these orders promptly in gold and silver. These Venetians in turn paid the orders of their correspondents. The carrying of these written orders for gold or silver was simpler and by far safer. They never could be used by any but the actual owners and could be reissued if lost or stolen. The gold and silver which they represented, therefore, remained safe. For a long time the actual trading, buying and selling, continued to be carried on with the gold and silver paid out on these orders.

But learning by experience that these orders were always good for gold and silver, men began to accept paper orders in place of the gold and silver. Little by little these paper orders were endorsed over from the original owner to anybody he traded with who would accept paper instead of the actual gold or silver which this paper represented. Later the paper orders were accepted without being endorsed. After many years the use of paper as a representative of gold and silver came into common use through this sort of experience, and the gold and silver was largely lost sight of in actual trade.

Money developed along with those other things which have led to the building of nations. Its use was at first local. Later its use followed the trade routes of the world as these were established and extended. Its importance thereby became regional. As nations developed along or because of these trade routes, money became national in importance. Coinage, as a guaranty of weight and fineness, was an early development.

THE RIGHT TO MAKE MONEY

Money lenders came to control commerce through the control of money. They often dominated their governments by this same means. They often became the accepted administrators of governments, and sometimes actually assumed the title and became kings. The absolutely decisive power of money in government through these experiences became so evident that kings themselves were compelled to take over the control of money, and this came gradually to be recognized as a kingly function or right.

When constitutional monarchies replaced absolute monarchies, the control of money was declared a part of the powers of constitutional government. When our own Republic came into existence, our Constitution provided for exclusive national control of money. The Supreme Court has confirmed this power in all its phases and aspects.

The American Constitution, on the subject of moneys, was, as in many other provisions of that document, a compromise. The New England idea of money was undoubtedly written into the letter of the Constitution. That idea of money was a money good in foreign trade—trade with anybody who came along the shores of New England or along whose shores New Englanders themselves should fare. Their idea of money naturally conformed to their experience. Long continued experience, if narrow, does not readily give way to any different or contrary experience, no matter how valid, nor does it readily recognize broader rights, nor does it willingly accept change. There was during the long pre-Revolutionary period only one kind of money good all over the trading world, gold and silver—spoken of as "hard money." This acceptance of hard money as the only money was greatly accentuated by the experience with Continental money—that is, the paper money issued by the Continental Congress for carrying on the Revolutionary War. This money became almost valuless and therefore caused such an intense prejudice against any and all paper money that there was a majority of the Constitutional Convention that actually favored prohibiting the issuance of paper money by a direct constitutional provision.

These men completely overlooked the great fact that this same despised Continental currency had enabled the American colonists to win the Revolutionary War. It was, therefore, of vastly greater value to them than what they lost through the depreciation of that Continental money. It did not occur to them that a money that enabled them to establish a republic might be used at a later date to save that same Republic from destruction.

The reason that Continental currency had so fallen in value was that the Continental Congress had no authority to issue money and no power to lay and collect taxes to maintain its value. It was a scramble among the Thirteen States to disown responsibility for any money not of their own making, and so repudiation occurred as a natural result. Fortunately, there were a few in the Convention, however, who saw the possibility for a secure national currency. But they were so much in the minority that they barely succeeded in preventing the adoption of a clause preventing the use of Federal currency. Fortunately, the compromise finally reached did not go so far as that. Had it done so, the Civil War might well have had a different result. The use of greenbacks—fiat money—saved that war just as the Continental money—also fiat money—had won the Revolutionary War.

BEGINNING OF NATIONAL CURRENCY

Let us look closely at this subject of the greenbacks, for in a proper understanding of that fiat money lies the beginning of our chance for a national currency, nationally controlled in the interest of the people as a whole—a stable currency whose national dollar can be prevented from varying in value, and the control of which may establish and maintain average price levels bringing security to industry for all time to come. This is a growth which must come, a final development upon which the stability of government may ultimately depend.

When the Southern States seceded, President Lincoln, newly elected and inaugurated, faced the loss of a large part

of the American Union. He had either to accept that possibility with probable further disintegration of the Northern States, or beat that section into submission. He chose the latter.

An examination of conditions found the Treasury empty, and the merest skeleton of any Army, as the only means of subduing seven rebellious States. Money was the immediate necessity. There was only one way to get money and that was to print it. The Congress on August 8, 1861, authorized the issuance—printing—of $50,000,000 of United States notes. A few days later another ten million was authorized. These notes simply said on their face:

United States note—the United States of America will pay to the bearer on demand [a certain number] dollars.

It should be noted that this was the first issuance of greenbacks.

As soon as this first issue was printed and passed out the big bankers of New York raised the question whether there were not actually some reservations to the use of these greenbacks. The Secretary of the Treasury very promptly ruled that these notes would be accepted by the Treasury on equality with gold and silver.

The "powers in control of money and credits" brought "pressure" on Congress. They said, "You must sell large quantities of bonds to win this war. We will not buy your bonds if you are going to pay interest on them in anything except gold and silver." Then they proposed and the Government accepted the proposal of "the exception clause," which appeared on all later issues of United States notes, known always as greenbacks, which made the legal tender provision read as follows:

This note is a legal tender at its face value for all debts, public and private, except duties on imports and interest on the public debt.

The effect of these last 10 words, known as the exception clause, we shall see.

The first issue of $60,000,000 of greenbacks, full legal-tender notes—pure fiat money, which were accepted by the Government itself at their face value for all purposes on equality with hard money—continued throughout their existence on an absolute par with gold.

All the later issues contained the exception clause, which limited their use—and these exception-clause greenbacks depreciated to as low as 35 cents on the dollar compared to gold. The soldiers that saved the Union were paid at the rate of 50 cents a day in this depreciated currency. The big gamblers of the country speculated in this exception-clause greenback money, pushing it up and down to suit their purposes. A total of three-quarters of a billion dollars of greenbacks were issued and played a decisive part in saving the Union. The Negro in America owed his freedom to a large extent to a national currency, even as all Americans will ultimately owe their freedom in part at least to a perfected national currency.

When the war was over, the question of the validity of the greenbacks was brought before the Supreme Court of the United States. The Court at that time consisted of seven members. A decision was made declaring the whole greenback system unconstitutional and every dollar of greenbacks invalid as money. This decision was made by four of the seven judges. The other three, in a dissenting opinion, held these greenbacks to be valid and the law creating them constitutional.

The President appointed two Justices to fill the two vacancies then existing in the Supreme Court, raising the number from seven to nine, as the law already provided. These two new members provided for were appointed, both being known before appointment to be favorable to the validity of the greenbacks. The question of the validity of the greenbacks was again brought up. The three Justices formerly supporting their validity and the two new Justices, in a sweeping decision—in what in law is known as the Legal Tender case—not only held the greenbacks to be entirely valid and constitutional but actually recognized the power of the United States Government to do practically as it pleases in regard to the kinds, amounts, and control of money, or evidences of indebtedness. The four Justices formerly holding the greenbacks invalid this time dissented. The Constitution had not changed; the facts had not changed; but the decision under the same Constitution and on the same facts had changed. It was in fact an interpretation of the Constitution to meet a national necessity, and fully justified as such.

CONGRESSIONAL POWER OVER MONEY

This decision of the majority—the five—has been upheld and extended in all later decisions. It has, therefore, become the accepted law of the land and will so remain. The import of that decision was to free the hands of the Congress from the intended implication of the Constitution; to grant it complete freedom to provide a national monetary system within our own country and at the same time to control gold and silver in receiving or paying international trade balances—a system of controlled currency for our internal use and "hard money" for international use. The two are at present separate and distinct and should be so kept. The provision of the Constitution in question is as follows:

The Congress shall have power to coin money and regulate the value thereof, and of foreign coin, and to fix the standards of weights and measures.

Because of the limited supply of gold and silver the amount of hard money available has always been so far short of requirements for the best service of mankind as to limit greatly the progress of civilization. It will remain so until men awaken fully to the fact that the whole system of money is the result of the combined efforts of all, and therefore the property of all, for the use of all, and the abuse of none. When that simple fact is fully understood by the great majority, they will demand, and enforce the demand, that money—their created convenience—shall be produced in whatever quantity the best interests of humanity may require, and that it shall be controlled by their Government solely in their own interest. Many of the steps necessary to that end have already been taken, and the details have all been worked out in practice.

A way had to be provided to supply the shortage of gold and silver. For that purpose governments stepped in and authorized banks to issue bank notes, the Government binding itself to pay out gold or silver for the bank notes whenever anyone should want it. This is called redemption money. Later the United States made itself responsible for the redemption in gold of all kinds and classes of money—bank notes, greenbacks, silver certificates, Federal Reserve notes, and Federal Reserve bank notes—and made the system truly national with full national responsibility. That simply meant the using of gold (and silver) many times over without actually handling it. This was the perfected system of redemption money.

But this redemption money had its difficulties and dangers. There was not sufficient gold obtainable to redeem it all if presented at one time. Only 40 percent in gold was actually required by the law to "stand back of" this gold as a redemption fund. The other 60 percent was not blazoned to the world because people had been taught by the controllers of our currency and credits that "fiat money" was bad money, in fact, not money at all. Thus 60 percent of our guaranty to pay in gold was in truth a guaranty the Government could not carry out and had no intention of carrying out. It was all right to have 60 percent fiat, but not to call it so. Here it ought to be pointed out that a promise to pay is not money at all. That only is money which in itself pays debts and buys commodities without being redeemed or exchanged for any other form of money.

Because of the terrible panic of 1929, it became necessary to nationalize—that is, to seize, to take by force all the gold within the United States and to hold it for the benefit of the people.

WHAT IS FIAT MONEY?

The original $60,000,000 of full legal-tender notes—greenbacks; pure fiat money, as has been pointed out—retained its parity with gold. The question arises, Why may not all money be like that? If fiat money can be so used with entire

safety, it would, of course, offer many advantages. Fiat money is money created by law. Money is not and cannot be created except by law. All money is fiat money. Its value depends purely upon the national credit. It is not based on any metal or any other thing of value in itself. It cannot be redeemed because it is itself primary money. It is legal tender for all debts, public and private. Fiat money has "behind it"—is based upon, is guaranteed by—all the wealth now existing in the United States and all the wealth hereafter to be created and taxed in the United States, including all the gold and silver already mined or hereafter to be mined in or imported into the United States.

If it does not meet all these requirements, it is not to that extent money at all. But in the ordinary acceptance of the term, fiat money is all law-made money which depends upon the credit of the country or of credits recognized by law. With this understanding, let us see whether and to what extent we already have fiat money.

Gold is not being paid out for any kind of bills, not even for gold certificates. The 40-percent base, which we had built up, no longer exists for that purpose, because we are off the gold standard. All our money is being reprinted legal tender for all debts, public and private, the exception clause on the greenbacks being left off. To begin with, our greenbacks, 342,000,000, are pure, unadulterated fiat, and are carried on our public records as that much public debt. Our bank notes are plain promises of the banks to pay, 672,000,000 of them, backed only by Government bonds, which are again national promises to pay, or pure fiat; the silver certificates promise to pay out silver dollars on demand.

Take, for instance, the silver dollar. The silver in the silver dollar itself has varied largely in value for the past several years, going as low as 22 cents. The fiat, or national credit, accounts for the missing 78 cents. The Federal Reserve notes were supposed to have a base of 40 percent gold and 60 percent fiat. But since the nonredemption in gold they also, based on notes and bonds, which are all promises to pay, are all fiat or credit money. The same is true of the Federal Reserve bank notes. This constitutes all of our money, all fiat or credit money, except the little bit of silver behind the silver certificates and the small change. So there is really little use or excuse to get excited about fiat money, when, excepting our bit of silver, actually we now have no other kind of money except fiat money.

During the 75 years which these greenbacks have been in use they have served the people of the country in interest counted at 4 percent and compounded the tremendous sum of $4,000,000,000. Why we may not save interest on all our money now based on interest-bearing bonds is a question well worth national consideration.

Gold was worth $20.67 the ounce under the old law, until the American Government, acting within its constitutional powers, through a new law, declared that same ounce of gold worth $35—certainly $15 additional legal fiat. It might have been $100 an ounce had the law so declared. Or it might have been $10 or $5, because clearly its money value is a value created by law and is fiat and has no relation to its value as a commodity. It has been noted that up to 1873 silver was given a coinage value of 129 cents per ounce. And as long as the United States minted silver on that basis it was worth that price. If it had been minted on a basis of 250 cents an ounce it would have been worth that much because the law would have made it worth that. But when the United States Government refused to continue its purchase, coinage, or extension of use as money, unminted silver gradually fell till it assumed a price based merely on its value for use in the arts, that is, a commodity basis. It finally fell to 25 cents an ounce. It showed no indication of a rise until there was a prospect for an extended use as money.

Now what about gold? It has been shown by clear analogy based on many related facts that if gold were not used for money its commodity value would be about $4 per ounce under the old law. Accepting that probability as correct the old $20 gold piece was $4 commodity value and $16 fiat.

Gold is now being used for the only purpose that it should be used for, namely, paying or receiving payment of the differences which the people of one country owe the people of another as the result of the buying and selling between them, called trade balances. Since the businessmen of the United States almost without exception sell more goods to the people of other countries than they buy, we get the difference in gold and very seldom pay out any ourselves. And gold is used in settling these trade balances only because gold has for many centuries been used in the world as money, and still is, more or less, by a small part of the people of the earth.

Two-thirds of the people of the earth have always used and still use silver for money instead of gold. When we are willing to do for silver what we are doing for gold—that is, put the price up to where it is to our own greatest advantage, to use in the settlement of trade balances with the two-thirds of the people of the earth who use silver—we shall be much wiser. By so doing we shall increase our foreign trade to a very large extent and limit the competition we are now being compelled to meet from these silver-using countries in our trade with the gold-using countries.

But whether money shall be made of one thing or another, whether fiat or hard money, is only incidental to the service that money must render.

Europe had been intensely poor during the Middle Ages. Money was exceedingly scarce. Prices of commodities where they existed in sufficient quantity to have a fixed price were extremely low. Commerce was as limited as money. Employment for wages payable in money did not exist at all. Slavery or peonage in some degree was almost the universal lot of the masses. But following the close of this long period of suppression of mankind, Spain began bringing into Europe tremendous sums of gold and silver from Mexico and Peru. This enormous influx of the precious metals continued without intermission throughout a period of two and a half centuries.

This not only awakened and stimulated the industrial and commercial life of all Europe to great activity, but it attracted the attention of many thinkers to inquire into the reason for the great rise in the prices of commodities, and the introduction of many articles new to industry and commerce. Out of the philosophic consideration of these two latter questions came one observation that is destined to change completely our ideas of the relation of values to prices.

An Italian named Carli, in considering this matter, observed that a measure of grain had only one principal use—the sustaining of life; that under the old, low price, it had the same actual value in use as it had under the new and much higher price; that the same quantity of the same quality of grain brought a much larger weight of gold or silver than formerly—that is much more money. Clearly one or the other had increased or decreased in value; and whichever had increased or decreased in value had necessarily changed in value; and conversely the item that had not changed in use had not changed in value. Clearly the grain would sustain the same amount of life in 1750 as it had done in 1250. So necessarily it occurred to him that the same amount of gold or silver would not accomplish the same purpose of sustaining life in 1750 that it had 500 years previously. Evidently it was the value of the metal that had shifted, not that of the grain. To prove this idea he had recourse to the comparison of articles exchanged in barter. He found that articles exchanged for other articles from the beginning of time were of approximately the same relative value still; that the exchange of the articles from the earliest times was always made on even terms; that the value of the things men use—commodities—had not therefore changed; that the relative value of the articles then being exchanged in barter were each about the same, and had been over the whole time wherever records existed, as shown by the exchange of five sheep for one cow over a period of 3,000 years.

He thereupon announced that the value of the things men use does not change, but that the value of the money paid for them does change. He distinguished between value and price. One is the expression of the use to which a thing is put; the other is the ever-changing quantity of money required to secure the thing of use.

It further occurred to Carli that if a number of commodities in general use over a considerable time, the prices of which had been recorded, were considered together, the average price of these articles would show clearly the fluctuation in value of the money used in making the purchases. He proceeded to prepare a table including grain, oil, and wine, and by showing the fluctuation in prices of these articles of universal use over a long period of time, he showed the actual fluctuation in the value of the money used in purchasing them. This was the first commodity price index.

MONEY CHANGES IN VALUE

This primary fact that it is the money and not the commodity which varies in value took root slowly but surely among the thinkers of succeeding years. Little by little statistics were gathered which bore out that contention.

By the year 1800 the fact that it is the value of the money, not the value of commodities, that fluctuates, was generally accepted by countless thinkers and students of economics. About that time a number of tables, following and extending Carli's table—commodity price indexes—were made. One of these, containing 30 articles in common use, showed by the average prices of those 30 articles, the actual variation of the value of the money used in paying for them at various times. The statisticians and treasury officials of every civilized country became interested in improving and extending these commodity price indexes. They were collected and compared with statistics—and further statistics along this line were gathered—until a thoroughly reliable and exact method of showing the variations in the value of money was worked out and adopted by every civilized country on earth.

America formed the most elaborate and most exact commodity price index, consisting for 40 years of 550 articles in common use. On January 1, 1932, this number was extended to 783 articles. This commodity price index is made up from wholesale prices quoted in several centers of the country and issued weekly by the Bureau of Labor Statistics. Each article is given its proportionate value in making these calculations in accordance with its relative use.

Common usage has fixed the American cent as the unit of monetary value, the one unit whose value theoretically does not change. It will be observed that the working out of our commodity price index in dollars and decimals of dollars, fits in with this usage, so that we speak correctly of 50-cent dollars or 150-cent dollars.

This commodity price index table, issued by the Bureau of Labor Statistics, shows the fluctuation of our American gold dollar. It was based upon the wholesale price of 550 commodities.

This table is based on the commodity price index of 1926 as the 100-percent dollar. Did the good American gold-standard dollar actually fluctuate in value? The fluctuations of our good American gold dollar have been worked out on this basis back to 1890 in this table, and up to and including December 1932. This 1926, 100-percent dollar also is almost the exact average over a 15-year period, that of 1915 to 1929, both inclusive, and this is an important item to hold in mind. In the depression following "the panic of 1893" (which really began in 1890) the gold dollar reached the value of $2.222 or 222.2 cents in June 1897, and an average for the year of 214.6 cents. The average value of the dollar for 1920 was 64.8 cents, and for May of that year it was worth only 59.8 cents.

Following the "deflation" of the farmer and panic on the New York Stock Exchange in a 6-month period—September 1920 to April 1921—the dollar jumped from 64.4 cents to 101 cents, and with that increase came wreck and ruin. Six thousand banks failed as a result of this. Notice again that some force held the dollar near the 100-cent level from 1923 up to and including 1929. This is said to have been the result of the insistent work of the heads of the New York Federal Reserve Bank, Mr. Benjamin Strong and Mr. George L. Harrison. It was a great service and can certainly be repeated. During this period in which the dollar was stabilized or held at the same value, wages constantly increased and business success was continuous. Then, following the panic of that year, 1929, the dollar started up again and reached 150.8 cents for February 1932.

So, having envisioned the tremendous fluctuation of our own American gold dollar from 222.2 cents in 1897 to 59.8 cents in 1920 in a 23-year period, we should be ready to observe with candor other fluctuations and to consider the reasons for and the effect of these changes in the value of the gold dollar upon the economic fortunes of the country.

The variation of the American gold dollar which controlled the prices of all commodities and all services for all these years may the better be grasped when it is pointed out that that variation as shown by the Government-issued commodity price index is exactly the same as though our 36-inch yardstick should at different times vary from 21½ to 79 inches. Imagine yourself operating a dry-goods store with such a yardstick.

Article I, section 8, clause 5, of the Constitution says:

> The Congress shall have power to coin money, regulate the value thereof, and of foreign coin, and fix the standard of weights and measures.

This is the stability clause of the Constitution. We have observed that part of this clause which relates to weights and measures under that constitutional provision. We have established the Bureau of Standards, in which there exists an unvarying yardstick and an unvarying pound. We have observed that part of the clause relating to the coinage of money. But we have not "regulated the value thereof" as the Constitution empowers us to do. Therein lies the devastating failure of Congress in this absolutely vital matter.

We talk about a standard. Now, what is a standard actually? A standard is an exact measure, one that does not vary. The fact is, therefore, that we have no actual monetary standard of value. We have a name—dollar. The dollar contained 23.22 grains of pure gold. But it was no standard of value, because that gold dollar has, itself, fluctuated ever since it was adopted, just as the bimetallic standard of our own and other countries had fluctuated before that time, and just as the silver standard has fluctuated wherever it has existed. No metallic standard has ever in itself constituted an actual unvarying standard of value, and never can.

Yet an actual unvarying monetary standard is the absolute requirement if we are to have business security, and permanency of prosperity once prosperity is reestablished.

The reason, and the necessity for that regulation, lies in these basic facts: A man has a right to pay back his debt in exactly the same unit of value as that which he borrowed. If he pays his debt in a unit of less value than that which he borrowed, he cheats his creditor. If he is compelled to repay in a unit of higher value, his creditor cheats him. If the unit of value is the same, neither is cheated. A dollar that fluctuates in value is a dishonest dollar, because any fluctuation of value cheats either the debtor or creditor. Both a 50-cent dollar and a 150-cent dollar are equally dishonest. The only honest dollar is the 100-cent dollar. It is as dishonest for a creditor to want to collect 150 cents where he loaned only 100 cents, as it is for a debtor to want to pay only 50 cents where he borrowed 100 cents.

The number of actual dollars, both pocket money and check money, in actual use in buying and selling and paying debts is decisive in establishing and maintaining average prices of all the things men use. The greater the combined number of pocket and check dollars that are in actual use in buying and selling and paying debts, the higher the average prices will be—the smaller the number of dollars the lower the average prices will be. This fact has been so long established and is so generally accepted as true that no further specific proofs are deemed necessary.

If the number of dollars, pocket and check, in actual business can be increased, to that extent the average commodity price index will be increased; and, conversely, if the number of dollars actually in use can be decreased, in that proportion the average of commodity prices will be decreased. Both these suggestions are clearly true. And the third suggestion necessarily results from the acceptance of the first two; that

is, that if we have the power to increase or decrease the number of dollars in use in business we can at will increase or decrease the average price of commodities. There is no limit to the prices, either high or low, that may be established and maintained by the use of this power. These dollars must necessarily include both the pocket-money dollars and the check-money dollars—note this clearly, cash money and credit money—currency and bank checks.

It follows that if the Government has full control of currency and credits it becomes a simple matter by increasing or decreasing the dollars in use to raise or lower the commodity price average or to hold it at a predetermined level. That the Government is the only agency that should ever have been entrusted with such a power goes without saying. That the Government has never, to the present moment, asserted and exercised that power is one of the wonders of our times. Governmental control of currency and credits is vital to the continuance of the capitalistic system in the United States. The assumption and fearless exercise of that control is the next step of the several necessary to recovery and to the permanence of prosperity in America.

A STABLE CURRENCY

If the Government wills it sufficiently, it may by the following method completely establish and maintain such commodity price levels as may be found most conducive to the industry of the country:

To begin with, we ought to attain and maintain the commodity price level of 1926. After that is accomplished, if our experience teaches us that some variant from that level is better—and it probably will—we should, of course, accept the change as it develops. But here is the process: Let the Government announce its intention to buy Government bonds sufficient to restore the commodity price level of 1926. Then begin buying steadily, paying out money, whatever number of billions may be necessary, with the assurance of its continuance till that end is achieved. The announcement of such a policy will tend toward the restoration of the many billions of check money—or credits—which have been canceled during the last 4 years. The fear on the part of the present controllers of credits that their control will be endangered if they refuse to reestablish credits will be a powerful lever in this movement. The source of the money will be unimportant, since the full power to use whatever amount may be necessary has already been granted by the Congress to the administration. The commodity price level of 1926 should be fixed by law as standard and no more than a 2-percent variant up or down be permitted to continue.

When sufficient money has been paid out to establish the price level of 1926, and that price level is passed, then the selling of bonds and calling in of money—contracting the currency—will reduce that price level to its legally fixed status. By this simple variant we may permanently stabilize our currency and greatly assist in making all legitimate business secure.

CONSEQUENCES OF THE WAR

Let us pass to that most interesting and instructive period in the history of money beginning in 1914 and extending to the present moment. The World War brought about as great a revolution in relation to the understanding of money as in any other possible line. When the World War came on, the economists of the world were not at all in agreement as to the wise course to pursue; hence mistake after mistake was made, which, in the present light of the full experience of this period, seem utterly inexcusable. The national tragedies which resulted will for all time to come afford the student invaluable material and the statesman a source of such enlightenment as ought to prevent the recurrence of any of these devastating economic conditions which stunned mankind.

It is true in every instance in all countries that business thrived and prices rose, just as currency and credit, pocket money, and check money increased. It is equally true that business failed, prices slumped, unemployment followed every time currency and credits, pocket money, and check money decreased. It is also true that when the money of a country was stabilized and held at one value, security to existing employment and existing business invariably ensued.

It is perhaps sufficient to point out that whatever conditions had existed prior to, during, and following the war, whether the countries had been forced off the gold standard or not, as most of them had been; and whether the deflation was for the purpose of restoring the gold standard to pre-war values or not; that following the World War, every country which for any reason deflated its currency where inflation had really taken place; or which contracted its currency where only expansion of currency had occurred—every country following this course of decreasing the amount of currency and credit went invariably into financial panic, with the universally resulting depression, unemployment, poverty, bankruptcy, and ruin to the business of that country. And that all is true for our own beloved America. To this there is not a single exception. The efforts to deflate slowly were quite as tragic as those where deflation was carried out rapidly. Those countries where deflation was carried out only partially had the same proportionate difficulties till stabilization at some figures was finally effected. And this result occurred directly following the adoption of this policy by each Government—however far removed, in time, this action may have been from similar action by other governments. It was an individual result of individual action by separate governments—in no wise a mass result of several governments acting together. Although many governments at different dates did pursue the same policy as some or many other governments had pursued at other times, the same invariable result followed the same action wherever and whenever contraction of currency and credits took place.

The folly of all these reductions of the currencies and credits of these countries, with their unnecessary and heartbreaking losses, is in striking contrast to the action of two small countries, Finland and Belgium, both of which immediately stabilized their currency where the war had left it. In other words, merely let it alone, and not a sign of panic or depression occurred in either country, though both, one an old government and one a new government, had been sorely tried.

And now let us proceed to examine the action taken in our own country on this subject of currency and credits. The primary purpose of the Federal Reserve System was to prevent the fluctuation of the value of the dollar by keeping the supply of money and credits adequate for that purpose. A section specifically providing for compulsory stabilization of the dollar when the bill was first written was very unfortunately rejected by the House. Tremendous flexibility in the issuance of Federal Reserve notes was wisely provided for. The intention was to provide a sufficient amount of currency to keep business at an unvarying level, to give the people assurance against the very tragedy which mismanagement of that law brought to the country in 1921 and again in 1929.

Because of the intent and possibility that the Federal Reserve System would take the control of currency and credits away from the powerful money interests of the country and lodge it in the hands of the Government where it so clearly belongs, the big banks of the country opposed the enactment of that law viciously. But defeated in that, they bided their time and finally after that splendid system had carried us triumphantly through the World War, the superbanks got control of the system, apparently by convincing the Federal Reserve Board that following the example of the other countries of the world, we too, should "deflate." The direct result of this will be found under the chapter on panics.

It is necessary here to define inflation, deflation, expansion, and contraction. Expansion of currency is the increase of currency required to carry on business to the best advantage where too small an amount for that purpose previously existed; inflation of currency, on the other hand, is the improper, abnormal, imprudent, wrongful increases in currency, beyond reasonable requirements.

Contraction and deflation, of course, are the opposites of these two terms. It is very necessary to get the definition and understanding of expansion and inflation clearly in mind.

because there has been so much misuse and misunderstanding of the words as to have completely muddled the entire matter in the minds of many. This seems to have been willfully done by those who desire to prevent public understanding of this simple matter.

A great fear of "inflation" has been instilled into people's minds, so much so that the mere word "inflation" inspires timid souls with terror. No one ever tells them the plain fact that vastly greater damage has been inflicted on the producers of wealth by contraction of currency and credits than has ever been done by inflation.

Nobody ever seems to tell them that we never have had an inflation of national currency and credits in America. That we have had the expansion of currency and credits necessary to carry on business as it should be done only once—during and immediately following the World War.

Money and the system of bank credits for multiplying the use of money many times over is, under the Constitution, purely a governmental function. If individuals, associations, or corporations are permitted to control or share in the control of money and credits, such privileges can be justified only on the theory that they are primarily the agents of government whose profits must be limited and whose surplus above this maximum profit must automatically revert to and belong to the Government for the use of all the people to whom the entire system of money and credit belongs. Any infraction of this rule invariably offers opportunity for a type of robbery the import and extent of which has been only too little comprehended.

Money has one basic quality that must be clearly understood because upon this fact investment largely depends, and that is, money itself draws no interest. It is the use of money which earns interest. To illustrate: With a stabilized currency—one that does not vary in value—if a man keeps $10,000 in a safety vault for 10 years, it will be only $10,000 at the end of 10 years. But if he lends it out at 6 percent or buys property that will bring 6 percent, he will have at simple interest $6,000 increase at the end of the 10 years. It is for this very simple reason that when the Government buys large amounts of bonds and pays out cash for them, the owners of that cash at once seek profitable investment or profitable loans. These two things underlie the entire practicability of largely assisting in a revival of business by expanding the currency and credits of the country when prices are below the normal.

It will be noted that in the above paragraph the whole proposition was based on a stabilized currency, or a dollar that does not vary in value. A man naturally seeks the highest returns he can get on his money. If a condition arises through which a higher return on money may be had by keeping money in his safety-deposit vault than he could secure by loaning it out or investing it, then, naturally, he will keep it in his safety-deposit vault. In doing that he takes none of the risks which he necessarily takes in all investments and in all loans. Now exactly that condition arises every time the value of the dollar goes up.

To illustrate again: A cautious man had $10,000 cash in the bank on October 23, 1929. A major stock crash on the New York Stock Market warns every man of experience of impending disaster, bank failures, unemployment, poverty, misery, low property prices—in short, the immediate coming of a major depression. The first thing that cautious man does is to withdraw his $10,000 dollars from the bank and put it carefully away. Now the money is at least safe. Let us see what results. The dollar starts to increase in value. It was worth 103 cents on October 23, 1929. On June 1, 1932, that dollar was worth 152 cents. In short, in 30 months that $10,000 has increased to $15,200 actual value. That is, that original $10,000 will now buy commodities or property originally worth $15,200. The man who had the $10,000 the day the dollar started up in value has made 49 percent in 2 years and 6 months without any risk, or 19⅗ percent per year. This very thing ensued on a tremendous scale following the panic of October 1929. As long as we permit a man to make more by hoarding his money than by investing it he will hoard it, of course. And as soon as we make hoarding unprofitable he will put his money to work.

This illustration with these $10,000 must be translated into many billions of dollars if we are to get a clear understanding of what has happened since October 1929. The great majority of those who sold out at the top of the market and then sold short in 1929 understood perfectly well what would be the result if they should get in hand large amounts of money or bank credits and wait.

Against this phase of the depression which resulted from that panic, there was a simple and certain remedy in the hands of the Government. If the Federal Reserve System should have set about buying Government bonds for cash in the open market and should have continued that operation on sufficient scale, those having the money and credits awaiting or hoarded would have been compelled to invest their dollars, or their dollars would have begun and continued to decrease in value until all their gains by withholding, waiting, or otherwise hoarding, would have been completely lost. Of course, by wise investment in low-priced property they could have retained their advantage because the rise in property price would equal the loss of their dollar values. But hoarding, with all its paralyzing effects, would have been ended. And that is exactly what would happen if the policy above suggested were actually adopted and adhered to. The holders of money which has increased in value have no right to that increase because it did not result from any service which they or their money rendered.

It is therefore necessary as a matter of justice to all lenders and all borrowers of money that the borrower shall have the right to repay what he borrowed in units of the same value. It is, therefore, a matter of fundamental justice and economic good faith that the payment shall equal the borrowing plus the interest earned, no more and no less. To accomplish this it is absolutely necessary that an actual standard, unvarying in value, shall be found and used. The commodity price index of 1926 furnishes the best basis we now have for an actual standard of values.

THE NEED FOR CIRCULATION

"Money in circulation" simply means so much United States money in existence somewhere, not in the United States Treasury. Money in circulation "per capita" means the average amount of "money in circulation" for each man, woman, and child in the United States. How much money there is in existence somewhere is never a question of decisive importance. The question that is of vital import is, How much buying, selling, and paying debts results from that currency in active use in carrying on business? There is the whole thing in a nutshell. There has been on the average, for some years past, about $5,000,000,000 "in circulation" in the United States. Of this, about four billion cash is kept by the people and about one billion cash is kept on deposit in all the banks taken together. The four billions cash which is kept by the people is called pocket money and carries on about 8 percent of the business of the country. The $1,000,000,000 cash on deposit in the banks, along with the other forms of security held by the banks, is the basis as a rule for about $41,000,000,000 of commercial loans which all the banks together carry during normal times, as in 1929. But these forty-one billion commercial loans in 1929 fell to twenty billion in 1932 as the result of the panic. With this $1,000,000,000 of cash in the banks being constantly withdrawn and redeposited, about 92 percent of the business of the country is carried on by use of bank checks. This is called check money, and as long as the checks are legitimately issued it is as good as any other money for paying debts, buying commodities, and paying for services. Pocket money and check money are equally useful, and proportionately important—dollar for dollar.

In short, the check money, by using the $1,000,000,000 cash in banks over and over again, actually is eleven and a half times as important for carrying on the business of the country as the four billions of pocket money, because it carries on eleven and a half times as much business of the country as is carried on by the pocket money of the country.

It is therefore not so much a question of how much cash there is somewhere outside the United States Treasury—that is, in circulation—but how much money, pocket money and check money taken together, is in actual continuous use. If cash is hoarded, it has exactly the same relative effect as if the use of the same amount of check money be discontinued; and if check money is discontinued, it is exactly the same as if that many cash dollars were hidden away. The money which lies in the banks unemployed is as useless as that hidden in the ground.

In short, when the use of twenty-one billions of commercial loans have been discontinued, and the check money based on those loans has been retired, it will create exactly the same effect on business as if 2,000,000,000 ten-dollar bills had been piled up and burned. If we restore these deposits and make them available for checking, it will affect business the same as if 2,000,000,000 ten-dollar bills were reissued and put into use again. The effect of the loss of the use of $21,000,000,000 in carrying on the business of the country as cited above is easily understood.

The quantitative theory of money—that is, "that the number of dollars in actual use in buying and selling and paying debts, both pocket and check dollars, is entirely decisive in establishing and maintaining average commodity prices"—is true beyond question, beyond doubt.

The mistake generally made in popular discussions of this matter lies just here—that dollars are generally looked upon as including only currency—lawful money of the United States of America. The fact that the direct use of all this lawful money is responsible for only 8 percent of the entire business done is what misleads us in arriving at a rational conclusion as to the matter.

If a rational statement of the money "in circulation per capita" idea is to be arrived at and used at all, all the dollars in use must be included—pocket money doing 8 percent of the business of the country and check money doing 92 percent of the country's business. The average amount of lawful money in circulation is, roughly, $40 per capita, and the check money in normal times is 11½ times that amount, or $460 per capita, the two taken together making an average of five hundred actual dollars per capita instead of the $40 or so usually understood in discussing this vital matter in the politics of our time.

THE CONTROL OF CREDIT

It is in the wide variation of the check money—available bank credits—that the principal variation in average prices, or the commodity-price index, takes place, and to a much smaller degree to the comparatively small variation in "the money per capita in circulation." This conclusion is clearly established by these two facts: At the bottom of the price level in 1932 "the money in circulation" was higher by around $3 per capita than it was in 1929 at the top of the price level. But the check money based on commercial loans had fallen $200 per capita—a fall of 40 percent below the average of 1929, and the commodity-price average had fallen also about 40 percent. The conclusion is inescapable that prices depend on check money 11½ times as much as they do on pocket money; that whoever controls credits controls the supply of check money, and thereby controls the prices of commodities and services.

The real question, therefore, is not so much who owns the money of the country, but who controls the credits of the country. These controllers of credits are the ones who have the full say as to how much check money there shall be; and, therefore, what the average price of commodities shall be; what the income of the farmers shall be; what the wages of the great majority engaged in industry shall be; how many men shall be permitted to work in industry; and above all how many men shall be doomed to unwilling idleness. Such are the powers of the controllers of other people's money. No group, no combination of groups of individuals, has any right to control the money of the country, to limit the country's economic life. Individuals seek individual advantage, always. The methods, the practices, the combined experience and national results of leaving control of the money and credits of the country in the hands of individuals, banks, or other corporations is completely exposed in the unfortunate present condition of the country.

The conclusion is inescapable—complete and entire control of currency and credits must be taken from any and all individuals or groups of individuals, and placed in the hands of the Government for the service and protection of all the people, under laws mandatory on the administrators of Government.

Nineteen Forty Census

EXTENSION OF REMARKS

OF

HON. CLAUDE PEPPER

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 13 (legislative day of Monday, March 4), 1940

STATEMENTS AND ARTICLES RELATING TO THE 1940 CENSUS

Mr. PEPPER. Mr. President, I ask unanimous consent to have printed in the RECORD certain data concerning the Tobey resolution. These data include: A statement by myself dated March 10, 1940; a brief article from the New York Times of Sunday, March 10, 1940; an article from the Washington (D. C.) Post of March 10, 1940; and a statement together with a press release, from the American Statistical Association, on the subject of the 1940 census.

There being no objection, the matters referred to were ordered to be printed in the RECORD, as follows:

STATEMENT ISSUED MARCH 10, 1940, BY SENATOR PEPPER

I hate to deny Senator TOBEY the opportunity to be the martyr that he so much desires to become by refusing to answer the question on wage and salary income in the 1940 census. The Senator will not get the chance to go to jail. The enumerator who contacts him will know that the Senator's salary is more than $5,000, so the enumerator will need simply to make an entry "$5,000 plus" and the "snooping" desires of the census will be satisfied.

Since the Senator has not been generous enough to inform his followers of the limitations and purposes of this question, I feel that it is necessary to repeat that the Census Bureau is not concerned about getting details on salary and wage income in the higher brackets, because it is not in those brackets that unemployment and underemployment exist as an economic problem.

The Census Bureau in making this inquiry is following out the mandate of Congress to make "inquiries relating to unemployment," and since the Senator has several years yet to serve, he is not as yet a proper subject for study in connection with unemployment. It has been repeatedly explained that a mere count of the unemployed is not sufficient to comply with the congressional mandate to make "inquiries relating to unemployment." Since so much of the problem of unemployment involves part-time workers, piece workers, and those inadequately employed, there is no common denominator to represent degree of employment in millions of cases except the amount of wages or salary received in exchange for work.

It was inevitable that the pious front behind which Senator TOBEY unloosed his political attack should at last be exposed. At last Senator TOBEY reveals the political nature of his attack by having the official copies of his radio address bear the legend "Republican National Committee, publicity division," and distributed by the Republican committee.

Senator TOBEY gives evidence of either deliberately misrepresenting the census questions, or of being unable to understand the questions as printed on the schedule. His statement that all male persons 14 years old and over will be asked what type of work they are physically able to do is pure fabrication. Employed persons, both male and female, are asked to report the occupation and industry in which they were employed during the week preceding the census; unemployed persons that in which they were last employed; and 1 person in 20 is asked to report also his usual occupation, which may or may not be the same as his present one. It is specified that this "usual occupation" must be one which the person is still able to follow—mainly to forestall the reporting by elderly people of strenuous or exacting earlier occupations which they are not likely again to take up.

No person, either male or female, is asked what kind of work he or she is physically able to do—a fact which Senator TOBEY deliberately distorts.

In addition to the complete fabrication of a question which is not asked in any form on the census schedule, the Senator misquotes two other questions in such fashion as to produce the same effect of falsification. He says that one of the questions asks whether

the person has ever been divorced. That question is not asked in the census; and the only cases where divorce is recorded are those where a divorced person has not remarried, and must report his or her martial status as divorced, since he or she is neither single, married, nor widowed. A divorced person who has remarried is reported as married and no further question involving divorce is asked.

Again, the Senator states that the owner of a mortgaged home is asked to report whether or not he is keeping up the payments on the mortgage. The actual question calls simply for a statement as to whether the mortgage contract requires periodic payments, and does not ask whether or not the required payments are being made.

The Senator implies that the census questions relating to marital status, age at first marriage, and mortgage status of home, are new to this census. The Senator has failed to state that queries relating to marital status have been on the census schedule since 1890; that queries on the duration of marriage were asked in the censuses of 1900 and 1910; that questions on mortgage status of the home were asked in 1890, 1900, 1910, and 1920. Since the Senator's talk is printed for distribution on the stationery of the Republican National Committee, publicity division, it is in order to point out, what he failed to point out, that all of these questions have been asked in previous censuses taken by administrations of his own party.

The Senator cries, "Shame"; I repeat "shame" on tactics which stoop to undermine the confidence of the American people in an enterprise, provided for by the Constitution of the United States, which has enjoyed that confidence for 150 years. It is a sad commentary on American public life that the fact-finding work of the Census Bureau, recognized by persons and agencies, governmental and otherwise, as an important scientific contribution to the American scene, need be dragged into partisan politics and made a political football.

[From the New York Times of March 10, 1940]

THE MERCHANT'S POINT OF VIEW

(By C. F. Hughes)

FIGURES CAUSING CONFUSION

Less may be heard of the "census rebellion" as businessmen make it clear to their legislative representatives at Washington that the facts sought on income, housing, and various appliances are facts that are vital to them for more efficient production and distribution and facts that they have requested. It is passing strange that the party which insists it represents business lately appears to be falling into this kind of sabotage. The census attack followed the inventory poll attack, and the inventory poll was no less than the original idea of Mr. Hoover when he was Secretary of Commerce.

[From the Washington (D. C.) Post of March 10, 1940]

WOE IS UNCLE SAM—CENSUS HEADACHE IS AS OLD AS KING DAVID—PROTESTS MAKE JOB DIFFICULT—ANCIENT TABOO ON COUNTING NOSES BALKED ROMANS, BUT NOW IT'S POLITICS

(By Alfred Friendly)

William Lane Austin is not the first director of a census to have encountered trouble on the job.

The target of angry blasts from the Senate and House, from newspapers, civic organizations, and thousands of citizens, Austin can comfort himself in the thought that since the time of King David, censuses have been thoroughly jinxed.

If Austin cares to seek surcease in anthropology from the fierce protests that his questions constitute snooping, and are none of the enumerator's damned business, he will find that the objection to people having themselves counted stems from a deep-seated primitive taboo.

First recorded instance of census trouble is in the Bible. David told Joab and the captain of the host to "go now to and fro the tribes of Israel, from Dan even to Beersheba, and number ye the people."

Joab protested, but David overruled him. The census was completed in 9 months and 20 days; the total was 800,000 "valiant men who drew the sword in Israel and 500,000 men of Judah.

"And David's heart smote him after that he had numbered the people. And David said unto Jehovah, 'I have sinned greatly in that which I have done.'"

The punishment was a pestilence on the land that slew 70,000 men.

EVEN THE ROMANS WERE FEARFUL

The Roman censuses were considered so perilous to the state that they were concluded with purificatory sacrifices. As late as 1753, the fear was expressed in the British House of Commons that numbering of the people would be followed by "some great public misfortune or epidemical distemper." In 1926 authorities in Kenya announced they anticipated trouble with the natives for taking a census because of the strict taboo against counting themselves and their cattle.

Trouble with the past censuses in the United States has not been because of religion, but because of politics. According to President Roosevelt, the root of the 1940 trouble is also politics, and nothing but politics.

This allegation is stoutly and cogently denounced by the leader of the chorus of protests, Senator CHARLES W. TOBEY (Republican), of New Hampshire.

Politics or not, the decennial census has run into its bitterest fights in alternate decades—when the census year coincides with the Presidential election year. This is one of them.

Senator TOBEY'S protest, which he has voiced in the last 2 weeks at Senate Commerce subcommittee hearings, is specifically directed against two questions of the forthcoming count, Nos. 32 and 33.

The first asks for the amount of wages and salary received by each individual during the calendar year 1939. It does not require the specific amount if the person questioned earned more than $5,000. He indicates only "$5,000 plus."

SENATE COMMITTEE TO VOTE THIS WEEK

Question 33 asks if the person received income from nonwage sources, such as interest, sale of products, gifts, or dividends, totaling more than $50 in the preceding year. Only a "yes" or "no" is required.

TOBEY has introduced a resolution declaring that it is the sense of the Senate that the questions be deleted. The Senate Commerce Committee is to vote on it this week.

Backed by 4,000 letters, and scores of editorials and public pronouncements, TOBEY has charged that the questions are not authorized under the census law, that even if they were authorized they would represent an unwarranted invasion of privacy, and, finally, that the politically appointed enumerators are not the sort to inspire confidence in Census Bureau assurances that the information will be kept confidential.

On the last score TOBEY argues that the enumerators in small towns and rural areas will be neighbors of the persons enumerated, that they will tell friends and relations the intimate details revealed by the census, and, also, that the information will be used by the Democratic Party machines as a basis for "political sucker lists."

To these charges the Census Bureau gives specific answers. In the first place, it argues, the law authorizing questions relating to population and unemployment certainly includes data on wages and salaries, otherwise unemployment cannot be measured. In addition, experts say, the major important fact about population in 1940 is its economic characteristics.

DENY QUESTIONS VIOLATE ONE'S PRIVACY

Second, census officers claim that the questions violate no one's privacy, that they will be considered only en gross rather than individually. Wages and salary, it is explained, are fairly common knowledge—one cannot hide his employment in a garage or a newspaper or a textile factory and wages in those establishments are generally known. Persons in the higher salary brackets, from whom most of the initial complaints came, were mollified when told that they did not have to reveal anything more than that they earned $5,000 plus, Bureau officers say.

On the final charge of enumerators tattling, census officials insist that the heavy criminal penalties against talking out of turn by enumerators will keep their lips sealed except in very rare instances.

On the whole, the Census Bureau argument goes, people have been misinformed. No one needs divulge any details of an admittedly delicate and private subject—outside nonwage income—except to say whether there was more or less than $50 of it in the last year. In addition, anyone who distrusts the enumerator has the right and privilege of refusing to give any of the required information to him, but may insist on giving it only to the district supervisor, or, indeed, to write it on a card and send it by mail to census headquarters if the local census taker is deemed a tattler or a party ward healer who would misuse the data.

PROTEST HAS MADE CENSUS JOB DIFFICULT

Whether the Census Bureau is on unassailable legal, economic, and moral grounds or whether Senator TOBEY is sustaining a traditional American zeal in the privacy of a citizen's affairs is not now the paramount question that faces Director Austin at the climax of his 40-year census career.

More important is the fact that, win, lose, or compromise, the Tobey protest has accomplished the result of making the 1940 census incalculably difficult.

Whatever action the Senate takes—whether it sustains the Tobey resolution or votes it down—the income questions cannot help but be bad news to each of the 120,000 enumerators who will count America's noses beginning Tuesday, April 2.

At the moment Austin insists that if the Senate defeats the resolution he will persist in trying to get the two questions answered.

Try as he may, however, there is a possibility that so many people have been aroused to resentment—rightly or wrongly—that the questions may net no statistically usable answers. Austin has been long enough in the business to realize that all the compulsion in the world cannot force answers, that the threat of jail accomplishes about one one-thousandth of the results brought about by willing cooperation.

He knows, too, that resentment against the two questions will lead to resentment against the whole census—a long chain of refusal after refusal to answer any questions. This will mean great additional expense in return visits by the district managers, the district attorneys' representatives, the sheriffs, and the citizens' committees.

Even if the Senate turns back the resolution, therefore, it may be that AUSTIN will decide to compromise on the questions. He has several choices.

He can try to get the answers, but he faces the possibility that they will be no good, statistically, and must be thrown out. He can eliminate the questions in entirety. Or, he can remove the

penalties attached to refusal to answer the two controversial queries, and trust that cooperation will supply an adequate number of answers. If this course is adopted, however, the result will be what statisticians call a "sample" and generally refuse to credit as scientifically accurate.

Another choice which AUSTIN can make is to have each enumerator leave cards at the households, upon which any suspicious citizen can fill out the desired information and mail it directly to headquarters. It has even been suggested that each enumerator carry a locked mail pouch, into which the cards may be dropped. Once inside the bag, they will be in the United States mails, where tampering is as rare as it is punishable.

If, however, the Senate sustains the resolution, AUSTIN will drop the questions, even though the resolution itself has not the force of law.

A major worry in the Census Bureau in this event, however, is that if he is supported by the Senate, TOBEY may offer still other resolutions, asking the deletion of certain questions on the housing census, to be taken along with the population count. The suspect questions in this census are those relating to the mortgage on homes, and to the use of bathroom facilities—whether shared with other families or not.

The information is, of course, vital to Government and private interests engaged in the housing field. At the same time, in the minds of many, it constitutes an invasion of privacy.

IT'S A COLOSSAL JOB WITHOUT HEADACHE

Even without the headaches of the mass attack on his project, Director Austin's colossal job is an almost insuperable problem under the best circumstances.

In the 2 weeks following April 2, 120,000 enumerators must put down some 33 separate facts concerning each person in the Nation, some 33 more about each home. For every 1 person out of 25, about 15 more questions must be answered.

The whole, on thousands of huge census-schedule sheets, must be brought back to Washington, coded and translated in holes on punch cards, one card for each citizen, one for each dwelling unit.

Then the cards must be run endlessly through almost-human machines, to sort them out and count the totals.

The least of the problem is to find out the number of citizens in New York—the apportionment figures for which the census was originally designed. The time-consuming, delicate, and elaborate operations are those necessary to produce the correlated figures—the number of family heads in the leather industry who earn less than $4,000 a year but who pay rents above $20 a month, for example.

Before the final figures emerge, in 20 or 30 huge volumes of thousands of pages, at least 5 years will pass. But on those figures depend the course of legislation for the next decade, the shape of things to come in business location, in social-service work, in finance, in charity, in trade, and in commerce.

Consciously or unconsciously, every businessman, every Senator, every public or private official uses the census figures as a constant on which to base his action. It may be simply the number of persons in a county that prompts the grocery owner to set up a new shop. Or it may be the income of tung tree orchardists in Alabama as related to the earnings of Pennsylvania steel workers that determines the clauses in a Tariff Act.

All of the figures derive from the census, from the 2-weeks' head and leg work of 130,000 men and women.

Austin, boss of more men for 2 weeks than any other public official except Postmaster General Farley, has his fingers crossed.

AMERICAN STATISTICAL ASSOCIATION,
Washington, D. C., March 13, 1940.

Senator CLAUDE PEPPER,
Senate Office Building, Washington, D. C.

DEAR SENATOR PEPPER: As a statistician who is acquainted with the great value of census statistics to the public as well as to our Federal Government, I want to thank you for the stand that you are taking in the present controversy over the 1940 population census. It is easy to find people who will criticize and attack, especially among those who do not understand what they are attacking. It takes courage to defend in the face of plausible but ill-founded arguments.

I believe you will be interested in the enclosed release just issued by Science Service, an impartial organization gathering news about science. I hope that you will find it useful in support of your position and I would suggest that if you think it will be helpful it might be introduced into the CONGRESSIONAL RECORD.

Sincerely,

FREDERICK F. STEPHAN.

SCIENCE SERVICE,
March 12, 1940.

POPULATION EXPERTS CONTINUE TO DENOUNCE POLITICAL SNIPING AT CENSUS—1940 SCHEDULE CALLED BEST GIVEN ANY COUNTRY IN WORLD

WASHINGTON.—Praising the 1940 population census as the best ever offered any country in the world, Prof. Raymond Pearl, of the Johns Hopkins University has joined outstanding population experts in strongly defending the census schedule against congressional attack.

Replying to Science Service's telegraphic request for opinion of scientists on the current census controversy, Professor Pearl declared:

"The information this census will furnish is a prime and fundamental necessity for the Congress of the United States if it is to guide intelligently the destiny of the Nation in the difficult times that confront us. No reactionary alterations of the census schedule should be tolerated."

Stressing that the next administration, whether Democratic or Republican, will be left in "the fog of ignorance" without data which congressional action may strike out of the census, Prof. Rupert B. Vance, of the University of North Carolina, stated:

"One of the greatest lacks of our Government is adequate figures and information on relief, unemployment, and housing. This need is to be met by certain queries which the Census Bureau, free from the pressure of politicians and acting on the advice of competent social scientists, has introduced into the 1940 census."

Serious consequences if the public is aroused to react against the census, the largest scientific undertaking of the United States Government, are feared by Prof. William Ogburn, of the University of Chicago. Once public cooperation is undermined, he foresees that census taking is liable to become more costly, less efficient, less complete, more inaccurate. If that is permitted to occur, both the business and economic life of the Nation will be damaged.

Income questions are far from new on censuses of democratic nations of the world, Professor Ogburn pointed out:

"For many years there has been a question on the income of farmers in this country, the 1940 census merely extends the inquiry to urban wage earners. There was no protest on income questions in earlier censuses. It is a matter of politics."

"Information sought by the 1940 census is needed by people of the United States to a greater extent than any previous census," is the view of Frederick F. Stephan, secretary of the American Statistical Association, here.

Emphasizing that a democracy needs information about the economic and social status of its people more than any other form of government, Mr. Stephan said:

"Citizens need to know the facts about national development in order to vote intelligently on public questions."

Recalling that when President Hoover appointed commissions to study economic and social trends, these commissions reported a lack of satisfactory information on many important questions relating to American population, Mr. Stephan said that surveys in limited districts have been made since. But these, while useful, point to the need for Nation-wide facts.

Information about distribution of income in various districts is needed by business concerns for the efficient marketing of their products, Mr. Stephan explained, in comment on the importance of questioning Americans about their incomes. This information is also needed by Congress, he added, for estimating the probable cost of changes proposed from time to time in social-security legislation, and for many other uses.

Advising the American public to remember the flurry over a radio broadcast depicting an attack from Mars, Mr. Stephan predicted that many will calmly test the charges of census snooping with all the facts they can find and then decide for themselves what to believe.

"Danger to our liberties in the collection of this information," he added, "is much less than the danger to our liberties from government that is based on rumors and guesses rather than facts."

Congressman Grant, Second Alabama

EXTENSION OF REMARKS

OF

HON. LUTHER PATRICK

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, March 11, 1940

EDITORIAL FROM THE MONTGOMERY (ALA.) ADVERTISER OF MARCH 10, 1940

Mr. PATRICK. Mr. Speaker and fellow Congressmen, plase let me come forward with a nice little bouquet that has been placed in my hands for Congressman GEORGE GRANT, of the good State of Alabama. It is in the form of a few words of friendly recognition from the pen and heart of Judge Walter B. Jones, whose father was Governor of Alabama and who is himself presiding judge of the Montgomery Circuit Court of the State. Mr. GRANT has no opposition for his seat, Mr. Speaker, hence you may be sure this is no political gesture. It is indeed the real thing. Here is the article:

[From the Montgomery (Ala.) Advertiser of March 10, 1940]

OFF THE BENCH

(By Judge Walter B. Jones)

CONGRESSMAN GRANT, SECOND ALABAMA

GEORGE MCINVALE GRANT, just GEORGE GRANT, or plain George to the people of the Second Alabama Congressional District, has no

opposition in his race to succeed himself in Congress, and everybody down this way is glad of it.

GEORGE GRANT has made a good Congressman. He was first sent to Congress on June 14, 1938, when, at a special election, he was chosen to fill out the unexpired term of Congressman LISTER HILL, now United States Senator, and an able and valuable one, too. In November 1938 GRANT was reelected to the Seventy-sixth Congress to succeed himself. He had no opposition then, and he has none now.

The Democrats of the Second Alabama Congressional District know that George has done good work in Congress. They know that he has served his people and his party efficiently and honestly, and they're sending him back to Washington to stay on the job, to represent the people of his district, and to help fight the battles of the Democratic Party in the halls of the National Legislature.

SECOND ALABAMA DISTRICT

The Second Alabama District is a large one and an important one. It embraces 9 Alabama counties: Baldwin, Butler, Conecuh, Covington, Crenshaw, Escambia, Lowndes, Montgomery, and Pike. In 1930 the population of the district was well over 350,000. Today the population of the 9 counties is perhaps around 400,000 people, and there are the following important cities and towns in the Second District: Montgomery, the capital of the State, with the great Army air post at Maxwell Field; Bay Minette, and the Gulf port towns of Baldwin County; the cities of Greenville, Georgiana, Evergreen, Castleberry, Andalusia, Luverne, Brantley, Brewton, Flomaton, Hayneville, Lowndesboro, Troy, and Brundidge, and then there are many smaller communities and little towns.

Each of these counties, and each of the cities and towns in them, have their problems, governmental, economical, and social, and the four hundred or more thousand people in the district have their troubles, their worries, their wants, and their needs, and their varied relations with the Federal Government at Washington, and so it is a big job to represent them, and GEORGE GRANT is doing that job in a big way.

FAITHFULLY SERVES CONSTITUENTS

GEORGE GRANT went to Congress with the idea, and the idea has never left him, that his people sent him there to be their Representative in the national law-making body. It's their district he represents, it's their laws he helps to make, it's their Government he helps to run, it's their money that is being spent, and GEORGE GRANT is their Congressman. He is faithfully and efficiently attending to the business of his constituents and his happiest work is to attend to their wants. George likes for his people to call upon him. He likes for them to write him their views about matters of state. He is glad when they bring their problems and their troubles to him. In this country we can't have a pure democracy, and besides that's not the theory of our Government, for it is a representative one, and Congressman GEORGE GRANT is at the National Capital in a representative capacity; to represent the people of the Second Alabama District—Baldwin, Butler, Conecuh, Covington, Crenshaw, Escambia, Lowndes, Montgomery, and Pike. And as he represents them worthily and usefully, so he represents the people of his State and his Nation. George was raised up on the old doctrine that public office is a public trust. He feels that a great trust has been committed to him, the trust to represent nearly 400,000 people in the greatest deliberative body in the world, and he goes about the work of that trust faithfully, ably, and conscientiously. He asks no higher title than to be the servant of his district, his people.

SOMETHING OF THE MAN

GEORGE GRANT is distinctively a product of the democracy of Alabama. He was born in Alabama, and he has lived here in this State all of his life. He got his education in Alabama, and all his public experience and service have been under commissions from the people of his State or his country.

Congressman GRANT was born at Louisville, Ala., in 1897, and so is today just about 43 years of age. He got his law degree from the University of Alabama in 1922, and at once began practice of law. But George wasn't just content to practice law, and his people weren't satisfied for him just to do that either; they wanted him to serve them in public capacities. They felt that his fine legal ability, his capacity for hard work, and his strong character had a place in the public life of his people, so they called him in his native county, Pike, to be the county solicitor. So well and honorably did he serve that he was county solicitor for 11 years. Then the Democratic Party felt the need of the brand of democracy that was in GEORGE GRANT, so the party made him chairman of the Pike County Democratic Executive Committee for 10 years, and then for 3 years he was a member of the State Democratic Executive Committee. When the World War came on, GEORGE GRANT closed up his office, and put aside his lawbooks, and went into the uniform of his country. And in 1929, as a tribute to his service and his executive ability, his war comrades elected him State commander of the American Legion in Alabama. George belongs to a college fraternity, too, Pi Kappa Phi, and they put him to work, too, making him serve as national secretary for a while.

GEORGE IS A "BELONGER"

One of the many outstanding traits about GEORGE GRANT is the fact that when he joins anything, belongs to anything, he belongs heart and soul. He feels that if he belongs to an organization then that part of his time, some of his means, and all of his talents belong to the organization also. GEORGE is not content just to be on the membership roll; he's got to be busy helping to do the work of the organization and to help work out the problems that come up from time to time.

"I AM A DEMOCRAT"

GEORGE GRANT can say, as an old-time member of the party once said, "I am a Democrat." He is a Democrat in his political views, a Democrat without pre or affix. There's no admixture of any other political faith in his democracy; it's pure gold.

Then, too, GEORGE GRANT is democratic by nature. There's no fuss and feathers about him, no put on, no show. He lives the life of his people, he speaks the language of his people. He is always ready to talk to anyone. He's a great listener. He has his own viewpoint, but he is always open to suggestions and fresh facts. And one of the reasons, I think, for his success as a Representative, has been the fact that GEORGE GRANT always tries to see the other fellow's viewpoint. GEORGE follows the advice that an anonymous verse maker gave us some time ago, and mighty good advice, too:

When you're forming your opinions,
Do it carefully, then go slow;
Hasty judgments are oft followed
By regretting, that I know.
And in argument be careful
Not too quickly to deride—
Try to look upon the subject
From the other fellow's side.

HIS RECORD IN CONGRESS

If you search the CONGRESSIONAL RECORD for any long-winded speeches by GEORGE GRANT, you won't find them. George doesn't make long-winded speeches. In fact, he makes few speeches. He does his work in the committees and on the floor of the House, and around the departments of the Government at Congress quietly, and with no great noise. You never hear of George pulling any publicity stunts, trying to steal the "limelight." He never gives out any press releases boosting himself. But quietly, efficiently, and thoroughly he does the day's work of a Congressman, and does the work well.

George has made hundreds of friends in the Senate and in the House of Representatives at Washington. In his own delegation, Speaker WILLIAM B. BANKHEAD, Senator JOHN BANKHEAD, and Senator LISTER HILL are his close friends, and everyone in the Alabama delegation has a high respect for GEORGE GRANT, the man and the Congressman.

The Speaker of the House has assigned the Second District Congressman to these committees: Roads, Civil Service, Elections No. 2, Immigration and Naturalization, and World War Veterans' Legislation. Our Congressman is a faithful attendant upon the meetings of his committees, and he takes a heavy and useful part in their deliberations and work. He never shirks any duty, and he thoroughly prepares himself on every subject that comes before his committees.

George is a great lover of outdoor sports. He observes with moderation the old saying that all work and no play makes a fellow dull, and if there is a football or a baseball game anywhere around Washington, and George can get there without neglecting his public duties you're sure to see our Congressman in the stands. Before he went to Congress George served for several years as president of the Alabama-Florida Baseball League, and when he was living at Troy he never missed a high-school game. He was always there to give the local boys an encouraging hand.

On December 5, 1938, a short time after his first election to Congress, George remembered that in second Genesis, "the Lord God said, 'It is not good that the man should be alone; I will make an helpmeet for him.'." GEORGE found his helpmeet in Miss Matalie Carter. She said "Yes" to life's most important question, and is now Mrs. George Grant. She takes an active interest in the work of her husband, helps him with all the problems that come along, and is interested in everything that is for the good of the Second District.

The Democrats of the Second District have looked back over the work of their Congressman. They find that it is good, that it is honest, that it is faithful, and that's why GEORGE GRANT is going back to Congress this year without opposition. It is a fine tribute to a useful Congressman.

Relief for Poland

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1940

ADDRESS BY HON. JOHN D. DINGELL, OF MICHIGAN

Mr. DINGELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address, which

I delivered at a Polish relief mass meeting at Madison Square Garden, on March 12, 1940:

Mr. Chairman, Your Excellency, and friends, we are gathered here today not for the purpose of expressing qur resentment toward the fiendishness and the depravity of nazi-ism which, like the robber in the night, invaded the peaceful domain of our Polish antecedents and then and there struck down the independence of Poland, robbed her of her priceless freedom and autonomy, and defiled and ravished everything that is held sacred by civilization.

We are not here to plan vengeance or to ask for retribution. That time and such an opportunity will come later when the entire plunderbund, shackled and dejected, is brought before the bar of justice and forced to disgorge its ill-gotten gains and to make restitution. Now, we are concerned with but one important problem, and its solution is far beyond the strength of any one person, one group, or even one nation to cope with. We are here to initiate a well-planned and a far-reaching humanitarian work to salvage the human wreckage caused by the unwarranted Nazi blitzkrieg and by our initiative, example, and generosity, based upon a sound plain within ourselves and in cooperation with other Governments, to stimulate the entire world to action.

The lives of millions of people—men, women, and children—of various creeds and varying shades of political belief, and even of some variety of nationalistic origin are suffering indescribable privations and misery. We are here to alleviate their sufferings and to save the lives of countless thousands who may perish unless we extend aid to those who face us with outstretched hands, confident that we will not deny them succor. We are here for just one purpose, and that is to outline a substantial and effective plan of action to save the lives of those who may perish, through starvation, exposure, and disease.

The pressing need of the destitute civilian population of prostrate and war-torn Poland is so acute and widespread that unless America and other neutral nations of the world hasten action of relief, millions of Poles will die of starvation, disease, and exposure.

As one who is interested in the earliest possible advancement of relief through the medium of the United States Government, I want to counsel all who are prompted by humanitarian motives and who are interested in speedy and effective relief to unite behind a simple and direct plan which holds promise of earliest fruition and which will produce the desired result.

As author of one of the bills before the Foreign Affairs Committee, I would urge all those who are actuated by humanitarian motives and who are anxious for immediate action to appeal to your Congressmen to prevail upon the Foreign Affairs Committee of the House of Representatives to bring out a composite bill embodying the most desirable features and the effective provisions contained in the several bills. The substance of the bill to be sponsored by the committee should embody three important essentials. First, the bill should provide an ample appropriation and for all practical purposes I suggest a sum of not less than $20,000,000. Second, the extension of relief including food, clothing, and essential creature comforts to be distributed to all of the destitute people of Poland. Third, the expenditure should be administered and directed by the President of the United States. I feel that a bill which embodies these fundamental points and has the sponsorship of a united committee will have the best chance of passage. I consider the various bills before the committee, for the most part, as essentially deficient in one way or another. To illustrate, one bill provides an insufficiency of expenditure although in other ways it may be quite proper. Another bill provides a substantially greater amount but limits relief to women and children, excluding destitute noncombatant adult males. Another bill designates certain and particular organizations, without regard to existing restrictions, as the agencies through which relief would be distributed.

My suggestion of $20,000,000 to be distributed among the destitute of Poland and limited to food, clothing, and essential creature comforts under the direction and administration of the President of the United States will meet the emergency and will fulfill every existent and anticipated need. If the President is given the authority he will carry on and meet changing conditions without further authority from Congress.

I cannot too strongly urge united action behind this idea to be embodied in a composite committee-sponsored bill. Altogether too frequently groups, organizations, and societies, sincere and anxious to help, transmit endorsements of one bill or another without knowledge of what such bills might actually contain.

I consider several of these bills clearly undesirable in that they are fundamentally deficient and thus would be ineffective if passed. The three points which I suggest are inseparable and absolutely essential and should be the guide for our united support.

Another matter of widespread interest which touches the heart of Polonia and of the civilized people everywhere is that of the homeless orphans, victims of the fiendish blitzkrieg. Today they are wandering all over Poland by the thousands, cold, starving, and helpless. These innocent and most helpless victims of the Nazi invasion grow in numbers each day as famine, disease, and exposure decimates the parents of this hapless land. There is room for thousands of these juvenile wanderers here in the United States. There are countless Americans who would with open arms welcome and give aid to those for whom our dear Lord expressed His love and affection. But the gates of America are closed, as are the hearts of some who would not heed the divine injunction. But there is hope for the world as long as we have men in Congress who will sponsor humanitarian legislation such as the bill introduced in the Senate by your distinguished senior Senator, BOB WAGNER, an exact companion bill of which I was induced by his example to introduce in the House of Representatives. The bill originally was intended to take care of the orphan victims of Nazi persecution in Germany, but hearings on the House side even before this war, anticipated the possible extension of the benevolent provisions to include victims of other lands. A simple amendment striking out the reference to Germany would, in my estimation, make possible the migration to our shores of several thousands of Polish orphans in the next 2 years. The gates of America will not be opened to unrestricted immigration should these bills become law. The number to be admitted outside of quota is limited to a maximum of 10,000 orphans per year. Let me here and now express my undying gratitude to the Society of Friends who have rendered such splendid service in the cause of charity and who have taken the most prominent part in support of this legislation. I urge you to join with them in their efforts to bring relief to these innocents who are doomed unless America extends her arms.

The Agricultural Situation

EXTENSION OF REMARKS

OF

HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1940

RADIO ADDRESS BY HON. CLIFFORD R. HOPE, OF KANSAS

Mr. REES of Kansas. Mr. Speaker, under unanimous consent granted to me today, I am pleased to include herein the address delivered by my colleague and fellow Kansan, CLIFFORD R. HOPE, on a Nation-wide radio hook-up last night, wherein he presented an intelligent and constructive view of the agricultural situation in the United States.

The address is as follows:

Like many of you, I listened with interest to a program at this same hour last Friday night when Secretary Wallace, Postmaster General Farley, and the President discussed and eulogized the present farm program. I wish I could share their rosy picture of current farm conditions and their hope for future improvement under the New Deal farm program.

As it is, I find little comfort in the New Deal farm record of the last 7 years. I say this with a sense of deep regret and not from a narrow, partisan point of view. For one thing, I admire Secretary Wallace's sincerity and his persistent effort to solve the farm problem. I know that benefit payments and commodity loans have been of great temporary help. I am not bitter and critical of what the New Deal has attempted and what it has successfully accomplished. To the extent it has helped I am happy. To the extent that it has failed I feel a great regret; and I would like to add that I know only too well what this failure means, for I represent a large agricultural district. I lived and worked on a farm as a boy. I have lived in an agricultural community all of my life. Practically all of my friends and associates are dependent either directly or indirectly on agriculture for a livelihood.

Before proceeding further I want to call attention to a few statements made by the President last Friday night in his farm message. He referred to the day in Topeka in September 1932, when under the hot sun on the statehouse steps he outlined his agricultural program. I, too, recall that day and that speech and am particularly struck with the fact that his administration has done most of the things the President then promised not to do and has failed to do most of the things which he then promised would be done.

Continuing last Friday night the President said that a policy of neglect prior to 1933 had brought 10 years of depression upon our farms and had contributed greatly to depression in the cities. I agree with the President that farm conditions for the 10 years prior to 1933 were not all that could be desired; but taken as a whole, those 10 years were like prosperity itself when compared with the 7 years of his administration. Cash farm income for those 10 Republican years averaged $9,392,000,000 per year as compared with $7,247,000,000 for the New Deal period, or $2,000,000,000 a year more. Average annual income per farm for the earlier years was $1,483 compared with $1,062 for the 7 years 1933–39. Average income per farm person for the 10-year period 1923–32 was $308 compared with $226 for the 7 New Deal years. If those 10 years, 1923–32, constituted depression, what term do we use to characterize the last 7 years?

If one is to judge the New Deal from the standpoint of its objectives and the problems it sought to solve, then it is a fact that the present farm program has utterly failed. The major objectives of that program were to bring about parity prices for agricultural products and to do away with burdensome farm surpluses. While most farm prices have risen since the outbreak of the war I am sure that no one attributes that increase to our

agricultural policy. In fact, the outbreak of war prevented a further decline in farm prices.

In August 1939 the price of wheat was 51 percent below parity, corn 43 percent below, cotton 44 percent below, hogs 39 percent below, butterfat 27 percent below, and potatoes 19 percent below. It is noteworthy that prices as compared with parity were lowest on those crops for which the farm program has been in general effect.

With respect to surpluses, without going into figures, let me call attention to the fact that today we have more wheat, more corn, and more cotton than we had in 1933. The only difference is that in 1933 it was called a burdensome surplus, and today it is called the ever-normal granary.

Another matter which the President mentioned was the reciprocal trade agreements program. He said:

"That program has brought results—results not only in better markets for our industrial goods but in better markets for our farm goods—results which are mathematically proved in terms of pounds and bushels and dollars and cents."

A little later I want to comment on this statement.

While this is not the place to get into a lengthy discussion concerning the relative merits of the trade-agreements program, I think that all of us realize that export markets are important and that to sell in international trade a nation must also buy. I don't think it is the principle of reciprocal trade to which farmers object but rather the way in which the program has been handled. Most farmers are worried about the concessions which have been made on agricultural commodities and possible future concessions if the power to make these agreements is renewed. I think that the fundamental difficulty with the program is that it has been carried out, not from an economic standpoint, as should be the case in connection with a program concerning tariffs, but rather from the standpoint of diplomacy. In other words, the policy of the Secretary of State has been to purchase goodwill by making trade concessions at the expense of agriculture.

Not only have competitive agricultural imports increased since the program went into effect, thus depriving the American farmer of a share of his home market, but, contrary to the statement of the President which I read a moment ago, it has failed to increase agricultural exports. While exports as a whole have increased under the program, farm exports have declined. Thus total exports from the fiscal year 1932 to the fiscal year 1939 increased from $1,980,000,000 to $2,885,000,000, or 51.2 percent. Agricultural exports, however, declined from $752,000,000 to $683,000,000, or 9.2 percent during the same 7 years. In fact, agricultural exports as a percentage of total exports reached an all-time low in the fiscal year 1939.

What is more, total figures do not tell the entire story. Looking at specific commodities, we find that exports of wheat, cured pork, cotton, and tobacco, which account for 65 to 70 percent of our total agricultural exports, all declined during the New Deal years. Furthermore, in the case of wheat and cotton, the drop would have been much more precipitous had it not been for the export subsidies paid to encourage the export of both commodities. Such a subsidy program, of course, is a complete antithesis to the philosophy of the Reciprocal Trade Agreements Act.

I do want to agree with one thing in particular which the President said, and that is the praise which he accorded the work of the county agricultural associations and committees. It is these men who are responsible for the major part of whatever success the present program has had. As the President said, they have sweated over the details of the program. They have sacrificed their own personal interests and leisure in trying to make the program a success. I want to add something, however, which the President might have said, but didn't; namely, that much of the sweat and the work and the worry on the part of these committees has been due to the red tape, the needless detail, and the complexity of the programs as prepared in Washington. I am satisfied that if we had had real farmer control and farmer planning in connection with these programs, 75 percent of the delays, the irritations, the red tape, and the complications could have been avoided. Whatever may be said in criticism of the program, certainly nothing but praise can be given those who have handled it locally.

Of course, I am not alone in my criticism of the New Deal farm program. In recent months, I have talked with thousands of farmers and have received many letters from farmers throughout the country. I wish I had the time this evening to tell you of some of the criticisms of the present program made to me recently by farmers and farm leaders. Only this morning I received two letters in my mail of interest in this respect. One of them was from a great and influential agricultural leader in the South, J. E. McDonald, commissioner of agriculture of the State of Texas. In commenting on the present program, Mr. McDonald wrote as follows:

"During the past few years billions of dollars of public funds been expended on agriculture, with the result that foreign production has been increased, foreign markets surrendered, thousands of good tenant farmers kicked off the farms onto Government relief in order that the large landowners could get the Government benefit checks.

"Any national farm program which does not provide the maximum number of homes for worthy farmers and which does not benefit those engaged in each and every essential American industry as it would the farmer himself, will not succeed and should not succeed."

The other letter was from a capable and intelligent farmer in the State of Illinois. He is not what you would call an agricultural leader or an officer in some farm organization but a man who lives on his own farm and makes his entire living by tilling the soil. I wish I had time to read his entire letter, because it is replete with practical farm philosophy and constructive suggestions as to what might be done to solve the problem. I do want to read you one paragraph, however, in which he outlines the economic situation of the farmers in his own township. This township, by the way, is located in one of the richest agricultural counties in the Corn Belt. He wrote as follows:

"I have made a survey of my township. There are 198 farmers in it, and I find that an average of $1,057 is needed to restore the depreciation of the last few years. Each family would have spent $800 more for clothing, furniture, floor covering, etc., during the same time. Two thousand dollars would have been spent by each family for automobiles. One hundred and thirty-two of these families would have spent $400 each for furnaces, $500 for miscellaneous items, and $2,220 for educating their children. Thus each family would have spent approximately $6,800 in the last 5 years if they had had income enough to do it, or almost $1,400 more a year."

Continuing he added:

"I am an admirer of President Roosevelt in his efforts to help agriculture, but I believe the program has failed. I know that pork cannot be produced profitably for a nickel a pound, corn nor wheat neither can be produced at 40 and 65 cents a bushel, respectively."

Last fall, with similar criticisms and comments in mind, House Minority Leader JOSEPH W. MARTIN appointed a committee of Republican members to find out what could be done to start American agriculture on the road toward permanent recovery and prosperity. This committee, of which I was made chairman, consists of 46 members, representing great agricultural districts in 22 States.

The committee felt that the place to begin its study was right out among the farmers. We wanted to go and find out what the man on the farm was thinking—the man who doesn't have a chance to come to Washington and talk to congressional committees. We wanted to learn what actual farmers thought of the present program—whether they wanted it continued; if so, what they might suggest in the way of improvements or changes, or whether they wanted a program at all.

To get this information the committee held a series of farm conferences throughout the country. During December we held hearings at Salt Lake City, Denver, Dallas, Hutchinson, Springfield (Ill.), Des Moines, and Minneapolis; and since the first of the year at Indianapolis and Charlotte (N. C). Further conferences are being planned.

I wish I could tell you how helpful these conferences have been. They were conducted on a nonpartisan basis and were attended by Democrats and Republicans alike. The committee did not offer or suggest any program. Nor did it attempt to gain support for the ideas of any individual or group of individuals. It did not condemn or praise any existing program. It simply asked those present to tell the committee what they thought the Federal Government could do or could not do to assist them in solving their respective problems.

I attended every one of these hearings, and I wish that everyone interested in farm problems could have had the same experience. We heard sugar-beet farmers from the irrigated sections in the West. We heard from the livestock producers in the Rocky Mountain area, in Texas, and in the States of the great Mississippi Valley—different situations, but all parts of the same great problem. We heard the cotton producers in Texas and the tobacco farmers in the Carolinas tell of their plight. Wheat farmers from Kansas and the Dakotas told the committee what they thought could be done. We heard from corn and hog producers at the Springfield and Des Moines meetings. At Minneapolis we learned of the problems confronting dairy farmers in the great Northwest. At a meeting in Indianapolis we learned of the problems of farmers in that part of the country.

One thing which impressed me at all of these meetings was the eagerness with which those present discussed their problems. They appreciated the fact that Members of Congress were ready and willing to talk matters over with them in their own communities. They were pleased to be called into a conference where their views and ideas were sought. Some of them said it was quite different from the agricultural conferences called by the administrators of the present program. As one Iowa farmer put it: "This is the first farm conference that I have attended where I have been asked instead of being told."

Since the committee has not completed its study I cannot speak for it in stating what we found as a result of these conferences. I can, however, give you in a few words some of the ideas expressed by farmers who attended.

It goes without saying that there were many differences of opinion and that the discussion of the present farm program ranged all the way from extravagant praise to utter condemnation. Between these two extremes, however, there was a large body of farmer opinion to the effect that we should have a farm program and that it was the duty of the Federal Government to assure that agriculture had an opportunity to attain economic parity with other industries. I was further impressed with the opinion expressed even by farmers who strongly favored the present program that there was too much delay, too much red tape, too many irritations, and that the program was far more complicated than need be. They felt in the main that there should be more farmer control of the program and that it should be greatly simplified.

The point upon which there was the greatest unanimity of opinion was opposition to the reciprocal-trade program as it is being administered. Wherever we went, farmers, irrespective of

politics, expressed themselves as believing that agriculture had gotten the worst of it in the agreements which have been negotiated to date.

One further point which I think will be of general interest in showing what is on farmers' minds was their almost unanimous concern over the size of the national debt and the deficit-financing policy of the Government. A great many farmers are of the opinion that as long as farm subsidies are essential, funds for the payment of such subsidies should be raised by special tax, rather than paid for with borrowed money.

Finally, I got the general impression that farmers do not believe that this administration has reached a real or permanent solution of the farm problem. They are of the opinion that the present administration has attempted to do a great deal for agriculture and that benefit payments, crop loans, and other subsidies have proved helpful in tiding farmers over the last few years. They believe, however, that all this is a palliative and not a real cure.

In this respect, I would like to call attention to a statement made recently by a great farm leader, Earl C. Smith, vice president of the American Farm Bureau Federation and president of the Illinois Agricultural Association. Speaking at the annual meeting of that organization on January 31, 1940, Mr. Smith said:

"Without equivocation, I make the statement that everything yet done by Congress for the solution of the farm problem has been to appease the farmers rather than directed fully to the solution of the agricultural problem."

Continuing, Mr. Smith said:

"There have been reams of evidence presented and filed with the Agricultural Committees of both Houses of Congress relative to the agricultural situation or problem, and its remedy.

"There has been evidence presented that before any fair jury in the land would have been convincing that a full effective permanent solution of the farm problem was a first essential to the solution of the unemployment problem and the balancing of the National Budget. This evidence has been temporized with by both Democrats and Republicans. As a result, politics has crept into both unemployment relief and the farm-surplus problem, vast expenditures have and are being made for the temporary relief of both but the real farm problem as related permanently to the future welfare of every citizen of this country has not even been approached."

What is the reason for the failure of this administration to achieve a permanent solution of the problem? Certainly it has tried, and just as certainly it has failed. Finding out why it has failed is in my opinion the first step to be taken in developing a program that will endure.

I personally believe that the chief cause of this failure has been the New Deal's inability or unwillingness to understand the true relationship which exists between agriculture, industry, and labor. As a consequence, there has been no coordinated effort to solve the problems of the depression. What the administration has done has been piecemeal. Certain legislation has been enacted for labor, certain legislation for agriculture, something has been done for the home owner, efforts have been made to do something for this group and that group without taking into consideration at all the effect that one kind of legislation might have on other groups. What was needed and what is still needed is a united, coordinated, and consistent effort on the part of all groups to achieve a full and complete recovery. This is especially important from the standpoint of agriculture, because of all groups it is least able to control its own business or the prices which it gets for its products and thus is more dependent upon full recovery.

For example, what good does it do agriculture if labor legislation and tax legislation force up the cost of goods purchased by farmers at a rate equal to the increase in prices received by farmers? Yet that is just what has been done. Between July 1933 when the New Deal farm program went into effect and August 1939 prices paid by farmers increased 11 percent while prices received by farmers increased 16 percent. As a consequence, the purchasing power of farm products increased only about 4 percent during this 6-year period. And some farmers weren't even this fortunate. Wheat, cotton, and corn producers actually experienced a decline in the purchasing power of their products.

Nor has much of the labor legislation enacted by the present administration produced any tangible results for American workmen. Wage rates have been increased, but total yearly income still lags far behind the level necessary to maintain adequate living standards and 10,000,000 men are still in search of jobs.

The great problem today is exactly the same problem that confronted the country 7 years ago; that is, What can be done to put agriculture and industry on a parity so that those who are engaged in each line of endeavor can trade with the other? As long as agriculture is selling on one level and buying on another, there is no opportunity for a free interchange of goods. If we insist upon a policy of increasing the cost of industrial goods through labor and tax legislation, then in fairness to agriculture we will be compelled to pass legislation fixing agricultural prices. The mechanics of this is not important. It might be done through loans without recourse at parity prices or by passing legislation to make it unlawful for the buyer to pay less than a fixed price based on parity. I am not advocating such legislation. I think that the regimentation and the policing which would follow the enactment of such a program would be utterly repugnant to our people and inconsistent with our form of government. I do say, however, that a continuation of the present policies with reference to labor and industry will in the end make price fixing inevitable or result in a permanently depressed agriculture.

I think a solution can be worked out without resorting to such totalitarian methods if labor, agriculture, and industry, instead of trying to solve their problems piecemeal, will get together, lay all their cards on the table, and see what can be done toward solving their mutual problems of unemployment and agricultural depression. Unfortunately, however, this administration has never and never will give encouragement to such a program. It has never tried to secure cooperation between the great elements of our economic life. Rather, its policy has been to stir up hatred and discord between every group and every class of our population.

The fact is there are many indications that this administration, indebted as it is for its support to the great and often corrupt political machines of the cities, has adopted the very methods of such machines, and by its very acts it indicates that it has utterly failed to grasp the viewpoint of the farmer. For instance, in the Dodge City Daily Globe, a leading newspaper of my district, there appeared last Saturday a news article reading as follows:

"FARMERS ADVISED NOT TO KICK ON FARM PROGRAM

"Southwest Kansas farmers were astounded to hear a national director of the A. A. A. advise them not to make complaints on the farm program to their Congressmen in the closing session of the farm conference Friday afternoon.

"N. E. Dodd, western director of A. A. A., in a general speech on the agriculture program, said: 'Every time a complaint comes from you farmers to your Congressmen in the House or Senate the program is damaged.'"

That statement represents typical dictatorial bureaucracy. The newspaper then goes on to state that a farmer who attended the conference later observed:

"That is about the most brazen a Government agency has become in public. We are denied the use of courts to hear a legitimate complaint about the program, and now they say we musn't even write to our Congressmen about it. What sort of a program do we have and what kind of government are we getting when an agency of it advises you not to make a complaint to your Representatives in Congress?"

That statement expresses the attitude of 6,500,000 good, red-blooded American farmers. The farmer wants to cooperate, but he will not stand for dictation; and yet more and more that is what is being attempted.

I have already spoken of the work of the Republican Agricultural Study Committee. Let me say in concluding my remarks that the members of this committee do not subscribe to the philosophy expressed by Mr. Dodd. We believe that the right of petition still exists in this country. We want our constituents to write to us if their Government is not being conducted to their liking. We do not believe that any Government program is so sacred as to be above criticism. We welcome your letters. We want you as farmers to tell us what you think of the present program, your constructive suggestions for its improvement, and your ideas as to a sound, long-range, permanent agricultural program.

Looking at the Record

EXTENSION OF REMARKS

OF

HON. WILLIAM H. SMATHERS

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Wednesday, March 13 (legislative day of Monday, March 4), 1940

ADDRESS BY HON. EDWIN C. JOHNSON, OF COLORADO

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very able speech made by my distinguished colleague, the Senator from Colorado [Mr. JOHNSON], at Camden, N. J., on last evening on the subject Looking at the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

WOODROW WILSON

Distinguished guests and fellow Democrats, I am sobered with the important assignment of discussing political matters with the citizens of the glorious Commonwealth which in another day gave this Nation Woodrow Wilson and Joe Tumulty. The United States and the Democratic Party can never expect to completely liquidate their debt to New Jersey. At the hands of Woodrow Wilson the Democratic Party was impregnated and inspired with a supercharge of common-sense idealism which spared it from a threatened retrogression and decay. Much of the good our party has accomplished since his time had its origin in those inspired ideals.

However, I am glad to come to Gov. Harry Moore's State because this good man is deeply respected and devotedly loved in the Senate, where he served with so much distinction until he forsook us to return to his beloved New Jersey. I want to pay my deep respects also to my colleague, the Honorable WILLIAM H. SMATHERS, who is

representing New Jersey at the present time so faithfully in Washington. Bill is a militant Democrat with a commendable passion for supporting the President in good weather and bad. The administration needs men like WILLIAM H. SMATHERS.

LOOKING AT THE RECORD

History constantly repeats itself so that a contemplation of the past reveals what may be anticipated in the future. There is a past, a present, and a future in politics. The present bridges the gap between the other periods and gives substance and realism to them both. The past is important because it is the guide to the future. The future is important if destiny be important. If we were about to set out upon a journey and were wise, we would consider every possible contingency and be governed in our preparations by the previous experience. That brings me to the subject of my address: "Looking at the record."

On January 20, 1941, a President will take his solemn oath of office and begin a 4-year term. At that time one or the other of the two great political parties will be placed in charge of this Nation's affairs. During the intervening months we must select our pilot and determine which party is to serve us. We, the voters, will make the decision. Upon the wisdom of that decision much depends. We might well be terrified by that stupendous task were it not for the recorded pages of history. By reviewing them we can accurately foretell how each party will serve, for we can discover there the purpose of each, the philisophy of each, and the performance of each. The record is the only guide which we have to assist us in our gigantic task and the only guide which we need. What to do in November may be determined by the conscientious voter by looking at the records of the past of the two great parties.

READ AND ACT

Since the close of the World War we have had 12 years of Republican and 7 years of Democratic rule. During these two decades every problem which we will likely be called upon to face during the next 4 years has been upon our threshold constantly. The problems growing out of mass production, inadequate buying power, international confusion and war, humanity's never-ending struggle for security, and the grotesque specter of unemployment would be old and shopworn were they not so fundamentally vital to our continuance as a democracy. We need to look at the record. We need to go about choosing our political remedies and our political doctor deliberately and intelligently. It is entirely up to us. The voters in this democracy are the architects of their own economic, social, and political fortunes.

STOP AND THINK

Just this week we were privileged to celebrate the seventh anniversary of the inauguration of Franklin D. Roosevelt as President of the United States. It afforded a fine occasion for a review of his brilliant administration. All of us recall the day he took his oath of office. Only one such other 4th of March is recorded in American history, and that was the 4th of March 1861, when Lincoln assumed his tragic role.

Recall, if you will, the first days of March 1933. What were you thinking then? Was your heart filled with hope or were you a little shaken with apprehension and uncertainty? Did you face the future in dread despair? I shall never erase from my memory my own experience on March 2, 1933.

I was Governor of Colorado at the time. A few days previous Michigan had started something by declaring a bank holiday, and that desperate action had been followed by nearly every State in the Union. Colorado was vainly trying to be the one Commonwealth to not join the procession of bank-holiday States. We were determined to keep our banks open at any cost. It was almost 9 o'clock on the morning of March 2, 1933. Telegrams were pouring in to me from all over the State; a half dozen messenger boys were in the office at one time; telephones were ringing frantically. My office was filled with excited men.

Runs on the banks were threatened everywhere. Long lines were reported to be standing in the streets in many Colorado cities. Our Colorado banks were unusually strong and we had complete confidence in their ability to withstand any storm, but a simultaneous run on them was indeed serious business; the situation might easily get out of control. We finally bowed to the inevitable, my proclamation was broadcast, and Colorado had a bank holiday, too, the last State to admit the complete collapse of President Hoover's administration.

FAITH FAILED

It was not really the banks—it was faith that failed. Confidence of men in men, confidence of men in their Government, confidence of men in every intangible thing took a holiday and only fear remained. The Nation's business, seeking refuge in storm cellars, had capitulated and surrendered, for business is based upon faith and cannot function without it.

Two days later, on March 4, we had a new President and you will recall that his first official act had to do with the banking situation. In due time a day was set for banks all over the country to reopen. The bankers were dubious. Fear and trembling had robbed them of their sleep. They dreaded the hour when they should open their cages. They expected panicky runs and they had piled up great reserves of currency to meet the anticipated withdrawals. The night before the banks were to open the President made his first fireside talk to his friends; 130,000,000 distracted people listened to him. He lightened a very solemn, earnest plea with something characteristically clever about the "fear of fear." He asked for the cooperation in this crisis of his neighbors. It was a simple speech, but the most effective one in all history. The next day the banks opened and the anticipated run took place according to schedule, but it was not a run to take money out; believe it or not, it was a run to put money in. That afternoon the newspapers everywhere headlined the unbelievable story.

From every town and city, from New Jersey, from Colorado, and from every State came the same good news: A run was made today on socks and mattresses and hiding places and good United States currency was deposited in every bank throughout the land. Great metropolitan centers, small unimportant country places, rural and urban communities alike at an identical moment acted in strange unison—not from prearranged schedule, but naturally and spontaneously. Faith had been restored in America. That hour marked the beginning of a new epoch in American history.

FEDERAL DEPOSIT INSURANCE CORPORATION

The Federal Deposit Insurance Corporation came into being and bank deposits were insured and guaranteed. Fifty million depositors today have full protection. Never again will men retire at night thinking that they have financial strength and awaken on the morrow to discover that they are ruined. Have you ever studied the faces of men and women making a run on a bank? Would that some artist with the ability to depict correctly the troubled despair in men's souls might have made a permanent record of that gruesome sight now that we are to see it no more.

During the 4 years of Hoover there were nearly 7,000 bank failures, the deposits involved being approximately $4,000,000,000, with almost complete ruin to the unprotected depositors. Under Roosevelt the average for 7 years has been but 51 bank failures per annum with practically no loss to depositors. Not only that, but the F. D. I. C. has met all the expenses of operation, paid deposit-insurance losses from its income, constantly added to its surplus, and kept its original capital stock intact. It is entirely self-supporting and, all in all, a most successful, sensible business venture. As a small-business man, I like that kind of a record.

To have cleaned up the unsatisfactory and impossible banking situation should be glory enough for any administration, but perhaps even a greater service was rendered by the clean-up of the Securities and Exchange fiasco. For years trusting widows and orphans and gullible men had been victimized and swindled out of their life savings by unscrupulous promoters of fake stocks and by high-pressure salesmen. Aided and abetted by thieving brokers, riotous speculation, and disgraceful scandals were common on the great exchanges. To put an end to all such deviltry the Securities and Exchange Commission was created by the Democratic Congress at the suggestion of the Democratic President. The vigilance of this agency has saved credulous investors millions upon millions of dollars by prohibiting issuance and sale of worthless stocks, by stopping unlawful manipulation on stock exchanges, by compelling holding companies to cease destroying the investment in sound industries for the benefit of inside looters, by requiring complete information about bonds and stocks offered for sale, and by preventing excessive and unwarranted speculation.

BUSINESS RAN THE COUNTRY

I do not like to dwell upon those last days of Mr. Hoover, but it is a part of the permanent record which in its stark reality must stand there for all time to haunt and plague our political opponents as an evidence of their pitiful failure and to warn those who would return the Republican Party to power what they may anticipate. We had Republican rule and discovered to our sorrow what it would do to America. Business obviously had no reason then to be afraid of Government control or Government supervision. In those evil times Republicans let business run the country in the way business wanted the country to be run. The New Deal was not yet born to terrify and frighten businessmen as the bogeyman frightens little children. There were no pay-roll, old-age, or unemployment taxes to vex, and no restraining regulation of wild speculation on the stock exchange curbing the spirit of free enterprise and industrial adventure. In that day speculators were given the nod to swindle the unsuspecting public and trusting widow and helpless orphan. Fear of Government watchfulness did not dangle over industry like the sword of Damocles. Business did not depend upon a magician at Washington to pull rabbits out of a hat. Wall Street was not being run from 1600 Pennsylvania Avenue. Quite the contrary. Money out of the Federal Treasury was not being poured down a rat hole to buy the favors of the blind, the crippled child, the unemployed, the homeless, the farmer, and the little-business man. Banks were accountable to no one for what they did with the deposits of the people. The Federal Government was not deliberately keeping down interest rates. Rubber-stamp Congresses and rubber-stamp courts had not abrogated their constitutional responsibilities. Business was not in a strait jacket. Free enterprise was not stifled, and speculation was not abridged. Why, then, in that open season of rugged individualism and free enterprise, did we not experience the glorious heights of prosperity—the golden era of two chickens in every pot and two autos in every garage?

Strange to say, the pages of history for that period record neither prosperity nor happiness. We should like to blot the whole hideous memory from our minds forever. We must have no more rugged individualism if we would save our democratic institutions. In 1940 we shall learn whether or not the burned child fears the fire.

OUR FOREIGN POLICY

Much is being said these days about America's new foreign policy. We have no new foreign policy. George Washington formulated our present foreign policy in his time and gave eloquent expression to it in his farewell address. His conception of foreign relations was rewritten in the Neutrality Act of 1939. The foreign

policy of this administration is to have secret alliances with no nation, to harbor ill-will toward no nation, to show special fondness for no nation, but to seek friendly cooperation with all nations. It is to keep out of the war zones and to avoid friction with belligerents in every honorable way. It is to not tolerate any foreign power to inject itself into our domestic affairs nor to inject ourselves into the domestic affairs of other nations. We learned in the World War to get out of Europe and stay out; we learned in that war that our best business is Western Hemisphere business. We are forever devoted to maintaining a free democracy here in our own land, but we grant every other nation the right to choose its own government and its own destiny. We have so many obstinate domestic problems demanding solution that we have no time to concern ourselves with difficulties beyond our control and which do not respond to our friendly sphere of influence anyway. It is our mission to prove to the torn and bleeding world the virtues and blessings of peace.

While there are wars raging throughout the world, the American continent is not threatened, and so long as we continue to tend strictly to domestic affairs and maintain an adequate and sensible national defense, peace will be our lot. Peace is a passion with President Roosevelt—second only to his devotion to liberty and independence. He recently said with deep feeling: "I hate war." The whole Democratic Party hates war and will not be drawn into it. The foreign policy as evolved by the Democratic Congress and followed by the Democratic administration pleases 90 percent of the American people and especially does it please American mothers.

DEMOCRATIC PHILOSOPHY SOUND

I lose patience with partisans who sneeringly say that the philosophy of the Democratic Party is not sound and that its methods are not practical. I implore all such persons to look at the record. I say that no political party serving a great democracy can have a more wholesome philosophy and a more salutary objective than to believe in and earnestly strive for "an equal opportunity for all." It is wicked to say that this fundamental philosophy of the Democratic Party is not sound. The Democratic Party has traditionally been the great champion of equal opportunities and it will continue to be. It is determined to solve each problem of the American people long before it becomes a chronic and devastating economic disease. It will ever champion realistic liberalism with both feet treading the firm ground of common interest, common justice, and common sense.

I shall not tire you with a detailed, chronological recital of the accomplishments of the party during the past 7 years. You are all familiar with the Civilian Conservation Corps and the rehabilitation in mind and body of the two and a half million American youths it has served; the free distribution of surplus commodities to the needy; the emergency work-relief programs; the assistance to industry by providing new markets and liberal finances; the dramatic rescue from bankruptcy of both the home owners and mortgage holders; the stabilization of the American dollar; the Federal assistance extended the blind, the dependent child, the widowed mother, the senior citizens; the establishment of compulsory collective bargaining and the ceiling on hours and the floor under wages in the Fair Labor Standards Act; unemployment compensation and many other social and economic reforms. It is a long story of great accomplishment and one to make a Democrat swell with pride.

When Mr. Hoover took office the national annual income was well over eighty billion; when he checked out it had dipped to less than forty billion. The Democratic Party has now brought it back from Mr. Hoover's low to seventy-eight billion; President Roosevelt has set his goal at ninety billion, which he is likely to realize in 1940 unless the war in Europe should slow America down. To me that is conclusive proof that the New Deal has been more realistic and effective in its policies than the preceding administration.

THE DEMOCRATIC VERSION

The Democratic Party under the leadership of President Roosevelt visualizes a prosperous industrial and agricultural commonwealth, with particular stress on public health in factory and home, both urban and rural; fair prices for farm products; high wages; reasonable hours; no cut-throat or chiseling business methods; no stock juggling and riotous speculating; reasonable interest rates and honest banking; regulated public utilities and unmonopolized natural resources; taxes high but based on the ability to pay; a good public service of educational, recreational, and many other desirable social facilities.

In short, the Democratic Party champions a happy combination of the profit motive with the service motive. It would have the common interests of all the people replace the special interests of part of the people, concern for the lowly and a sympathetic understanding of forgotten men replace social indifference, and cooperation based on mutual recognition of conflicting interests replace devastating competition. The values of these ideals should be measured by the extent to which their advantages will be shared by all the people.

FRANKLIN DELANO ROOSEVELT

It might be well to state here and now in this connection that it is my firm conviction that when all current political propaganda, political jealousies, and ulterior motives of every nature and description have been deleted, and when every historical fact is placed in its proper perspective and an unbiased and truthful history is written concerning this period, it will unqualifiedly and emphatically hold that the first 4-year term of President Roosevelt was the most brilliant, the most constructive, and the most progressive Presidential term in all the glorious history of America. It will be said when the final chapter is written that this earnest man held to the course of a true liberal and guided the Nation in peace safely through the dangerous shoals of murderous international strife, and that he corrected grave internal social disorders by formulas which were based upon equity and justice.

Christian people cannot consistently abandon the halt, the aged, the orphan, and the blind to the ravages of unrestrained nature. Yet, strangely enough, the present administration is the first in American history to courageously assume the staggering burden of Federal philanthropy to these unfortunates, not because we wanted to seize the responsibility of their care from local government, but for the good reason that local government had failed for one reason or another to accept the challenge of their need.

The last decade has been a difficult one throughout the world. Today ancient cultures abroad are being destroyed by war. We are at peace. Foreign currencies have been inflated and deflated until they deserve little international respect. Our dollar is par the world over. Civil liberties are being denied without apology in nearly every land; here they are being religiously observed and strengthened. Foreign economy has crumbled with the impact of the times; a sound economy has been maintained in the United States. In comparison to the balance of the world, our record stands out as bright and lonely as the evening star. Fair-minded men must admit that the Democratic Party has, generally speaking, done a thoroughly good, constructive job. The Federal debt has mushroomed, but we have valuable assets to balance against at least half of that debt. School buildings, public buildings, highways, improved streets, sewage plants, waterworks, reclamation and power dams, airports, rural electrification lines, and many other properties represent an investment which fully justifies the expenditure. In the past few years we have invested nearly $5,000,000,000 in national defense, which is a good insurance against the likelihood of war.

THREE PROBLEMS

I have taken much of your time reviewing the record to establish my argument and prove my contention that the Democratic Party has been a faithful servant, and that it is worthy of your confidence. I have done that to prove that the Democratic Party has the will, the experience, the courage, and the ability to cope with the difficult social and economic problems still requiring solution. Three major problems will challenge the attention of whatever party comes to power in 1940. They are the problem of peace in a war-torn world, the farm problem, and America's No. 1 problem—unemployment.

PEACE

The formula adopted in the Neutrality Act of 1939 must be adhered to religiously to keep us out of Europe's wars. At the same time we should extend every peaceful assistance and offer every peaceful encouragement to the reestablishment and maintenance of world tranquillity. We must be firm and deliberate in our determination for peace, and so discreet, so sincere, so impartial, and so unselfish that we may be helpful in the restoration of peace without the slightest danger of involvement. Civilization needs our humanitarian concern, our sanity, and our unselfishness, and we must not fail civilization in its hour of need.

AGRICULTURE

We must solve the problem of agriculture without placing any further burden upon the Federal Treasury. The Federal Treasury cannot, and should not, support that industry. All of the farmer's difficulties are based upon the proposition that he is not receiving a just return on his goods for his services. The consumer should not be exploited, but he should pay the farmer the cost of production. No honest man wants to eat food produced at a loss, or under conditions of peonage and semislavery. Since January 1, 1937, the price of wheat in Chicago, the basic wheat market of the country, has fluctuated from $1.50 a bushel to 60 cents a bushel, without a fraction of a cent's change in the price of a loaf of bread to the consumer. The 60-cent price meant bankruptcy to the farmers, while the $1.50 price meant a handsome profit. In neither instance was the consumer either benefited or injured. The farmer can be treated fairly without injuring the consumer. Fair-minded consumers know that when farmers are prosperous the country is prosperous. The Democratic Party must give the families who feed America a living wage. Of all people, they are indeed worthy of their hire.

UNEMPLOYMENT

America's No. 1 problem is unemployment. It is the curse of these times. It became acute 10 years ago and remains acute. The economic waste created by the widespread idleness in America makes the national debt look like pin money in comparison; $200,000,000,000 have been lost in this country in the last 10 years in unemployment. Rich as America professes to be, it cannot afford the luxury of 10,000,000 unemployed. The evil of unemployment must be cured, and I believe the Democratic Party can cure it. It is reasonable to ask why the Democratic Party has not solved this problem during the past 7 years. At a terrific strain upon the Treasury, work projects and other work-relief programs have been of some temporary assistance but have cured nothing. The truth is that unemployment is actively progressing, and while many measures have been effected

to reduce it, these measures have merely kept unemployment from increasing and have not materially reduced its total. We have but kept pace with the technological displacements; in other words, we have only been holding our own in this conflict. Two million workers have been displaced by machines and other technological improvements during the past 10 years. The Democratic Party has tried and is determined to find the solution. The important thing for the voter to note is that the Democratic Party has recognized unemployment to be a Federal problem. The Republicans have always treated it as a private problem. Make no mistake about the importance of that distinction. The Republicans have no solution except to return to the policy of free enterprise, already dramatically demonstrated to be completely in error by President Hoover. I have no faith that they can or will do anything other than that about it. The hope for a solution for this problem rests with the Democratic Party.

THE REMEDY

Mass production must be met by mass consumption. I would not curtail production—I would increase it instead—but I would speed up consumption until it was equal to the increased production. If every empty stomach in this country were filled and every naked and ragged human back were properly clothed, there would be no burdensome surplus of food and clothing. I concur wholeheartedly in what Philip Murray said to the Thirty-sixth Constitutional Convention of the United Mine Workers of America on January 29 of this year about unemployment. I quote Mr. Murray:

"I should like to see the leaders of the Democratic Party and the leaders of the Republican Party say to the people of the United States: 'If you elect us to office you do so with the distinct understanding that we will not rest until we put every idle man and woman back to work.' "

There is absolutely no hope that the Republican leaders will accept that challenge, but the Democratic Party and its leaders must accept it and proclaim it and live up to it or refrain from seeking office. The dispossessed in America must be restored to jobs, and in that restoration will come the cure for most of our economic and social ills. It is startling to learn that one-third of the workers in this country make less than $500 a year per family. Little wonder there are burdensome surpluses of food and clothing.

A CLOSE ELECTION

In 1940 a half dozen States will decide the election; New Jersey will be one of those States. She is already classed as a pivotal State. No one is expecting a landslide in 1940; everyone believes that it will be the hardest fought campaign since 1916 when New Jersey's great Governor carried the torch of common-sense liberalism to a glorious victory. The victory this time will go to one or the other of the two major parties—either a conservative Republican or a liberal Democrat will be elected President. The Republican candidate will be a conservative of the old school with his face turned toward the good old days of Herbert Hoover and rugged individualism, and the Democratic candidate will be a liberal with strong New Deal tendencies, because no other type of candidates can win the respective nominations of the two parties. I think that I know the name of the Democratic liberal, but this is neither the time nor the place to discuss men. Tonight we are dealing with issues.

DEMOCRATIC QUINTS

The party made immortal by Jefferson, Jackson, Cleveland, Wilson, and Roosevelt has given its country a consistent and notable service when in office and when out of office. Human beings have been its first concern. The average man and woman, whether in the factory, on the farm, or behind the business counter, knows in his heart that the Democratic Party has not been operated in the interest of property and privilege but has existed primarily to give mankind greater security and opportunity. The Democratic Party had its birth simultaneously with the signing of the Constitution and will live and serve until that document passes into oblivion. It is not only the oldest political party in the world but it has accomplished more for the common man and his welfare and happiness than any other party or combination of parties. It has lived long and it will live longer. It has lived well, and it hopes to live better. It has seen the rise and fall of the Federals, the Whigs, the Know-Nothings, the Populists, the Progressives, the Farm-Laborites, and the Republicans, and it will serve after the obsequies are held of other political movements which come and go with the pressure of the times. When the people tire of political innovations and nostrums, the good, old reliable Democratic Party stands ready again to give expression to the will of men in the cause of humanity.

THE VISION

With Jefferson's devotion to the people glorifying the Democratic Party, the militancy of Jackson in its heart, the indomitable will of Cleveland in its character, the realistic idealism of Wilson in its soul, and the combination of all of these virtues personified by Roosevelt tingling in every fiber of its being, it will never turn backward. It has made its share of mistakes; it is neither infallible nor is it omnipotent, having strength only as the people give it strength; but it has pursued a straight course ahead, neither enamored with the luxurious life of conservative inertia on the one hand or the temptation of impatient radical imprudence on the other. It will maintain its faith in the people's cause and keep its mind upon the worthy objective of human well-being; it will never lose its enthusiasm for human progress or accept permanent failure as it pushes forward to glorious victory or, if it be the will of the people, to temporary defeat.

Catholic Culture and Latin American Good Will

EXTENSION OF REMARKS

OF

HON. FRANCIS T. MALONEY

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Wednesday, March 13 (legislative day of Monday, March 4), 1940)

ADDRESS BY HON. DENNIS CHAVEZ, OF NEW MEXICO

Mr. MALONEY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by the junior Senator from New Mexico [Mr. CHAVEZ] at a communion breakfast of the Holy Name Society at the George Mason Hotel, Alexandria, Va., on Sunday, March 10, 1940, on the subject The Catholic Culture in the United States—A Stepping Stone to Latin American Good Will.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Bishop Ireton, reverend priests, distinguished guests, members of the Holy Name Society of Alexandria, Va., Mr. Toastmaster, ordinarily, in speaking before a gathering such as this, one pauses before proceeding to the main subject of his discourse to pay tribute to the locality in which he is making his address, and in a place so historic and charming as Alexandria this becomes almost essential. However, I will not attempt to mention the charm and beauty of Alexandria, nor the chivalry or patriotism of its inhabitants, because I know that, alongside the merited eloquence that has been bestowed on your glorious State and city, my humble words would measure poorly.

I am proud and honored to be in such distinguished company, and the significance of this occasion—a religious gathering—is particularly noteworthy at this time. It serves to illustrate a feature which distinguishes our Nation from those other nations which have lost the word of God. As long as we have faith, we need not fear. When God is driven from the hearts of the people, the Nation is endangered. History shows us that people who do not believe in God must perish.

The United States has grown great because it is a religious country. It was colonized and it prospered through faith in God. The Republic which is founded here is based on rights which ultimately, by the expression of the Constitution itself, are founded upon God. Unfortunately, many nations have lost faith. The rulers dare even to war on God. This is an alarming tendency and to this can be attributed most of the world's ills.

In searching for a subject I could not escape the conclusion that the most pressing problem facing the American people today is that of keeping this great country of ours at peace. It occurred to me that there is a splendid opportunity for the Catholic Church and its communicants to contribute to peace. Let me illustrate.

The isolationists are Americans who desire the United States to follow implicitly the advice of Washington to avoid involvement in European wars. I hold to this theory, but I feel that those isolationists who say that the United States can live in complete isolation are wrong. National prosperity and civilization cannot exist in a nation which does not live on free terms with its neighbors. Unfortunately, much of our prosperity and culture has been predicated on intimate relations with countries whose histories show them to be always involved in warfare. Exclusive political and economic relations with Europe are dangerous because the likelihood for involvement in its wars is always present. Europe has been a continuous battleground for thousands of years.

Today Europe and Asia are on the brink of the flames. It is impossible to view the world situation without fear that we may be drawn into the conflagration when it starts.

Therefore, if it is true that we cannot live completely isolated, it behooves us to develop our foreign relations with those countries with which there is the most likelihood of peace, and which can assure us trade and cultural contacts compatible with our dignity as a great nation.

Expansion of our relations with South America is a sure way of advancing the peace of the United States. By improving our cultural, economic, and political relations with our closest neighbors, a new world "hegemony" can be developed with such strength that it can withstand any economic, cultural, or political onslaughts from other parts of the world, irrespective of any solution established on European battlefields.

You may ask: In what manner is the church in the United States concerned with the expansion of our Latin American relations? The answer simply is this: The Catholic Church and its communicants are historically the closest bond between the United States and South America. Because of this kinship and common

ground, the Catholic Church is in a strategically important position to foster and cement improved relations.

Though it may be alarming, the danger of the war in Europe must be kept before the American people. As far as public opinion is concerned in the United States, there is no question that it is strongly opposed to American participation. This is recognized by the press and by statesmen the world over. But in spite of public opinion, there are powerful factors tending at all times to draw us into the war.

There is the pull of propaganda from the newspapers, the newsreel, and from the radio. The effect of this propaganda is calculated with difficulty at this time. Who knows what would happen to public opinion in this country if France and England were overwhelmed? Then we would feel the effects of the poisonous propaganda now being fed to us. In addition, there are strong sentimental and economic factors which draw us toward Europe. The sentiment of the people, as a whole, is with the Allies.

These facts must be accepted and considered alongside the general thesis (which, by the way, I hold and intend to fight for), that in spite of everything and irrespective of the future, we must, to borrow the title from Glenn Frank's book, "Save America First."

Therefore, since there is danger of our participation as long as war continues, and since this will become increasingly more acute if lightning warfare breaks out, those interested in keeping the United States in peace must develop a positive program. You can't fight something with nothing, and only a fighting campaign for peace can successively resist the tendency toward war.

Pan-Americanism, in my opinion, is our only recourse if we must sever our political relations with Europe. To preach such doctrine in the face of strong sentiment and close economic interests tying this country to Europe, is ordinarily like speaking on an empty desert.

I can only hope that some day, sometime, this great country of ours will learn to think of itself first and its quarrelsome neighbors' domestic problems last.

The present administration has pointed the way by the development of the good-neighbor policy. But if the good-neighbor philosophy is to succeed, it must percolate from the heights of official action into the hearts of the people themselves, for Latin America is wary of the United States. After all, imperialism and dollar diplomacy are far more familiar to the Latin American as characteristic of American policy than is the good-neighbor policy.

If we are to have success in Latin America, there must be a change in the state of mind of the Americans toward the Latin Americans. The arrogance, greed, and superior attitude of the past must be done away with, and future contacts made on a basis of equality and friendship.

If this is necessary, then there can be no better way of changing this attitude than by dedicating the 20,000,000 communicants of the Catholic Church of the United States to spreading sympathy and good will for South America in the United States.

There are many problems and obstacles to overcome before pan-Americanism can be successful. It is well nigh useless to speak generally of our common problems. After all, even though we do live in the New World, geographically, the people of South America are much farther away from us than is Europe. They speak Spanish and Portuguese, their civilization is Latin, their religion is Catholic, and their economy is agricultural. Contrast this with our situation in the United States and you will see why it is so hard to bridge the tremendous cultural abyss between their civilization and ours.

The 20,000,000 Catholics in the United States represent the strongest and most effective link to South American good will. Through them the bridge can be crossed.

I am alarmed by the danger of war and what it means to the United States; and because I can see what the aftermath of war will be in the way of social unrest and consequent loss of our liberties if this unrest is put down, I am interested in the promotion of those means which tend to keep us out of war. And it behooves the church, as representative of a minority group in the United States, and one which will suffer if established liberties are done away with in times of social unrest, to take the lead in the development of our Latin American policy and thereby promote peace.

South America is Catholic. They feel their religion strongly. Because of this they will recognize the close affinity between the American Catholics and themselves. They cannot help but be won to sympathy if approached on a ground which is common to them and to the United States.

Witness the success of the American Catholic representatives to the Lima Conference, Father John Francis O'Hare, of Notre Dame University; Dr. Charles Fenwick, of Bryn Mawr; and the phenomenal reception given to our unofficial missionaries of good will, Rt. Rev. James J. Ryan, Bishop of Omaha; and Rev. Maurice Sheehy, of Catholic University, when they traveled through South America in January of 1939. They were successful because they could appeal to the Latin Americans; they had something in common with them.

There is no more heroic story in history than that made by the prowess of the Spanish warrior in conquering, exploring, and colonizing the New World. But equally heroic and far-reaching was the work of the Spanish missionaries whose zeal during the same period won two continents for Christianity.

In the sixteenth century the Spanish conquistador overran the New World. He left his language and his blood from Tierra del Fuego, the farthermost point of South America, through Central America, and those portions of the North American Continent occupied by Mexico and the southern and southwestern sections of the United States.

The Spaniard overthrew the Indian dynasties of the Inca and Aztec. He replaced the highly developed Indian culture with his own at the point of his sword. Accompanying him, at other times ahead of him, but never far in his wake, came the ameliorating influence of the Catholic missionary. The cross was firmly implanted wherever the mailed conquistador trod.

We are familiar with the missionary zeal of Jolliet, Marquette, and Champlain, but we are doubtless less acquainted with those heroic Catholic priests in what is now the American Southwest, who labored against the elements in order to establish Christianity among the savage tribes. The work of the missionaries, most of whom won martyrdom in what is now New Mexico, California, and Texas, is mentioned not in order to call attention to their heroic deeds but to point to the fact that the monumental work which they erected in the United States is identical in culture with that which exists today in all Latin America. Missions, schools, and all the civilizing effects of true Christianity were propagated by the Catholic missionaries throughout Latin America, just as the priests did in New Mexico.

Here, then, lies the common ground on which the approach to South American good will can be made. The Catholic Church in the United States, with reasonable expectation of success through its common heritage with Catholic Latin America, can lead the way.

The work which the missionaries performed in bringing peace to the savage tribes which had just been subjected by the conquistadors, may yet find its greatest flower in cementing the ties between the Americas, and thereby bringing the glory of peace to one sector of a war-torn world.

Leaders of Democracy

EXTENSION OF REMARKS

OF

HON. MATTHEW M. NEELY

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 13 (legislative day of Monday, March 4), 1940)

ADDRESS OF HON. CLAUDE PEPPER, OF FLORIDA, MADE AT A TESTIMONIAL DINNER IN HONOR OF FRED WAGNER, OF COLUMBIA, PA., MARCH 12, 1940

Mr. NEELY. Mr. President, I ask unanimous consent to have printed in the RECORD the remarks of the Senator from Florida [Mr. PEPPER] made at a testimonial dinner in honor of Fred Wagner at Columbia, Pa., on March 12, 1940.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

One of the most interesting phases of political history is to note those men who have been the leaders of liberalism.

Thomas Jefferson, learned landowner, philosopher, agrarian aristocrat, became the spiritual champion of the masses of America.

Andrew Jackson, Senator, general, master of the Hermitage and its broad acres, one who could well be foremost in the procession of the mightiest of men, the hero of the downtrodden, the backwoods, the poor of America.

Woodrow Wilson, scholar, bred under the shadow of the cloth, whose peerless intellect and whose soaring idealism carried him to heights where kings were his comrades but the hopes of common man his cause.

Franklin D. Roosevelt, truly one of America's noble men in lineage, in intellect, and in spirit. One of the best in breeding, in virtue, in stature America has produced, known as the hero of the underprivileged, the ill-housed, the ill-clad, the ill-fed.

JOE GUFFEY, if you please, a man who by training, environment, financial-interest association might in wealth have been another Ernest Weir but instead from the days of his youth he has been a colaborer in the liberal cause, laboring by the side of Woodrow Wilson, Franklin D. Roosevelt, and all those men of his generation who have fought day and night, in and out of office, when it was easy and when it was hard, to make things better for the people of their country, to lighten the burden of toil on the back of labor, to open the doors of opportunity to the underprivileged, to broaden the whole horizon of the handicapped, to make his country more perfectly the realization of the dream of the pioneers, where life was richer, fuller, happier, and safer than in anywhere else in all the world.

I know JOE GUFFEY, I know how he feels, I know his mind, and I know how he thinks; I know his strength, and I know what weight he adds to his convictions. I know how badly needed he is in the United States Senate. I know how imperative it is that men like JOE GUFFEY continue to carry the flag for the noble cause of human betterment.

I know, therefore, that Pennsylvania is likewise proud of the way it has been able to help its sister States to do through JOE GUFFEY; it is proud of his seniority in the Senate, the confidence that his colleagues have in him, how they value his counsel, how they depend upon his great help.

Knowing what he means to the President, by having the most perfect record in support of Roosevelt that any Member of the Senate has, knowing what he has always meant to the Democratic Party, knowing what he means to Pennsylvania and Pennsylvania's people, knowing what he means to America and to his generation, I know there will be no doubt but that with the overwhelming approval of the people of his State JOE GUFFEY shall continue to be one of the great leaders of a great democracy.

For Farmers and by Farmers

EXTENSION OF REMARKS

OF

HON. GUY M. GILLETTE

OF IOWA

IN THE SENATE OF THE UNITED STATES

Wednesday, March 13 (legislative day of Monday, March 4), 1940)

RADIO ADDRESS BY SECRETARY WALLACE ON THE OCCASION OF THE ANNIVERSARY FARM DINNERS

Mr. GILLETTE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a radio address delivered by Secretary of Agriculture Henry A. Wallace on the 8th of March.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is thrilling to know that tonight hundreds of thousands of you—men and women from the farm—are taking part in a great anniversary celebration. Together with some of your friends in the cities and towns, you have assembled at dinner meetings in hundreds of counties from the Atlantic to the Pacific and from the Canadian border to the Gulf. You are celebrating the seventh anniversary of that day, March 8, 1933, when President Roosevelt requested me as Secretary of Agriculture to call a conference of representative farmers and farm leaders to consider legislation for a national farm program.

The conference was held 2 days later. Responding to the recommendations of the farmers, Congress established the first Triple A. That act specifically recognized the right of the farmers of the United States to economic equality.

And so these anniversary dinners tonight are being held in commemoration of the first decisive step toward writing into the law of the land the fundamental principles of agricultural justice.

I am speaking to you from the President's study in the White House. In a few minutes you will hear Postmaster General Farley and President Roosevelt himself.

We want you to know how much we appreciate the splendid vision you have shown in holding these real farm dinners. For 7 years you have been cooperating in an unprecedented effort. You are the men who have been fighting steadily for justice to agriculture ever since 1921. It has been hard work. Every struggle for human rights is hard.

Some of you were born Republicans, some of you were born Democrats, and some of you are Independents. Some of you voted for La Follette in 1924 and some of you went down the line for Lowden in 1928 and then turned to Al Smith. Nearly all of you joined together in 1932 and 1936 to support the greatest friend the farmer has ever had in the White House, Franklin D. Roosevelt. We do not yet have full agricultural justice, but we are much closer to it than we would have been without Roosevelt.

In the decade of the 20's we were feeling our way, trying to find some effective method of cooperating to combat the farm depression which had set in after the first World War. Farmers of the South and farmers of the West, long separated by differing views on the tariff, were trying to find a common ground for action. It was these efforts which finally culminated in national farm unity and, with the constructive and sympathetic help of the New Deal, in the first national farm program carried out for farmers and by farmers.

The entire national farm program now is a conservation program in the broadest sense. It conserves not only the soil but also the best human values of farm homes and farm life. It is an all-weather, ever-normal granary and crop-insurance program, which is guarding both farmers and consumers against the dangers of drought as well as surplus. But this farm program goes still further. It helps to expand agriculture's markets abroad and at home. Through trade agreements and special export programs, farm exports have been increased. The American farmer doesn't like to be told that he shouldn't want anything but the American market. The trade agreements help him to regain his export market. At home the farm program has established four great research laboratories to find new industrial uses for farm products. Another part of the program provides for getting farm surpluses to low-income families in the cities and towns. This is being done through the food-stamp plan, school-lunch program, low-cost milk program, and cotton-stamp plan. Nor does the farm program stop there. It helps low-income farm families to help themselves. It helps tenant farmers to become owners. It brings electricity to farm homes. Finally, it meets the farmer's credit needs.

All these phases of the farm program are vitally important. But perhaps the most important aspect of all, from the standpoint of farmers, is the nonpartisan farmer control which has been a cardinal feature of the farm program from its beginning in 1933. No one knows better than the farmers what it has meant to have local operation of the program in the hands of men from the farm, elected by the farmers as officers of the county conservation associations and members of the community and county committees. The fact is the farmers have helped to shape the farm program every year in the last 7 years.

Today the farmers of the United States are informed. They are thinking. They know where they stand and where they want to go. Working together with the Government, they have built a great and valuable instrument through which they can achieve equality.

During the last 7 years, the national farm program has had to contend with obstacles and hazards of every kind. It has met and conquered years of drought, years of surplus, and a heartbreaking adverse decision by the Supreme Court. It has survived bitter political attack and unscrupulous misrepresentation. Now, it is faced with new problems brought on by the European war.

In spite of all these obstacles and hazards, the farmer associations and farmer committees have carried on. And I feel sure that, for many years in the future, they will continue as the stalwart champions of economic democracy on the farm.

Tonight let us look forward to completing the task of making the farm family secure in the market place, on the land, and in home.

Survey of Loans Made by Farm Security Administration

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Wednesday, March 13 (legislative day of Monday, March 4), 1940)

LETTER FROM WILL W. ALEXANDER, ADMINISTRATOR OF THE FARM SECURITY ADMINISTRATION

Mr. BARKLEY. Mr. President, I ask unanimous consent to have printed in the RECORD a letter addressed to me by Hon. Will W. Alexander, Administrator of the Farm Security Administration, concerning the activities and work of the Farm Security Administration in the State of Kentucky.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

MARCH 8, 1940.

Hon. ALBEN W. BARKLEY,
United States Senate.

DEAR SENATOR BARKLEY: We have just completed a Nation-wide survey of the progress being made by Farm Security Administration borrowers, and I felt that you might be interested in the figures for the State of Kentucky.

We are proud to report that F. S. A. borrowers not only have increased their net worth and annual income, but also are making satisfactory progress in the repayment of their loans.

The survey showed that the 9,614 standard rehabilitation borrowers in your State had an average net income last year of $654.44 per family, as compared with $533.29 in the year before they came to F. S. A. for help. This represents an increase of 23 percent.

Moreover, these families increased their average net worth—over and above all debts—by 25 percent.

In other words, these families not only have added $3,262,414 to the wealth of their communities but they also have increased their annual incomes by a total of $1,164,709. This expanding purchasing power has, of course, been a considerable benefit to the merchants and other businessmen of the State.

At the same time, the survey showed that the borrowers in your State already have repaid $1,242,706 into the Federal Treasury as installments on loans totaling $3,935,972. The typical rehabilitation family in Kentucky has borrowed $409.40, and already has repaid $129.26. Since much of the money loaned does not fall due for 4 or 5 years, there is every reason to expect that the great bulk of it will be repaid.

We feel that this collection record is particularly significant, because, according to normal business standards, our borrowers would certainly not be considered good credit risks. Rehabilitation loans are made only to families which cannot get adequate credit anywhere else; and nearly all of them either had been on relief or were approaching the relief level.

Although the rehabilitation program is intended to meet long-range problems, which have been growing steadily worse for more than a generation, it is financed out of relief appropriations; and it takes the place of direct relief in rural areas. It is designed to help needy farm families to become permanently self-supporting instead of remaining indefinitely dependent on relief.

It has succeeded largely because every loan is accompanied by advice and guidance in sound farming methods, to make sure that the money is put to the best possible use. There is ample evidence that this guidance and technical training is the most important part of the rehabilitation program. Without it, few of the families would have been able to make much progress or to repay their loans.

In a limited number of cases, in order to get the family off to a sound start, small grants have been made to supplement the loan. Usually these grants were just large enough to tide the family over until it could make it first crop. They have averaged $35.68 per family, or a total of $343,028 over a 4-year period.

Often it has been necessary to work out an adjustment of the family's old debts before rehabilitation could be successful. Local farm-debt adjustment committees have been set up for this purpose. They have no legal authority to compel adjustments, but by bringing the farmer and his creditors together for a friendly discussion, they usually are able to arrange a scale-down of the obligations, reduced interest rates, or extension of the payment period. Such adjustments frequently save the farmer from foreclosure and at the same time enable the creditors to get substantial payments on what might otherwise have been bad debts.

This service is available to all farmers, whether or not they are rehabilitation borrowers. Altogether, debt reductions totaling $979,400 have been negotiated for individual farmers in Kentucky. This represents a scale-down of 17.3 percent. As a direct result of these adjustments, $28,510 in back taxes has been paid to local governmental agencies.

In addition, reductions totaling $248,283, or 77.5 percent, have been negotiated in the debts owed by irrigation districts and similar farm groups.

In helping rehabilitation borrowers to plan their farm operations, we always urge them to get away from one-crop farming, and to raise as much as possible of their food and feed supplies. The progress they are making is indicated by the fact that the borrowers in your State produced $3,273,086 worth of goods for home consumption last year, as compared with only $2,585,878 worth before they came into the F. S. A. program.

These families canned 2,634,428 quarts of fruits and vegetables last year, or an average of 274 quarts per family. They also produced 5,403,453 gallons of milk for home consumption, an average of 562 gallons; and 92,679 tons of forage, an average of 9.64 tons. This kind of diversified farming has meant a higher standard of living, a better diet, and usually a marked improvement in health.

One of the most common reasons for past failure among the families which come to F. S. A. for help was that they had not farmed enough acreage to make a living. In helping our borrowers to get a new start, we have made every effort to assist them in getting adequate-size farms. Consequently the borrowers in Kentucky are now operating an average of 101.08 acres, or an increase of 8.2 acres since they came on the program. This increased acreage has not added materially to the production of commercial crops, however, since virtually everything raised on it is consumed on the farm. It simply means a better diet and a better standard of living for these families.

Another main objective of F. S. A. is to help tenants and sharecroppers get more secure land-tenure arrangements, so they can plan ahead for crop rotations, soil conservation, and other sound farming practices. The survey indicated that 1,885 tenants in your State have obtained written leases in place of verbal agreements. Furthermore, 831 families have advanced from sharecropper to tenant status as a result of F. S. A. help.

In making the survey, our field workers found that there are 34,565 families in Kentucky which are eligible and in need of rehabilitation loans, but have been unable to get them because of our limited funds.

Aside from the rehabilitation program, the Farm Security Administration's most important job is to make loans under the Bankhead-Jones Farm Tenant Act to tenants, sharecroppers, and farm laborers to enable them to purchase family-size farms of their own.

While it has been necessary to confine loans to certain counties, because of the limited funds available, we had made 157 such loans in your State, totaling $1,166,498, up to the end of the last fiscal year. This year we are expecting to make about 224 Bankhead-Jones loans in Kentucky, totaling approximately $1,350,000.

This has been a rather detailed report, but I felt that the information might be useful to you. If you would like to have any further details about our program, I hope you will let me know.

Sincerely,

WILL W. ALEXANDER,
Administrator.

Praise for Virginia General Assembly

EXTENSION OF REMARKS

OF

HON. PRENTISS M. BROWN

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES

Wednesday, March 13 (legislative day of Monday, March 4), 1940

STATEMENT BY SENATOR GLASS BEFORE VIRGINIA GENERAL ASSEMBLY

Mr. BROWN. Mr. President, under the leave granted me to extend my remarks in the RECORD, I ask unanimous consent to insert the article concerning a statement made by the Senator from Virginia [Mr. GLASS] before the Virginia State Assembly to which I referred in the course of the debate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CARTER GLASS, SR., PRAISES ECONOMY OF GENERAL ASSEMBLY

The senior United States Senator from Virginia came back yesterday to the capital of the State he has "never left" and mixed words of praise with a gentle warning to beware of Uncle Sam's generosity.

He talked briefly of his days in the general assembly, gave high praise to the economy of Virginia legislators, and finished off with a charge of violation of States' rights at Washington.

Senator CARTER GLASS, Sr., recovered from a period of illness, came to Richmond primarily to visit his son, Carter Glass, Jr., newest member of the Virginia Senate, but before he had gone there was demand for him at both ends of the capitol.

"Welcome back to the Commonwealth," greeted Speaker Dovell.

I'VE NEVER LEFT

"I've never left," replied the peppery little veteran.

The exchange took place at the speaker's stand in the house of delegates as the senior Senator approached with slow step, towered over by a waiting committee of five.

"There are no further honors Virginia can confer on CARTER GLASS," Speaker Dovell said in introduction, and handed his gavel to the visitor.

"I hate to make speeches, and apparently my listeners feel the same way about it," Senator GLASS began.

He blamed his illness for his inability to see his son sworn in as a member of the body of which he himself was made a member 40 years earlier, and said his service in the Virginia Senate came during the happiest years of his life.

PROUD OF VIRGINIA

"I have never gotten away from Virginia," he continued. "I go to Washington to get prouder and prouder of Virginia and her legislative body."

The gavel hung limply in his hand, but suddenly it came up with spirit.

"If I could prevail upon them in Washington to get one-half the conservatism, common sense, and democracy displayed in Virginia, they would be much better off," he declared.

Senator GLASS at no time raised his voice.

"You should be proud of your delegation in Congress," he said. "It is the rarest thing that they ever vote wrong, and when they do they repent in sackcloth and ashes.

A roar of laughter swept the house.

PRAISES ECONOMY

"I'm glad to see your spirit of economy," Senator GLASS continued, "Senator Weaver asked me to help balance the budget, but I told him it was too much of a job on the national Budget for me to undertake another."

And then he turned to the subject of Government loans.

"Beware of grants and loans," he said, "because, sooner or later, you've got to pay back every dollar you spend. You get these grants to do jobs that you could get done for half the cost."

He swung next to the charge that Congress is trying to dictate as to the qualifications of State officeholders.

STAND UP FOR RIGHTS

"It's a miserable invasion of States' rights," he declared. "The Federal Government is trying to usurp the powers of the States. I hope you stand up for your State's rights."

As he concluded, the sharp-eyed little man turned to Speaker Dovell.

"You don't envy me any more than I envy you," he said. "There is nothing I prize more in life than the good will of members of the General Assembly of Virginia."

His listeners stood and applauded. The veteran started to sit down, and then he hesitated and struck sharply with the gavel.

RAPS FOR ORDER

"The house of delegates will be in order," he announced loud enough to be heard.

Speaker Dovell tossed the visitor a final bouquet before he walked slowly back through the aisle of standing house members and out of the chamber.

"He is Virginia's leading contribution to constitutional government," the speaker said.

Before he visited the house, Senator GLASS spoke briefly to the senate.

"I wish I could make you a speech, but it would be pretty dangerous to do it," he observed. "I don't tune in with a great many people."

To this he added quickly with characteristic fire:

"At the same time, I have nothing for which to apologize, and I don't take back a word."

A 10-minute recess was called in order that members of the upper house could greet the senior Senator.

The Republican Position in '40

EXTENSION OF REMARKS

OF

HON. CHARLES HAWKS, JR.

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, March 13, 1940

ADDRESS BY HON. STYLES BRIDGES, OF NEW HAMPSHIRE

Mr. HAWKS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the address by Senator STYLES BRIDGES, before a meeting of the Texas State Central Republican Committee, Baker Hotel, Dallas, Tex., February 24, 1940, as follows:

It is a real treat to meet with you today. As Republican leaders in a Southern State, you are faced with particular obstacles to overcome. But I believe that all over the country men and women are realizing that the New Deal is anything but democratic, whether you spell it with a small or a capital "d," that the Democratic Party has been raped by the New Deal crowd, and that the Republican Party must be the instrument of bringing about a recovery, not only of material prosperity, but of the moral and spiritual values upon which democracy is based. And I believe that if the new dealers have their way and nominate either Mr. Roosevelt for a third term or any one of their clan, a number of Southern States will be found in the Republican column this November—including Texas.

Needless to say, the first and most obvious characteristic of the New Deal is that it will probably go down as the most colossal failure in our history. Having spent $66,000,000,000, and having been given the most far-reaching powers over our economy and the lives of our people of any administration of any democratic nation, the problems of unemployment, agriculture, and industry are further than ever from solution. We have mortgaged Americans of tomorrow without providing work, security, much less prosperity to Americans of today. For the first time, the New Deal is on the defensive. You cannot solve problems merely by creating a new bureau and giving it the money and the power to do so. If the more than 50 bureaus which the New Deal has established in less than 7 years are not enough to solve our problems, how many would be? If the powers they have been given are not sufficient to enable them to solve our problems, how much more power do they need? If nearly a million bureaucrats in the various departments of the Government cannot solve our problems, how many more would be necessary? If $66,000,000,000 is not enough, how much more would it take?

Second, it is becoming increasingly clear that the New Deal has well-nigh exhausted its hat of rabbits. Having tried every conceivable panacea they could think of, the brainstormers are now busy trying to disguise the same old tricks in new colors and new labels. There can be no doubt that another term of the New Deal will mean the persistence of policies that failed, that we shall be 4 years closer to bankruptcy and inflation or repudiation, and 4 years further from the restoration of our system of free economy and our democratic form of government. It is also clear that if the worth-while reforms that the New Deal has attempted—collective bargaining, social security, and so on—are to be effectively achieved, their administration must be placed in Republican hands.

But we in the Republican Party cannot sit back and await the turning of the tide, nor will we. We are up against the most powerful propaganda machine in Democratic history. The taxpayer's money is used to feed him propaganda day and night, in the press and over the air as to the blessings of the New Deal. Moreover, there are always those who think that they are being supported by the Government for nothing.

The New Deal is counting on these subsidies—which are increased in election years—to help reelect them to office. We can meet this only by awakening the people to the fact that not only are they subsidizing themselves but that they get back only a portion of what they pay in taxes and will continue to pay for years on the debt. Santa Claus has not only taken money from the children's bank to pay for the toys he gives them, but he has signed their names to a lot of I O U's that they will have to pay, and the sooner they awaken to the fact the better. Today, the Government is borrowing 30 cents out of every $1 deposited in the banks and replacing it with an I O U. The depositors will have to pay additional taxes—for interest as well as the amount borrowed—to get it back again. Incidentally, it costs the American people $76,000,000 just for traveling expenses for our army of bureaucrats. This represents 18 percent of all railroad traffic. The unemployed have not only paid their share in hidden taxes on the cost of all that they buy, they bear the brunt of Government taxation of business which has meant no money to hire more men. The farmer has not only paid these hidden taxes on the increased cost of industrial goods, he has suffered from Government taxation of the rest of the population and Government failure to put men back to work which have made it impossible for them to pay higher prices for his farm products.

The New Deal's favorite form of attack upon its opponents is to launch a campaign of fear against the dire results of returning to power the "reactionary tories," the selfish "princes of privilege," and so on ad infinitum. We must meet this with the truth. I, for one, am not afraid to have the Republican Party known as the party that knows how to make jobs rather than destroy them. The only jobs the New Deal knows how to create are of two types—the meager subsistence job on relief and the soft, fat political job for the faithful.

Combined with this campaign of fear is the ballyhoo of emergency being conducted by the "third termites." In a radio speech the other night Secretary of the Interior Harold Ickes predicted revolution and chaos if public confidence in Mr. Roosevelt was shaken. The American people have lived in one perpetual emergency ever since the New Deal took office and they are getting tired of it. It is beginning to dawn upon them that the greatest emergencies confronting us are those caused by New Deal policies.

The New Deal has taken unto itself three little words that have a great appeal—"liberal," "progressive," and "humane." But today the American people are asking for a greater liberalism than that of spending the people's money. They are asking "Progress toward what?" They are not so sure that they want 4 more years of New Deal "progress" such as they have had during the last 7. They want a Government whose claim to being "humane" is based upon more than just keeping the unemployed alive with food and clothing and shelter.

One of the strongest appeals that the New Deal makes is the picture of itself, backed with cash and propaganda, that it is the friend of the underprivileged—as the President so eloquently expressed it, the "one-third of the Nation" that is "ill-fed, ill-housed, ill-clad." If any of them have radios—and there is more than one for every five people in the country—they hear a melodious voice telling them in persuasive tones, "I am constantly thinking of all of our people." One must frankly admit that the President is adept at presenting his views and policies in human terms.

In this he is right as well as wise. The ultimate test of any government is its ability to meet human needs. The Republican Party accepts the challenge to discuss the issues of this campaign in human terms. The outstanding fact of 7 years of new dealism is that it has failed to meet these human needs. You cannot buy prosperity with the United States Treasury. You can achieve it only under conditions which encourage individual initiative, energy, and industry, the creation of new jobs and new wealth in an expanding economy.

The average American is a practical person. He is more interested in results than in theories, in the specific rather than the abstract. The best way to show him the fallacies of New Deal policies is to demonstrate their effect upon him. He must be made to realize that, remote as they may seem, they have a direct effect upon his everyday life.

He must be convinced that taxation which devours the profits of an industry is undesirable, not because it deprives some economic royalist of another yacht, but because it keeps men out of work, prevents increases in wages, and raises the price to the farmer and every other consumer. Government baiting of business, restrictive regulations upon investment and expansion in industry—all these affect no one more directly than the man who is in search of a job, or who needs a raise in pay. He must realize that when business is put into the red by Government taxation, jobs and wages are put into the red as well, that every restriction upon legitimate investment and expansion of business is a restriction upon new wages, new jobs, and new purchasing power; and that a government that robs them of these things robs them of something that no subsidy can repay.

We must awaken the people to the fact that the United States Treasury is their Treasury, not only to get money from but to fill; that the Federal Budget is their Budget, and that the national debt is theirs to pay, whether directly through taxes, or indirectly in higher prices and lower wages. They must realize that the

Government is now spending nearly $26,000,000 a day, or more than a million dollars every hour, or over $18,000 every minute, every hour, every day of the year. It is going into debt at the rate of over fourteen and one-half million dollars every day, or over $604,000 every hour, or nearly $11,000 every minute, every hour, every day of the year.

All too few realize that between 20 and 30 cents of every dollar spent goes for hidden taxes which are added to the cost of all that they buy. All too few realize that their share of the national debt of over forty-two and one-half billions is approximately $325, and that they will pay much of that, too, as they now pay indirect taxes, in lower wages and higher prices. Three hundred and twenty-five dollars, and yet our national income last year was only about $520 per person.

Bring these facts home to the American people, make them realize their stake in Government spending and deficits, and the hue and cry will go up for economy as it has in recent years for spending.

We must bring home to the American people not only the truth about New Deal Government by stealth, but its effect upon their lives and its threat to their free institutions. Ours is traditionally a representative government; and Congress has always been and must always be the most representative of the people. In a pure democracy, every individual would have a direct voice in public affairs. But because this is obviously impossible among a people numbering many millions, they can exercise their voice only through the election of their representatives and by holding those representatives responsible only to them. But the fact remains that the framers of the Constitution intended that the powers entrusted to the Congress were meant to be exercised by the people, through those whom they elected to represent them. Every power surrendered by Congress either to the President or to a Government agency is a power taken away from the people, and over which they have lost their control.

But these various New Deal agencies have not been content to exercise the vast powers which were vested in them, they have usurped powers which the Congress never intended them to have.

Americans are learning that the authority to exercise these vast powers in their favor is also the authority to use the same powers against them. The worker has learned that the National Labor Relations Board, for example, cannot only assure them the right to collective bargaining but that it can discriminate against his union or destroy it at will and force him to join a union for which he has never been given the opportunity to vote. He must realize, too, that these powers which may be used in his favor today may be used against him tomorrow. If the National Labor Relations Board has the power to limit the free speech and press of the employer it has the right to deny these same rights to the employee; and, should this power fall into other hands it might be so used. The fact that it is not is no justification for bestowing such power upon any board, nor it is any guaranty that it can't happen here.

The hearing of the House committee investigating the Labor Board has not only revealed discrimination and abuse in the use of its vast powers against employer and employee alike; it has also thrown light upon the workings of New Deal agencies. It has revealed organized campaigns on the part of these bureaucrats to line people up to exert pressure upon Congress against any amendments to the Labor Act or any cuts in appropriations. It has revealed that if an individual gets in bad with one board he may be blacklisted by others. The National Labor Relations Board, for instance, presents lists of companies and individuals to the Reconstruction Finance Corporation to whom loans shall be held up or denied. Moreover, there is evidence that attempts are also made to blacklist a company on trial before the Board with other private concerns.

We have learned that a company may be found guilty on charges so flimsy that the evidence is not accepted by a court of appeals, and yet the decision of the Board will be upheld by the Supreme Court. Should that company need a loan later from the R. F. C. in order to keep going, it stands small chance of obtaining it once blacklisted by the N. L. R. B. The result? A business shut down if it is unable to obtain a loan, more idle men and idle machines—all because a board of three men, entirely beyond the reach of the people, usurped powers they were never intended to have. Multiply this one example by the more than fifty agencies created by the New Deal and you have some conception of what is going on every year under this administration. How many men may have been kept on relief by bureaucratic baiting and blacklisting of business, it would be impossible to estimate. Who says that such policies don't affect the man on the street?
